The present volume is strictly, like the less fittingly called compendium of Justin, an Historia Philippica. It takes in the reign pendium of Justin, an Historia Philippica. It takes in the reign of Philip, with such other matters as are needed to make the reign of Philip understood. Among these is naturally the geography of Macedonia and the growth of the kingdom up to Philip's time, done, as such a subject was sure to be done, in Curtius's best manner. We have too a picture of "the policy and intellectual life of Athens up to the beginning of the public career of Demosthenes." Here we think that Curtius would have done better if he had kept the literary and artistic part more distinct from the political and military. There is no denying that the political and military history of the time - say from the death of Epameinôndas to Philip's siege of Olynthes—is not an attractive time. It is a dull time in itself, and there are no good materials for writing its history. We have no contemporary narrative, we have hardly any consecutive narrative there are no good materials for writing its instory. We have no contemporary narrative, we have hardly any consecutive narrative except in the stupid Diodóros, and we do not get the full advantage of the Greek orators till a little later. And even when we get to the great orators, it needs a very skilful hand to steer us through all the details of their contradictory statements and abuse of one another. Bishop Thirlwall, as we have already implied, has done this more effectually than either of his successors. But has done this more effectually than either of his successors, the time is a time of great intellectual activity, though, as in public life the military and political departments were test parting off from one another, so merely intellectual activity was largely parting off from both. Demosthenes himself showed one side of this separation. He took his place as a soldier in the ranks, but no one would have thought of setting him to command the warlike expeditions which he so carnestly called on the people to undertake. In the men who had lived on from an earlier age the divitake. In the men who had fived on from an earlier age the division of labour which characterizes the time comes out yet more strongly. Plato and Isocrates are men born within a few years either way of the death of Pericles, but who lived on into the thick of the days of Philip—Isocrates indeed almost to the end of Philip's days. But in the days of the childhood or even the youth of Isocrates a man could not have your favor by providing political of Isocrates a man could not have won fame by writing political pamphlots in the form of speeches, speeches which every one know were never meant to be spoken, but were simply meant to be read, pamphiots in the form of speeches, speeches which every one knew were never meant to be spoken, but were simply meant to be read. It is curious to read Curtius's character of Isocrates. He sees his weaknesses, but still, after summing them all up, it is somewhat mild to say that he was "not a man equal to the highest demands of his age." Under the strong hand of Bishop Thirlwall the amiable dreamer comes off somewhat worse. In his contemporary Plato we get a further step in the divorce between speculative and practical life. Isocrates makes a part, whatever we hold to be the value of that part, in the political history of Greece. Plato lives altogether outside that political history. He lives far more outside of it even than his own master Socrates, who, if he had never talked a word of philosophy, would still have deserved to be remembered as the honest citizen who refused to obey the illegal bidding of the Thirty. In fact, we are half startled at finding the name of Plato at all in a chapter whose pages are headed the "Policy of Athens." The little that he has to do with the practical life is rather to be looked for in the history of Syracuse. On the whole this second picture which Curtius has drawn of the general life of Athens strikes as as hardly so successful as the earlier one. It drags a little in residing; the whole life of the volume seems to be hept for, and to some out in, the last chapter. We will not go mask into matters of detail, but we cannot help remarking that Curtims is, as in so many other things, quits pres-Grotian in his notions of the Thedrikos or festival fund. Mr. Grots understands as well as any man what the abuses of that fund ages against which Demesthens had to atruggle, but he brings out, as no one had brought out before him, what was the real nature of the fund itself. It was, as he somewhat daringly puts it, the "church fund of Athens." He likens the proposal to employ it for military purposes to a proposal in a modern State so to apply the funds commonly voted for public worship. Like most other analogies, the analogy is not perfectly exact, but it brings strongly out what ought never to be forgotten, the essentially religious character of the fund. Now, before Mr. Grots wrote, it was quite perdonable not to understand this. But it is too bad when a scholar who has, or ought to have, Grote open before him can calmly scholar who has, or ought to have, Grote open before him can calmly write sentences like these:—

A merry life for the people is the most important of all considerations; and to procure the means requisite for this is the first and most serious task of a senscientious statesman. It is as if in a monarchy the principle were assexted, that the income of the state is in the first instance designed to defray the count-festivale, court hunting-parties, and other amusements of the covereign, while what is left over must suffice for the requirements of the commonwealth. Only, of course, a principle so utterly repugnant to the essential idea of a state is but rarely put forward and carried out with so charmingly simple an openness as it was by Eubulus.

Now the Athenians even under Eubulus were not absolutely fools, Now the Athenians even under Eubulus were not absolutely fools, and moreover we hold that Curtius is unduly hard on Eubulus, who does not seem to us to be anything worse than a commonplace conservative politician. The comparison which Curtius makes is had in every way. The royal chapel would really be a nearer parallel than the royal hunting parties, but in the whole analogy Curtius is seemingly misled by those rhetorical passages of orators and poets which, wish great truth from one point of view, speak of the Athenian Dêmos as King or tyrant. But a Court hunting party, or a Court should one Court shouthing sless can have no real analogy. Athenian Dêmos as King or tyrant. But a Court hunting party, or a Court chapel, or a Court anything else, can have no real analogy with the Theörikon, because the Court festivity, of whatever kind, is in its own nature a thing in which only a few people can share, while the Theörikon was in its nature a thing which the whole people shared. The whole notion of this Theörikon springs from that agreeable connexion, or rather identity, between devotion and festivity which was so characteristic a part of the Greek religion. It was doubtless a great point that the people should have a merry life, but it was because the merrier they were the more merry life, but it was because the merrier they were the more pious they were, the merrier they were the better the gods would be pleased, and the more would the city flourish under their probe pleased, and the more would the city hourish under their protection. All this Curtius puts out of sight, and, in putting it out of sight, he puts out of sight the peculiar difficulties under which Demosthenes lay when he proposed to make changes in the matter of the Theörikon, the cautious way in which he approached the subject, and the special daring which was needed by the man who approached it at all. Curtius does not in this case put things into Mr. Grote's mouth which Mr. Grote never said, buthe writes an important large of history, on which Mr. Grote has thrown special light as piece of history on which Mr. Grote has thrown special light as if Mr. Grote had never written it at all. This is not the way in which history should be written. And now, as we have fully admitted all along the great merits of many parts of Curtius a book, we must again raise our final protest against the new light displacing either of our own old ones. We can conceive no man better displacing either of our own old ones. We can conceive no man better fitted than Curtius to put forth admirable essays or lectures on many detached points of Grecian history; but the political history of the Greek commonwealths was work for another and a stronger hand. It was work, not for a traveller or a professor, but for the man who was all the better Radical member for the City of Landau heaves he was a large properties to be the historian of the of London because he was preparing to be the historian of the Athenian democracy, who was all the better historian of the Athenian democracy because he had been the Radical member for the City of London.

Of Mr. Ward's translation we have spoken so often that we need ardly say much again. On the whole there are now fewer strangely tranged sentences, fewer strange combinations of words, than in arranged sentences, arranged sentences, fewer strange combinations of words, than in the earlier parts of the work; but we still have had sometimes to look to the original in order to make out the meaning of the translation. We will notice only one case which has constantly struck us through this volume. Curtius, naturally and fairly enough, constantly talks of the Athenian Demos as the Bürgerschaft or body of citizens; this Mr. Ward constantly translates "civic community," as in other compounds of Bürger and Bund, he constantly uses the adjective of civic " and "federal." We fully grant the great difficulty of translating many of the compound words which give such nower of Rurger and Bund, he constantly uses the adjectives "civic" and "federal." We fully grant the great difficulty of translating many of the compound words which give such power to German, as to Greek, political language. But Mr. Ward's version of them often gives quite another idea from the original. The cause of all this is, as we have often said before, that Mr. Ward really knows the German language too well to translate well out of it. While we have been reading his translation of Curtius, we have been looking at some parts of Dr. Ihne's translation of himself, where the German writer reproduces his own work in English with which Mr. Ward's will not bear comparison. But this is just because Dr. Ihne is dealing with his own work, which he may treat as he pleases. Mr. Ward is bound to translate nomehow. Dr. Ihne, if hafinds it hard to translate, is not bound to translate at all, but may repreduces it in any shape that he difficulty of the are glad that Mr. Ward's has got to the mod within ground task; we wish to see him at work on comothing better this immediating anything. He has the shall in him to win a place in first rank of living historians, and we should be well played.

to think that he is engaged on something in which his wenderful knowledge of the language, the literature, and the history of Ger-many may be a help, and not, as in this case it has proved, a

QUATREVINGT-TREIZE.

THE wonderful and tempestuous genius of M. Victor Hugo has again found scope in a theme purhaps more suited to it than any on which it has been exercised since the masterplece of Lee Missirables. In dealing with these critical spisodes of the French Misérables. In dealing with these critical spisodes of the French Revolution the poet-novelist is on his own ground. M. Victor Hugo's assurance that his father served against the insurgents of La Vendée may not induce us to accept with perfectly unqualified faith his account of the subterranean habits, mysterious communications, and generally superhuman capacities for brigandage of the Vendean peasuntry; and even his own intimate knowledge of Paris can hardly warrant more than a presumption that anything he tells us of the Paris of 1793 will be at least possible. But still he is addressing his countrymen on matters in which they have a common national interest with him, and for the knowledge of which abundant materials exist. There is happly no chance of which abundant materials exist. There is happily no chance in this case of performing any such strange feats of learning as in L'Hommo qui rit, where M. Victor Hugo's researches among English institutions led him to the discovery that a Wapentake is a terrible officer of justice, armed with an instrument called "the iron-weapon." Not that the eccentricities which are familiar to iron-wespon." readers of his previous works are by any means absent in this book. We shall presently see that there are quite enough of them. But they are not of the gross and glaring kind which made his last But they are not of the gross and glaring kind which made his last work unworthy of him, and there is promise of their being more than counterbalanced by the fruits of the true power which has obviously not deserted him. We say "promise," for we have not before us the full plan of the work. These three volumes are entitled "Premier récit." What more is to come we know not; but we may conjecture that the whole will be on something like the scale of Les Misérables. In that case the same general effect may perhaps be repeated. In Les Misérables there are extraordinary digressions—technical, topographical, historical, and what not; tedious dialogues, gratuitous horrors, and impossible incidents. But the force and volume of the whole carry off all this and more which would break down an ordinary romance; and the result of which would break down an ordinary romance; and the result of all the strange elements thrown together in seeming confusion is a prose epic. M. Victor Hugo's genius is volcanic. When he works on a great scale his blemishes are the scoriss of a lavastream. But it does not follow that on a smaller scale the blemishes have only the same proportional effect. The minor blemishes have only the same proportional effect. The numor operations of volcanic forces may send up nothing but hot water and mud. At present we find that in *Quatrevingt-treise* there is a somewhat unreasonable proportion of dress and extraneous matter. Any less daring or less discursive writer would have brought the book within half its present length. But the first two or three volumes of Less Mistrables taken by themselves would produce push the same effect; and in these circumstances out first duce much the same effect; and in these circumstances our first

duce much the same effect; and in these circumstances our first general impression must needs be only provisional.

In the various chapters of these volumes all M. Victor Rugo's characteristics are to be found in detail. The words which he himself applies to the Convention are precisely fitted to express his own eminence and his own faults—"Itien de plus difforms et de plus sublime." The parallel goes further; for, as he observes on the same subject, the deformities are obvious on any near and on the same student, while the grandeur only comes out afterwards in a comprehensive view. Hence the critic of M. Victor Hugo's writings has a somewhat invidious task; for particular objections which show their own grounds must have more weight in proportion than a general admiration which assumes the reader's confidence. confidence.

The persons of the romance may be divided into two classes. There are some of an ideal kind, whose doings furnish the framework of the story, and who serve as pegs for the author to hang various sentiments and speculations upon. There are others of a less ambitious but more human kind, for whom M. Victor Hugo may not have intended us to care so much, but for Victor Hugo may not have intended us to care so much, but for whom, in fact, we care most. To take the real people first, they consist principally of three children named Remi-Jean, Gros-Alain, and Georgette, who in the first chapter are found wandering help-lessly with their mother, driven from her home by the war, and Sergeant Radoub, of the Paris battalion Bonnet-Rouge, in command of the party who find them. They are solemnly adopted by the battalion on this wise:—

Une veuve, trois orphelins, la fuite, l'abandon, la solitude, la guarre grondante tout autour de l'horizon, la faim, la solf, pas d'autre nourriture que l'herbe, pas d'autre toit que le ciel.

Le sergent s'approcha de la femme et fixa ses yeux sur l'enfant qui tétait.

La petite quitta le sein, tourna doucement la tête, regarda avec ses belies prunelles bleues l'effrayante face velue, hériseée et fauve qui se penchalt sur elle, et se mit à sourire.

elle, et se mit à sourire.

Le sergent se redressa et l'on vit une grosse larme rouler sur sa joue et s'arrèter au bout de se moustache comme une perle.

Il éleva la voix.

— Camarades, de tout ça je conclus que le bataillon va devenir pèrc.

Il éleva la voix.

Camarades, de tout en je conclus que le bataillon va deveuir pèrc.

Est-ce convenu! Nous adoptous ces trois enfants-ià.

Viva la République! orièrent les grenadiers.

Cost dit, fit le sergent.

Et il étendit les deux mains nu-denns de la mère et des enfants.

Veilà, dit-il, iss anfants du betaillon du Bonnet-Rouge.

Fictor Hugo Quatrosingt-traise. Premier rieit. La guerre civile. B 2

La vivandière sauta de jois.

— Trois têtse dens un bonne
Puis elle écleta en sanglet
j dit :

- Comme la petite a déjà l'air gamine!
- Vive la République! répétèrent les soldsts.
Et le sergent dit à la mère:
- Venez, citoyenne.

The whole of this chapter is in the author's most charming and natural manner, for M. Victor Hugo when he pleases is the most natural of writers. We see no more of them till the third volume, when they are the hostages of a small band of Vendean desperades besieged by the French troops in a solitary castle. There is a description of their childish play which, if not very material to the narrative, is anyhow a welcome relief to the grotesque horrors which the author has thought fit to accumulate at that part of the book. In particular there is a chapter quaintly headed "Le Massacre de Saint-Barthélemy," which shows how, being left alone with a unique edition of the apocryphal Gospel of St. Barthelomew—which, by the way, gives occasion for one of M. Victor Hugo's alarming exhibitions of learning—they most innocently pull it to pieces. They are finally restored to their mother and to the battalion. As for Sergeant Radoub, he is a brave and honest fellow and, to judge by the opinion he delivers at a count-martial presently to be mentioned, the only one of the grown-up people to whom the general intoxication of the year '93 has left any common sense. The persons who are not human are the following:—The Marquis de Lantanac, who comes from Jersey to take command of the Vendean revolt, and is besieged in his own ancestral tower. He it is who, after having escaped with the remnant of his followers, when they are the hostages of a small band of Vendean desperadoes

is who, after having escaped with the remnant of his followers, comes back alone to rescue the children from the configration in which they had been left to perish. The scene is one of M. Victor Hugo's finest; but it is unfortunate that he could not somehow contrive to make Lantenac ignorant of the original diabolical plan, which one would hope even infuriated and bigoted rebels would not be capable of conceiving. Then comes Gauvain, great-nephew of Lantenac, commander of a national expeditionary force which besieges the tower. Lastly, Cimourdain, formerly a priest and tutor to Gauvain, now attached to his command as delegate of the Committee of Public Safety. He is in a sort the leader of the club of extreme politicians known as the Evêché, and the chiefs of the Mountain Lock on him with respect the Mountain look on him with respect. So far as we have been able to ascertain, all these persons are fictitious, although Cimourdain is introduced with various traits and circumstances which look as if they were borrowed from some actual biography. As for the probability of their conduct as told in the story, let a very short account suffice. On board the vessel in which Lantenac is conveyed to Brittany a gun break vessel in which Lantenac is convoyed to Frittany a gun breaks loose from its lashings. The results are of the most alarming kind; whether they would be such in fact we do not stop to inquire, especially as we are here overwhelmed with a whole vocabulary of marine terms of art on which even M. Littre throws no light, and the very magnitude of M. V. Hugo's assumptions of special knowledge makes it impossible for any mortal critic to test them. However, the man who was answerable for the gun not having home procedure expect of the contract to except the its angles of the sum of the second contract to expect the second contract to the second contract the second been properly secured undertakes to capture it, and does so after a terrific combat. The Marquis calls up all hands, and proceeds first to decorate the man with the cross of St. Louis for his bravery, and then to have him shot for his negligence.

we come to Gauvain and Cimourdain. Gauvain is the only creature for whom Cimourdain has a personal affection; and it must be said that there are lucid intervals in which he appears as a real and lovable person. Cimourdain has saved his pupil's life in illness in old days, and by a somewhat superfluous stroke of art he is made to save it again in fight at the very moment when he rejoins him. At the end of the book Lantenac saves the children, at the risk to himself of falling into the hands of the Republicans. Cimourdain has been sent from Paris on purpose to have Lautenac guillotined, and is about to proceed to that operation; but Gauvain, after a sharp conflict of motives, contrives his ancestor's escape. Thereupon Cimourdain sits in court-martial upon Gauvain, the court being composed of himself, a commissioned officer, and Sergeant Radoub, and condemns him to death by a casting vote, Summent Radoub ampletically dissenting, and observing not with-Sergeant Radoub, and condemns him to death by a casting vote. Sergeant Radoub emphatically dissenting, and observing, not without reason, "Jo n'aime pas les choses qui ont l'inconvenient de faire qu'on ne sait plus du tout où on en est." After which Cimourdain has a solitary interview with Gauvain, and they discuss the prospects of the Revolution with great tranquillity and satisfaction, though with certain theoretical differences. Next morning Gauvain is duly guillotined and Cimourdain shoots himself. And so ends the last volume. If this incident were the work of any other man than M. Victor Hugo, we should take it as a malicious allegory of the sort of benefits mankind have to expect from the practical application of such ideas as those ascribed to Cimourdain. But the author has laid one scene at Peris, and has thereby found occasion to discourse at large and without any allegories upon the significance of the year 1793. This portion of M. Victor Hugo's romance, like many chapters of Les Mistrables, is, in truth, in the ambit of the romance, to use a convenient legal metaphor, without being really parcel of it. But it is too prominent and characteristic to be neglected, and we reserve it, together with sundry minor points of execution, to be dealt with in a separate notice. THE PRINCESS CHARLOTTE.

THE PRINCESS GRARLOTTE.

THES little volume—"brief memoir," as the author calls it—is

L a richarge, with some new ingredients, of an article in the

Quarterly Review of January 1873, hearing the title "Unpublished Letters of the Princess Charlotte." It was not stabled
in the Quarterly to whom the letters were addressed, but Lady
Rose Weigall, having now revealed herself as the writer of the
article, says that they were addressed to her mother, the late
Countess of Westmoreland, who, as a girl, Miss Wellesley,
was companion and playmate of the young Princess Charlotte,
and who became the Princess's most intimate and confidential
friend. The letters begin in 1813, after Miss Wellesley had
married Lord Burghersh, and the last was written within a few
days of the Princess's sad and untimely death. The new ingredients in the volume are materials supplied by Her Majesty
(what, is not stated), a series of letters from 1798 to 1804
written by the Princess's governess, and also letters of Miss Hayman,
who was the Princess sub-governess for a few months in 1797
when the Princess was only in her second year, and who was afterwhen the Princess was only in her second year, and who was after wards in the service of the Princess of Wales.

The unhappy marriage of the future George IV. with Prince Caroline of Brunswick doomed the Princess Charlotte, the

offspring, to misery from her cradle. The parents were formally separated very soon after the birth of the Princess, which was at Carlton House, on January 7, 1796. The Princess of Wales was to retain her apartments at Carlton House, with free access to the infant. Lady Elgin, as governess, was at the head of the nursery establishment, and superintended everything she was the modium of communication between the Prince and Princess. The Princess of Wales had a villa at Charlton, near Blackheath, but came constantly to see her daughter:-

In these early days—the summer of 1707—the Princess of Wales was constantly backwards and forwards between Charlton and Carlton House, coming most days to play with her daughter, either in Miss Hayman's room or in the nursery; but never encountering or holding any sort of communication with the Prince, who, on his part, avoided the nursery, most likely through fear of meeting her.

The Prince, having the child in the same house with him, saw very little of her. Miss Hayman writes, June 7, 1797:—

The Prince's time for seeing the child is when dressing, or at breakfast.

... He has not been up here, having dropped that custom many months, nor has he sent for the child or seen it since the birthday, but he was some days out of town. I do not often know whether he is at home or abroad.

Here is an amusing extract from a letter of Miss Hayman, of the same year, telling how the child in her second year mimicked Canning:-

Princess Charlotte is very delightful, and tears her caps with showing me ow Mr. Cauning takes off his hat to her as he rides in the Park, and I hold or up at the summer-house window.

In 1804, when the Princess was eight years old, Lady Eigin resigned her post, and was succeeded by Lady de Clifford. About this time the Prince of Wales proposed to place the education of the Princess under the control of his father, George III., who upheld the cause of the Princess of Wales and doted on the Princess Charlotte. The young Princess was now sent to Windsor to be under the eye of the King. The Prince of Wales, caring nothing himself about seeing his daughter, was very jealous of her intercourse with her mother, and visits from and to the mother were made rare. The father of the Princess of Wales, the Duke were made rare. The father of the Princess of Wales, the Duke of Brunswick, lost his life at Jena, in 1806, and her mother than came to live in England, and settled herself near her daughter at Blackheath. It was then arranged that the Princess Charlotte should go once a week, on Saturdays, to the house of the Duchess of Brunswick, and there see her mother. The Princess of Wales thus wrote to Miss Hayman in a letter of 1807:-

On Saturdays my daughter comes at three o'clock to dine with my mother, when company is always asked to meet her, consisting of old and steady people. At four o'clock I appear; at six Charlotte leaves us.

steady people. At four o'clock I appear; at six Charlotte leaves as.

These short Saturday visits to her mother were the chief, if not the sole,, enjoyments of the child's existence. She loved her mother. "It is quite charming," wrote George III., February 25, 1805, "to see the Princess and her child together." In 1811 George's III.'s insanity and the Regency of the Prince of Wales affected the Princess Charlotte's position for the worse. The King had sympathized with the two Princesses, mother and daughter; the Queen's feelings were the other way. She leaned to the Prince of Wales. The young Princess's life became harder and gloomier. We quote from Lady Rose Weigall:—

A main part of this pernicious policy was to keep the young Princess soulded from the world. The Regent had reason to fear that her appearance in public would give a fresh stimulus to the wistespread feeling in favour of herself and her mother, and render him proportionately more unpopular. He was further bent upon avoiding everything which could look like a recognition of her as the heir-presumptive to the Criwm, probably hoping that by the death of his wife, or by a divorce, he might hereafter have a son through a accord marriage, and shut out the daughter of his detected consort from the thronts. . . The Princess Charlotte was regarded as a rival to be empressed, rather than as a future severage who was to be trained for her imperial editor. Past fifteen at the reasonancement of the Regency, and presentes of her again, she, on her edds, was talky alive to the importance of her pastition, and to the determination of her father to ignore it. The attenue to degree them of her privileges applied her trible these some

is when she had the eager lenging of a girl to break loose from her my beath sty in its p

When the Princess was usually assumes, Lady de Clifford sittined from her post of governess, and was ancousted by the Richess of Leeds. On Lady de Clifford's retirement the Princess had hoped that a change might be made in her establishment, that she might be allowed a "Lady of the Redchamber," instead of heing continued under a "governess," and that she might be allowed to "come out." She wrote to her father requesting these things. The letter made him furious; he immediately posted down to Windsor, taking the Lord Chancellor (Eldon) with him; and there, in the presence of the Queen and his sister Princesses, the Regent and the Chancellor scolded the Princess "for the enormity of here and the Chancellor scolded the Princess "for the enormity of here demands, pretty much as a souple of angry nurses might scold a child of four years old." So writes Lady Rose Weigall. Miss Knight, who now became sub-governess, has in her "Autobiography" given the following account of Lord Chancellor Eldon's

Bysoe her Majosty, Princess Mary, and Lady de Clifferd, in a very rough manner, the learned Lord expounded the law of England as not affording her Boyal Highness what she demanded; and on the Prince's asking what he would have done as a father, he is said to have answered, "If she had been my daughter, I would have locked her up." Princess Charlotte heard then my daughter, I would have locked her up." Princess Charlotte heard then with great dignity, and answered not a word; but she afterwards wont into the room of one of her aunts, burst into tears, and exclaimed, "What would the King say if he could know that his granddaughter last been compared to the granddaughter of a collier."—Miss Knight's Autobiography, vol. i. D. 184. p. 184

Lady Rose Weigall relates the same incident less circumstantially

Princess Charlotts, with all her impulsiveness, had the self-command to remain silent under the storm of abuse. It was not till she reached her own room that she burst into team, and broke out into complaints of the indignity put upon her by her father, who, not content with rating her himself, had brought the Lord Chancellor to back him up, and suffered her in anmeasured language. Always scalous to propitiate the resigning power, Lord Eldon forgot the decorum which was due to a lady, let alone the respect which was due to the heir-presumptive to the throne.

The Prince Regent moved his daughter from Windsor to London, and established her at Warwick House, close to Carlton House, and immediately under his eye. She was permitted to continue visits to her mother, now living at Kensington, but orders were given to her attendants never to leave her alone with her were given to her attendants never to leave her alone with her mother. In December 1813, just as the Princess was reaching the completion of her eighteenth year, her father made up a match for her with the hereditary Prince of Orange. His object was to get his daughter out of England. The Princess wrote to Lady Burghersh, about the middle of December, telling how she had been hurried into an engagement; and, in her unhappy position, no wonder that she hurriedly caught at a chance of emencination from her father: emancipation from her father:

emancipation from her father:—

On Friday night the Prince of Orange arrived in England; the Prince (Regent) wished excessively I should see him, which I agreed to. On Sunday evening I diesed at Carlton House to meet him with a small party—the Castleregha, Liverpools, Lord Bathurst, two Fagels, besides the Duches of Leeds, and myself and the Duke of Clarence. During the evening I was called out to say what I thought of him, and, in short, to decide in his favour or not, on so short an acquaintance. However, I decided, and in his favour; we are funce, or promis, therefore, on his ruturn from Holland. I confess I was more agitated than I can express at the whole proceeding. The Prince was so much affected himself, but so happy, that it has quite appeared to me since hike a dream! He was with me Monday and yesterday, when I took leave of him, as he is off to-day fur Holland, and will not be able to return before spring. He thinks about April, when he will go to Berlin and bring over his family here for a short time. He teld me yesterday what has cut me to the heart nearly, that he expected and swished me to go abroad with him afterwards to Holland, but that I should have a home here and there, and be constantly coming backwards and forwards; that he whaled me to go to Berlin, and travel in different parts of Germany. He was all kindness, I must say; at the same time, as he teld me, it should never prevent my seeing and having my friends with use as much as ever I liked; that he should be happy if they would all go with me, or else come and see me; his auxious wist, I must say, is to do what I like as much as possible to make me happy, and study everything that can make me so.

By a refinement of erusity the Princess was ordered not to tell

By a refinement of erusity the Princess was ordered not to tell her mother of her angagement. She wrote to Lady Burghersh, February 14, two months after it:---

I was silowed to go to Connaught Place [her mother's house] on the 7th of last month [her bixthday], but not to dine there. My birthday was kept quietly at home, and, except for a few cadesax, totally neglected. I thought she [her mother] looked ill and gnown thin, and her spirits wretchedly bad: since then I have not been. The interdict as to my informing her has set been taken off; but I have broken through it, as I could not endans her being sits fact to be told of what so nearly affected her child. I wrote the other day to her, and her answer was letter than I had hoped to meetive, as I happen to knew, from the best methority, that she did not like it. It was short, and very good-natured to me. That is ever

A week afterwards the intendict was removed; but, as we in seen, the Princen's filial instinct had anticipated the permiss to tell her mother. She wrote to her friend, February 26:—

The interdist has at last been taken of my tongue. Lord Liverpool was with me the other day, to say I might now wells and inform the Princess of it, as it was no langur to be last never, and it would be strateging the work not the first informed of it. Indeed, Lord Clarecuty, of the Princes, had other to send over a passes of high rank to set me fir this Hamiltony, and as he was either on his way as files, would be I might had be subsected by the Princes of the princ

I had both a kind and good-humoured letter on it, which I en to higher powers [her father], and in a few days I propose gets which will be proper, as I have not done so since day man atmounted to her.

Time, which brought reflection, fixed and intensified the determination of the Princess to remain free as to going abroad with the Prince of Orange. As heir to the Dutch throne he would be compelled to live in Holland; she, on the other hand, was helr-presumptive to the throne of England, and conflicting duties might, and probably would, call on her to remain here; and, constitutional questions apart, her heart was in England and with her mother, near whom she wished to stay, and personal feeling and affection were embarked in her resolute advocacy of perfect freedom to decide for herself, after her marriage, as to going abroad with the Prince of Orange. She seen found after her hurried engagement that, though esteeming the Prince, she did not love him; there was therefore no passion to restrain her from pressing what she believed to be a legitimate and proper demand. A long correspondence ensued, which Lady Rose Weigall publishes in artense; the marriage was on the point of being broken off; at last the Prince of Orange's father was called in by the Prince Regent to settle the matter; and it was settled in accordance with the Princess Charlotte's wishes. The Princess had shortly before Time, which brought reflection, fixed and intensified the de Princess Charlotte's wishes. The Princess had shortly before written the following admirable letter to the Prince of Orange, after receiving a letter from Lord Liverpool, the Prime Minister, re-

fusing to advise the Prince Regent to comply with her wishes:—

Warwick House: Monday, May 9, 1814.

My dear William,—It is with the deepest regret that I have received the enclosed letter from Lord Liverpool, which, unless you have infinence enough to make them after their opinions, puts an end I fear to an alliance a had every reason to expect would have insured my happiness, and which from the very high opinion I shall ever entertain of you, I shall not coasse to regret if broken off; and I regret it the more as I feel persuaded that if there had been any inclination to conciliate on the part of Ministers it might have been obviated. I have at least the satisfaction of ficility perfectly sure that it is not owing to either you or myself, this unlooked-for termination. With every sentiment of regard and friendship, believe ma,

The difficulty as to foreign residence got over, and the Prince having entirely her own way, all seemed settled and the marriage a certainty. But discussions and dissensions arose on other a certainty. But discussions and dissolutions and the Prince of the Prince of the Prince Recent and Orange. The Prince stood in fear of the Prince Regent and wished to humour him. He did not acquiesce in the Princem's wishes and intentions as to treating her mother as her mother, and ignoring her parents' quarrels. There arose a little trumpery quarrel, on which the Princess finally broke off the match. "The Princess Charlotte," says Lady Rose, "wanted the Prince of Orange to ride with her in the riding-house. He started objections and she represented him till approved at he represented him till approved at her released. tions, and she reproached him, till, annoyed at her vehemence and pertinecity, he left her to recover her temper. The climax had come, and in the evening she wrote peremptorily to say that their engagement must cease." And so it was. It did cease. The Prince of Orange was taken by surprise, but the Princess was determined. termined.

The Prince Regent was furious at his daughter's conduct, but could not help himself. In anger he appeared at Warwick House, July 12, 1814, and aunounced to his daughter that all her attendants would be dismissed that evening and replaced by strangers. "The Princess controlled herself while she remained in her father's presence, but the instant she could occape any result of the course of the largest replaced to her course of the largest residue to her course of the largest residue to her the stant she could occape any rushed to her own room, put on her homnet, ran into the street, hailed a hackney-coach, and drove off to her mother's house in Connaught Place." Lady Rose Weigall proceeds:—

When the Princess Charlotte's flight from Warwick House was discovered, her friend Miss Mercer, who was present and had heard her utter some disjointed exclamation about going to her mother, set off with the Bishop of Salisbury to Connaught Place, and sent back word to inform Miss Knight of the result. The good lady followed with the Princess's maid and some clothes, and found her at dinner with her mother, her mother's lady-inwaiting, and Miss Mercer. Meantime the Regent had called on Lord Liverpool, Lord Eldon, and the Duke of York, and some hours of negotiation ensued at Connaught Place between the envoys of the Regent, and the runaway Princess and her friends. Both sides recommended the Princess to return. She yielded at last to their united opinion, and at two o'clock in the morning was escorted back to Cariton House by the Duke of York, the Lord Chancellor, and the Lord Chief Justice. Various accounts have been written by the different agors in the scene of what took place. Lord Eldon leconically described her as "kicking and bouncing," but finally giving in. Lord Brougham has left a more melodramatic account of the cloquent appeal by which he persuaded her to go back to her father; and even the contemporary newspaper reports all vary as to details. But the plain narrative of Miss Knight gives the greatest impression of truth, and from her account it would appear that the Princess passed the hours she spent in Connaught Place nearly entirely alone with her mother and the ladles in the Princess of Waler' own room, while the gentlemm same and went below; and the influences to which she yielded were probably the wishes of her mother and the entreatles of Miss Mercer and Miss Knight. When the Princess Charlotte's flight from Warwick House was discover ir friend Miss Mercer, who was present and had heard her utter some d Knight.

The Princess's life, miserable before, was now made much more so by her father. Nearly two years afterwards she was released from what can only be called a state of durance vile by a marriage of affection with Primes Leopold of Saxe-Coburg. Happiness at last came with Trines Leopold of Saxe-Coburg. Happiness at lest came to her. But it was of brief duration. Every one knows the sad and. In the moment of looked-for joy death came to her; being delivered of a still-born child on March 5, 1817, she died within a

delivered of a still-born child on March 5, 1517, and the warms—
how hours afterwards.

Lidy Rose Weigall has been fortunate in acquiring excellent materials, and has put them together in a pleasing style, but her "brief mission" does not go beyond these materials, and has an imperfect and fragmentary character. This is not the only defect of the book.

The author permits herself to use unnecessarily strong language in condemnation of the Princess of Wales, and, inspired probably by her mother Lady Westmoreland's feelings, accuses the Whig party of an interested espousal of the cause of that Whig party of an interested espousal of the cause of that most unfortunate woman, adding that the same political party "would only have been too happy to render it more attractive by linking to it the grievances of the Princess Charlotte with all the interest which attached to her youth, innocence, and regal prospects." Lord Brougham's Autobiography, untrustworthy in many respects, may be relied on for the correspondence which it publishes; and there may be seen ample proof in his correspondence at the time with Farl Grey, Whitbread, and others, of the backwardness of a large part of the Whig party in the case of the Princess of Wales, and of caution and delicacy in handling the grievances of the Princess Charlotte. Lady Rose Weigall treats the "Delicate Investigation" of 1806 as conclusive condemnation of the Princess Investigation" of 1806 as conclusive condemnation of the Princess of Wales. George III. had written to Lord Eldon in July 1804 that the Princese's "injuries deserve the utmost attention of the King, as her own conduct has proved irreproachable." Lady Rose Weigall pronounces that "her eccentric, reckless behaviour was soon to deprive her of all title to the epithet." Reckless is a strong word for indiscreet, which is the most that can be made out of the qualification by which the Commissioners who conducted the "Delicate Investigation" accompanied their entire acquittal of the Princess on the charges brought against her. The caution administered by these Commissioners did not amount to reproach. The Princess was acquitted of the Douglas charges. Lord Eldon, no chivalrous knight-errant, and Spencer Perceval, the purest of men, unflinchingly supported her; and Perceval wrote for her her memorable letter to the King on the Commissioners' Report. Lady Rose Weigall speaks of the Princess Charlotte's affection for her mother, "notwithstanding the mother's weaknesses and vices." The last is a Investigation" of 1806 as conclusive condemnation of the Princess "notwithstanding the mother's weaknesses and vices." The last is a strong word, utterly unjustified as applied to a woman against whom, even at the last and at the worst, crime was "not proven." Men of unimpeachable honour, and women of unsuspected purity, befriended her to the last, in spite of all her undoubted indiscretions. Lady Rose Weigall, who here may have the excuse that she is the Princess Charlotte's biographer, and irresistibly moved as such the Princess Charlotte's biographer, and irresistibly moved as such to take up the cudgels for her under all circumstances, severely blames the Princess of Wales for leaving England and deserting her daughter in 1814. In July 1814 the Princess Charlotte had fled from Warwick House, and from her father's cruelty, to take refuge with her mother in Connaught Place. She was taken the same night, by the advice of her friends and of her father's, to her father's residence at Carlton House; and the Princess of Wales father's residence at Carlton House; and the Princess of Wales concurred in this advice, and did not endeavour to keep her in her own house. Lady Rose Weigall hereupon writes as follows:—

She [the Princess Charlotte] was acting under an impulse of indignation or alarm in an unforeseen emergency, and probably her calculations did not extend beyond the instinctive notion that her mother's house was her proper sanctuary, and her mother's countenance her surest support. But her expectation of finding sympathy and protection was destined to meet with no response. The persecution the Princess of Wales had undergone had long deteriorated her character, and ended by hardening her leart. Her affection had gradually been stiffed under the overpowering sense of her own "brongs, which filled her mind, and rendered her indifferent to her daughter's welfare. She had recently made up her mind to go abroad, that she might live free from all restraint, and absorbed in her own sellish plans, the last thing she desired was to be mixed up in the disputes between father and daughter. Much as she liked excitement, the sudden apparition of the runaway Princess was anything but welcome to her, and she was quite as anxious to get rid of the fugitive as the Regent could be to recapture her.

Her mother's coldness and eagerness to send her back were probably a bitter disappointment to her. She left Connaught Place, as already stated, with the Duke of York, and reached Carlton House just before daybreak. She was not allowed to return to her own rooms in Warwick House, but lodged in Cariton House, and an entirely new set of attendants were placed about her, and she was removed in their charge a few days later to Cranbourn Lodge, in Windsor Park. At the end of the months she had a sinal interview with her mother to take leave of her before the Princess of Wales' departure from England, and this was the last time they ever saw each other. Princess Charlotte was deeply hurt at her mother's wilfulness in going abroad, perceiving how detrimental this step must be to her, and feeling, no doubt, that it was an ungrateful return for the uncompromising efforts she had made lately on her behalf, efforts which cost much, as the mother She [the Princess Charlotte] was acting under an impulse of indignation

mother was not only sinned against but sinning.

There are surely two modes of interpreting the Princess of Walee's conduct. Could she be insensible to the injury that might ensue to her daughter from her remaining near her? Might she not feel that by going abroad she might even ease her daughter's position? What good at that time could she do for her daughter in England? The daughter had, it is true, with a filial loyalty which deserves no special eulogy, battled with the Prince of Orange for the right of treating her mother as guiltless, and discussions on this point had contributed to the breaking off of the engagement. But these discussions and many acts of the Regent showed that, while the Princess of Wales was within the daughter's reach, the woes of the latter were aggravated and her fate embittered, and the mother might have disinterestedly felt that her absence would be a benefit to the daughter whom she was totally unable to protect. The Princess departure for the Continent was not approved by many; but it was advised by Canning and Lord Dudley, two scalous, disinterested, and fearless friends.

Section 5.

PATERSON'S MEMORIALS OF PROFESSOR SYME.

A LTHOUGH it is strictly from a professional point of view the the life of the late Professor Syms can be assumed to posses sufficient interest to call for its embodiment in print, his trag sufficient interest to call for its embodiment in print, his transcendent merits as a surgeon were such as to make it only due to his memory that such a work should be undertaken. It would have been a slur upon the profession which he so ably served and ornamented had his eminent contributions to pathological and operative surgery, the impulse given by his words and axample to the generation who flocked to his teaching, and the very controversies which so bespoke the man and were the means of bringing into relief so many of his latent gifts and energies, been left without the recognition or the abiding monument which a record of his life and labours could supply. Amongst colleagues, friends, and pupils the desire for a memorial of a man so valued and renowned could not fail to meet with a fitting exponent of the admiration and regard inspired by one who had stood for years the acknowledged head in his own department of science and practice. Many willing hands contributing their share to the stock practice. Many willing hands contributing their share to the stock of materials, the office of biographer of James Syme devolved upon his old friend and associate, Dr. Robert Paterson, Vice-President of the Royal College of Physicians, and of the Medico-Chirurgical of the Royal College of Physicians, and of the Medico-Chirurgical Society of Edinburgh, whose oration as President of the Harveian Society of the same capital at the annual meeting of 1873 has been made the nucleus of the volume before us. Dealing mainly, though not exclusively, with the scientific or professional aspect of Syme's career, and drawn up as far as was possible in his own words, the value of this memoir lies in its setting in their true light those contributions of his to the surgery of his day which are indicative of real genius, together with an estimate of the man as a reformer of surgical method or clinical teaching; his diagnostic power and his unsurpassed skill as an overstor being disquostic power and his unsurpassed skill as an operator being not more conspicuous than his gift of conveying knowledge to others, and of carrying with him the intellects and the hearts of Principles of Surgery, a text-work upon the subject, his numerous contributions to the medical journals of the time show his unwearied industry, no less than the concentration of thought and feeling, expressing itself in terseness and conciseness of language, which justified a celebrated advocate in saying of James Syme that he never wasted a word nor a drop of ink nor a drop of

Sprung from a good Scotch family and inheriting from his father a temper of firm perseverance combined with courage and self-reliance, James Syme, born at Edinburgh, November 7, 1799, was more marked in his early years by patient study than by brilliance of parts. To this steady ability, joined to the excellent grounding which he received at a private grammar school, was due the good place which he took on entering the High School at the age of ten. Quiet and meditative, with a certain shyness and reserve about him, he had but few companions, and those chiefly of kindred tastes, with whom he kept up friendship through life, many of them rising like himself into eminence. Chemistry formed his favourite pursuit. The dissection of small animals, picked up in the intervals of school-time and in holiday rambles, shared with this mind and heart. A certain thickness of speech, approximating at first to an impediment, was greatly modified and well nigh obviated by pains and skilful training as years went on. All young Syme's pocket-money went in chemicals and apparatus, and his experiments were the admiration of the school. A striking sign of his instinctive tendency towards the realistic or natural rather than the literary sources of knowledge, no less than an augury of the success which he was thenceforward to achieve, was seen by his chosen companions on his leaving the High School at the close of six years. Dashing from among them, the lad, with an air of dignified resolve they had never witnessed before, took his books and threw them from him, as much as saying, "Away with these toys! I am now done with Quiet and meditative, with a certain shyness and reserve about as much as saying, "Away with these toys! I am now done with

as much as saying, "Away with these toys! I am now done with them. The more serious business of life is before me, and to it I mean to address myself."

Matriculating at the University of Edinburgh in November 1815, James Syme made botany and philosophy his first studies, the chemical teaching at the time being there, as throughout the United Kingdom, rather low. Joined by Robert Christiaon, now the distinguished Professor, he got together as a chemical society a dozen or so of students, working ardently with occasional mishaps in a large underground cellar as well as in his private lodgings. dozen or so of students, working ardently with occasional mishaps in a large underground cellar as well as in his private lodgings. In March 1817 he was able to announce to the world through the medium of the Annois of Philosophy the discovery, by means, of the distillation of coal-tar—then lately brought into notics by the lighting of Edinburgh with gas—of a solvent for escutchous, which was turned by Mr. Mackintosh into a material of boundless manufacture and the foundation of untold wealth. Had the patent advised by his friends been taken out by the asknowledged a of the invention, a large fortune would doubtless have added to the scientific credit and the sense of confidence of added to the scientific credit and the sense of confidence which was all that Syme reaped by this early stroke of genius. At the same time he was drawn irresistibly sowards anatomy, with a view to surgery, so his eventual and absorbing puresit, partly by early him, partly by the charm of Barelay's power as a lecturer, while as it was by the influence and absorbing surgery in the University of the Life of Faces Syme, Professor M. Chainel Surgery in the University of Edinburgh, &c. By Ribert Paleston, M.D. View President of the Royal College of Physicisms, Edinburgh, &c. Edinburgh; Edinburgh; &c. Edinburgh; Edinburgh; &c. Edinburgh;

of Lision, then demonstrator under Barolay; from whom however that rising operator parted in 1818, and set up an anatomy class of his own, taking Syme with him, and encouraging the young surgeon to assume ere long the office of demonstrator. Be rapid yet stondy was Syme's progress, that by the year 1822 he occasionally lectured for Liston, and had the sole charge of the dissecting rooms. In that year a short course of study in Paris brought him into contact with Listranc, who took a lively interest in him, as well as with Dupuytran, whose heart he won by the loan of a set of Liston's instruments in a case of diseased none. Becoming in 1822 a Fellow of the Royal College of Surgeons of Edinburgh, after having already joined that of London, he distinguished himself in the autumn of that year by his first important operation. It was the earliest case in Scotland of amputation at the hip-joint, and was a modification of that of amputation at the hip-joint, and was a modification of that of Listrace, in which Syme was assisted by Liston, Abercomble, and other professional friends, the time occupied being about a minute. A characteristic letter to Dr. Sharpoy, whose friendship he had A characteristic letter to Dr. Sharpoy, whose friendship he had gained in Paris, tells of his modest delight at this success, which has, he writes, thrown the good town into commotion. In the next year occurred the deployable rupture with Liston, who had abandoned to Syme the teaching of anatomy, though retaining a certain interest in the classes. That jealousy, and nothing else, was at the bottom of this break in their close friendship is all that his biographer has to say upon the matter, whilst it is scarcely possible to state exactly how the feud arose, or on which side lay the greater share of blame. The number and variety of controversies and estrangements in which Syme found himself involved from time to time, coupled with his known warmth of temper and sharpness of tongue, forbids our holding him altogether blameless. Free as he is stated to have been by original disposition from anything like a disputatious spirit, a change is traced in him from the time of his setting up his surgical hospital at Minto House and the professional warfare it brought upon him. There is much point in the remark of an old friend, Dr. Belfrage, minister of Slateford, to the remark of the confidence of the confiden to whom he confided his difficulties of this sort, that Syme was always right in the matter, but often wrong in the manner, of his It was most inopportune that the appointment of Syme as Professor of Clinical Surgery led him, as a matter of supposed duty, to attend the operating theatre at all times when any rtant operation was going on, to the intense disgust and scorn of Liston, and to the expectancy on the part of the class of some unnesmly outbreak. Stories are still told of retaliations behind his rival's back too petty for the dignity of one like Liston, such as allowing furtive peeps of a small simian head which he kept in his pocket during lecture, with sly allusions to a likeness which required no verbal hint for the enlightenment of the anused students. Curiously as the two great men were alike in many points, both of character and career, as Dr. Paterson has shown in an interesting chapter, in physique there could hardly be a greater contrast. Syme's sharp and eager face, with his spare and almost puny frame, might seem to make him no match for the burly form and bluff, if not gross, aspect of his antagonist. Yet, well knit and wiry, Syme was no more wanting in fibre of nerve or muscle than in fixity or force of mill. will. Never was there a hand more firm and unwavering in operations, or a mind more rigidly held in control and ready with resource. Without the muscular strength which enabled Liston to perform amputation of the thigh single-handed, the house-surgeon only aiding by holding the limb and tying the arteries, Symo had a style of surgery attended with no less confidence and success, prompt, sure, and even artistic. The softening of manner which his friends remarked in Liston, as an effect of his removal to London, had for one happy result the reconciliation which was brought about near Christmas in 1839, the way being paved by a letter full of character, in which he speaks of Syme's having already "broken the ice, though rather in a roughish way," and of his own wish to have their grievances and sores "not plastered up, but firmly cicatrized." Their old friendship seemed entirely renewed when Liston revisited Edinburgh in

ship seemed entirely renewed when Liston revisited Edinburgh in the autumn of 1847, not many menths before his death.

The history of Syme's short-lived appointment at the University College Hospital of London is given by his biographer with all needful fulness, and in a straightforward way, the letters of eminent and trusty friends contributing much towards clearing up his conduct and vindicating his ultimate resolve. No act of his life, it may be said with truth, was more characteristic of his insight and courage. At home once more, within five months, in his chair at Edinburgh, he was elected towards the end of 1848 President of the Medico-Chirurgical Society of that city. Devoting his whole energies to pure surgery, he won his way to the foremost rank, and advanced his department of science by a series of operations as brilliant as they were novel. The thanks of patients whom his skill had saved from despair or death, even from suicide, showered upon him. In 1850 he was elected President of the Royal College of Surgeons, Edinburgh, and in that capacity entertained in liberal style the leading members of the British Association at his beautiful country house, Millbank. His repute as the first surgeon of the day not only brought him honour at home and fame abroad, but made Edinburgh the centre for the diagnosis and treatment of the most difficult cases. Amongst the most important, unusual, and critical operations in which his skill was successfully displayed was one, in 1857, for aneurism of the common carotid array, which he described in his report as by far the most ardures that had occurred in the whole course of his surgical anaments. Scancely less difficult was an operation for glutcal anaments of the hip, which had not been seen since the time of the surgical anaments of the hip, which had not been seen since the time of the surgical anaments.

John Hell, sixty years before. Syme, it was remarked, was never at fault. Unforcessen difficulties never found him without resquent, and never shook his nerve or unsteadied his hand. The last case reported by him—in March 1865—was one of total excision of the tengue, which he had twice tried before, but unfavourably. Here, instead of cutting all the muscles of the os hyoides, as in the former cases, he resolved to retain entire the mylo-hyoides and gunio-hyoidei, and morely divide the attachments of the genio-hyoglossi. He also dispensed with chloroform, so that the patient, instead of lying horizontally, might sit in a chair, the blood not passing backwards into the pharynx, but running out of the meuth. A special interest attaches to this case from its having been adduced not long ago by Mr. Twisleton and quoted in our columns, as an instance of the recovery of speech after excision of the tongue in connexion with the supposed miracle of the African martyrs under Hunneric.

In his address to the British Medical Association at Leanlington in August 1865, which his biographer has printed at length, we have a valuable summary of recent progress in surgery, the credit of not a few, nor those the least important, steps being due to Ryme himself. The surgeons of Ireland were forward to welcome him and do him honour on more than one visit, whilst their brethren in America were zealous in acknowledgment of his improvementa, with especial reference to the "Syme amputation" of the anklejoint. Elected the first representative of the Universities of Edinburgh and Aberdeen in the Medical Council, he would doubtless have been chosen once more on the expiration of his term of office, but for the effects of paralysis, which after repeated seizures carried him off on the 26th of June, 1870. Litigious and quick in quarrel as he has been called by those who dwelt most preminently upon the professional controversies and legal suits in which he was so often engaged, it must in fairness be allowed that the cause of warfare was, with Syme, by no means so much personal aggrandizement or pique as what he held to be the interests of science and truth, or the honour of a profession which he adored. In the most critical of these legal disputes he came off for the chief part with success, whilst in all he has been allowed in the end, if not in the immediate heat of strife, to have been actuated and austained by none but generous and pure motives. Where money was concerned he was uncalculating and lavish to a fault, and it was scarcely less by his devoted and chivalrous practice than by his brilliant achievements in science that he mised and dignified the profession of his day.

MYSIE'S PARDON.*

In a "Letter to a Friend in London," the unive felf-assurance of which is rather amusing, the author of this book explains his reason for writing it. He has been much exercised by the "ludicrously inexact representations" of Australian life concocted by rapid writers who, after a scurry through the colonies, feel themselves qualified to instruct their fellow-countrymen in everything pertaining to those distant lands. With a view of correcting false impressions and letting the people at home know how Australian colonists really do live, Mysic's Pardon was written. The author's aim has been to present a perfectly accurate picture of social life in the colony of Victoria in one or two of its phases. The aim is an excellent one. The conditions of life in Australia, although not perhaps quite arcadian or idyllic, present a new field for the novelist's talent, and a welcome exchange for the lovely bigamists and impossible murderers who enliven the fiction of our own more mature civilization. We are only sorry that Mr. Hay's performance falls short of his promise, and that the experiences of a somewhat long residence in Australia have not crystallized into a more complete "photograph of colonial life." The faculty of observation is not altogether the affair of time which our author supposes. His Australian scenes are provokingly devoid of local colour. Except a description of the "Corner" at Ballarat, a famous rendezvous of gamblers in mining shares, the topographical surroundings of his story have not much that is distinctively Australian about them. So far as the main interest of his story is concerned, the venus might be changed without any violent wrench to any provincial town in the old country. Nor, barring the reflection of an epidemic fever for speculation, are the social surroundings at all more characteristic. The feature of Victorian life most vividly, and probably most truly, portrayed in this work is domestic rather than social. It is full of the sayings and doings of a set of obtrusive and irrepressible

The delineation of the chief character in this book—heroine she can hardly be termed, even by courtesy—has evidently been a labour of love for the author. But he is too enamoured of the strong individuality with which he has invested her to realize the unpleasing and unsatisfactory impression which his handiwork is likely to produce on the less preposessed mind of his reader. Towards Mysie Raeburn one feels as one feels towards certain characters in real life whom one is invited by some esoteric admirer to take upon trust. One is told that they have sterling good qualities, sincerity, self-reliance, a sense of duty, much that is respectable, even estimable; but, unfortunately, they have such

Magnice Purdon, By James Hay, 3 vols. London: Blackwood &

an unamiable way of asserting themselves, they exhibit so many asperities of manner and speech, that they remain all their lives objects of dislike and repugnance to the outer world. To this class of virtuous hedgehog Mysic belongs. The only way to make a character of this sort acceptable is to temper the bristles with a vein of latent tenderness. Beatrice may be as wasnish and wein of latent tenderness. Beatrice may be as waspish and trenchant as she likes provided that Benedick is permitted to catch a glimpse now and then of the warm heart and generous sympathies which underlie her bitter mood. There is little of sympathies which underlie her bitter mood. There is little of this undercurrent of sensibility in Mysic. What there is flows in too narrows channel to compensate for the dominant harshness and want of good feeling which she exhibits. She is passionately attached to the memory of her dead mother; but a devotion to the dead which takes the form of habitual injustice to the living is a sin and not a virtue. Lady Macbeth had a kindly recollection of which takes the form of habitual injustice to the living is a sin and not a virtue. Lady Macbeth had a kindly recollection of her definct father; but it certainly does not avail to place her conduct before the dispassionate reader in an altogether amiable light. Captain Raeburn, a weak-minded Fifeshire squireen of dissipated habits, finding himself a widower, determined on a second marriage. A dutiful daughter would have at once seen that such a step was on prudential grounds most desirable. But Mysic's jealousy for her mother's memory did not permit her to take this calm view of the matter, and after a "hot battle" she quits the paternal roof for ever. After this it is not surprising she "felt harder," and became "harsh and repellent," and "acornfully cold" to all mankind except her uncle and brother. "The only thing," we are told, "which at this period saved her from becoming an utterly unbearable, unwomanly woman, was that what she had gone through had intensified the love she bore to her dead mother." We fail to see how this progress in morbid sentiment prevented her, either then or later, from becoming unbearable and unwomanly. On the contrary, it was precisely the extravagant love for her dead mother that inspired the actions which those epithets justly describe. On the death of her uncle Mysic seeks a new home in Australia, where her brother has settled as a colonist near Ballarat. Australia, where her brother has settled as a colonist near Ballarat. But even at the Antipodes her susceptibilities on the score of her dead mother are destined to new trials. Maggie, the child of the detested second marriage, is consigned on the Captain's death to the care of second marriage, is consigned on the Captain's death to the care of her Australian relatives. Here, in spite of sundry petty jealousies in the matter of housekeeping, things go on pretty smoothly between the two half-sisters, till one line day the elder, under a stupid misunderstanding as to the intentions of a worthy young banker who wished to make the younger his wife, flies into a passion, behaves like a lumatic, and utters words so insulting to her stepmether's memory that Maggie is forced to follow her example, and quit the house. A devotion to the memory of a dead mother which takes the form of vilifying the dead mother of another strikes us as an instance of flial plety hardly less grotesque than that of the young wife in Tricache and Cacalet who cannot bring herself to clope with her lover without carrying with her the portrait of her more adorée.

Mysic's Parlon, or rather one should say her reneutance, is

Mysic's Pardon, or rather one should say her repeutance, is brought about in the following manner. She had conceived an absurd and unreasonable projudice against George Garden, who had trifled, as she wrongly supposes, with Maggie's affections. Why she should have opposed a marriage which would rid her of the presence of a sister whom she could not bring herself to love, is a mystery which our author does not explain. By her bitter tongue she had driven Maggie away; but as the result of this was merely to Easten her marriage with the young banker, no great harm was to hasten her marriage with the young banker, no great harm was done. But no sconer are the young couple happily united than the bank is brought into difficulties by the abscending of a fraudulent manager. The bridegroom is forced to hurry over to New Zealand in pursuit, and the bride insists on accompanying him. The vessel in which they are erroneously believed to have embarked on the return voyage is lost with all hands. This news of the shipwreck reaches Mysie, and overwhelms her with hurses and compared to the return to the horror and compunction :-

horror and compunction:—

And with the thought came the appalling self-accusation that of Maggie's death, she, and she alone, were the cause. If ad it not been for her detestable temper, and for her want of control over the violence of her speech, her sister would not have been driven from her home, thereby precipitating the marriage which had led to this latal journey. . . and what had been her object for all the evil she had wought? Because of her mother, and the love she had borne her, and the resentment she had felt against all who were in any way connected with the insult to her memory. Mysle asked herself now how that mother would judge her for what she had done; and she knew that the sentence would not be one of approbation. Would she who had loved all human beings who crossed her path, and had been beloved by them in return, have bestowed a blessing an her daughter, whose hatred, malier, and all uncharitableness had led to such a disastrous termination? Mysle could not think she would. And when she cause to reflect on the way in which she had been brought up by that dear mother, and on the careful solicitude with which her young footsteps had been tended, and contrasted herself with the "mitheriess hairn" Maggie had been when she canno across the weary wa, asking for a home and homelike hearts, and had been set forth to find love among strangers, Mysie saw, as if by a revolation, &c. &c.

Her suspense, however, is of short duration. The next morning Maggie arrives safe and sound, having taken passage in another ship. The salutary revolution in Mysic's ideas brought about by the fright is complete and leating; and the curtain falls on her figuring in the new capacity of indulgent maiden aunt to Maggie's children.

It is a relief to turn from Mysic's violent temper and interminable flow of "Fifeshire Doric" to some of the many minor characters who crop up in this work, apparently merely to chatter and effice themselves. They have little to do with the story; and their

raison d'être is explained by the introductory note in which Mr. Hay informs us that this work has already appeared in a sectation in a Melbourne journal. The temptation to multiple characters, by way of spacing each fresh instalment of a nor with something new and piquant, is one of the chief vise of this form of publication. We have already remarked upon the obtrusiveness of the servants in this work. There is North the Irish cook, and Babbie the Scotch housemaid, and Too the Irish cook, and Bebbie the Sostah housemaid, and Toma Blarnigan, a lazy tippling man of all work, who all chatter most consumedly, each in his or her active dialect. In one chapter we learn "How Norsh went to Chapel"; in another, expressly devoted to "Tom Blarnigan," we are told in great detail how that pleasure-loving person won a fiddle at a raffle. Then there is the Dodder family, equally divided between virtue and vice—the father and daughter simple, loving, and honest; the mother a furious termagant, and the son a thief and forger. The ups and downs of Australian life are illustrated by the experience of Joe Dodder, who gets into trouble through some mining shares. of Joe Dodder, who gets into trouble through some mining shares, which ultimately turn out to be worth 14,000/. Then we have various specimens of the Australian farmer—John Raeburn as various specimens of the Australian farmer—John sacours as placid and good-humoured as Mysic is the contrary; Mr. Campbell, a colonist from the Scotch Highlands, who excites Mysic's wrath by an offer of marriage, received, of course, with a very uncomplimentary torrent of Fifeshire Doric; Mr. Waller, a "great, broad-shouldered, genial Englishman"; Mr. Ingoldsby, who believed the legends that bear his name to be the records of his family history; and, lastly, by way of contrast to those varieties of the virtuous farmer, Mr. Westbury, a fraudulent farmer, and the accomplice of the abscending Netherwood. The last-mentioned accomplice of the abscending Netherwood. The last-mentioned gentleman was the bank manager of Armstrong, Garden, and Co. It required a remarkably smart man to do business in Ballarat; and, without doubt, Mr. Netherwood, who owed much of his success in business to a remarkable squint, which shifted from one eye to the other so as to puzzle and embarrass the observer, is a remarkable instance of Ballarat smartness, very inadequately required by a mild sentence of nine months' seclusion in gaol. It is a curious instance of the propensity which every one in this book has to chatter, that Netherwood, in the crisis of his fate, cannot get off to New Zealand without a talk to the barber who comes to shave off his beard and whiskers: off his board and whiskers:-

"The gentleman as employed me," said the barber, "informed me as you wanted a change of countenance. If we could only get a change of hearts."

"Irop that," said Netherwood, with an oath. "I have no time for any humburgging... only fire away quick, as there is no time to lose."

"You see," answered the barber," "everything in a job of this kind depends upon being artistical. I am an artist, and like to do my work well.....
You see, sir, those eyes of yours are puzzling. So I was forced to fancy to myself how they would be described in print, and to make them as unlike that as possible...." that as possible. . . .?

"Go to the devil!" said Netherwood; "how much do I owe you?"

"Go to the way...
"Three guineas."
"You know how to charge, at any rate."
""""""" and not do it for less—that is, artistically. . . ."

"You know how to charge, at any rate."
"I could not do it for less—that is, artistically. . . ."
"Guineas," said the barber.
Netherwood laughed as he placed three shillings beside the gold. "You are as bad as a barrister," said he.
"Yes," answered the barber gravely; as he pocketed the money, "it is unbecoming the dignity of artists, barristers, and us, to take less than guineas. Before I go, might I solicit a subscription for our little Zion?"

We trust that this was an exceptionally "smart" barber, and that the artistic disguise of absconding criminals is not a recognized branch of the trade in Melbourne. In New Zealand a whole set of fresh subordinate characters come upon the scene; but the reader will probably be content with the samples already culled

from these volumes.

We can say nothing in praise of the style in which this book is written. The story, such as it is, is unskilfully told, and in language which is often slovenly and confused. The capricious use of "Fifeshire Doric" involves a strange violation of probability. It is true that Mr. Hay anticipates the objection by observing that while Mysic adhered to her native dialect, her brother, whose business required him to mix with all varieties of men, spoke with "a form of English words," although with an unmistalably Scotch accent. Speech, however, is not the mere matter of volition which our author would have it, and nothing could be less likely than that a brother and sister, brought up together and fondly attached, should speak two different languages. notice, too, traces of this arbitrary distribution of tongues in an earlier generation of the family, for while Captain Rasbura of Fifeshire talks the purest English, Mr. Archibald Bonthron, his brother-in-law, equally of Fifeshire, talks the most pronounced Seotch.

BRAMES'S COMPARATIVE GRAMMAR OF THE MODERN ARYAN LANGUAGES OF INDIA.

THIS is an attempt to satisfy a need which has been long felt, and to a certain extent the book may be considered sucoeseful. It contains some theories which may be rejected as unsound, and others which are crude and require deliberate investigation, but so far as it goes it is a valuable contribution to Comparative Philology. It is, however, only an instalment of what promises to be a somewhat lengthy week. There is an introduction of one hundred and treater name according with a introduction of one hundred and twenty pages, occupied with a

A Chappenetice Grammar of the Modern Argan Languiges of Salls: to wit, Hingh, Panjabl, Sinthi, Cinjurat, Marchi, Cong, and Bangal.

By John Bannet, Bengal Civil sterving, Sta., See Landon - Ordinar & Co.

Sounds in the subject; the rest of the volume is devoted to Sounds in that no program is made beyond the alphabet. A second volume on the Noun and Prenoun is promised at some indefinite period, and the author hopes in complete the work with a fairly volume on the Verb and Particles.

The languages which Mr. Beames has subjected to comparison and the Hindi, Panjahl, Sindhi, Gujarati, Marathi, Oriya, and Bangail. These are the chief Aryan languages of India in modern days, but there are a great many dialectical varieties which are of very high philological importance. Hindi is the widely spread language which is spoken in the valley of the Ganges down to Rajmahal, where the river makes its bend to the south; Oriya is the language of Orissa, and is the most circumscribed of all the seven. The names of the other five languages indicate with sufficient precision the districts in which they are another. Mr. Beames dent precision the districts in which they are apoken. Mr. Beames very justly remarks that a work like the present is beyond the powers of a scholar in Europe, and could only be produced by one living in India, and acquainted as well with the written as with the vernacular language. With four out of the seven languages fir. Beames claims to be familiar; as to the other three, he has been compelled to trust to books and friendly co-operation.

The languages dealt with in this volume undoubtedly spring from a common source, and that the Sanskrit. It is

a fact enfliciently proved, that the spoken Sanskrit is the fountain from which the languages of Arvan India originally sprung; the principle portion of their vocabulary and the whole of their inflectional system being derived from this source. Whatever may be the opinions held as to the subsequent influences which they underwent, no doubt can fairly be cast on this fusidamental proposition. Sanskrit is to Hiadi and its brethren what Latin is to Italian and Spanish.

The modern Latin tongues of Europe have passed through the intermediate stage of the Romance languages, and the Präkrits of India form a similar break between the modern tongues and the Remis form a similar break between the modern tongues and resold Sanskrit. We had occasion in a former number (Satarday Review, March 1, 1873), when reviewing Dr. Muir's "Sanskrit Tanta," a book of which Mr. Beames has confessedly made great use, to enter at some length into the peculiarities and affinities of the various Prakrits, so that we need not now touch that part of the question. Suffice it to report that the modern lengueses of of the question. Suffice it to repeat that the modern languages of India trace their descent through the Prakritz from the old Sanakrit, or, as Mr. Beames has it, "the spoken Sanskrit." Between the Vedic Sanskrit and the classical Sanskrit of the Ramayana and Maha-bhurata there is a clear difference. Many of the old Vedic forms have, in the natural course of things, worn themselves out; and besides, the grammarians had been at work on the language, and cramped it with their rules, so that Mr. Beames is probably right when he says "that it may be safely denied that Sanskrit was over spoken in the form in which it has been handed down by Brahmanical authors." There must, however, have been a spoken language, and, according to Mr.

Reames,

It may be accepted as a well-established fact that the Aryan races entered India not all at once, nor in one body, but in successive waves of immigration. The tribes of which the nation was composed must therefore have spoken many dialects of the common speech. I say "must" because it is contrary to all experience, and to all discoveries lithere made in the science of language, to suppose otherwise. All the races of the great Indo-European family, whether they migrated into India, Persia, or Europe, have been found, however far back they can be traced, to have spaken numerous dialects of a common language; but this common language is made as one homogeneous speech, spoken without any differences of prenunciation or accent by the whole race, at a time far anterior to the sariiest date to which they can be followed.

There is much of truth and much of suchability in this but will

There is much of truth and much of probability in this, but still it cannot be said that the opening statement in this passage is "a well-established fact." This is the sort of blemish which appears every now and then in the work. The author is ovidently a man of strong convictions, and he does not always take sufficient pains to prove what he feels to be true. It may safely be admitted that there were different dislects, if not even great diversities, of Language among the early Aryan immigrants, but whether those differences arose before or after the settlement in India is hardly capable of proof, and is of no great philological importance. That there was some difference of dialect, and that the classical Sanskrit did not descend wholly and solely from the Vedic, appears to be proved by the fact that the classical Sanskrit contains some words of which the forms are more archaic than the Vedic forms; thus Sans. griha is geha in the Vedic and geha also in Prakrit; Sans. hrita is kāta in the Vedas and of a similar form in Prakrit. Bans. With it Math in the Vedas and of a similar form in Prakrit.

"One of these languages," Mr. Beames goes on to say, "became at an early period the vehicle of religious sentiment, and the hymns called the Vedas were transmitted orally for centuries, in all probability with the strictest accuracy." To this we entirely assent. But he goes on say that

After a time the Brahmans consciously and intentionally set themselves to the task of constructing a served language, by preserving and reducing to tale the grammatical elements of this value the grammatical elements of this varied themselves of the stand tell whether in carrying out this task they availed themselves of the stand of one dislect alone; probably they did not, but with that rare power of analysis for which they have ever been distinguished, they seized on the salient features of Aryan speech as contained in all the dislectional magnitud them into one harmonitous whole.

This view of the matter we must at once reject. These have been writers who have maintained that Zend is a fabricated him guern, and much has been written about the artificial character of the later Sanning; but the theory that charies Sanning; was guerned "consciously and intentionally" from a variety of dialects. era special purpose is contrary to science and will handly

meet with acceptance. If this were a correct representation, Sanakrit would less its philological value, and would not deserve that prominent position it acceptes in the present work. There can be no doubt that the common vernacular of the Sanakrit-speaking people differed considerably from the Sanakrit of the poems—the language of the learned and the vernacular of the poems—the language of the learned and the vernacular of the vulgar differ more or less in all countries; but we know absolutely nothing about "spoken Sanskrit;" the written language is all that has come down to us, and with that we must deal. It may well be, however, that many vulgar words which never found their way into the classical Sanskrit still survive in the modern tongues.

modern tongues.

Passing on to the Prükrits of the drams, Mr. Heames selverts to the fact of the different characters speaking in different dialects, and considers it "highly improbable that this custom represents any state of things that ever existed." No doubt it is; but the practice may be attributed to a conventionality of the stage, a conventionality not altogether unknown to the European drams. The general character of the Prakrits is their breaking down of the original words, the rejection of consonants, especially of compound consonants, and the preference given to vowels—a preference which they share with their counterparts, the Romance languages. The author appears to have grave doubts as to whether some of The author appears to have grave doubts as to whether some of the Präkrits were ever real spoken languages. Quoting some passages, he declares them to be like to "some Maori or other Polynesian dislect rather than to anything Aryan; and I cannot bring myself to believe that the people of India at any stage of their history ever spoke such a form of speech." Very probably not. But it must again be remembered that all these specimens of Präkrits are derived from the plays, and it may have been considered funny and amusing in those days as well as in the present to exaggerate the vernacular peculiarities of the various characters. It is unnecessary, however, to lay any great stress upon the Prakrita of the dramas, as there are ample materials for philolo-gical purposes in the Pali of Buddhist literature, and in the Jain works written in the Maharashtri Prakrit. Strange to say, Mr. Beames, so far as we have seen, takes no notice of the Buddhist Gathas, a species of popular ballads or verses found scattered in Buddhist writings, composed in a corrupt Sanskrit, and apparently intervening between the Sanskrit and Prakrit eras.

As to the period when the Präkrits and Pali were spoken we need not here inquire, but inscriptions show that a language closely approximating to the latter was in use some two or three centuries before the Christian era. Of the modern languages Hindi is the principal and the most ancient. Mr. Beames places its rise in the eleventh century. The great bulk of the words in all these languages is clearly traceable to the Sanskrit, and the difference in the grammatical structure is that usually found between ancient and modern languages. The latter have thrown between ancient and modern languages. The latter have thrown off the synthetical or inflectional form, and have adopted the analytical, in which the work of inflections is performed by separate auxiliaries and particles. Much of this modern grammatical structure is also distinctly traceable to Sanskrit, and Mr. Bannes "strenuously denies" that non-Aryan elements "have had any hand in the formation of the analytical system which the Aryan tongues at present exhibit." He may be right in his conclusion, but he is very inconclusive in his reasons for rejenting the supposed identity of the particle ko, which is the sign of the dative case in the Dravidian as well as in the modern Aryan tongues. With an umbensant dismaragement of the opinions of tongues. With an unpleasant dispuragement of the opinions of others, which too frequently makes its appearance in the work, he charges Dr. Caldwell with having "gone quite wild on the subject" of this particle. But the only way in which Mr. Bennes is able to account for its origin is by stating that the old Hindi form is kaun, that the Sanskrit accusative being formed, as in Latin, with m, nouns unding in ka make their securative in kam, and this kam is the Hindi kaun and the modern ke. This is not impossible nor altogether unlikely; but something more than bare assertion is required before it can be admitted that the ke was thus derived. Nouns in ka are common enough in Manskrit, but still not so common as to be a leading type likely to be seized

upon for such a purpose.

The work brings out very clearly the materials of which the modern languages are composed. Native writers have divided them into three classes, which, to avoid the use of unknown terms, we will call Sanskrit, Sanskritic, and Rural. The Sanskrit words we will call Sanskrit words have the same form as in the parent language; the Sanskrite are modified words, clearly traceable to their origin; the Rural or country words are such as are not thus distinctly traceable. The last is an important class of words, of which too little is at present known to justify an opinion as to their origin. A careful investigation of them may, as Mr. Beames considers, affiliate many of them to the Aryan stock. The proportion which these words bear to the general language is but small. The whole interest of the present investigation is centred in the Sanskritic words, and the manner in which they have descended, whether through the Prakrits or direct from the Sanskrit. One peculiarity, which at first sight is perplexing, is the fact that many Prakrit words show greater attri-tion and decay than the same words in the modern languagestion and decay than the same words in the modern languages—thus Sanskrit rātri, Prāk, rāt, Hindi and other modern tonguages rāt. This proves that, although the Prākrits occupy an intermediate stage, such words as this have not passed down through the Prākrite with which we are acquainted. In the majority of the Prākrite with which we are acquainted. In the majority of the property of the majority of the majority of the modern. Into this class of words Mr. Beames the ancient and the modern. Into this class of words Mr. Beames

1000

enters at considerable length in his chapters on "Sounds," and traces a great number of words from the Sanskrit down to the modern tongues, distinguishing the changes peculiar to the different languages, and showing how one language affects one kind of modification and another a different kind. This is very interestof modification and another a different kind. This is very interesting and instructive, but it might have been made more generally useful. The Indian words are printed in the Deva-nāgari characters, without any transliteration in Roman letters, so that the general student of comparative grammar must learn this character before he can use the book. A stumbling-block is thus placed in the way of philologists who would like to compare the process of derivation as exhibited in the Indian with that of the European languages. Mr. Beames is quite alive to the many remarkable points of similarity between these two families of languages, and he should have afforded every facility for a critical comparison of their laws of change. of their laws of change.

The pure Sanskrit words in the modern language are of little or no philological value. They have been introduced in modern times by writers whose learning, or affectation of learning, has led or no philological value. They have been introduced in incoder times by writers whose learning, or affectation of learning, has led them to employ a Sanskrit word in preference to a vermecular one, just as we have and have had writers who prefer Latin words to good old English ones more vigorous but less imposing. The words which came in when the language was in process of formation adapted themselves to its genius; those of later introduction retain the rigid forms of the original language just as with us. But ws, having once appropriated a Latin word, have generally been content with it, and have not borrowed it a second time; or, if we have done so, the old adaptation and the modern appropriation usually have some difference in meaning. But in the modern tongues of India there are large numbers of words having double forms with no variety of signification. The old one being the form used in familiar language, the modern one occurring only in books or in the language of pedants.

Mr. Beames enters into an inquiry as to the period of the rise of these languages. He fixes upon the eleventh century a.n. as that of the Hindi, the principal language of the group. Panjābi and Gujarāti he regards as subsidiary forms of the Hindi. Marāthi "remained a Prākrit till the twelfth or even thirteenth century, and third, Orlya, which must quite have completed its transformation.

"remained a Prakrit till the twelfth or even thirteenth century, and third, Orlya, which must quite have completed its transformation by the end of the fourteenth. Bangali was no separate independent language, but a maze of dialects without a distinct national or provincial type till the seventeenth or beginning of the eighteenth century." Where these languages come in contact the dialects spoken upon the border partake of the characteristics of each other, and as all the languages are of one stock, and have so many points of redenblance, there seems to be a probability that some of the seven will be gradually absorbed. Mr. Beames thinks that Panjäbi and Gujarati will be assimilated to the Hindi. "Sindhi, on the wast, Bangali on the east, will resist absorption much longer; the former owing to its fundamental divergence of type, the latter by virtue of its high cultivation and extensive literature. Oriya and Marathi may probably continue to hold their own to a more distant time." There is yet another language quite of modern growth, which already holds a leading position, and seems destined to supplant some or all of them. This is the Urdū or Hindustani, a simplified form of the Hindi, and essentially Aryan in its groundwork and grammar, which owes its origin to the intercourse between the Mahommedan conquerors and their Hindu subjects. It has been flooded with words of Arabic and Persian origin, and is especially the language of Musulmāns, but it has origin, and is especially the language of Musulmans, but it has appeal most rapidly, and Mr. Beames has fair reason for his opinion that,

With the barriers of provincial isolation thrown down, and the ever freer and fuller communication between various parts of the country, that clear, simple, graceful, flexible, and all-expressive Urdu speech, which is even now the largest frace of most parts of India, and the special favourite of the ruling race, because closely resembling in its most valuable characteristics their own language, seems undoubtedly destined at some future period to supplant most, if not all, of the provincial dialects, and to give to all Aryan India one homogeneous cuttivated form of speech—to be, in fact, the English of the Indian world.

We look forward to the continuation of this work with con-We look forward to the continuation of this work with considerable interest, and hope that the author's official duties may not greatly delay its publication. We hope, too, that in the mean name he may learn to speak a little more tenderly and respectfully of the works of others. It is amusing to find a young writer characterizing Sir G. C. Lewis's Ethay on the Romance Languages as "a clever little work," but a different feeling is roused when the works of the pioneers of Oriental learning are spoken of disparagingly because they are not abreast with the knowledge and requirements of modern times. Mr. Beames will do well also if he takes a hint that we have given and do well also if he takes a hint that we have above given, and prints the whole of his examples in Roman as well as in Indian letters. The languages of modern Europe and of modern India are so much akin, and have so many points of resemblance, that no bar should be placed in the way of those who would compare them.

SCOTLAND FIFTY YEARS AGO.

SCOTLANI) fifty years ago must have been one of the plea-santest and one of the most backward countries in Europe. Social life in Edinburgh was in those days merry, intellectual, not

Letters on the Affairs of Scotland from Henry Cochburn, Solicitor-roid under Earl Gray's Government, afterwards Lord Cochburn, to may Probable Kranssly, M.P., afterwards the Right Hon, T. F. Lennety, 4818-1850. London; William Rhigway. 1874.

severely shetemious, and, as it still is, unceremotious. Resignationar parties (the comfort of which may, to shy or nervous man, have been chequered by the formalities of "rounds of tousts" and "rounds of sentiments") begat late supper parties, where wine soff wit flowed freely and dry formalities were unknown. Hand-drinking and hard-swearing judges, weary of hanging prisoners on dubious evidence and damning counsel, met at the social board or at the whist-table the very counsel whom they had just consigned to perdition, and drank and talked, and set late hours—sometimes till the courts met next morning—with them and with their friends. And at these pleasant gather-vivial Calvinists with all the sourness of their faith reserved for Sabbath in the kirk; quaint, old-fashioned Scotch ladies, with keen and ready wit unfettered by restraints of prudery; leading politicians on their way to and from London with the latest ansodote of Royalty and the gossip of the Court; and last, not least, the men of letters of the time, the author of Waverley and his friends, the smart promoters of Blackwood's Magazine, and the band of Edinburgh Reviewers. The society of Edinburgh was a brilliant society in those days. The sayings and doings thereof are all chronicled in Lord Cockburn's "Memorials of his Time;" a book which, even in the mutilated form in which it has been given to the public, throws more light upon the social condition of a country, or at least the capital of a country, than any other given to the public, throws more light upon the social condition of a country, or at least the capital of a country, than any other book of recent times

book of recent times.

But, while social life was thus bright and pleasant, the political condition of Scotland was almost incredibly stagnant. Up to the end of the last century many of the colliers and salters in Scotland were in a state of slavery. They belonged to their respective mines, and changed hands when the mines changed hands like any other part of what would now be called "the plant." By an Act passed in 1799 (39 George III. c. 56) it was enacted that all who were still in bondage "shall be free from their servitude." Thirty years after this the whole people of Scotland were, as to political freedom, as the salters and miners had been as to personal freedom. They had no voice whatever in the government of their country; a few Tory gentlemen managed the whole thing. There was nothing like popular representation; there were no emancipated burghs; no rival of the Established Church; no independent press; no free public meetings; no Bank until 1810 that would have free dealings with any one who was not a Tory. Forty-five members free public meetings; no Bank until 1810 that would have free dealings with any one who was not a Tory. Forty-five members of Parliament were sent to represent the country, of whom thirty were sent by the counties, and fifteen by the burghs. The whole electors in Scotland numbered only 3,253 in 1830. The thirty county constituencies did not make up two thousand electors among them, and they consisted of a small body of gentlemen who possessed property, and of electors who had no property but an empty feudal title, acquired for the sole purpose of creating a right to vote. Their numbers being thus limited, they were the more accessible to influence, so that the Government with a little management had no reason to dread the return of a single Opposition member. The burgh representation was ingeniously arranged so as to exclude the possibility of independence. The Town Councils, who were self-electing bodies, returned the members to Parliament. Edinburgh had one member all to itself; but the other fourteen members were returned to represent districts of five burghs each. Glasgow rejoiced in having a fifth part of a member. Fach Town Council of the five burghs elected a delegate, and these five delegates met and elected a member. It was other fourteen members were returned to represent districts of a we burghs each. Glasgow rejoiced in having a fifth part of a member. Each Town Council of the five burghs elected a delegate, and these five delegates met and elected a member. It was not worth while therefore to bribe even the whole of the Town Council; a majority of the delegates was quite sufficient. It was not worth while therefore to bribe even the whole of the Town Council; a majority of the delegates was quite sufficient. It was a simple enough matter to secure a Scotch seat in those days. You had to profess the Government politics and then get into communication with the leading territorial magnate of the district of burghs. "So you represent my Scotch burgh now," said a well-known English Judge to the representative of a cluster of burghs in the South-West of Scotland; "I used to sit for them in the good old days. They are somewhere in Invernesshire, are they not? I was never nearer them than Middlesex. I used to send Lord—— a cheque for two thousand pounds at each election; and he asked the delegates to dinner, and made them drunk, and then they elected me. That was all I knew about the constituency. I got the seat: Lord—— got his two thousand pounds; the delegates got their dinners; so it suited all parties." The people who were supposed to be represented knew little about the elections, and cared less. They might hear the church bells ringing, or they might see the return of their representative posted up in their streets. But the election was performed at a dinner party, or in a private apartment from which, in case of need, the public were excluded. The representation of the people of Scotland having been managed thus carefully, it is not surprising that Scotchmen falled to distinguish themselves in Parliament. For that long century and a quarter from the Union till the Reform Act they all, except one or two, appear to have done nothing but give dumb Ministerial votes.

But even more remarkable than the representation of the scopie w

nelecting the jurous, and a judge appointed by Government picking the jury, even the sechblanes of jurtice disappeared. A case is elted in one of Lord Cockburn's letters in this book in which one Stawart of Archifel was tried for the death of Campbell of Glenure. The Duke of Arquit obtruded himself as Lord Justice General to preside at the trial and put thirteen Campbells on the jury. What possible chance could a Stewart have in such a case with a Campbell for judge, and thirteen out of fifteen Campbells for jurymen? This to be sure was in 1746. But long after this, and before Lord Cachburn's persistent efforts to remedy such a monstrous state of things became successful, juries were invariably selected in this fashion. "Come awa', Maister Horner," said Lord Braxfield to a jurymen (father of Francis Horner) whom he had selected to be one of the jury on a celebrated political trial; "come awa', Maister Horner, and come awa', and help us to hang ane o' thas damned secondrels." "Let them bring me prisoners," said the same eminent Judge on another occasion, "and I'll find them law"; and no doubt he did find them law of a sort consistent with the spirit of the time. spirit of the time.

These strange anomalies in Scotch politics and jurisprudence, and others of a not less glaring character, are the subjects of this clame of letters. The letters are addressed to Mr. Kennedy, an Ayrahire gentleman who happened to be in Parliament during the sen years before the passing of the Reform Act, and who, when appointed to an office in the Treasury, had charge of the Bills relating to Scotland, and acted generally as Secretary of State for that country. His chief correspondent is Mr. (afterwards Lord) Cockburn. He was the centre of the small knot of distinguished with the small knot of distinguished. that country. His chief correspondent is Mr. (afterwards Lord) Cockburn. He was the centre of the small knot of distinguished Whigs who struggled on in Edinburgh against Tory insolence and domination during the darkest part of Scotland's later history, when the Dundases and their underlings were omnipotent and Toryism supreme. The object of Mr. Cockburn's letters to Mr. Kennedy is to keep him instructed in Scotch feeling and opinion when he is in London fighting the Whig battle against almost hopeless odds; to enlighten him as to the different jobs the Tories are perpetrating or intending to perpetrate in Scotland; to suggest ecounter jobs in the interest of the Whigs; and generally to keep him up to the mark in his labours to emancipate his country. "Fight, and on your stumps, for Cowell being joined to Bute, and Orkney to Shetland." "Don't take your eye off the burghs." "Do worry Sir George in our Scotch Committee—and Hum Drum—and all Hopes and Dundases." "For the love of God and the Court of Justiciary, look after the law of combination, since Providence and Huskisson have given Hume a Committee on that subject." "Do you attend the burials of your electors? Murray does." "Our meeting has gone off admirably. . . . Except an indication for ballot, which Oragi instantly put down as not within the requisition, there was no approach to Radicalism. A shilling at the door always excludes that virtue." "The family of Anstruther held this office for the greater part of last century, with a disgraceful job of a salary—about 1,000L a year, I believe. It is now held by Mr. John Ker, W.S., at a salary, I believe, of about 400L! (N.B. A job also. Smite it. He is Lord Dundas's agent, who got it for him.)" "Colin M'Kenzie is going to attempt to resign in favour of his brother William the writer; and the said William is off to London to secure the job, of course through the ——, whose agents he and Colin have long been." Such morsels of whose agents he and Colin have long been." Such morels of advice and information put in pithy or in humorous sentences Mr. Cockburn writes from time to time to Mr. Kennedy. His letters are full of such. Many of them might well be quoted entire, but we must content ourselves with a single extract describing Lord Advocate Jeffrey's reception by his brethren on the Bench when he was made a judge:—

the Bench when he was made a judge:—

Jeffrey is a Lord of Session! an actual red-gowned, paper Lord. A framer and lover of acts of sederunt. An admirer of the Nobile Officium. A deviser of interlocutors. A hater of the House of Lords. He nods over the same bench where nodded the dignified Eskgrove, and aderns the long pure cravat which typified the calm elegance of the judicial Braxfield. I wish you had seen him as he took his seat. Part of the ceremony consists in his going behind their Lordships, the whole being present, from right to left, where his place is, shaking hands with each as he passes. Four cordial shakes there were, Mackensie's, Monorief's, Cranston's, and Fullerton's. But the other nine Had you seen Charles Hope hailing as a brother the Editor of the Edinburgh Review; Balgray polluting his Perthehire pain with that of the framer of the Resoum Bill, elenching his Beacon fingers, as the dog whom in the year rece he caused the Faculty to reject from being even a Collector of Decisions, approached; Gleniee grimning at the challenger of David Hume; and Meadowbenk taking him all in his arms with estentiations hypocrisy.

If all the letters in this huge volume were as good as that just quoted, and if they had been woven together by a well-written enameeting narrative of the events to which they referred, it would have been unnecessary to say one word against the editing and publication of the book. But unfortunately it is not so. There is not even a thread of narrative. The letters are arranged chronologically, and that is all that the editor has contributed. Many of Cockburn's letters are obviously of a private character, and chook burn's letters are obviously of a private character, and been contitled, and nearly every letter from everyhody clas. What possible good could come of preserving, not to say publishing, such a letter se this: letter as this:--

Inther so this:

Prom Viscoust Althory, M.P.
Althony, Outster 50, 1850.

He Duan Sun,—I will be at Breeker's under a time o'clock to meet ruly,

Attenday.

Why insert all the official "whips" sent round by Lord Althory at the beginning of each Sestion to the Government supporture? Why, above all, insert that strange epistle at page 5.75 tracing the pedigree of Mr. Kennedy's "red roan buil Tyrene," through "Alabaster," "Jupiter," "Trunnell," "Smith's Ball," and so on through no less than ten great granddams to "Jolly's Bull"? Such a narrative may possibly be appreciated by an archeological cattle-dealer in the wilds of Ayrahise. It can have no conseivable interest for the ordinary educated Englishman, nor does it throw any very brilliant light upon either the social or the political state of Scotland fifty years ago.

WILLSHIRE ON ANCIENT PRINTS.*

WILLSHIRE ON ANCIENT PRINTS.*

THIS handy epitume of a large subject has been compiled with a twofold purpose. First, it is meant to supply the student of ancient prints with a systematic summary of materials which have become too widely scattered to be readily available. And, secondly, it is intended "to furnish the inexperienced collector with certain instructions which may be practically useful to him at the beginning of his career." That the subject of "ancient prints" has been already worked almost to exhaustion is seen from the authorities which the author impresses into his service. Among English experts are Strutt, Bryan, Ottley, Dibdin, Cumberland, Chatto, Sotheby, and Hamerton; and among Continental writers of monographs or systematic treatises are Bartsch, Robert Dumesnil, Nagler, Blanc, Passavant, Dalaborde, Alvin, Heller, Galichon, Meaume, Parthex, and Weber. Mr. Willshire has shown considerable critical discrimination and manipulative skill in condensing into a compact volume these multifarious stores, though here and there he fails to economize space, as when, for example, he allows himself to be led away into descriptions and criticisms which have only an indirect bearing upon the subject in hand. The motive, however, may be to gain popularity for topics proverbially dry; at any rate, it must be conceded that these pages are made to read pleasantly. The author indeed brings to his task qualifications superior to these of an industrious compiler; he has himself the experience of a collector. Accordingly, under the title "Advice on commencing the study and collector. piler; he has himself the experience of a collector. Accordingly, under the title "Advice on commencing the study and collection of ancient prints" we meet with passages which, though rather elementary, are practical and to the purpose. Take the following:-

During our own time we have witnessed a great change take place. We could tell such stories of hunting up really good things in dirty dut-of-the way shops, known to a few of the initiated, as would not be credited by the more recent devotes.

more recent devotee.

To become the collector of mere curiosities should not be the desire of the true art-student.

We would advise that in forming a collection the novice deal with a few masters only at a time, and that as examples of those are procured, he study them carefully in conjunction with the history of their authors and their works generally, so that when other specimens are met with the collector may be more prepared for their critical examination than otherwise might be the case.

The man of taste, rather than the mere collector, will seek excellence before some peculiarity, not of any value in itself, but perhaps rather detrimental to the artistic merits of the engraving. But to the collector—pure and simple—a "state," a "first state" in particular, however intrinsically poor or incomplete it may be, and from its rarity, however costly, is a thing that must be searched for and ultimately obtained at whatever ventures, otherwise his collection without it remains incomplate.

Engraving, taken in the widest sense of the term as signifying all work of the graver, comprises line-engraving, etching, mezothit, and wood-engraving. In fact little is excluded from this extended category save lithography, a process distinguished as being of the pencil and not of the needle or the graver. An art so varied and multitudinous stretches far beyond the limit of a single volume. As to the artist himself, it comprises the utmost skill and talent represented by the names of Marc Antonio, Albert Dürer, Martin Schön, Rembrandt, Raphael Morghen, Toschi, Strange, Woollett, Sharp, and many others. Moreover the artist who works with the graver has had accorded to him the rank not of a copyist merely, but in some measure of an originator and a creator; his translations into black and white are more than literal transcripts, they often become free paraphrases; and when, as with Rembrandt, Dürer, and Schön, the designer and the executant meet in the same person, the plate has all the attributes of an original product. The hand moves in chedience to the will the lines are recovering to thought in their obedience to the will, the lines are responsive to thought, in their vigour and in their tenderness they speak direct from the artist to the spectator. No execution is more sensitive to the vibration of a nerve, or more instinct with a motive of the mind, than that which arises or more instinct with a motive of the mind, than that which arises from the intelligent and delicate handling of the graver. Form, texture, material, even colour, can all be expressed through lines individually and collectively, and when these lines are composed with grace and symmetry, they are rhythmical as the line of a poem and musical as the cadence of a song. Hence it is that the practitioners of this art have had accorded to them in the Academies of Europe a position scarcely short of the highest. By the sid of some such handbook as that now before us the student many obtain entrance into a world of beauty, senecially if on the may obtain entrance into a world of beauty, especially if, on the case hand, he has strength to rise out of dry and barren anti-quantanism, and, on the other, sufficient art intuitions to enjoy art for its own sales, an enjoyment which brings manifold reward.

An Introduction to the Study and Collection of Ancient Prints. By Sam Hagies Willshire, M.D. Edin, late President of the Medical sty of Lendon, &c. London: Ellis & White. 1874.

17.7

Some famous engravings have had eventful histories, and have passed through strange viciseitudes. The life of an engraving, stretching as it occasionally does over several hundred years, is specially sensitive. A piece of paper is necessarily frail in constitution; it is liable to a thousand misadventures, and though it may happily survive all perils, it will bear on its face the ravages of time. In Italy we have sometimes been interested in tracing the successive conditions of some of the best known plates, such as Raphael Morghen's engravings from Leonardo's "Last Supper," and Sanzio's "Transfiguration." The copper-plates remain still in existence, and are occasionally worked from; but they have suffered so much from wear and retouching that individual lines are in parts lost, so that the latest impressions approach lithographs. We have examined side by side examples from these plates in three or more stages, and the monetary value of the latest compared with the earliest was not in the ratio of shillings to pounds. Travellers in Italy have need to be on their guard against imposition—many are the victims; perhaps for all parties it is safest and best that the copper-plate should be destroyed as soon as its art quality is gone.

The volume before us cannot but suggest, over and above the question of art merit, the great monetary value of now extant engravings—works which as to numbers are reckoned by tens of thousands, as to the producing artists by hundreds and as to large of time by

The volume before us cannot but suggest, over and above the question of art merit, the great monetary value of now extant engravings—works which as to numbers are reckoned by tens of thousands, as to the producing artists by hundreds, and as to lapse of time by four or five centuries. No less than 308 pieces are assigned to Marc Antonio Raimondi, and the number of existing impressions of each plate it were hard to estimate. The prices of course vary vastly according to the state of the plate or of the impression, but we find that at the sale of the Hippisley collection twelve engravings by Marc Antonio realized 1,1816. 18s. A far higher figure than any recorded in this volume was reached a short time ago by the portrait of Arctino. Quite a sensation was excited in art circles when it became known that more than 7006, had been paid by a leading connoisseur for a choice impression of this plate famed for the beauty of its technique; we have just examined this choice impression in the Gallery of the Burlington Club. The exceptional price given is specially indicative of quality fine examples of the print are rare; indeed Mr. Willshire tells us that it is "more difficult to procure good impressions of Marc Antonio than of any other engraver of the same date, and that the mass of examples in the hands of second-rate dealers is absolutely

Passing to Rembrandt the statistics of the auction-room are still more astounding. The number of etchings by this, the greatest master of the art, is set down as at least 350, and it has been estimated that "a complete collection in first-rate condition could not be acquired for less than 1,400l. or 1,500l., though perhaps it might be said with more truth that it would be impossible with any amount of money to make a parfect and satisfactory set, for two reasons." One is that certain rare specimens can saldom some into the sale-room, the other that the number and real of collectors are far in excess of the works in the market. M. Charles Blanc relates an anecdote which serves to illustrate the exorbitant and somewhat capricious rise of prices. This well-known critic and connoisseur possessed in his collection 304 prints by Rembrandt, which he parted with to M. Thibaudeau. At the death of the latter these etchings were put up to auction, but the sale proved a failure. "It seemed," says M. Blanc, "as if there had been a tacit agreement between amateurs and dealers to stop the biddings." But, as a sample of the curiosities of print-dealing, it is added that "aix months later the same prints sold for triple the amount" realized by the representatives of M. Thibaudeau, and that "now they are worth at least five times as much." M. Blanc tells us that he has tried, but in vain, to form another collection; simple amateurs have to give way before "the crushing sombinations of financiers." "Alss!" he concludes, "nowadays Governments and millionaires alone can possess the collective works of Rembrandt in fine condition." The argument is pushed to extremity in the marvellous progression in the price of Rembrandt's masterpiece, "Christ Healing the Sick," commonly known as the "Hundred Guilder" print. An impression cost during the artist's life about \$8. 8s. of oar present money; in 1755 the same work realized only 7l, in 1809 the price had rison to 41l. 7s. 6d.; in the year 1840 the value was further augmented to 231l.; in

Some useful practical suggestions are thrown into the chapter which treats of "the examination and purchase of ancient prints." The tire is told to take up a print, weigh it in his hand, note the thickness, quality, and condition of the paper, determine under a good light and with the aid of glasses its state, whether early or late, the amount of reparation it has undergone, "whether ink, grease, or spots of paint disfigure it, or if there be any staining." The novice is also put upon his guard against copies and other spurious imitations. "Almost all good prints have been copied, some several times over," and certain copies "are as rare, or even rarer, than the original"; thus the question may easily arise whether a supposed Direr may be but a copy by another engraver, or whether a "presumed Cetade may not be an Ostade, nor even the copy of one, but be the legitimate, unpretending work of smother master." It is tree that a great maxy orpies or forgeries make open confession of their parentage by their inferior technique, by coarseness of line, by want of brilliancy, by difference of size, by reversal of the composition, by some variation in the monageum or signature, or

by unwonted characteristics in the paper or the water-mark. Still the utmost caution must be used even by the most experienced collector in dealing with masters imitated so consummately as Rembrandt, Lucas van Leyden, and Ostado. We have heard persons well conversant with the picture galleries of Europe assert that they would undertake to find copylets competent to produce facsimiles of the masterpieces of each great painter in turn. The boast, though a little rash as to such complex products as pictures, would seem to be within the limits of experience in the more mechanical or routine art of engraving. The remember to have seen Toschi at work among his pupils in Parma on the copper-plates from the freezoes of Correggio, and as we passed from table to table, so firmly was the school established in its style that it sometimes became difficult to distinguish between the master and the scholar. Since the death of Toschi we have revisited the same atolier, and can testify that its present director, Signor Raimondi, has so far inherited the talent and the traditions of the founder as to tread step by step in the old footprints. It is true that the entire series of engravings which happen to be now before us are diversified by individual idiosyncrasies; yet the prevailing style is throughout so much of a piece as to make it easy to understand how the great masters of the art have been increased or forged. Of the facility of making facsimiles some curious amples are adduced in the volume before us; thus Mr. Setheby mentions a certain Amunciation, formerly in the collection of Mr. Ottley, of which a facsimile was engraved, and then an impression worked off on old paper. Mr. Ottley would not be persuaded that this print was only a copy until the original had been produced. "That impression," adds Mr. Sotheby, "since the decease of Mr. Ottley, passed into other collections, having been, without the smallest doubt of its genuineness, sold as an original impression." Mr. Maberly tells a still stranger story, which we cond

Hudson the portrait-painter, the master of Reynolds, obtained the very rare etching by Rembrandt called the "Coach Landscape," and gave a supper to his amateur friends at which to display his piece of goed leak. Benjamin Wilson, his brother painter, though at the time selecting great enthusiasm, amused himself afterwards by etching a companion plate in the style of Rembrandt. An impression was sent to Paria, and at the same time the report circulated at home that there had been discovered in France a companion to the "Coach Landscape." Hudson hastened to Paria, bought the print, then, on his return, collected once more all his amateur friends to a second supper, and again received their congratulations. The same party, Hudson included, were shortly after invited to a supper at Wilsua's. When all came to the supper-table, every plate was found turned down, and on the guests lifting their plates, behold under each one appeared an impression of the unfortunate companion of the "Coach Landscape," and under Hudson's plate lay the moncy he had paid to Wilson's confederate in Paris for the purchase.

In the closing chapter, which deals with a difficulty felt by all collectors—the safe and lucid arrangement of prints—we meet with the sensible but obvious remark that the treasures of the connoiseour should be kept in order as the herbarium of the botanist, the cabinet of the numisunatist, and the museum of one engaged in scientific inquiry. Such an arrangement not only familitates reference, but favours study, and invites to the reading up of books which elucidate the history of engraving and the sister arts. Yet further perplexities arise in the conflicting claims of chronology, nationality, and artists. A classification based on chronology, nationality, and artists. A classification based on chronology is the best for continuity of history; nationality favours distinctive divisions into achools; while the separate system which allows to each meater his own portfolio is obviously to the advantage of biographical illustration. But the truth is that no one classification can be of universal application, and the wise man will use only so much of each method as may best meet his wants. We see no mention of a plan which answers well in the Print Room in Dreaden. There, upon the walls, is ranged a representative selection from the larger collection hidden away in cabinets. By this means the student finds visibly before his eye the history of the art as represented by the masterpieces best worth remembrance. We would further suggest that the wall frames should be made with backs easily shifted, so as to admit of a ready change of subject; thus the whole collection might be brought under schilbition in succession. The noble art of engraving is now; also, so much a thing of the past that we can ill afford to have historic treasures hid away in portfolios which are seldom opened.

THORPE REGIS.

WE find in Thorpe Regis the same sweetness and simplicity of tone, and the same keen sense of natural heavity and facility in describing it, which gave the Rose Garden its special charm of tender grace; but we do not think the suther has done so well in certain other essentials of her art as formerly, and with much that is excellent to admire in her new book there is also something that is below the mark to condean. Her first fault is the manner of introducing her characters. It is vegue and puzzling; and, for want of a distincter labelling in the beginning, we have considerable difficulty in niching them into their proper places, and understanding who's who and what relations each beers to the other. They are spoken of as if we ought to know in about them, rather than as creatures perfectly entirely indicated as not intelligence and familiarly indicated as not intelligence and heard

[&]quot; Thorps Busin Bride Author of "The Boss Gerden," Unewayee," &c. des. givale. London: Smith. Edder, & Co. 1874.

381

of for the first time. Hence we have to turn back and place together broken hints and fragmentary indications, which hinders the smooth running of the tele in the beginning, and sets up little barriers that irritate a swift reader. Also, though this is a minor matter, so many names begin with M—e.g. Mannering, Miles, Milman, Maddox, Margaret, Marion, and Marmaduke—that the frequent fricarrence makes it confusing to the eye and monotonous to the ear. This may be a small fault, but true art is free from small faults, and, while it takes care of the weightier matters of plot and character, does not disdain the lighter ones of style and method. This long list of initial M's was an inadvertence doubtless; but criticism knows nothing of inadvertence, and may not

copt such a ples as an excuse.

The theme of the book is beyond the execution. To trace the The theme of the book is beyond the execution. To trace the gradual strengthening and ennobling of a hasty, presumptuous, ardent youth by the fiery process of adversity, and the as gradual lapse of a weak and selfishly desponding nature into absolute dishonour by the pressure of jealousy and fear, needed a more powerful as well as a more subtle hand than that of our present writer. The situation was good, the idea strong; but it is not given to every one to wield thunderbolts or to hold free and clear the slander threads of secret motives; and unfortunately Thorps Regis is only one out of many instances where an author has mistaken his or her best capabilities, and where the work has in con-Above 35 only one out of many instances where an author has instances his or her best capabilities, and where the work has in consequence fallen short of the design. The character of Anthony Miles is a very bright study in the earlier pages. He is one of those high-spirited, irrepressible, self-confident young men who accept every new theory as a proved fact, and hold themselves consequently the reliable provided and put array one to right. accept every new theory as a proved fact, and hold themselves consecrated to reform the neighbourhood and put every one to rights. The old lawyer, Robert Mannering, reported of him that he "nearly blew up Underham with the chemicals he got hold of when that idiot Salter's back was turned"; that he "bribed the doctor's sesistant, and half poisoned poor old Miss Philippa with learning how to mix medicines"; that he "upset his mother, and frightened her out of the few wits she possessed by trying a new fashion of harnessing"; while his brother Charles Mannering adds that, "if the boy goes on in this fashion, there must be a new science created for his benefit." All of which indictments are reasons sufficient why he should not be allowed to see the sacred Farleyense, when he went to the lawyer's garden and interfered in the treatment of a Gesnera which Mr. Robert Mannering had been assiduously cultivating on charcoal and cocoanut; or, as the old gardener contemptuously called it, "itemy nonsense." Itsaides being officious and a universal reformer, Anthony Miles is also conceited and a poet. He had done well at college and gained the Charcellor's gold medal, also as much applause as was good for Chancellor's gold medal, also as much applause as was good for him. Winifred Ohester, the Squire's daughter, a girl with a strong sense of truth and inner nobleness, thought he had gained more applause than was good for him. Wherefore, though she loved him more than any one else did outside the Vicarage, his own him more than any one else did outside the Vicarage, his own home, she never scrupled to say sharp little things which should out his crest when he held it too high. For if Anthony Miles held himself consecrated by nature to the task of putting the world at large to rights, Winifred Chester apparently considered herself told off to that of keeping Anthony himself in a decently humble frame of mind in spite of his temptations, both internal and external, to be over-well pleased with himself. Thus the young reconle, in love with each other as they are quarrel more often than ternal, to be over-well pleased with himself. Thus the young people, in love with each other as they are, quarrel more often than they do anything else, and at one time nearly make shipwreck of their whole happinese together. All this is well told. The young man's raw vanity and hot "enthusiasm for doing good, for upholding right, for beating down wrong"; the girl's impatience at his folkles, his conceit, and at the flattery which he accepted so kindly, and which made what was already bad enough so many degrees worse; his wounded self-love at her uncompromising severity, and her enger with herself when she had given freer vent than usual to her displeasure; his mixture of folly and good feeling, hers of temper and a high standard, make up a very truthful sketch of character and action evidently observed and drawn from the life.

So too is the weakly, self-indulgent, self-bewailing Marmaduke See too is the weakly, self-indulgent, self-bewailing Marmaduke Lee, who means at his hard fate in being kept chained to an uncongenial deak, but who has neither the courage nor energy to lift himself into a higher sphere, and who is of the kind that waits for myens and the falling of reasted larks. He loves Marion Miles, the sister of Anthony the reformer, but he loves himself more than all; and makes use of the girl's devotion to help him in his endeavour to get good terms from Mr. Tregennas, on whose momises he present to rely rather than on his own exertions. He is a despicable character enough; but between weakly, self-indulgent complaints, and the dishonour of opening, reading, and destroying a letter not addressed to him, is a long way only to be reached by many stages. And we do not think that the author has been careful enough to trace these stages. Men will do such dishonest things in their trades and preferations as are sentimed by custom, and think none the worse of themselves; on the contrary, they will think they are many than justified—worthy of special applause if they have define the rick with more than common neatness, and that healthning would be Quinotism and prudery. But the very man ight would oversech him neighbour in a largain, or mislead him by a false statement, would heafine to intercept a letter and the faviolability of a sealed letter is one of them. We till that

Marmadule's beames in this matter is strained and doubtful; and even granting the action, we protest against the accritics of so generous and loyal a girl as Marion to so mean and pitful a secondred. It would have been better for her to have suffered the disappointment of a girl's love affair than the far desperantery which must have fallen on her in later life as she grow to the knowledge of the worthlessness of the man she had married, and the bitter mistake she had made. It is strange how our lady authors vacillate between an amount of high-flown scrupulosity so atterly impracticable and exaggerated as to be good for nothing outside fairy tales, and the estimate of truth and honour as things having no fixed properties, and to be used or abandoned as time and occasion serve. Between these two extremes the simple straightforward manliness which would not for self-respect condescend to a meanness, commit dishonour, or tell a deliberate lie, yet which has a rational sense of life and understands the need of self-preservation, moral and social as well as physical, gets lest in the log of a fancy humanity which gives us anything rather than honourable men, by no means disposed, however, to be the prey of the unscrupulous.

The only other characters which hold anything like a prominent place in the gallery of Thorpe Regis are David Stephens, the deformed and eager Methodist preacher, and Ada Levell, the false and heartless country who thinks two strings to her how better than one, and whose davourite lover is the man who can make the best settlements and give her the handsomest house. We think the author has drawn the character of Ada a little more agitable than was necessary. Her want of truth and loyalty are too extreme; so much so indeed that they create a sort of reaction in the reader's mind; and the natural impulse is to question the securacy of the portrait rather than help in denouncing the iniquity of the character. Here, again, we wonder at that odd blindness to demerit which Anthony shows in his relations with Ada, just as Marion had shown before in her rel tious with Marmadules. The young lady with the long seft curl on her neck seems to us so transparent a humbug that we cannot understand how a clever fellow like Anthony could be deceived by her; or how he could have descreted his loving, steadhest, noble-minded Winifred for such a mass of folly and frivolity. In the same way, too, David Stephens, strong in zeal and faithful to his cause as he is, gives up his heart into the keeping of a girl who is neither of his pessuasion nor up to his religious height, and to leve whom would have been in his mind an awful backeliding and a temptation of the Evil One. But David, too, following the edd law of moral incongruity specially affected by lady writers, holds back the knowledge which would have cleared Anthony from the undeserved suspicion cast upon him by Marmadule's act of villamy and dishonour; and "I thought you hindered the good work" is the reason he gives for a silent complicity in a cruel falsehood by which an innocent man's fair fame was destroyed, and the happiness of a life nearly wrecked for ever. We cannot accept such distortions as these for homest portraiture. Nonconformity does not warp a man's consciones so

Some of the best passages of this book are the descriptive scenes scattered through the pages like charming vignettes. Of these the most neatly and the most completely done is the description of Thorpe Regis itself in the beginning. It has the clearness and the vividness of Dickens without his mannerism, and is an excellent example of photographic idelity and artistic grace. The author has evidently a keen sense of natural beauty, and her power of patting on paper what she sees is equal to her power of discerument. She has also at times, and those by no means rare, a wonderful grace of words, a pictorial power and quaint application that lend colour and life to her scatteness. But these good qualities do not make up for graver defects, and, while giving all due weight to the one, we must not forget to insist on the other.

GERMAN LITERATURE.

IN our notice of Dr. Schliemann's former publication we cheaved that it exhibited the merits and defects incident to the production of a self-taught man. The remark is equally applicable to his recent narrative of his explorations in the Trued, it being always borne in mind that the merits are far more conspicuous than the drawbacks, the farmer relating principally to the manner, the latter to the manner, of his work. Dr. Schliemann's

carrain tradition of Projections Atterthiner. Bericht ther die Augrabaugen in Trajection. We think that W.C. Helarich Schliemann. Leipzig: Breckhess. London: Asier

independence is evinced by his resolve to decide the vexed question of Homeric topography for himself by spade and mattock; his energy is equally shown in the persevering accomplishment of his task. While scholars laboured to reconcile the site assigned for Hion by Demetrius and Strabo with the text of Homer, Dr. Schliemann demonstrated the impossibility of the theory by actual excavation on the spot. Not only were no tokens of the existence of a city discoverable on the site, but the depth of soil was even insufficient for the foundations. The result seemed favourable to the theory which denies Troy's existence altogether; but if Dr. Schliemann was mighty to pull down, he proved no less potent to reconstruct. His speculations had already led him to the conclusion that the site universally assigned before the promulgation of Demetrius's theory was the correct one. Here, he said, Troy will be found; there accordingly he dug, and the results of his explorations must be admitted to have either vindicated his asgacity or established his almost supernatural good luck. The remains discovered by him may never have borne the name of Troy; the identification of the ornaments he has found with Priam's treasure may be wholly fanciful; the destruction of the place may have been unconnected with any expedition from Greece; but, allowing all this for argument's sake, it is still clear that the district has a bond fide history; that men existed and events happened about the period commonly assigned for the fall of Troy which may perfectly well have originated such a tradition as we find reproduced with poetical embellishments in the Hiad. More might be fairly claimed; but this suffices to assert for the Homeric poems at least as definite an historical basis as that of the Italian epics on the Carlovingian cycle of romance; and when it is considered that the latter are to a large extent professedly fantastic, while Homer tells nothing that a romance; and when it is considered that the latter are to a large extent professedly fantastic, while Homer tells nothing that a pious Greek of that day might not accept as fact, it is fair to conclude that the element of definite historical truth in the Iliad is much more considerable than that in the Orlando. The audacity is much more considerable than that in the Orlando. The audacity of Homer's exaggerations is equally palpable, and will occasion less surprise to most people than to the sanguine Dr. Schliemann. "I should have liked," he exclaims, "to have found Troy a thousand times bigger"; but there is no evading the fact that the præ-Hellenic remains only occur over a limited area, everything discovered outside of which is found at a comparatively slight depth, and belongs to the Grecian epoch. The depth of the objects referred by the discoverer to the age of Priam is about eight metres; throughout a further substratum of five or six metres occur other throughout a further substratum of five or six metres occur other remains, generally in stone or terra cotta, which Dr. Schliemann considers to belong to a still more primitive settlement on the site. The actual Troy must have been confined to the enclosure which The actual Troy must have been confined to the enclosure which Homer represents as the Pergamos, or citadel, thus creating the conception of a large surrounding city, which, in fact, never existed. The population cannot, in Dr. Schliemann's opinion, have exceeded five thousand, and even this reduced number he only accommodates by the hypothesis of lofty, many-storied houses; for which, however, he assigns independent reasons. As regards its literary form, the book is an unaltered reprint of letters addressed to friends during the progress of the excavations; and thus preserves the vividness and freshness of the explorer's daily hopes and fears, triumphs and disappointments, far more effectually than could have been accomplished by any subsequent manipulation of the materials. Especially graphic is the author's description of the circumstances attending the discovery of the golden ornaments described as "Priam's treasure," the glitter of which he was fortunately the first to observe—how he instantly called the workmen off to luncheon, and during their absence, with no small risk, disengaged the precious objects from the crumbling ruins, aided by off to luncheon, and during their absence, with no small risk, disengaged the precious objects from the crumbling ruins, aided by his wife, who wrapped them up in her shawl. A full appreciation of his discoveries is impossible without an inspection of the accompanying atlas of 218 folio photographic plates, the character of which we can only briefly indicate. The objects represented may be imperfectly classified as—1. Disks or platters in terracotta, adorned with ornamental devices, among which two descriptions of crosses are conspicuous, with leaf or flower patterns of conventional execution, and occasionally, as it would appear, with rude representations of animals. These occur at all depths from 1 to 16 metres, but never among the remains of unquestionably 3 to 16 metres, but never among the remains of unquestionably Hellenic origin. 2. Stone knives, lance-heads, saws, whetstones, of the usual style of execution, and found at the same depth. The almost total absence of bronze weapons is remarkable, considering the evidence afforded by the elaboration of other objects, and by the occurrence of the mixed metal electron, of a fair degree of proficiency in metallurgy. A few copper knives and spear-heads, however, are found at a considerable depth. 3. Vases and other however, are found at a considerable depth. 3. Vases and other vessels of terra cotta, occurring in extraordinary numbers throughout the entire depth of the excavations, and in general repeating the same five or six varieties of pattern with little alteration. They are usually in a remarkable state of preservation. One only is painted; one or two more are inscribed with what we trust will prove to be alphabetical characters. 4. The singular images which Dr. Schliemann describes as owl-headed, and considers to represent Athene, though some of the accompanying details seem scarcely in harmony with the attributes of a virgin goddess. Grave doubts have been expressed whether the figure actually represents an owl at all, and we decline to stake our critical infallibility upon the question. 5. The so-called treasure of Priam, found at a depth of eight and a half metres under circumstances which in Dr. Schliemann's opinion prove it to have been packed together for hasty removal, as might be expected in the case of the sack of a city, and subsequently exposed to the action of fire. It consists of a variety of objects in gold and silver,

among which are particularly to be noticed some golden beadhands of really beautiful workmanning; clustered gold spangles of an elegant leaf pattern, vasce, bracelets, thin oblong plates of gold, plansibly identified by Dr. Schliemann with Homer's rabarra (the resemblance to the ancient Japanese golden currency is very apparent), and a double-mouthed cup, in shape something resembling a butter-boat, and clearly a modified form of the primitive drinking horn, which the discoverer pronounces a specimen of the enigmatical dimag duismidder. 6. Greek busts and vascs, with a spirited bes-relief and two inscriptions of the first century n.c., found at a depth of from one to two metres, and belonging to New Tilum. The number of small curiosities is infinite; among them we may notice an unmistakable figure of a hippopotamus, bespeakwe may notice an unmistakable figure of a hippopotamus, bespeaking intercourse with Egypt; and a pair of terra cotta vasce pierced with holes, which Dr. Schliemann wildly conjectures to be beehives, but which, as a lady friend points out to us, were probably intended for incense-burners. Dr. Schliemann's minuteness in stating the precise depth at which each object was found is most laudable; we have only to regret that the execution of the photographs is very inferior, and the arrangement not always the most systematic.

Professor Richard Foerster , considering that ancient mythology only admits of satisfactory treatment through the medium of logy only admits of satisfactory treatment through the medium of a series of monographs on the individual myths, exemplifies his principle by a copious treatise on the legend of the rape of Proserpine, as represented both in literature and art. It was originally, he shows, a legend connected with the Eleusinian mysteries, the localization of it in Sicily being a later development. The archeological department of the subject is very fully treated, embracing a description and attempted explanation of all the extant works of antique art bearing relation to it.

Dr. H. Duntzer's † latest Homeric essays are in part a realy to

Dr. H. Duntzer's † latest Homeric essays are in part a reply to criticisms directed against a former work. He occupies a middle criticisms directed against a former work. He occupies a middle position between the conservative and sceptical schools, maintaining the personality and antiquity of Homer, but disputing his authorship of the Iliad and Odyssey in their present shape, which he considers them to have assumed in the time of Pisistratus. He appears to agree with Mr. Grote in the hypothesis of an Achilleis as the original kernel of the Iliad; the admiration aroused by this is held to have produced a school of epic bards, whose performances, so far as available for the purpose, were moulded into their present shape in the age of Pisistratus. It is not explained how, on this theory, the poems should be so devoid of allusions referable to a later date than that of their original composition, which is admitted to have been between B.C. 850 and 776.

Herr Müller-Strübing's endeavour to illustrate the history and constitution of Athens from the plays of Aristophanes I possesses

constitution of Athens from the plays of Aristophanes I possesses the merits of erudition, freshness of thought, and a zeal which fully justifies the use of the adjective polemic on the title-page. Its great defect is a prolivity which will provoke many a reader to cast the volume aside without ceremony, and which is the more very strong because totally needless. The excision of all reduced raises vexatious because totally needless. The excision of all redundancies would reduce the work by two-thirds, greatly to the advantage of Herr Strübing's arguments, which would have some chance of being appreciated when it was possible without excessive fatigue to ascertain what they were. At present we can only say that he is at variance with almost all modern authorities on all the points raised in his treatise, some of the most important of which relate to the administration of the Athenian inances. Pericles, he contends, owed his influence in the State to his office as treasurer, contends, owed his influence in the State to his office as treasurer, not as strategus. The charge against Cleon in the "Knights" is not one of corruption, but of maladministration in having procured the reduction of the tributes paid by the allies. Another long chapter is devoted to Thucydides, whose good faith as an historian is seriously impugned. These views may probably be paradoxical, but they are at all events conceived with an originality which makes it a real subject for regret that they should owe so little to the manner in which they have been put forth.

Oscar Peschel § has made no original contribution to our knowledge of the human race, but we know no treatise better adapted than his to fulfil the desideratum of a manual of the science of anthropology. The inquiry, pushed simultaneously along various

anthropology. The inquiry, pushed simultaneously along various lines of research, has resulted in a confluence of physiological, zoological, philological, ethnological, and historical data, with the whole of which it is vain to expect any investigator to possess a first-hand acquaintance, and ample room remains for the scholar who, without restantions to original preserve in a contract of the scholar way. who, without pretensions to original research in any one branch of the extensive subject, possesses the judgment and ability to take a comprehensive survey of all. Herr Peschel, whose own special branch of science is the geographical, has made hisself fully acquainted with the laboure of specialists in other departments, and is fortunate in possessing a sobriety of judgment especially necessary in fields of research which have sometimes appeared wholly surrendered to extravagant speculation. His part is rather that of an expositor and critic than that of an independent inquirer; the views of various schools are fairly stated, and the

reviewer's own opinion neither obtracts nor concealed. A moderate Darwinian, he is struct to the theories of the polygenists, and attributes a common origin to the human race, at a time, in a place, and under circumstances at present incapable of verification. After a brief discussion of this obscure department of the subject, he peases to those physiological and philological distinctions which must form the groundwork of every classification, but whose various, and to a considerable extent dubious, character renders a scientific arrangement so difficult. Next follows a survey of the material and moral progress of mankind from its most primitive condition to the civilized state; and we finally arrive at the ethnological classification of the race. Herr Poschel admits seven species into the genus homo—the Australian, Papuan, Mongolian, Dravidian, Hottentot, Ethiopian, and Caucasian man. The admission of the fourth of these varieties alone appears open to criticism, and will be contested varieties aloue appears open to criticism, and will be contested alike by the philologists who discover a relationship between the Dravidian and Mongolian languages, and by the physiologists who seek a common origin for Dravidians and Australians in the hypothetical submarged continent called with unconscious satire

Senhor Macedo's work on the geography of Brazil * goes beyond the strict promise of the title in giving also pretty full historical details of the settlement of the various provinces, as well as of the general history of the country, its political constitution, and its general history of the country, its political constitution, and its natural products. A very flattering picture is presented of the suitableness of the Southern provinces for European immigration, while it is admitted that the experiments made in this direction have not hitherto been attended by any noticeable success. Notwithstanding an occasional grandiloquence of style, the work conveys an impression of honesty and thoroughness. Its principal drawback

is the absence of a map.

Herr Louis Rosenthal† is by no means a scientific, or even highly cultivated, traveller; he possesses, however, the gift of quick observation, which, joined to a lively style, makes his unpretending work sufficiently entertaining. Having gone out to Buenos Ayres without any very definite object, he found his way across the Panapas to Chili, where he obtained employment in a coal-mine, and mixed with a society resembling that of Malinilla coal-mines. and mixed with a society resembling that of Melipilla, so famous in connexion with a more celebrated personage. Growing restless, he moved northward, and essayed to establish himself as a photographer at Quito, where however he found that the ground was pre-Diagusted at such want of encouragement, he returned to Europe, bringing a number of views which are to be reproduced in photography. The book is cheerful and amusing throughout, and, if making no material addition to our knowledge, it gives at all events a lively idea of the social circumstances in which a European adventurer in South America is likely to find himself.

European adventurer in South America is likely to find himself.

Although containing much miscellaneous information on subjects connected with natural science, A Polar Summer; cannot be described as belonging to the scientific category of works of travel, but rather to the class in which the object is less the literal reproduction of facts than of the impression left by them upon a sensitive and receptive mind. It is, in fact, a work of that genus of which Bothen affords the best known English type, and, if less intellectually brilliant, is accreely less effective in the portrayal of the most picturesque aspects of manners and scenery. The brevity and intensity of the Arctic summer have in themselves something dramatically suggestive of the contrast afforded by the habitual climate of the country; and this hurry of Nature, conscious sometaing dramatically suggestive of the contrast anorded by the habitual climate of the country; and this hurry of Nature, conscious of the shortness of her season of affluence, is extremely well rendered by the authors' straightforward and eager style, abounding with beauties of detail, but betraying no trace of minute elaboration. The scene of their peregrinations was the region included between the White Sea and the stretch of coast from its opening to the Norwegian frontier; their descriptions alternate continually be-Norwegian frontier; their descriptions alternate continually between land and water, and it is hard to say whether the luxuriant, almost oppressive life of the primitive forests bursting into summer glory, or the bright freedom of the waves, is felt and rendered with more accuracy and charm. There are also pictures of bleak moor and inhospitable wilderness; of the autumnal beauty of the woods during the wane of the year; and of the simple, good-natured inhabitants. A chapter on the Samoiedes is especially interesting, and contains much curious information respecting their religion and superstitions. The natural history of the region is fully treated in an appendix; the chief value of the work, however, consists in its representation, not of the facts, but of the poetry of nature.

The modern age of chemistry dates from the refutation of the phlogiston theory by Lavoisier. Passing lightly over the earlier stages of research, when the science might fitly be described as groping in the dark, Herr Kopp 5 dwells very fully on its subsequent development. His style is clear and easy, and if the dimensions of his volume appear formidable, it is fair to remember the extent and intricacy of the subject.

. .

The little German earthquake of March 1872 had the advantage of taking place in a civilized country, which has occasioned its phenomena to be investigated and recorded with far greater accuracy than those of more memorable convulsions. Here you Seebach has collected three hundred and twenty-four observations, from which, with the aid of mathematics and geology, he endeavours to deduce rules applicable to the deportment of earthquakes on all occasions. on all occasions.

The latest member of Gustav Freytag's + series of historicosocial romances is a decided improvement upon Ingo and Ingrahan.
The approximation to modern times and sympathies is favourable
to a writer possessed of all the advantages that knowledge and to a writer possessed of all the advantages that knowledge and literary dexterity can confer, but destitute of the creative gift. Herr Freytag's accurate acquaintanes with the manners of the eleventh century almost supplies the want of that personal observation which insures the success of his novels of modern life. The feat is not quite performed; the mediaval period is not made actually living for us; we never lose the consciousness of looking on a picture. The workmanship is nevertheless so clever, the style so easy, and the details generally in such excellent keeping, that the Yellowhammers' Next may be perused with very considerable pleasure. The opening chapters, where an impetuous young here struggles to escape from the convent where he has been educated, remind us forcibly of Scott. The subsequent scenes are skilfully contrived to display the feudal system from a variety of points of view, especially as regards the relation of the monarch to his powerful vassals.

Are there Gods 1 is a romance of nearly the same period, scarcely historical, however, and rather a prose poem than a novel.

scarcely historical, however, and rather a prose poem than a novel. The purpose may have been to exhibit the influence of unwented trains of thought upon the barbarous simplicity of a Berserker. Halfred's scepticism, however, contributes little to the effectiveness of the story, which will be most enjoyed if regarded simply as a narrative of wild, stormy Norse adventure. As in Freytag's work, the modern man of letters is somewhat too apparent, but the artifice of composition is frequently relieved by a touch of genuine

Fordinand Löwe's translation of Kriloff's fables 5 is no doubt Ferdinand Löwe's translation of Kriloff's fables \$ is no doubt very close to the original, but its accuracy only serves to bring dut the deficiency of the latter in one of the prime virtues of a good fable—conciseness. The point is frequently frittered away in a multiplicity of minor details, ingenious in themselves, but adding nothing to the general effect. The Russian La Fontaine has evidently gained much in Mr. Ralston's English prose version, by which he is principally known in this country.

It is sufficient merely to name an elegant reprint of the Wunderhorn || as a boon for all who appreciate the careless, inimitable beauties of genuine popular poetry.

ENGLAND AND THE CONTINENT.

COMPLAINTS are sometimes made that English opinions with regard to the affairs of the Continent are not only wrong or hazy, but are capricious, and are often strong one way for a time, and then just as strong the other way. We judge the inhabitants of other European nations, it is said, from our own insular point of view, are very unjust, admire the wrong men, and adore or detest equally without foundation. In contrast with these hifting, confused, and ill-informed judgments, we are asked to compare, greatly to the disadvantage of our more democratic times, the steady purpose and definite aims of England when it was under the rule of a governing class, and was the woul of the coalition against Naroi Eon. No doubt much of what is written and said in England about European nations in these days is not very valuable, but there are sente things to be considered on the other side. It must be remambered that, if we have wrong opinions about other European nations, and do not understand much about them, we are at least the only European nation which trees for know anything about other mambers of the European to know anything about other members of the European family, or to form anything that can be called an opinion about them. Frenchmen—even intelligent and well-educated Frenchmen—know as a rule simply nothing about England or English politics or society. There is in one or two German papers a correspondence from England which is not wholly unmeaning, but that is all that can be said Englishament least try to know something about the Continent The leading papers keep correspondents in every great capital, and all the principal events of European history are copiously and not inaccurately described. When Englishmen read they read to form an opinion, and if they form an opinion they like to express it. The less they know the sooner they are ready to pronounce a judgment, and most readers are naturally guided in a great measure by what their favourite journal says on Continental topics. A great many rash judgments are thus pronounced; but other nations fall into fewer errors, not because they know other nations fall into fewer errors, not because they know more, but because they know less. In the old days a few persons in the upper circles kept up communication with the Continent, and knew something of what was going on there. A definite policy, which was not by any means always a wise policy, which was not by any means always a wise policy, which was not by any means always a wise policy, which was not by any means always a wise policy, was pursued in the experience of France shows that the Empire was only one among many bad experiments which the French the Empire was only one among many bad experiments which the French seem willing to try successively. We must look sometimes and is so wide that no one can say where it begins or where it sends. Everybody judges for himself, in the sonse of repeating as his own the last thing he has found in his morning newspaper. This does not lead to much useful result immediately, but it is the only way in which bodies of men dain begin to move forward. To get them interested it anything is the first step to getting them to have a mederately right opinion about it; and they must pass through the etage of having a fair amount of has wrong opinions to the etage of having a fair amount of has begin to may variability attributed to English opinions. The mispadgments of Englishmen about Continental efficiency of the present and the property of t more, but because they know less. In the old days a few

itself a creditable one Englishmen as they begin to know and think more about the Continent learn to be shy of their own insular prejudices. They try to see with the eyes of others. They are even captivated with Continental things and people simply because they are not English. They distrust the application of general principles which suggests itself most readily, and they are often thus led to take up first this and then that theory about France or Germany, and do not heed the repreach of inconsistency, because they are anxious to understand, or seem to understand, successive sets of people and different guides of Continental opinion with whom they feel they have not much in common, and to whom this very feeling

makes them wish to be generous and lenient.

The Chislehurst demonstration has served as the most recent occasion for unfavourable criticism on English opinion. The Prince Imperial has been flattered and praised, his qualifications for a great station have been, it is said, ridiculously exaggerated, and the Empire is now spoken of as the only chance of safety and happiness for France. It is but a short time since those who are so warm in their admiration of the Empire and of the late EMPEROR lavished all the resources of rhetoric in denun-EMPEROR lavished all the resources of rhetoric in denun-ciations of the Man of Sedan, and of the rotten system which he had built up by intrigue and violence. Possibly there may be some truth in the accusation, and there may be a little want of political prin-ciple at the bottom of this striking change of opinion. But it may be remarked that Englishmen cannot be much blamed for not being wiser in judging of French affairs than Frenchmen. If there has been a change here in opinion as to the Empire, so there has been in France. It is beginning to be seen there that the EMPRIOR was not the only person responsible for the disasters of the war; and weariness of the conflicts of parties in the Assembly, and disgust at the short-sighted policy of the Duke of BROULER, and at the scandals of the Government of National Defence, have made men more ready to pardon the errors and follies of the Government that kept France going in some shape during a long period of prosperity. There does not seem

deser extreme, and to put as thick a coat of whitewash as they can command over the black paint they have been daubing on too liberally before. But it is difficult to say why utterances made in this frame of mind should be dignified with the name of English opinion. They are only at the most contributions to English opinion, and the real English opinion on Continental matters, so far as there ringuish opinion on Continental matters, so far as there can be said to be such an opinion, is not the opinion of such hasty judges, but that of the bulk of moderate and fairly informed men, which in the long run determines the judgment of the nation, and, unless in moments of panic or of popular excitement, determines its foreign policy.

When the matters to be indeed of a real of the continuous continu

When the matters to be judged of are such as Englishmen can understand without much difficulty, when the course of political action has been consistent, and there has been nothing to provoke much censure in the personal careers of those who have taken leading parts in that political action, English opinion is consistent, reasonable, and unmistakable. The King of Italy has now been twenty-five years on the throne, and the Italian nation has just made his completion of this period of his reign an occasion for testifying its good will towards him. Italy owes much to him, and is glad to testify its gratitude. For more than half his reign he has been waging a great battle, for more than half his reign he has been waging a great battle, first against the Austrians, and then against the Pore, and he has won the battle against both enemies. The Italians have shown a very considerable capacity for managing their affairs. They have clung to unity in spite of many attempts to shake them in their purpose; they have gained something like security in most of their provinces, and they have managed in one way or other to get their ecclesiastical religious telegrated even where it might seem most likely to policy tolorated, even where it might seem most likely to give offence. The Duke of Brogniz dired with the Italian Minister to celebrate the day kept in honour of Victor EMMANUEL, and got well abused by the clerical journals for doing so; and, although this is a small thing, it is sometimes by small things that nations can judge how they stand with the world. During the whole part of the Kind's reign which has witnessed the rise and progress of his kingdom, English opinion has never wavered. It has been warm and steady in favour of the Italians. It has applauded their efforts and approved their purpose. Of course there have been Englishmen who have differed from their countrymen as regards Italy. Mr. DISRAELI, for example, tried at one time to hand on the traditions of the Tory party which saw in the temporal power of the Pors a humble means of preserving the European equilibrium, and keeping a hold over the Irish But the general current of English opinion was quite steady, and flowed uniformly in favour of Italy. When, on the other hand, there is great difficulty in understanding the problems to be solved and the ciscumstances in which a foreign country is placed, English opinion is hesitating, or, if not hositating, is hasty, and changes not unnaturally as new facts present themselves, or new ideas are seised. The King of ITALY is not the only sovereign in whose honour a celebration has been going on this week. The Gorman Empanon reached the age of age of seventy-seven a few days ago, and his birthday was made a national festival. What do Englishmen think of him, and of the use he made of his French victories, and of the laws which he and his great Minister are enacting against the pricets? Most sensible Englishmen are content to own that they do not really know what to think. They feel that the limits of defence against future attacks which a victorious nation may wisely set are not to be easily ascertained, and that the issues between Ultramontanism and modern society are very deep and wide. The consequence is that English opinion on current German politics is somewhat hazy and variable; but then it may be almost said to be desirable that this should be so, for the subjects to be discussed and weighed

of faith when his Budget is produced. Mr. DISBARIA has unfortunately been far less discreet than his colleague. Lord Hampton, in explaining the grievances of ratepayers, naturally omitted all reference to the arguments which have been urged against plans for relieving local taxation.
The leading member of a deputation is understood to speak as an advocate, and to present to the Minister and ke addresses only the side of the question which he for the time represents. In his reply Mr. DISBAELI thought fit to use even stronger language than Lord HAMPTON'S, and to pledge his Government to deal with local taxation during the present year. It was, he said, utterly unjust to levy taxes for general purposes on one kind of property; yet every tax, national or local, is levied for purposes not directly connected with the subject-matter of taxation. The excise on spirits is applied to the maintenance of the army and navy, although consumers of gin and whisky have no exclusive interest in the national defences. The house duty is charged on one description of property consisting of houses of 20l. rental, and the Income-tax falls only on incomes exceeding 100l. a year. The reverse of Mr. DISRAELI's proposition would be so far truer that it would be more conformable to universal practice. It is wholly impossible to determine whether a tax on any particular article or on any special kind of proporty is just until it is converted with other kind of property is just until it is compared with other taxes which may perhaps redress the balance. It is also material to inquire into the duration of the burden, for charges which have for a long series of years been taken into account in contracts and purchases involve no injustice to the actual taxpayer. There was far too much of the politician and the partisan in the tone as well as in the substance of Mr. Diskalli's answer to the deputation. It is greatly to be regretted that he has nover acquired a technical knowledge of finance, and also that, unlike some of his predecessors who shared his deficiency, he is not willing to devolve on skilled advisers the responsibility of dealing with taxation.

A deputation was about the same time urging upon the Charcellor of the Exchequer the repeal of a tax which exactly satisfied Mr. Disk Li's definition of a burden imposed for general purposes on one kind of property. The brewer's licence is paid by the brewer out of his own pocket, inasmuch as the custom of the trade and the nature of the article in which he deals render it impossible for him to transfer the burden to the consumer. A charge of 400,000l. a year cannot be distributed over hundreds of millions of pints of beer annually consumed. One of the strongest objections to the arbitrary imposition of burdens on special classes of the community is that the grievance attracts little sympathy from those who are indirectly benefited by the inequality. The prosperous body of brewers are not commonly regarded with compassion, and yet they are entitled to justice. Sir STAFFORD NORTHCOTE was scarcely accurate in comparing their demand for relief with the proposal for abolishing the Income-tax. A fallacy was implied in the question whether the abolition of the licence duty would affect the price of beer; and Mr. Pavon, as the leading member of the deputation, virtually threw his case away when he hastily, and perhaps incorrectly, answered that, although the price would not be altered, a better article would be supplied for the money. The real objection to the tax is that it is arbitrarily imposed, not on the consumer, but on a limited class of producers. The exceptional favour accorded to the representatives of the ratepayers will dissatisfy both the community at large and the more judicious owners of real property. Possessions which are invidious because they are visible derive security from the not less perceptible contribution which they make to public wants. As soon as Sir Massey Lores had obtained his untoward victory over the late Government, Mr. Goschen took the opportunity of proposition large addition to the taxes which already fall on landowners. Notwithstanding the late Conservative reaction, landed Should be so, for the subjects to be discussed and weighed are too large and complicated to admit as yet of a clear and consistent opinion of any real value being formed about them.

RATES AND TAXES AND THE GOVERNMENT.

IR STAFFORD NORTHCOTE has displayed in his answers to a dozon deputations the prudent reticence which may be expected from a Chancellor of the Exchequer. No body of brewers, of maltsters, of farmers, of applicants for the removal of direct or indirect taxes, will be able to charge Sir Stafford Northcors with a breach Commons any selicine for transferring public charges from the rates to the taxes; but Mr. Gladerous and several of his late colleagues will be formidable financial critics, although for the present their party is not strong in muscle. By mixing up politics with finance, Mr. Disharin deprive himself of the right of commenting on Mr. Gladerous's most conspicuous error.

stone's most conspicuous error.

Mr. Laing's speech on the Income-tax was highly senson. able, although he can scarcely have been aware of Mr. DISRAELL'S premature disclosures. It is well that financiers of authority should protest against the cant of describing as a war tax a mode of providing revenue which has been deliberately maintained by successive Governments and Parliaments during thirty years of peace. It is, as Mr. Lang said, uncertain whether there would have been in recent times any surplus if the Income-tax had not supplied a contribution which has never been less than 5,000,000l. By the aid of the Income-tax 40,000,000l. of taxes have been removed, nor is there any reason why the process should now be discontinued. Even the mistakes which the Government is apparently about to commit furnish additional reasons for retaining the Income-tax. When the ratepayers complain that one kind of property is subjected to exceptional burdens, they point directly to a charge on personal property which can scarcely be levied except in the form of an Income-tax. There would have been no pretext for their agitation if it had been possible to raise a local Income-tax in the form of a rate upon personalty. true that while Mr. DISEARLI'S policy of relieving local taxation renders the Income-tax still more indispensable, it is likely at the same time to make it more unpopular. The tradesmen who conduct the agitation against the tax will find a plausible argument in the suggestion that a part of the proceeds is applied, not to national purposes, but to the relief of owners and occupiers. The contributors of the greater part of the revenue arising from the Income-tax have, as Mr. Laing remarked, never complained of the burden. Until lately the agitation was directed exclusively against Schedule D; but in the course of a controversy which has lasted for twenty years some popular delusions have become untenable; and malcontent shopkeepers no longer hope to secure exemption for themselves except under colour of a total repeal of the tax. It is for this reason only, as the spokesman of an Income-tax deputation lately confessed, that the Government is urged by a minority of direct taxpayers to sacrifice an income of five or six millions. But for Mr. GLADSTONE'S adhesion to the clamour for repeal it would have seemed impossible that any Chancellor of the Exchequer should comply with a partial and unreasonable demand.

The advocates of repeal are perfectly consistent when they object to proposals for the relief of small incomes. Any arrangement by which a tax may be made more equitable or less unpopular necessarily weakens the arguments of its opponents, but it is surprising that those who have long denounced the taxation of trade profits should be shocked at a proposal for raising the limit of exemption on the pretext that it tends to confiscation. It has been explained again and again that a small household pays a larger proportional amount of indirect taxes than a large ostablishment; and the rise in the price of ordinary articles of consumption furnishes in itself a sufficient reason for altering the standard of exemption. The argument of conaltering the standard of exemption. The argument of confiscation may be met by the plan of levying the tax exclusively on the excess of income beyond a fixed amount. A part of the surplus could not be better employed than in providing for an adjustment which would in future greatly mitigate the discontent caused by the tax. The House of Commons will probably adopt any Budget which may be proposed by the Government, but, although it is almost impossible to oppose the removal of any burden, the repeal of the Income-tax would cause much dissatisfaction. There can be no doubt that Mr. Lang's speech was received with approval by both sides of the House. The soundest portion of the Liberal party would condemn the policy of unnecessarily increasing or perpetuating indirect talation; and the representatives of the property, if it were relieved of the Incometer, which be liable to the readjustments which were indicated in Mr. Grandwar's Germanick and in Mr. Grandwar and in ed in Mr. GLADSTONE'S Greenwich address. A reduction of the tex from threepence to twopence in the pound would be a feeble compromise, though such a change would be preferable to total repeal. There is fortunately no resson

to apprehend that Sir Szarrono Northcore will begin him official career by converting a surplus into a deficiency. His chief has indiscreatly pledged the Government to bestow a portion of the surplus on the receptyers; and in the presence of a stagnant or declining trade it will be necessary to allow an ample margin between the estimates of revenue and of expenditure. If there is a disposable balance, it would be most advantageously applied to the repeal of the sugar duty, although Mr. Diskarl expressed a contrary opinion in one of his election speeches.

SPAIN.

THE result of the battle which was proceeding on Thurs-THE result of the battle which was proceeding ommander day last between Serrano and the Carlist commander to the west of the beleaguered town of Bilbao will probably On the 26th SERBANO occupied some of the positions of the Carlist army; but in his telegraphic reports he claimed only a partial success. The lines of Somorostro are strong; but the assailants have a great superiority in artillery. The generals in command are the ablest on either side. It is but lately that, for the first time in nearly forty years, the Carlist insurrection has assumed the proportions of a regular civil war. The outhusiasm of the population in the Royalist districts must be thoroughly genuine, for the difficulty of Don Carlos and his generals is not to obtain recruits, but to find arms for the levies which flock to his standard. It is said that whonever one of the onemy's convoys is intercepted, a number of men corresponding to the stock of rifles which may have been captured is immediately added to the Royalist army. No intelligible explanation has been given of the means by which the Pretender obtains funds for the heavy expenses of the campaign. No Carlist lean has been publicly negotieted were in the page, that tiated, nor is it known that capitalists in any country are interested in the success of the enterprise. The insurgents are deficient in cavalry and artillery, but they appear to be well provided with small arms, and the rarity of desertions proves that the troops are not dissatisfied with their pay and provisions. It is now many weeks since they invested Bilbao; they have occupied Olot, and threatened Gerona and Valencia; and in one considerable engagement they obtained an undisputed victory. The summary dismissal of the Cortes and the Republican Ministry at the beginning of the year, and the simultaneous reduction of Carthagena, appeared to be fatal to the hopes of the Carlists; and it is certain that the accession of Pr y Mangall and the Federalists to power would have rendered the Northern insurrection irresistible; but, although a military leader has now for three mouths been at the head of the Administration of Madrid, the war has until lately not been prosecuted with extraordinary vigour. Marshal Sergano probably found when he took office that the demoralization of the army through the former efforts of the Republicans had for the time deprived the Government of the means of terminating the civil war. It was not until the failure of Moriones to relieve Bilbao, that the Chief of the Government determined to take the command in person, and to accumulate on the scene of action all his disposable forces. A struggle between armies which are severally estimated at the number of twenty-five or thirty thousand men is more serious than any contest which has occurred in Spain since the date of the Convention of Bergara. As lately as the autumn of 1872 SERRANO, then commanding in the name of King Amadeo, suppressed the Carlist rising with an army of a few thousand men.

The defeat of the Chief of the Government at the head of the principal Spanish army would probably cause a renewal of the political agitation which has been of late strangely suspended. The Federalists or Socialists, who are the only genuine Republicans in Spain, were strong enough, although they formed a small minority of the whole population, to obtain undisputed possession of power on the abdication of the King. Soon afterwards they summoned a Cortes which, like all Spanish Assemblies, represented only the party which happened for the moment to be dominant. In the course of a few months two or three successive Ministries, consisting of charlatans who were successive Ministries, consisting of charlatans who were consisting distinguishable from traitors, rapidly reduced the constry to a state of anarchy which tended to social and political dissolution. The commencement of a reaction was indicated by the accession to power of Castelan, who had the hencesty and courage to repudiste in practice the dectrines which he had spent his life in preacting. Whose

the Cortes, after a long suspension of its sittings, refused to support the only respectable leaders of the Republican party, the vigorous action of PAVIA and the dictatorship of Serrano were almost universally approved; yet it cannot be supposed that the irreconcilable faction has been either annihilated or converted. The promoters of the Carthagenian insurrection furnished the Carlists with an opportunity of organizing their forces in the North; and probably the capture of Bilbao and the repulse of the relieving army would be regarded with complacency by the Republican malcontents. It is not improbable that the operations of Serrano may be influenced by the fear of political disaffection; but if he has the good fortune to return in triumph to Madrid, he may for the present defy all opposition. His own ulterior designs are only subjects of conjecture. It is possible that he may prefer the Presidency of a Provisional Government during an indefinite time to the exercise of the same power as Regent in the name of Don Alfonso. In common with all other military and naval chiefs, SERBANO is opposed to the permanent adoption of a Republican form of government, and his opinion is probably shared by all the upper and middle classes of Spain, and by a large section of the peasantry. Until the Monarchy is restored, the constitution of Spain will resemble the intermittent form of government enjoyed by the Israelites during the turbulent period recorded in the Book of Judges. When the Republicans from time to time obtain the upper hand, every province will do that which is right in its own eyes, until it becomes necessary to select a Jephtha or a Gideon of the type of Prim or Serrano. The advantages of a settled dynasty will probably be ultimately recognized in Spain, as formerly in the Holy Land.

Don Carlos has lately asserted his claim to sovereignty by a declaration which indicates a sympathetic intelligence of Spanish customs and modes of thought. In anticipation of an early recovery of his dominions, the Pretender annonness that no debts contracted by the Republican authorities after the date of his own entry into Spain will be recognized by his Government. Repudiation is a truly national instinct, and if any capitalist has been rash enough to lend money to any Spanish Government since the abdication of Amadeo, he ought not to complain of an additional and contingent probability of losing his desperate The Republican Government will not even be expected to recognize Carlist loans; and in the provinces which are the scat of war the chances of both parties may perhaps appear to be equal. For several months the Liberal army has obtained no material advantage, and it has suffered several reverses. If the operations had been confined to the land, it is doubtful whether SERRANO could attempt with any prospect of success to raise the siege of Bilbao. Unfortunately for the Carlists their opponents have undisputed command of the sea; and on several occasions they have attempted to disembark detachments of troops in the rear of the besieging army. Some of their enterprises have been baffled by the Carlist commanders; but within a few days General Loma has effected a landing to the west of the lines of Somorostro. The bombardment of the town, which commenced more than a week ago, had about the same time been intermitted; but it was not known at the time whether the suspension was preparatory to an assault, or whether it was caused by a diversion on the part of the relieving army. It is now certain that all the efforts of the Carlist forces were needed to meet the formidable attack of Serrano. Whatever may be the result of the immediate contest, it is not a little surprising that insurgents who commenced the struggle without artillery, with a scanty supply of arms, and without a base of operations, should now be engaged in the siege of an important place, and that they should at the same time make head against an army superior in numbers. It would seem that SERRANO has n compelled to concentrate in the neighbourhood of Bilbao all the troops at his disposal; for, although some small bands of insurgents are said to have been attacked small bands of insurgents are said to have been attacked and dispersed, Saballs and other Carlist leaders have made considerable progress, and Gerona and Vittoria are threatened. In the former civil war, the death of Zumalacarregur before Bilbao was practically decisive of the result. It was then understood that the Northern Fewers were prepared to recognize the Government of Don Carlos if his troops had entered Bilbao. At present no foreign intervention or influence is to be hoped or feared by either combatant; but the defeat of Saballo would justify a demand on the part of the Way if a useful reform is proposed. They aid not abandon attempts to make Lord Wesseler's Act a working reality until they had satisfied themselves that it encesses would justify a demand on the part of the When Lord Carres became Chancellor in 1867, he

Carlists to be acknowledged as belligerents. Internation relations have assumed an entirely different character since it was thought that the interests of England and France required them to support the claims of Que ISABELLA to the Spanish throne. If the grandson of the former Pretender can make his way to Madrid and reduce rival parties to submission, his title will be as good as that of any Monarchy or Republic. Since the departure of King AMADEO no Government in Spain has been sufficiently stable to obtain or deserve recognition from any European

All parties in Spain seem to regard political controversies as obsolete. In former times the Duke of MADRID professed principles closely resembling those of the Count of CHAMBORD and the Legitimist party in France. Reigning by divine right, he was nevertheless disposed to listen to the representations of an elected Cortes; but in general he proposed to restore absolute Monarchy, and, like his predecessors before the Revolution, to maintain a close alliance with the Church. It is a remarkable fact that the clergy have, except in the Northern provinces, abstained from agitation in favour of the Carlist cause. They found by experience that a nominally Liberal Queen could be as much devoted to the interests of the Church as Don Carlos himself; and they prudently abstain from encouraging the host lity of Governments which have better prospects of success. The majority of Spaniards have, up to the present time, scarcely contemplated the possibility of the re-establishment of the male line of Boursons. The chances are perhaps still in favour of Don Alfonso, who has become, with the exception of Don Carlos, the only possible claimant of the throne. The Republic is for the time thoroughly discredited; and it would be absurd to invite any foreign prince to accept the succession of ANADEO. Serrano, who may probably retain supreme power for some time if he succeeds in suppressing the Carlist insurrection, is already far advanced in years; and no other military chief seems likely to succeed to the position which he has acquired by fortune rather than by extraordinary achievements. A nominally constitutional Monarchy would perhaps afford to Spain the best prospect of recovery from the consequences of numerous revolutions which have for the time destroyed both authority and obedience. Don Carlos, though he is the heir of the Bourson Kings of Spain, would be regarded in the greater part of the country rather as a foreign conqueror than as a legitimate occupant of the throne.

THE LAND TRANSFER BILLS.

ORD CAIRNS has taken up the measures which Lord Selborne introduced last year for the simplification of the transfer of land. They really owe their origin to Lord Cairns himself, being mainly based on proposals which he made as long ago as 1859, when he was Solicitor-General under Lord Derby's Government. They then dropped, and the subject of Land Transfer passed into Lord Westbury's hands. He adopted a completely difference of the subject of Land Transfer passed into Lord Westbury's hands. Lord WESTBURY'S hands. He adopted a completely different system, and his system proved a total failure. He set up an expensive office for registration, and this was all. It turned out that there was nothing for the office to do. Lord WESTBURY'S scheme was a scheme, not for registering titles, but for registering statements about title. It provided a registry, not of the fact of ownership, but of deeds; and, as Lord CAIRNS said on Thursday night, it provided a registry of deeds of the worst kind, because under it the person registering had the power of placing on the register not the deeds themselves, but a statement of what he considered to be the effect of each particular deed. The Act was a dead failure, and, as the CHANGELLOR stated, the cause of this failure lay entirely in the Act itself, and not in any indis-position of solicitors to take advantage of its provisions. Every set of persons in turn gets a good word said for it, if it waits long enough; and Lord Carris took occasion in his speech to say a good word for solicitors. The more eminent members of that profession are, according to his experience, most anxious for every legal improvement, and never let any consideration of their own interests stand in the way if a useful reform is proposed. They all not abandon attempts to make Lord Westerser's act a working reality until they had said themselves that it entailed experter expenses and record teamble than had been

appointed a Royal Commission to inquire into the working of Lord Wassaux's Act, and that Commission strongly recommended that all attempts to work on the basis provided by Lord Wassauxy should be abandoned, and that there should be a recurrence to the principles on which the Brand Lord Carres in 1859 had been framed. Different Vitical obstacles stood in the way of any practical effect being given to the recommendation of the Commission until last year, when Lord Selbonne brought in his Bill, which was in the main an embodiment of what the Commission had recommended. Lord CAIRNS gave a general approval to its provisions, as was natural, considering that he was the original author of the system it established, and that that system had received the sanction of a Commission he had appointed. But the Judicature Bill stood in the way, and there was no hope of the Land Transfer Bill receiving sufficient attention last Session to allow of its being adopted by Parliament. In order, however, that time might not be wasted, Lord Cairns made a wise suggestion which Lord Selborne wisely adopted. This suggestion was that the Bill, or rather Bills, should be placed in the hands of a counsel of the highest eminence, so that they might be moulded most carefully and every thing done to make them practically operative. SELBORNE selected Sir Charles Hall for the task, and the mode in which the difficult task was discharged proved so satisfactory as to elicit from both Lord CAIRNS and Lord SEL-BORNE the most enthusiastic expressions of approval. When it became probable that the days of the GLADSTONE Government were numbered, but before the change of Ministry was actually made, Lord Selborne sent to Lord Cairns all the materials which he had collected for the Bills of the coming Session relating to the Transfer of Land; and it is in this way that Lord CAIRNS has been able to get his measure ready for the opening of the Session. The measure now proposed to Parliament is therefore the work of two Chancellors of the highest eminence labouring together, and assisted by the most eminent conveyancer of the day. If such a measure is not, so far as it goes, a really good measure and likely to work well, it is difficult to see how

any satisfactory measure on such a subject is to be framed. What Lord Caiers proposes is that there shall be a registry, not of deeds, but of title. He formerly wished that the whole system of registration should be under the control, not of a Registrar, but of a body having a constitution and powers similar to those of the Irish Landed Estates Court; and last year, when Lord Selboers proposed to use the services and staff of the Registrar under Lord Westruer's Act, Lord Caiers repeated his opinion that something in the way of a Landed Estates Court would work better. He has now, however, adopted Lord Selboers's suggestion, partly because, having the responsibility of office, he is not quite happy at the thought of having two establishments, one to do nothing, and the other to do everything, and partly because he thinks that it might not be easy to define the relations of the Judges of the Landed Estates Court to the Supreme Tribunal of Judicature which will soon come into play. The new system is to be worked through a Registrar, and is at first to be worked only in London, power being reserved to set up district branches of registration in any place where business is found to be so extensive that there is a prospect of the costs of such establishments being met by the receipts. There are three main questions as to such a scheme as Lord Caiers proposes. The first is, What is to be registered? the second is, What shall be the effect of registration? and the third is, Whether the adoption of the system shall be compulsory? Lord Caiers proposes to register fee simple estates, leaseholds of a certain length, and charges where mortgages are on the estate. The effect of registration will be of three kinds, the Bill permitting the registration of three sorts of titles—a title absolute and indefeasible; a title limited that is certified to be the owner. The attainment of an absolute title is also to be sided by three changes. If persons come before the Registrar may, under the sanction of the Court, regist that a title

the Registrar will be at liberty to receive as facts recitals in deeds twenty years old. On the other hand, Lord Camus does not propose that the registration of an indefeasible title shall settle anything as to boundaries. The owner of the estate will not be certified to be the owner of every inch of ground included by reputation in the estate. His neighbours will be as much able to dispute a boundary question with him as ever. The reasons given by Lord Caires for leaving the question of boundaries still open seem conclusive. If the registered until every adjacent landowner had been called on to make and sustain any claims to boundaries he might think proper. At present, although boundaries are very often uncertain, there is very little contention, and still less litigation, about them. But if every adjacent landowner had to assert or abandon his possible claims whenever a plot of land was sold, there would be an amount of squabbling and delay which would render registration almost impracticable. Thirdly, is the adoption of the system to be compulsory? Lord Cairns proposes that for three years there shall be no compulsion at all; and that after the expiration of three years there shall be compulsion in a very gentle, but, as the Chancellor believes, perfectly effectual, shape. The purchaser will be then so far under an obligation to register, that, until he does register, he will obtain, not a legal, but only an equitable title. The inconveniences to which he would be thus subjected are of a kind too technical to dwell on, but they are sufficient to make every prudent solicitor advise his client in ordinary cases to register; and every one knows that, in land purchases, what the solicitor advises is, in ninety-nine cases out of a hundred, practically done.

a hundred, practically done.

Lord CAIRNS, like Lord SELBORNE, adds to his main measure a subsidiary Bill for shortening the periods of limitation in respect of suits relating to real property. The periods of forty years, twenty years, and ten years fixed by the Act of William IV. are to be cut down to thirty years, twelve years, and six years respectively. Lord CAIRNS has, indeed, done little else than make Lord Selborne's Bill slightly milder. The period after which some sort of compulsion was to be introduced was fixed by Lord Selborne at two years, while the Conservative Chancellor tries to make his landed friends slightly more comfortable by substituting a period of three years. Where Lord Selborne, in altering the Act of William IV., chose ten years and five, Lord Cairns gives a little longer grace, and chooses twelve years and six. The recognition of absence beyond the seas as a ground for the extension of the time during which suits relating to real property may be brought was abolished by Lord SELBORNS in his Bill of last year, on the ground that in these times of locomotion and newspapers a man beyond the seas is practically as likely to be aware of his rights as a man staying in the United Kingdom. Lord Cauns last year objected to the innovation, and, as he was silent on the subject on Thursday, it may be presumed that he still retains his opinion. The CHARCELLOE has a third measure of his own, which is beyond the scope of Lord SELBORNE'S Bills of last year. This measure proposes to remedy some technical faults in the existing law of vendors and purchasers, which Lord CAIRMS thinks give rise to needless inconvenience. On the whole, the CHANCELLOR'S scheme, or rather the scheme of the two Chancellors and Vice-Chancellor Hall, will probably be found a safe and simple one, although its operation must necessarily be slow, and must always be limited. It is, as it purports to be, merely a scheme for simplifying the transfer of land. With interests in land apart from transfers it makes no pretensions to deal. Land that is not sold or meant to be sold will be unaffected by it, and it will be only gradually that any great part of the land of England will get on the register. But the saleable value of land that is once on the register will be so much increased that landowners will be inclined more and more to take advantage of the Act, and will like to think that they have augmented the market value of land with which they have no intention of parting. At first the Act would make little practical difference, but time would extend the sphere of its beneficial effects, and it may be confidently expected that before a quarter of a century has elapsed a very considerable portion of English land would be so held that it could be transferred to a purchaser quickly and at a very moderate cost.

THE FAMINE CORRESPONDENCE.

THE Abstract of Correspondence between the Government of India and the Secretary of State in Council relative to the Drought in Bengal is as satisfactory as abstracts usually are. It gives what the compiler considers most important in a vast body of correspondence extending over a period of three months and a half. Unfortunately there may often be two opinions as to what is most important, and in this respect the compiler's judgment appears at times to have been at fault. Thus of the VICEROY'S Minute on the non-prohibition of exports, which has already been printed in the English newspapers, he gives both the substance and the full text, while of Sir George Campbell's first letter, recommending prohibition on the ground that "every grain "of rice would be wanted," there is only a short abstract; and of a further letter urging the same policy in more detail we are only told that it was "powerful." Officials to whom the preparation of abstracts is entrusted ought to know, or ought to be taught if they do not know, that what is wanted from them is the contents of documents, not their private opinion of their value. The full text of these letters from the Lieutenant-Governor, and of any others which urge, or appear to urge, upon the Vicenov the adoption of a policy different from that actually adopted, ought to be printed at once. If there is any large failure in the measures taken to save the population of Bongal from death, the blame will lie in the first instance upon the VICEROY, or upon the LIEUTENANT-GOVERNOR, or upon both. It is only fair that the case of both authorities should be before the English public during that preliminary period in which opinion is slowly forming. Upon the particular question of probibition of exports, Lord Northerock's apparently convincing arguments cannot have their full force until they are set side by side with the reasoning which they were intended

It is especially necessary that the minutes of the Conference held at Calcutta on the 10th of November, and of Sir George Campbell's letters of the 10th and 11th of November, should be published in full. The Times, which has at length abandoned the theory that the prohibition or non-prohibition of exports is the cardinal point of a famine policy, now maintains that this Conference disclosed the *beginning of a "vastly greater" difference between Sir George Campette and Lord Northebook. It is not easy, until all the particulars are before us, to determine how far this is true. In his letter of the roth of Northebook. true. In his letter of the 10th of November, Sir Groren Campella says, according to the Abstract, that "the most "pressing measure was the scattering broadcast of relief houses, so as to have one for every group of villages "within reach of every one's home, and the purchase, "transport, and storing of grain in the places in which it " was most likely to be wanted for purposes of relief." At the Conference on the same day he asked " whether any and "what provision was now to be made for eventual "charitable relief? Was Government to buy and store "grain at once for charitable relief?" It is not quite clear whether "relief" in the letter means the same thing as "charitable relief" in the questions asked at the Conference. If it does, it is important to have more information as to the part assigned in Sir George Campbell's mind to charitable relief and relief given in the shape of employ-ment. In his letter he seems to make no mention of the latter sort of relief, and to write as though charitable relief, and not merely relief in the shape of employment, must at once be brought within reach of every one's home. If this is what his letter really says, there does seem to have been a serious divergence between his idea of the proper famine policy and the VICEBOY'S. The rule which the VICEROY laid down at this Conference was borrowed from the Report of the Orissa Famine Commissioners, of whom Sir George Campbell was one. It was this-" That Govern "ment should supply employment by means of public "works, and that the public should supply the means of gratuitous relief to the helpless." If Sir George Campnear to urgo immediate provision for eventual charitable relief, is it to be understood that his experience in Bengal has led him to modify his faith in the rule he laid down for Orissa? For ourselves we see no reason to depart from the opinion we have already expressed, that a combination of Government and charitable agency tends to paralyse both. Lord Northerook stated at this Conference that the Government would contribute an equal sum to

v³

that collected by private persons, but at the same time he adopted the declaration of the Lieutemant-Governor of the North-West Provinces in 1859, that every district officer is to be held "personally responsible that no death "occurs from starvation which could have been avoided "by any exertion or arrangement on the part of the district officer or his staff." When the personal his are asked to give money for the relief of distress are told in the same breath that, if they do not give, the Government will take care that nobody is the worse for their refusal, they cannot help seeing that the real gainer by their liberality is the Government. If the Guardians of the poor in England were to ask for help to support the paupers in the several workhouses, every one would feel that, as the Guardians are bound to support them anyhow, such private contri-butions would really be in aid of the ratepayers, not of the paupers, and we can see no difference between this case and the case of private contributions to the relief of the sufferers in Bengal. Nor do we believe that the public, whether in India or at home, will see very much difference either. A certain amount of money will come in as an evidence of personal sympathy with the distressed population; but when it has all been reckoned up, it will remain a more when it has all been reckoned up, it will remain a more nothing in comparison with the necessity that has to be relieved. Yet the uncertainty how much will come in in this ray, and the conscious and unconscious waiting to see precisely what does come in, must to some extent delay the acticle of the Government in providing for the demands which they will have to meet in the end.

As regards the transport of grain into the interior, the Abstract, or the correspondence, is unsatisfactorily meagre.

Abstract, or the correspondence, is unsatisfactorily meagre. In the seventh Special Narrative, dated the 31st of December, the LIEUTENANT-GOVERNOR says that transport will be particularly difficult in the districts of Tirhoot and Chum-

parun, and in part of the division of Rajshaye. On the oth of January the Vicenov complains that accurate information as to the sufficiency of country carriage had not been obtained, "though the attention of the Bengal "Government had been repeatedly called to it since "November." This was after a conference with the IMEUTENANT-GOVERNOR and his Secretary, at which it is also stated that "the question of constructing trumways was "discussed, and the project was abandoned." By the 13th of February the Vicenov had seen ground for distrusting the wisdom of this resolution, and an engineer had been dispatched to Tirhoot to construct a tramway from the Ganges to Durbhunga. In this despatch occurs the the Ganges to Durbhunga. In this despatch occurs the first mention of the Viceroy's dissatisfaction with the information supplied from Tirhoot. Sir Richard Templa had reported that provision still had to be made for the conveyance of the grain to the villages, and though Sir Grorge Campbell, in forwarding his minute, expressed some doubts as to whether it did not over-estimate the needs of the Tirhoot districts, the Government of India formally records its disappointment "that local officers had so long neglected fully to appreciate "that local officers had so long neglected fully to appreciate the requirements of that part of the country, and had "thus postponed to the present time arrangements which "thus postponed to the present time arrangements which "should have been made many weeks before." The want of organization of which Mr. Forens's letters contain so many examples is thus explained. The proportions of the famine have been under-estimated by those who had the best means of gauging them, and the consequence is that they have been caught unprepared. How far the blame must rest upon the local officers, and how far upon those of

shaye, but upon this point the papers are silent.

The Home Government has been blamed, as we think unfairly, for not making a grant in aid of the Indian Exchequer. The time has not yet come for deciding by whom the cost of the famine is to be borne. That is a question which cannot be settled until it is known what the cost will be, and upon that point unhappily full knowledge will not be attainable till the autumn. All that can now be done is to spend without stint, and when the money to do this is to be raised by a load, it is perfectly possible to postpone all further considerations. Whether that loan shall ultimately be availed by the the Considerations. postpone all rurtner considerations. Whether that loan shall ultimately be repaid by the Government of the land, or by the Imperial Government, or by the two Governments jointly, must be left for future consideration. The Home Government is responsible in the less most for the finances

is even more essential to know is, whether there is any

ground to fear a similar under-estimate in the case of Raj-

What

of India as well as for every other particular of its adminis-tration. The discussion of these questions may properly be left to the spring of 1875.

THE HOME BULE DERATE.

A. BUTT and his supporters did neither good nor harm to their cause by the Amendment and division on the second night of the Session. It was impossible that they should delay for any long time the expression in Parliament of the opinions which they had professed at the hustings; and at the same time they could not be expected at once to introduce a definite measure which would have exposed them to special criticism as well as to general repudiation of their principles. It can have mattered little whether they betrayed a little earlier or later the secret of their weakness both in argument and in numbers. At the last moment Mr. Burr attempted to evade a division, having perhaps, when he moved his Amendment, hoped that some one at least of the English members who had pledged themselves to Home Rule for the purpose of the elections would take the opportunity of estensibly redeeming his pledge. It is satisfactory to find that the minority consisted exclusively of representatives of Irish constituencies, although Sir G. Bowyer and Lord Robert Montagu thought fit to remember that they were Catholics rather than that they were Englishmen. The Irish voters of Newcastle and some other Radical boroughs will now understand that there are higher duties than the performance of election

It is great sin to swear unto a sin; But greater sin to keep that sinful onth.

The genuine Home Rule party rallied fifty votes out of fifty-eight; but not a single independent member could be found to avow himself a convert or a dupe. Although the Amendment only referred to the alloged dissatisfaction of the Irish people, it was understood on all hands that the question at issue was the partial or total dismemberment of the Empire. Although, in apparent conformity with an understanding among themselves, the speakers in favour of Home Rule repudiated the doctrine of separation, nearly all of them contradicted themselves by appealing to the precedent of Canada and Australia. All the great colonies are now virtually independent, except as far as they think fit to retain a nominal connexion with the English Crown. It is distinctly understood on both sides that if at any future time the Dominion of Canada should prefer absolute sovereignty in its own territories, an acknowledgment of full independence would not be withheld by England. The colonists are not represented in the Imperial Parliament, which in turn exercises no control over their domestic or financial legislation. Neither Canada nor Australia contributes to the cost of the Imperial army and navy; nor would they share the burden of any war in which England might be engaged, unless they found it necessary to provide for their own defence. Both Canada and Australia have, in disregard of the interests of English commerce, established protective tariffs, which have, with or without remonstrance, been allowed by the advisers of the Crown. The establishment of an Irish Government of the Canadian type would be equivalent to separation.

Since Mr. GLADSTONE implicitly believes the assurances of loyalty which are tendered by the Home Rule members on behalf of themselves and their constituents, it is perhaps not surprising that he is still unable to understand the nature of their principal demand. It is true that their explanations of their purpose are abundantly ambiguous; but the confusion is caused, not by their ignorance of their own meaning, but by the difficulty of reconciling their moderate language with their dangerous design. Those who are not conventionally incapable of seeing visible objects which lie straight before them have no need to look further than the proposed government of Ireland by Ministers exclusively responsible to an Irish Parliament. If the speeches and resolutions of public meetings have any significance, one of the first conditions of obtaining power in Dublin would be a pledge to procure the release of the convicts who are a litter sentence for civil or military crimes con-nected with the Fenian conspiracy. As some of the crimi-rals are within English jurisdiction, the refusal of the Crown to release the prisoners would produce an immediate collision between the Krish and Imperial Parliaments. It

are, nearly without exception, Englishmen and Scotchmen. If the claim were resisted, a conflict of authority would be immediately produced; and perhaps it was in antinipation of difficulties of this kind that Sir G. Bowyer proposed the establishment of a Supreme Court, to be copied from the American Constitution. It was impossible to reduce to a more intelligible and illustrative absurdity the numerous anomalies involved in the demand for Home Rule. That a court of law should determine the limits within which the powers of the Imperial Parliament are to be exercised is a proposal which has never before been gravely submitted to the House of Commons. Mr. Sullivan, whose elequence has been justly praised, declined even to discuss the question whether Irish independence would be used for the oppression of Protestants by the Catholic priesthood and oppression of Protestants by the Catholic priesthood and their adherents. It is probable that Mr. Sullivan has nepersonal sympathy with projects for Catholic ascendency; but when he sees the English members for Irish boroughs by his side, he can scarcely fail to suspect that religious he well as political objects are involved in the agitation for Home Rule. Neither Lord Robert Montage nor Sir-George Bowyer can claim to be an Irish patrict; nor can there be any doubt that in their present relations with the Home Rule party they regard only the interests of the Church. If the priests and the Fenians were neutral there would not be half-a-dozen Homo Rule members in In one of the most important counties of the House. Iroland, a Home Rule candidate supported by the Roman Catholic clorgy was utterly defeated by a Fenian opponent, who is now counted among the loyalists under the lead of Mr. Burr. In other districts the priests have used their influence on the side of Home Rule, although it is fair to admit that Cardinal CULLEN refused to take part in the opposition to the re-election of Colonel TAYLOR.

The grievances which were alleged by the supporters of the Amendment had little to do with the real issue before the House; and, on the other hand, the objections raised to the scheme of Home Rule by Mr. Newdrants and Mr. GLADSTANN are not the true objections to the project. Mr. Burr would readily concede any security which might be required against the undue interference of Irish members with the special interests of England and Scotland; nor would he be unwilling in the last resort to dispense altoether with the representation of Ireland in the Imperial Parliament. The more closely the rights of Irish members were restricted, the stronger would be their claim to the exclusive control of Irish affairs, including all affairs which might be common to Ireland and to the rest of the kingdom. Partial objections to the details of a scheme which is absolutely inadmissible as a whole only strengthen the case of the promoters. Arguments which tend to show that a particular project is objectionable almost necessarily admit the possibility of improvement. Home Rule ought to be rejected because Ireland must be contented to be ruled. not at home, but at the seat of the Imperial Government. Either the legislative or administrative defects which are alleged to exist admit of remedy under the present system, or they must be recognized as unavoidable. They could only furnish sufficient reasons for the concession of Homo Rule if they were of so intolerable a nature as to ontweigh the evils of separation. The hardships of which Mr. Burr and his supporters complained are the results not of English legislation, but of the unhealthy condition of Irish society. Although it is perhaps proper on all public occasions to profess a sanctimonious horror of suspension of constitutional rights, it is much better that journals should be restrained from propagating treason than that jurors should acquit the writers in violation of their oaths. The violence of the so-called National Press of Ireland is, even under the coercive laws, such as would not be tolerated in any other part of Europe; and if they were exempted from necessary restraints, rebellion and murder would once more be preached with impunity, and perhaps with success. Mr. Johnston's statement that some of the patriotic newspapers professed an eager desire for the victory of the Ashantees over the English troops was perfectly well founded. It is again perhaps shocking that Westmeath farmer should require a licence before he can carry a gan; but before the Act was passed, every farmer and every landlord in Westmeath was exposed to imminent risk of death if he refused to obey the commands of secret conspirators acting through hired assessins. collision between the Irish and Imperial Parliaments. It A purely Irish Government must either adopt similar is almost certain that an Irish Parliament would impose an imstheds of protecting life and property, or it must leave enoughteens tax on the property of absence hadderds, who them unprotected. Mr. Mittensell Hawar may claim the

merit of having discovered the oddest grievance which has at any time been attributed to Kinglish misgovernment. According to Mr. HENRY, the price of labour has increased in Ireland so much that farmers can now hardly cultivate their land. "The result was that during the year just "closed 217,000 acres of land in Ireland went out of cul-"tivation; 37,000 acres of land in fremme went out of cul"tivation; 37,000 of these acres were turned into grass
"farms; but that left 180,000 acres which had gone to
"absolute waste." It is strange that the demand for fixity
of tenure should be urgent when the land is rapidly going out of cultivation; nor is it easy to understand how the establishment of Home Rule is to remove the evil which Mr. MITCHELL HENRY deplores. It may, however, be well that the Irish people should understand that one of the blessings which are to result from the institution of national independence will be, though by an unexplained process, a beneficent and large reduction of the rate of wages.

THE SEPTENNATE.

THE nature and duration of Marshal MacManon's authority continue to be the subject of much languid controversy. None of those who take part in it, except perhaps a portion of the Left Centre, are entirely outspoken as to the interpretation which they put upon the vote of the Assembly which created the seven years' term. The Right are naturally the most inclined to be straightforward, because on any strict Monarchical theory the Marshal is keeping the King out of his rights. But even Monarchical theorists can be driven to temporize, and the Right on the whole prefer the existing stop-gap to any which is at present likely to be substituted for it. This existing stop-gap is made up of two elements, Marshal MacManon and the Duke of BROGLIE, and hitherto the Duke of BROGLIE has been the more influential of the two. But if the Right were epenly to separate themselves from the Government, the Duke of BROGLIE might have to make his choice between resignation and a change of policy. Neither of these alternatives would advance the interests of the Right. If the Duko resigned, Marshal MacManon would have no difficulty in finding a Minister to take his place. Indeed it is the Duke of Broglie that is the principal obstacle to a reconciliation between the Left Centro and the Government. If he were out of the way, a serious attempt would probably be made to give some kind of definitive organization to the much-talked-of Conservative Republic. A large part of the Left Centre would in their hearts be rather glad than not to see this attempt made under Marshal MacManon's rule. The Republicanism of the Left Centre is of the most moderate conceivable type, and it is doubtful whether they did not think even M. THEES himself a too extreme politician for their purpose. They recognize the difficulties of founding any government which is not a Republic, and they have sense enough to see that even a Republic, provided it be sufficiently firm in its seat, is better than no government or than a merely provisional government. But they would like to keep the construction of the Republic in their own hands. In their ideal State there is no place for Republicans of the type with which the term has hitherto been associated. It is necessary of course that the Republic should be formally recognized as the legal government of the country, but it is almost equally necessary that this should be done in a way to discourage Republican enthusiasm. M. THIERS has not been properly careful about this latter point. He has spoken of the Republic as though it were in itself a fairly good sort of government. The section of the Left Centre who lean most towards Marshal MacMahon are hardly prepared to go so far as this. They would as soon think of calling a wooden leg a good sort of leg. If you have lost the leg which nature gave you, you must put up with a wooden leg, but it is mere childishness to try to hide the fact that you have sustained a very unpleasant loss.

This is very much the feeling of the Conservative Republicans in the Assembly. In the country things have taken a different course; and though the Republic which the peasantry would found if they had the power would be inensely Conservative, it would not apparently be viewed as the simply necessary evil which a part of the Left Centro seem to consider it. Men who look at the future with this resigned gloom would be a good deal cheered if they knew that the work of organizing the Republic was to remain in Marshal MagManon's hands. There is nothing extreme or

enthusiastic about him. He treats forms of government as a sensible soldier ought to treat them—as something altogether subordinate, that is, to the maintenance of public order. It is much pleasanter to discuss constitupublic order. It is much pleasanter to discuss constitu-tional theories when you know that, whether your theory or your adversary's commands most votes in the tissembly, Marshal MacMahon has the army at his command, and can be trusted not to allow any theory which he distrusts to take practical shape. If, therefore, the Duke of BROOLLE were forced to resign, there might easily be a coalition between his auccessor and the Left Centre, which coalition between his successor and the Left Centre, which would lead to an entire redistribution of Parliamentary parties. It is not the interest of the Right to provoke this, and consequently they are forced to use some prudence in speaking of Marshal MacMahon's rule. 'They know that so long as they do not precipitate a quarrel between the Marshal and his first Minister, the Duke can be trusted not to irritate them more than he cannot help. For, though it is in form open to the Duke to change his policy, it is scarcely possible for him to do so in fact. Even the less than moderate Republicanism of the most Conservative section of the Left Centre is offended by his reactionary extravagance. No declaration of his readiness to accept the Republic would stand a chance of being believed. Any such protest on his part would merely lose him the support of his friends, without gaining the support even of the most placable among his opponents.

And, to do the Duke justice, he is not in the least likely to make any such protest. He is willing enough to acquiesce for the present, because he sees that the Government which he would like to see established is not at present possible, but he is not prepared to place any additional obstacle in the way of its being established hereafter. The Count of CHAMBORD cannot live for ever, and seven years hence he may see more clearly than he does now that Monarchy after his pattern can never be set up again in Thus, if Marshal MacManon can be maintained at the head of affairs for the full term of the Assembly's vote, without the Republic becoming any more definitively organized than it is now, Orleanism will have two possibilities open to it. The Count of CHAMBORD may be dead before the seven years are over, or he may have seen his way to abdication. In either case the Count of Paris will be the sole and legitimate Pretender, and the final attempt at a Restoration can be made with all the advantages of constitutional principles and the tricolour flag. If, unfortunately, the Count of CHAMBORD should be still living and tunately, the Count of CHAMBORD should be still living and still obstinate, the Duke of Broglie perhaps hopes that Marshal MacMahon's torm of office may be still further extended. Or, as is more probable, he has too much to occupy his mind to give his thoughts any time to throw themselves so far forward. The majority, at all events, of the Right Centre may be supposed to think with the Duke of Broglie, and it will be seen that their support of Marshal MacMahon is really dependent on his authority not being twisted, as they really dependent on his authority not being twisted, as they would call it, to the establishment of the Republic. Their satisfaction that the Government is provisional marks them off from the Left Centre. Their desire that it should remain provisional for seven years certain marks them off from the Right. That there is a section, however, of the Right Centre which does not share the first of these views is shown by the recent speech of M. DE FOURTOU, the Minister of Public Instruction, in which he treats it as possible that Marshal MacMahon may remain in power with other counsellors than the present Cabinet. This evidently points to a Ministry in which the Left Centre should be represented, and it is hardly conceivable that such a Ministry should exist without some sort of positive recognition being accorded to the Republic.

The attitude of the Left towards Marshal MacManon is equally reserved with that of the Right. Just now it is their one to treat his authority with a great show of deference. So many attacks are made on it from the side of ence. So many attacks are made on it from the side of the Right that the most extreme Radical is naturally led to support it, if from no other motive than mere perversity. The Legitimist and Bonapartist organs constantly parade their desire to see the Marshal replaced by a ruler who can show either an hereditary or a popular title to the throne, and so long as they do this the Left are constantly many tent to call the Duke of Broglis's attention to their own superior loyalty. In addition to this, the Duke of Broglis is not disposed to allow them anything like so much license as he allows to those whose Conservation are not be side of excess. It is understood that Legitimist and Bonapartist

disaffection may be telerated as an innecent eccentricity, but that Republican disaffection will be taken as directed against society. So long therefore as the Duke of BROOLIE remains Minister the Left have good cause to be careful, and even if he were succeeded by a Minister of less proand even if he were succeeded by a Minister of less pro-nounced conservation, it is by no means certain that the Marshal nimeelf would not regard an agitation to substitute a King for a President as something different in kind from an agitation to replace one President by another. That the Left genuinely acquiesce in Marshal MacMahon's rule, or are willing to see the Republic organized under the supervision of an ex-Imperialist general, may fairly be doubted. But they are too weak in the Assembly and too uncertain of their strength out of doors to make it prodent uncertain of their strength out of doors to make it prudent to let their discontent appear. The most unfortunate feature in this state of things is the discredit which it unavoidably brings upon Parliamentary government. The Assembly is made up of parties which know that they do not represent the country, and of parties which are uncertain in what proportion they represent it. The Right and the Right Centre answer to the first half of this description; the Left and the Left Centre answer to the second half of it. Until a general election has brought the Assembly and the electors into harmony, the worst enemies of constitutional and Conservative principles will continue to be found in the ranks of their professed defenders.

DR. HAYMAN'S CASE.

VICE-CHANCELLOR MALINS, however strong might be his opinion that Dr. HAYMAN had not been fairly treated by the Governing Body of Rugby School, had clearly no alternative but to decide against him on the legal question which was raised as to their authority. Dr. HAYMAN'S Bill challenged the grounds upon which the Governing Body had dismissed him from his office, and argued that, on such grounds, they had no right to dismiss him. To this the Governing Body replied that they would not go into the question of the justice or sufficiency of their reasons for thinking Dr. HAYMAN unfit to be Head-Master, because they were entitled to dismiss him at their own discretion, if they were not satisfied with him, and the Court of Chancery had no power to interfere. Before, therefore, the VICE-CHANCELLOE could pronounce a judicial opinion as to the propriety of Dr. HAYMAN's dismissal, or even hear evidence on the subject, he had to determine whether he had any power to meddle with such a subject at all. This was the only point which was really before the Court, and it was to this point alone that Sir R. Malins's decision was directed. It is provided by the 13th section of the Public Schools Act that the Head-Master of every school shall be appointed by, and hold his office at the pleasure of, the Governing Body; and that all other Masters shall be appointed by and hold their offices at the pleasure of the Head-Master. The language of this clause would appear to imply the co-existence of two potentates, one indeed subject to the other, yet absolute within his own sphere. It is as if a monarch were to say to a vicercy, "Here is a territory for you; rule it at your "discretion; appoint your own Ministers; promote, "exile, bow-string them as you please. On the "exile, bowering them as you please. On the "other hand, you will be held responsible for the "other hand, you will be held responsible for the "condition of the country, and if things go wrong "the punishment will fall on your own head." It will be seen that the absolutism of the Governing Body over the Head-Master is distinctly coupled with the absolutism of the Head-Master over his assistants; and it was Dr. HAYMAN's contention that the Governing Body did not adhere to this bargain, that they arbitrarily deprived him of the right assigned to him by the Act of Parliament of choosing his own subordinates, and that it was because he choosing his own subordinates, and that it was because he insisted upon this right—without which, indeed, he would be insisted upon this right—without which, indeed, he would be paralysed and powerless—that they discharged him. The Governing Body replied that they had dismissed Dr. HAYMAN simply because they did not think he was the right man for the place, and that they had a right to do so without justifying their reasons to the Court of Chancery. The VRIE-CHARGELLOR held that the Act of Parliament placed the parliament plac the Head Master so absolutely in the hands of the Governing Body that "he was at their mercy just as "much as a condman was at the mercy of his master," and that they could dismiss him for any reason that they could dismiss him for any reason that seemed to them sufficient, provided that they were not accuration was founded were inquired into by the Trustees, assumed by any correct motive. As no correction was

imputed to the Governing Body, the Court had no power to question or control them in the exercise of their general discretion.

It does not require much reflection to see that, if the Vicu-CHARCELLOR had given any other decision than this, he would have practically assumed on behalf of the Court of Chancery the pleasant duty of managing a public school—boys, Masters, Head-Master, and Governing Body altogether. If the Court of Chancery could be invoked for the purpose of compelling the Governing Body to retain a Head-Master in whom they had lost confidence it would be squally open to whom they had lost confidence, it would be equally open to the Assistant-Masters to appeal against dismissal by the Head-Master. The case, as the VICE-CHARGELLOR said, is really the same as that of a domestic servant, and we may add, as that of a clerk or workman in any establishment. An employer is not responsible to any tribunal for the soundness of his judgment as to his choice of servants. If he finds that he cannot get on with any of them, although it may be pure prejudice on his part, still they must go. There are no means of compelling him to retain their services, although any person who thinks that his character has been unfairly disparaged by dismissal is of course entitled to sue for compensation. It is quite clear that the world would soon be brought to a standstill if people had to work with servants, not of their own choosing, but imposed upon them by the authority of a court of law. A Head-Master is a person of great dignity and importance; but so is a Parliamentary Under-Secretary, and how can we conceive of a Parliamentary Under-Secretary going to the Vice-Chancellor to ask that the Cabinet should be compelled to keep him in an office for which they believe him to be altogether unfit? Mistakes for which they believe him to be altogether unfit? Mistakes will constantly occur in regard to such matters. Prejudice, narrowness of mind, hasty or superficial consideration, or mere downright stupidity, will always have an effect; but it would be absurd to think of setting up the Court of Chancery as the supreme arbiter of all the details of social existence. To govern must necessarily be the object of a Governing Body, and they certainly would not govern except in name if they were liable to be checked at every turn by a Bill in Chancery. It is true that the Act bestows on the Head-Master absolute authority to choose the Assistant-Masters, but the Governing Body have the right to dismiss him if they think that his appointments are right to dismiss him if they think that his appointments are injurious to the school. Whether in this instance or not the Governing Body made a wise and worthy use of their supreme authority is of course a very different question from that as to the integrity of their motives. Dr. HAYMAN's Bill could have been admitted only on the ground of a distinct allegation of malice or corruption. As this was not alleged, there was nothing to be inquired into, except the general discretion of the Governing Boly which was beyond the discretion of the Governing Body, which was beyond the jurisdiction of the Court of Chancery.

It will be observed that there were two questions at issue —first, whether the Governing Body acted within their legal powers, and next, whether they made a fair and reasonable use of those powers. It has been decided that in dismissing Dr. HAYMAN they did what they had, in a strict legal sense, a right to do; but the VICE-CHANCELLOR did not hesitate to express very strongly the opinion, which is probably shared by most impartial persons, that Dr. HAYMAN never for a moment had a fair chance at Rugby, at least after the old Trustees had been superseded by the new Governing Body. He was met at the outset by a concerted and organized hostility which reminds one of nothing so much as some of the practices of the Trade Unions. He was picketed by the Assistant-Masters, who also combined with Bishop Temple to ratten his prestige and authority as head of the school. There is a story of a schoolmaster who, on a visit from a member of the Royal Family, begged to be excused from uncovering, because, if the boys were once to suppose that there was anybody superior to him in the world, there would be immediately an end of his authority. What must boys think when they see a new chief hustled and bonneted by his predecessor and a rabble of ushers? It is evident that Dr. TEMPLE and the Masters did all they could to insult, degrade, and humiliate the new Head-Master in the eyes of his subjects. He was held up at the very

repeated, and were never withdrawn. Dr. Tample supported them, and even went so far as to threaten, in almost so many words, that he would use all his influence with parents to rain the school if the Trustees persisted in retaining Dr. HAYMAN as Head-Master. Forgetful not only of those generous principles which are embodied in the higher code of honour, but even of the common decencies of personal intercourse, he wrote a letter to the Trustees in which, admitting that he knew personally nothing of Dr. HAYMAN until he came for a few days to be his guest, he asserted as the result of his genial and hospitable study of his visitor at the dinner-table, that he was "quite incompetent," that if he became Head-Master "the moral tone and discipline of the school would sink, "and the confidence of parents would be justly with-"drawn." He added that he would himself take care, by his significant and unmistakable manner of answering questions from parents, to advertise as widely as possible his opinion of the hopoless abyss of moral decay into which the school had fallen. Dr. TEMPLE was not ashamed to put his name to this letter, which might almost from its tone have been signed by "MARY ANN," with a coffin underneath. In violence and virulence it is scarcely exceeded by the familiar intimidation of an exasperated Unionist or a vindictive Ribbonnan. Dr. TEMPLE had been for a number of years at the head of the school; he knew many of the parents; and as the Trustees had spirit enough to resist his implied threat, it may be presumed that he carried it out.

BROADHEAD in his memorable examination at Sheffield explained that when he employed an agent to fire at one knobstick with an air-gun, or got a canister of gunpowder dropped down the chinney of another, he had no desire to do them serious personal harm; he merely desired to disable them from working in opposition to the rules of the Sawgrinders' Union, the interests of which he had at heart. There is no reason to suppose that Dr. he had at heart. There is no reason to suppose that Dr. Temple wished to ruin Dr. HAYMAN, but he had the interests of his traditional Rugby at heart, and he felt bound-in perfect honesty no doubt-to take any means which were open to him of getting rid of a Head-Master who has been denounced by one of the more candid of the Rugby Unionists as a "Tory and High Churchman." Dr. TEMPLE can hardly have supposed that he was going to Exeter to uphold the traditions of that diocese as they were understood in the time of his predecessor, and he would probably have syn pathized with Dr. HAYMAN if the Dean and Chapter had serenaded him, as he encouraged the Masters at Rugby to seronade his successor, with a chorus of "Ba, Ba, Black Sheep." The Trustees did what they could, while they remained in office (short of summarily dismissing the mutinous Assistant-Masters), to protect the Hend-Muster, and in a significant minute they rebuked the Masters for attempting to spread disorder among the pupils; but their term soon came to an end, and the weight of the Governing Body was then thrown into the scale against the head of the school. He was compelled to work with men who had grossly insulted him and whom he distrusted; and because the state of a school so conducted was found to be unsatisfactory he was dismissed. It is quite clear that, as Vice-Chancellor Manns said, he never had a fair chance. If it had been within the province of the Court of Chancery to sit in judgment on the administration of the school as regards good taste, good feeling, honourable impartiality, and fairminded equity, the decision of the Court would probably have been different. The "traditions" of Rugby as represented by Dr. TEMPLE'S conduct and by the whining cant and priggish self-sufficiency of the Masters' letter are cortainly not very edifying; and it is to be hoped that some means will be discovered of purifying the atmosphere of the school. It has hitherto been supposed that the peculiar merit of a public school lies in that spirit of generous and loyal maniferess which is infused into the pupils; but it may be doubted whether this is likely to be the result of such influences as at present prevail at Rngby.

THE MILITARY HISTORY OF THE ASHANTEE WAR

TIME Ashantee war affords another patent example of the great military maxim long since affirmed by Weshington, that in the face of a savage foe the purely defensive is seldom possible and never politic. Nothing could be more different in its outset than this from our late advanture in Abvasimia, although the closing the march on Coomassic, bore a similarity to that cam-

paign which must have struck the most unobservant. But our successful advance to the enemy's capital and our final intensity was, in the case of the Ashantses, only gradually forced on in as necessary by the course of events, instead of being planned deliberately beforehand as the original object of the expedition. Nothing could have been more repugnant to the netional view not many months since than a close imitation of the war with King Theodore, although the savage potentate of Ashantse held in durance certain European captives taken as much in defiance of all right as the tyrant of Magdala seized his; and a long and tedious correspondence as to their liberation by ramoni was actually conducted down to the very time when hostilities commenced. But neither the treachery of King Koffee Kalkali to restore them to the Administrator, nor even his unprovoked inroad on the soil which he knew to be under our Protectorate, would have roused the nation to the necessary sacrifice. This was paign which must have struck the most unobserve would have roused the nation to the necessary sacrifice. This was simply forced upon us by the carrier events of the war itself. We need not employ our space in searching for the causes which made need not employ our space in searching for the causes which made England so unwilling to proceed to extremities in this particular case. We prefer rather to review the events as they occurred last year, as the simplest means of showing how the march to Coomassie grew naturally out of them.

It was as long ago as the 30th January, 1873, that the Ashantee King, for the fifth time within this century, threw an army over the Prah. The actual pretext for this sudden attack was never even officially announced. Up to the very time that it took place King Koffee was in regular correspondence with the acting Administrator

Koffee was in regular correspondence with the acting Administrator of the Gold Coast on the subject of the release of the missionaries, and he had professed just before that it was only the pressure of his chiefs which compelled him, much against his will, to raise the amount of the ransom asked at first for them, which had amount of the ransom asked at first for them, which had been consented to on our behalf. No doubt the negro monarch, whose family has been established on the throne of Coomassis for one hundred and seventy years, funcied he had hereditary claims over part of the town of Elmina (originally known as St. George del Mina in its Portuguese days), lately ceded to us by the Dutch. But war had not been threatened by him on this account. No such claim had been imported into his recent correspondence No such claim had been imported into his recent correspondence just spoken of. And the previous history of Ashantee invasions, with the suddenness of the opening of this last, furnishes convincing proof that this new inroad was simply one of the usual wars of conquest and rapine which are the tradition of his monarchy. The extraordinary weakness of our garrisons in West Africa, which comprised but four companies of black troops, of which two wars at Sierre Leone, was of course fully known by means of the spice which the Ashanten had always heard to receive the spice. which the Ashantees had always largely used as part of their pre-paration for hostilities. The humility with which we had sought to buy back the innocent German captives carried off from their peaceful labours on the Volta had probably contributed, more than has been anywhere admitted, to confirm the belief that we want has been anywhere aware when here to defined the Prowere barely able to hold our works, much less to defend the Protectorate. The handful of Houssas, of Glover's native police, which was stationed at Elmina, was probably counted up as the whole extent of the levies of foreign negroes on which we could rely. The natives of the protected coast tribes were notoriously inferior to their fierce inland neighbours in organization as well as courage. And there seemed therefore reason for the Ashantee belief that a bold advance would at once place the resources of the Protectorate at the mercy of the army, hom us within our pestilential little forts, and possibly in the end weary us out of a position on the coast-

line which we seemed hardly caroful to preserve.

Colonel Harley, however, an officer whose merits have hardly had justice done them, was not at all inclined to yield the invaded country without a struggle. He had a large acquaintance with, and influence over, our native allies, and had seen service in the last of our Ashantee wars. And it is a plain proof that he at least did not think as ill of the Fantees as it is just now the fashion to do, that he at once started to meet the enemy, trusting for his resources to the nearest of the protected tribes, and calling on them to gather against the common foe. Near Mansa, thirty miles inland, his motley gathering soon came into collision with the miles inland, his motley gathering soon came into collision with the advance of the invaders, and some indecisive skirmishing began the actual hostilities. But when the fighting became more serious, a sudden panic among a section of the Fantee followers, such as sit mobs of undisciplined armed men are subject to, soon spread and carried the whole to the rear in disorder. The Ashantee general followed the retreating force slowly, but without encountering further opposition, until he halted almost within sight of Cape Coast Castler, when the gives of which it had search a shelter. under the guns of which it had sought shelter. The Ahantees of under the guns of which it had sought shelter. The Ahantees of Elmina, who had long before, during their chromo quarrals with the Dutch, had relations with the invaders, received a body of them into the town; and there seemed to be nothing left of our Freetentorate but the fort of that place, which was still held by the Houssas, and a few square miles of ground outside the walls of Cape Coast Castle, which were covered with thousands of panic-stricken fugitives from the interior, beyonding the line of their homes and clearings, and falling an easy pray to the pestimene which of course followed scarnity among their consider make.

The news of these disesters peached us in May. The gen-feeling then, however, prevailed, and netwelly had full we with a timid Cabinet, that it was impolitic to do much more a defend our own forts efficiently. Frinciple and greendout is little power in our councile in such anterest say time. Pu-centificant is what the Gallinial Minister, will be colleagues look

The Ministry, almostly grown unapopular, had a material four of the African diments, which approvided to standing distillar of each a bold policy as would hear with it even the appearance of aggression. So the measures taken were limited to the despatch of two hundred marines from England, and the order to said from the West Filter to the Coast the rest of that and West Indian Regiment which had furnished the detachments for the latter before the war broke out. Colonel Harley meanwhile was forced by sinkness to quit the seens of action, and the military charge fall to the senior officer of those thus directed to the scene of action.

The immediate successor to the command, Colonel Festing, who brought the reinforcements from England, and who had already been distinguished on active service, proved a man of too much vigour and sepacity to leave the new resources of the defence unused, modest though they were. If not able to enter the bush and take up the struggle in which his predecessor had been worsted, he could at any rate, by means of the co-operating squadron, command the line of the coast; and he had the promise of aid on shore to a small extent from the seamen and marines. So, on the 13th June, soon after his arrival, he proceeded suddenly from Cape Coast to Elmina, and demanded the evacuation of the town—which is severed from the port by a considerable stream—by the hostile force that held it. Being refused point-blank, he proceeded to drive out the enemy, and the Ahantees who harboured him, with shell from the steamers, sided by the gans of the fort. Following up this attack by water, he next, landed his small command on the flank of the now evacuated place, which the shells had fired; and when the Ashantees advanced boldly from the forest to drive the white men back to their vessels, their force of some thousands was soon checked by the fire of the Snider rifle in front, and, being taken skilfully in flank by a party of seamen under the lumented Lieutenant Wells, it was routed with a slaughter of several hundreds left on the open ground on which they had ventured. For the moment our prestige seemed restored. The Ahantees professed to fall off from their late allies; and the latter in their discouragement began to suspend their late alarming pressure on the ground round Cape Coast itself. Festing svailed himself of this to cover his front by constructing a strong redoubt known as Fort Napoleon, at a point some five or six miles inland, and chosen so as to protect the strip of coast between Elmina and Cape Coast Oastle, being nearly equidistant from the works of each.

The next phase of the Stripgle was much less favourable to us.

The next phase of the struggle was much less favourable to us. Some six weeks after the affair of Elmina, Commodore Commerell, who, as the chief of the West African squadron, was present to assist the land forces, undertook to explore the lower part of the Prah, which, after encircling our territory by a long course westward, disgorges itself into the sea fifteen miles west of Elmina, in the Ashantee territory, and close to the negro town and the abandoned Dutch fort of Chamah. The brave but perhaps overbold sailor appeared to think that the presence of his vessels nearthis place secured the neutrality of the tribe that lined the stream; but he was soon bitterly undeceived. Not two miles up the river his little flotilla fell into an ambuscade—whether of hostile Ahantees themselves, or of an Ashantee detachment posted there with their connivance, does not appear. He himself was very badly wounded; the second in command only less severely; the footilla, which was not equipped for any such rude proof, had to quit the fatal stream precipitately. And although the town of Chamah was instantly destroyed by the Rattlesnake, in retribution for this treachery, the affair was undoubtedly so serious a misfortune as to more than undo the good effect of Festing's previous success. Another repulse of a boat party under Lieutenant Young not many days after, a little further down the coast, spread the rising flame of disaffection. The doubtful tribes all along the coast began to turn openly against us, and to seek terms from the Ashantees at the cost of probable permanent subjection to Coomassie. And as our little garrisons were at this time more than decimated by the sicknesses incident to the hottest season, there seemed much reason to fear that the last vestiges of our rule on the coast were doomed to disaffectors.

doomed to disappear.

But this melancholy state of things had its natural effect on the proud and great people who have been so long accustomed first to grumble over, and then to plunge boldly into, those colonial wars to which the Empire ruled by Great Britain really owes so much of its splendour. The cry for effective succour was loudly raised at home, and swelled gradually until decisive action was forced upon a half-hearted Cabinet which would fain have shrunk from Imperial responsibilities. The press spoke grith sufficient distinctness as to the proper course to be pursuad, and the proper person to be entrusted with the undertaking. The choice key practically between two soldiers, both in the very prime of manly vigour; the one justly famous for extraordinary victories won over unheard-of numerical odds by his unaited genius for training and leading fistive levies; the other, literally a man of war from his youth up, who had served through four campaigns of groof with ever-rising credit, and had of late conducted a difficult supedition with such complete success as to win that highest of all praish which comes to the commander who accomplishes a difficult political object without the cost of one through decided. The choice of the Ministry fell on Eir Granat Wolkers, and large powers, civil and military, were at once confidence that heart he new Granard was stated promptly, with a small last them the new Granard was stated promptly, with a small last them the new Granard was stated promptly, with a small last small military in white troops was promised him in some of absolute

much, to be used, however, only during the about healthy season. And the idea was now with some health on entertained that possibly the commander might find it measurery, in order to distant proper terms, to gain possession of, or at least appear before, the enemy's capital.

In delaying the shipment of the white contingent until the

In delaying the shipment of the white contingent until the sickly season had gone by, it is probable that a very wise discretion was exercised. Indeed from this time only two mistakes of any weight have been noted in the sundaet of the war. One of them was of course the neglect to support the contemplated counter-invasion of King Koline's country by shipping at once the proper means, especially in the farm of military workmen, for carrying on and ediciently protecting the road leading towards Coomassie, the completion of which for use as the line of communication and supply was already recognized to be a prime necessity. The other was the partial division of command which arms from the time when Captain Glover, formerly amployed with great success to train the native police at the great commercial settlement of Lague, was hurried back to the Coast-with power to raise a co-operation force which was to set from the more open country about the mouth of the Volta, far to the eastward of Cape Coast Castle. Of course it was understood in a general way that his operations were but subordinate to Sir Garnet's strategical views. But the fact came clearly out in the course of events that the Colonial Office regarded him and his contingent as their special charge, and thus as a thing distinct from the more purely military conduct of affairs on the side of Cape Coast. It is owing probably more to the high personal character of these officers and their patriotic feeling than to the good sense of these officers and their patriotic feeling than to the good sense of these officers and difficulty arese to mar the completeness of the success which followed.

Arrived at Cape Coast at the beginning of October, Sir Garnet Molseley applied himself at once to the double task that lay before him of forming native lovies for the purpose of taking the offensive, and closring and protecting the first part of the old road to the Prah by which any serious advance on Coomassie would have to be made. From their large camp at Manipon, some sixteen miles to the north, the Ashantses watched without disturbing him. No doubt their failing stock of food—for the Fautes previsions seized by them were giving out—produced or aggravated sickness in their crowded force. But their supplies of powder and rum were heard of as going regularly to them from the side of Elmina; until the English general, by a surprise conducted with a secresy and ability which richly earned success, threw his little force, mearly all of blacks, on to villages which they held in that direction, and so effectually carried them by his sudden attack, and so completely destroyed them, as at once to show his enemies that they were no longer safe in the shelter of their native forests. This opening stroke of Wolseley's both impressed them with a sense of defeat, and cut them off from the coast-line altogether, to his own immense advantage when the real struggle came later, and when their failing ammunition could not be replenished as of old through the smugglers who have maintained the evil traditions of the Gold:

Const trade for lawlessness and rascality.

After this came a sort of doubtful era in the war. Reconnaissances pushed forward on the bush roads from Elmina and Cape Coast proved the enemy to be retiring from Mampon; but how far his retreat was prolonged or even real could not be ascertained. Our front was evidently only made safe by the works on the Prah road at Dunquah, and by the large post of Abracumpa, a few miles west of it, covering the approaches to Elmina. And after a series of skirmishes during the last week of October, so inducisive that it was doubtful whether our advanced posts could be maintained, the General was forced to write of his position as "somewhat humiliating," and to announce that the uturly untrustworthy nature of the Fantece, who were to have formed the bulk of his intended native army, prevented his following up the Ashantees. though he had good reason to believe them to be in decided retreat. This despatch settled the last doubts of the Ministers at home; and not two regiments, as formerly promised to him, but three, wer under immediate orders, with a detachment of artillery, and with the engineers whose services would have been invaluable from the first in a country where skilled labour could neither be bought nor impressed, and to the lateness of whose arrival it was largely due that our victorious column was all but cut off at Coomassie by the advent of the spring rains.

Whilst Wolseley's report was yet on the way home, the Ashantee general brought matters to a different stage by an overbold offensive. Weary of insation, or pressed by orders from Coomassie, and perhaps encouraged by the repeated retreats of our reconnoitring parties, he led the bulk of his forces—now greatly reduced by sickness—to the attack of our central post at Abracampa, skilfully prepared against such an event, though with very rude material, by the lamented Captain Buckle. The asamit hasted over great part of the 6th and 7th November; but when Sir Garnet strived at the scene of action with all available succour, Major Russell and the 650 men under him (of whom but fifty was white, and 100 black regulars of the 2nd West) had inflicted a decisive and bloody repulse on the numerous assailants, and the Ashantes general was drawing off utterly dishestened. This defeated his retreat with his demonstrated troops on the Prain. Our control of the language and his headful of Engineers pashed their road work stability forward on to and screen the Prain, and the arrival of the white theory and decision.

mander-in-Chief the longed-for means of conducting the offensive campaign against the enemy's capital, which in its conception and success alike bears a striking similarity to Lord Napier's achieve-

ment in Abyssinia.

At this point we purposely close our record. What followed is in the memory of all, and has been admirably told and illustrated in the despatches and correspondence which the public has but recently perused with no less eagerness than pride. Nor is it our duty to point any special moral, unless it be the single purely military one that, however well savages or semi-civilized troops fight on occasion, sustained effort is not within their power. A careful study of the events after the one important and serious action of Amoaful (where it has been happily said that Wolseley adapted his tactics to new and special conditions, fighting his troops rather on the ancient Roman model of close order than according to the modern principle of extension), convinces us that the real pinch was only felt by our brave soldiers there. Beaten fairly on their own chosen ground, where a vast superiority of numbers had allowed them deliberately to employ the outflanking tactics favoured by the national traditions, the enemy fell back in disorder which increased more and more until the sudden dispersal came outside Coomassie, at the moment when they felt instinctively that no one had anything more left to save but his individual person or property. Hurried as our triumph was, it was yet complete enough to show the world once more that, though we are fond of boasting of our peaceful policy, and are often ready to follow political culera who make avoidance of all war their boast, we have yet the old English aptitude for fighting when occasion compels. Happy shall we be if in each case of need we find ready to our call general so skilful, a staff so energetic, soldiers so enduring and brave, as those who have just returned in triumph from the heart of the Ashantee kingdom.

CONTEMPORARY MYTH-MAKING.

"THE Napoleonic Legend" has become a recognized form of words, and most worthily. For it is a form of words which forcibly brings home to us the fact that, aide by side with our better means for preserving historical truth, exactly the same processes go on which have created the mass of myth, legend, tradition, and more falsehood which we find sometimes standing alongside of, sometimes displacing, the genuine history of past times. Eighty years ago the name of Buonaparte was no more illustrious in the eyes of mankind in general than the name of Tonkins. To the few who had heard it—and those who had heard it must have been records who grantly any deep indeed into Italian local history. been people who groped very deep indeed into Italian local history —the word Buonaparts doubtless had a better sound than the word Tomkins, and it had a sound all the better because then, and long after, it was sounded full in four syllables. It was still an Italian name with a meaning to it; it was not, as now, cut down to three better because then, and the world in ground the name had never been heard and cut down to three French syllables without a meaning. But by the world in general the name had never been heard, and by the world in general the Christian name Napoleone had nover been heard either. No one indeed could have read Italian history with much minuteness without coming across two or three bearers of the name. But none of them were men at all in the first rank of Italian history; so they might then easily be forgotten, while with a reader of our times their name ensures their being remembered. Within these eighty years the names Napoleone and Buonaparte, clipped and cut short years the names Napoleone and Buonaparte, clipped and cut short to be sure in the process, have not only become famous; they have not only become more famous than any other names of their time; they have actually become mythical. The name of Buonaparte they have actually occome mythical. The name of Buonaparte has become as truly legendary as the names of Arthur and Charlemagne; as there is an Arthurian cycle and a Carolingian cycle, so there is also a Napoleonic cycle. With all this before us we are better able to understand how very soon the Charles the Great of history began to turn into the Charlemagne of romance. And, better able to understand how very soon the Charles the Graat of history began to turn into the Charlemagne of romance. And, more than this, when we see the strange ideas which many people have of things which have happened in our own time, of the events of the last thirty years, we better understand the current mistakes about the expulsion of the Athenian Tyrants which Thucydides took so much trouble to set right, and we better understand how every circumstance of the events which led to the Norman Conquest of England could have got misrepresented during the lifetime of men who must have remembered all about it. Wonderful, some may say, that the same process should go on in an age of printing, an age when everybody reads books and newspapers, which went on in an age whon there was hardly any writing except a few inscriptions on stone, or in an age when writing, though as familiar as it is now, was almost wholly the professional business of a single class. We suspect that the books and newspapers do very little to hinder the growth of legend; we are not sure that their existence does not really make it more easy. Their use is of another kind; they do not hinder legends from growing up, but they give us the means of correcting them when they have grown up. They enable us to do more thoroughly what Thucydides and Florence of Worcester tried to do. We ove to them that there is no danger now, as there was danger in both of the two other cases, of the truth being wholly forgotten. The true version is there, ready to be appealed to at any time. But the existence and the false version by the side of it. Indeed the fact that everything is

written and printed, that every man skims his newspaper, that many men skim their books, really helps the other way. It helps to make men careless and satisfied, and convinced that they know all about everything. It helps to make memory less strong even in actual spectators and actors. A man who knew that, if he did not accurately remember a thing, it would certainly be forgotten or misunderstood, was much more likely to remember it accurately than he is now that he can write down an accurate statement ready to refer to whenever he wishes. His written statement will be more accurate than the other man's memory; but his memory will be less accurate. When Herodotus set to work to write down the history of the things which happened when he was a child, his materials, besides a few public inscriptions on stone and brass, were to be found in the memory of men of the standing of his father. Those materials were much more trustworthy than the same kind of materials are now. His unwritten testimony was better than any unwritten testimony what could be had for events at an equal distance now. Only we have means for checking and correcting our written testimony which Herodotus had not.

Now the notions which a great many people have of the history of France six-and-twenty years ago are exactly of a piece with the notions which Thucydides says that most people at Athens had in his time about the driving out of the sons of Peisistratos. The two confusions of history of course start from exactly opposite notions of politics and morals; but as perversions of truth they are of exactly the same kind. The Athenian held that to upset a despotism and to restore a commonwealth was so worthy a work that it justified private assassination. The belief of many comfortable Englishmen is, that to upset a commonwealth and to set up a despotism is so worthy a work that it justifies public massacre. Harmodios and Aristogeiton were the destroyers of tyranny, the restorers of freedom, the men who sacrificed themselves for the good of their country. They really did nothing of the kind, and, to make it seem that they did, three or four years of the history of Athens had to be wiped out. So a great number of people seriously believe that in the year 1848, the late ruler of France, being already President or Emperor or something or other, saved society by putting down a roaring mob of Red Republicans. We have heard so over and over again from people of all kinds, and by no means always of the same way of thinking in politics. We have often had it elaborately explained to us, by a slight confusion between June 1848 and December 1851, how the soldiers had once had to knock under to them a second time. When the word conspiracy or rebellion is applied to the act of December 1851, people stare, and do not understand. It is not a question whether a certain act does or does not deserve to be called conspiracy or rebellion; their state of mind is that the man who did it was an Emperor, and that an Emperor cannot conspire or rebel. All this is exactly like the Athenian confusion. To make it appear that it was not Cavaignac but Buonaparte who put down the Reds in 1848, three or four years of French history have to be wiped out,

of crowds of people who must have known all about them.

The whole ceremony which has been lately gone through at Chislehurst is an outgrowth of this process of tradition forming itself under our own eyes, and it also gives us some lessons by showing us under our own eyes how the notions of divine right and hereditary succession grew up in past times. The whole thing implies that the family of Buonaparte has something about it different from other families; that there is something which gives its members a right to rule in France which other families have not. The young man who is the subject of homage has, plainly been taught to think that he is quite different from a son of M. Thiers, of M. Gambetta, or even of Marshal Mac-Mahon. And it is no wonder that he thinks so when so many people come out of France to Chislehurst to tell him so. Unless there were something which set a Buonaparte, as a Buonaparte, above other people, no party could be found that would propose to hand over the rule of a great nation to a young man of no experience, whose character must be unknown and unformed, and who as yet has had no chance of doing good or evil in his own person. Now what ground is there for looking on a Buonaparte, as a Buonaparte, as something thus privileged above the rest of the world? There are two grounds on which a nation may reasonably accept hereditary succession in its rulers. In early times it may really be believed that a particular family is literally divine, that it springs of the blood of the Gods, and has therefore a right to command the allegiance of ordinary men. And, when this belief has died out, the members of a particular family is literally divine, that it springs of the blood of the Gods, and has therefore a right to command the allegiance of ordinary men. And, when this belief has died out, the members of a particular family is literally divine, that it springs of the blood of the Gods, and has therefore a right to command the allegiance of ordinary men. And, when the authorized have really ma

which for eight hundred years never lacked a male heir to sit on the throne of Hugh Capet, is the oldest and most brilliant example in the world. Or, again, a nation may do as we have done ourselves; it may be convinced that, whatever may be the evils of hereditary succession, its advantages outweigh them, and it may therefore entail the Crown in a particular family by a formal law. It is hard to see how this last argument can be made to apply to the house of Buonaparte, for, if we attach so much value to sham pickecite as to hold that France has twice elected the Buonapartes as her rulers, France has also twice driven them out by pickecite of a much more real kind. The young Pretander himself is not made to put forth any claim to the throne unless he is called to it by a pickecitum. But why should he think, or why should anybody think for him, that a pickecitum bestowing power on any other human being in France or out of it? Gambetta, Thiers, MacMahon, have all some personal qualifications for power—at all events, in the opinions of their own partisans. The youth at Chielchurst may have equal or greater qualifications than any of them, but as yet he has had no chance of showing them. And we may add that a pickecitum calling on a man whose qualifications are unproved to discharge the functions of a personal government is far more unreasonable than a law which calls on the next heir, without regard to his qualifications, to succeed to a constitutional throne. A personal government calls for personal qualifications of the highest order, such as hereditary succession certainly does not secure. Now it would be quite wrong to say that, even in a constitutional State, where the King reigns but does not govern, personal qualifications are of no importance. Even in such a State as ours the personal character of the King is by no means a matter of indifference. There may be a wide difference between a good King and a bad one. But the qualifications needed for a constitutional King are not of the same high and unusual ch

Why then should any party, why should any one man, look to this particular young man as a possible ruler rather than to anybody else? No reason can be given, except that he is the son of his father, the great-nephew of his great uncle. It cannot be mere preference for that form of government which in France is called Empire. For if it is thought well to invest one man with Imperial power, it would be just as easy to invest somebody else. Galba, Otho, Vitellius, Vespasian, may any of them be set to rule as well as Tiberius or Nero. The whole thing resolves itself into a matter of birth, and that birth should be held to have anything to do with the matter is the point in the whole case which is really worth study. How has it come about that the House of Buonaparte is looked on as having some kind of hereditary right? It cannot be because the Buonapartes have any right by the existing law of France, for the law of France, so far as France can be said to have any law, does not recognize them. It cannot be that they have any claim of divine birth above other men; at least we have not seen any pedigree in which the lawyer of Ajaccio was traced up to Zeus or Woden. They cannot claim, like the Royal House of Paris, to have been among the rulers of men for a thousand years, seeing that eighty years ago their name had never been heard of. They cannot claim an unbroken succession even during those eighty years, for as yet no Buonaparte has ever succeeded another. They cannot boast that their rule has been specially prosperous, for each of the two Buonapartes that have reigned has dragged down France into the lowest depth of overthrow, and has been driven out amid general rejoicing. The whole thing is a superatition, but it is instructive as showing us, for once in a way, the beginning of a superstition. A family of which two members have reigned with a long interval between them has got in the minds of many to be invested with something of the same greatness and mystery as if it had reigned without interruption for eight

SENTIMENT AND LOGIC.

To is a common complaint of many reasoners that their opponents bysines to esparate questions of feelings from questions of pure logic. People are only too apt to believe a thing because it is pleasant, instead of believing it because it is proved. The reasoners who make this complaint most energetically are generally assailed by a counter charge. It is said that, under pretence of limiting them-

selves to purely logical considerations, they manage to omit the most important elements of the problems of which they treat. According to the common illustration, the life disappears under the dissecting knife; and the observer detects only the mechanism of the dead body instead of the forces of the living organism. This is the meaning of the common saying that writers of the utilitarian or experimental schools are wanting in knowledge of human nature. They are dispassionate in their reasoning simply because they forget to take the passions into account; and yet without a clear recognition of the force of passion all reasoning about human affairs becomes more empty verbiage. This, for example, was the fault of the recolutionary agitators whom Burke demounced so often and so eloquently for importing geometrical methods into politics. They reasoned as if human beings were mere colourless units, capable of being arranged in such combinations as might please the fancy of the legislator without reference to previous history or to existing prejudices. The doctrine of the Rights of Man therefore begins by omitting to consider the whole series of enotions and beliefs by which society is principally moulded. The same fallacy, in various degrees, runs through the writings of all constitution-mongers from the days of Harrington or of Sieyès to our own. The universal postulate is that a mere shuffling of the cards will alter the nature of the pack. A similar delusion underlies the theories which propose to abolish differences of sex by legislation. Their advocates, having themselves but a small allowance of human nature, imagine that that important element in human affairs can be restrained by simply ignoring its existence. Of course there is an easy retort. To object to changes because they shock your feelings is simply to consecrate the blindest prejudice. If the mode of abstract reasoning on politics is often too dry, at least it helps to bring political arrangements into harmony with reason; whereas the opposite syste

with existing interests. The contest between the two opposite types of thinkers will doubtless be perpetual; and doubtless, as in all other never-ending contests, each side has something to say for itself. The proposition is unassailable that the pleasantness of a conclusion is not a reason for accepting it. It is equally true that people without strong feelings are unable to understand the very meanings of the words which are to be employed in their reasonings. A man without a keen sense of shame could not argue a question of morality more satisfactorily than a deaf man a question of music. And therefore the conclusion would seem to be that a man should be accessible to sentiment whilst forming his premisees, and should discharge his sentiment whilst drawing his inference. The difficulty is, of course, enormous in practice. The reverence which a man feels for a doctrine disinclines him to examine its truth; and, if he has no reverence for it, he cannot appreciate its full meaning. Possibly the difficulty may be surmounted by a conscientious training of the faculties; and, indeed, some minds are so constituted that a desire to believe in the truth of a proposition sometimes predisposes them to doubt it. This, however, is little more than a kind of intellectual nervousness; and, as a rule, it cannot be questioned that the effort to judge one's own creed impartially is beyond ordinary powers. Moreover, the connexion between reasoning and feeling is often too closes to admit of any such separation. The process of judging is only in part reducible to a chain of syllogisms. Dr. Newman gives to that kind of reasoning which is conducted by less formal methods, the name of the illative sense; and though we may deny the propriety of describing it as a separate faculty, we may admit that he gives under that name a lively account of our ordinary methods. He under that name a lively account of our ordinary methods. He takes as an illustration the case of a dispute as to the authenticity of a passage in Shakspeare. It is obviously impossible that the really decisive considerations should be put into the form of ordinary logic. One may indeed settle certain collateral points by such methods. It may be proved by arithmetic that some words occur in the disputed passage in greater proportion than they appear in other writings of acknowledged authenticity. It may possibly appear that some phrase or grammatical form is used which did not make its appearance till a later period, or which had died out before Shakspeare was born. But in any really doubtful cases we shall be unable to discover any such which had died out before Shakspeare was norn. But in any really doubtful cases we shall be unable to discover any such external tests. It is only by an occasional felicity that we can judge of poetry by rule and line. And when such methods are not available, the only test is the judgment of a critical faculty of which no precise and definite account can be given. A man has read Shakepeare till he has become saturated with the spirit of his writings and can detect a harmony or a discord which is not perceptible to the less acute ears of ordinary mankind. The process ceptible to the less acute ears of ordinary mankind. The process is that by which we have to judge in most of the affairs of life. We can swear to the identity of a friend although we have not made a catalogue of his features and should even be unable to tell in his absence whether his eyes were brown or blue. The test is the purely internal sensation, the fact that the impression which he sakes upon us corresponds to the undefinable but not less lively impression which we carry about in our minds. An artist may be able to match two colours with microscopic accuracy, though no words have ever been invented which would enable him to discrimimate the precise shade which he recognizes. In this case we might be able to checkthe judgment. We might try experiments which would show conclusively whether the artist's eye for colour was really as lessn and trustworthy as he supposes. But in such a case to that

of a Shakespearean text, we must very frequently take the result upon credit; or, at least, the only applicable test would be the agreement of a large number of qualified experts. Such an agreement would go to prove that, if there was an error, it was due not to any personal peculiarity, but to some general cause; and the improbability of its existence might be carried beyond any existence in the carried beyond any

assignable limits.

Now, in a very large number of the most important questions that can be raised, this kind of intuitive judgment is the only one accessible; and it then becomes exceedingly difficult to assign the share which the sentiments may have had, or ought to have had, in determining the logic. The fact that a certain conclusion is repulsive may be not only a motive but a sufficient reason for rejecting it. This, for example, is obviously the case in much postical rejecting it. This, for exhibit, is one dusty she case in much post as criticism. A given poem makes one man yawn, another laugh, and a third cry. Which is right? Some people reply that all are right, and that therefore all criticism is merely a record of personal impressions. We should entirely deny the accuracy of this conimpressions.. We should entirely deny the accuracy of this con-clusion, and maintain that the difference in the intellectual power, in the truthfulness of perception, and in the power of expression of different poets, is just as much a real quantity as the difference of weight between the coxswain and the rowers in a University But we admit that no sufficient test can be discovered for individual criticism; and that till later generations have pro-nounced their verdict we must be content with a judgment based upon feeling. The same difficulty occurs in moral and political disputes. One man asserts, and another denies, that a particular view of morality is debasing. If ow is it to be decided which is right? The utilitarian replies that he can give us an external right? The utilitarian replies that he can give us an external test; and pronounces that course to be right which is the most productive of happiness. But, admitting this to be true, we still have the infinitely complex question, What is happiness? which can only be decided by a man's own feelings, and by his sympathy with the feelings of his neighbours. If he is convinced that the pleasure of eating is greater than the pleasure of thinking, he will inevitably attribute the same sentiment to others, and will hold that he contributes to the pleasure of mankind more decisively by increasing the amount of food in the world than by increasing the amount of intellectual power. Ultimately, therefore, we must allow the emotions to judge in this case as well as in others. Or, again, to take a political question, a Ottmately, therefore, we must allow the emotions to judge in time case as well as in others. Or, again, to take a political question, a man will say that the feminine type which is produced by the concession of woman's rights is, on the whole, lower than that which is produced by the old-fashioned system. He will grant that woman gains in the power of public speaking, and has perhaps more opportunity for logical practice, but he will say that such advantages are too dearly bought by the loss of tenderness and modesty. The diagrapt which the proposal greatest in his mind is therefore not The disgust which the proposal creates in his mind is therefore not morely the expression of a prejudice, but gives a distinct logical reason, though one which by its nature cannot be reduced to numerical or quantitative expression. The advocate of woman's rights may evade the point by appealing to the doctrine of abstract rights. That is substantially to beg the question by assuming that the differences between men and women are too superficial to be taken into account in legislation. But if the question is stated as one of experience, it is impossible to evade the point raised, or to it otherwise than by those instinctive verdicts in which

sontiment is indissolubly blended with logic.

The difficulty therefore goes more deeply into the substance of all the most important disputes than appears at first sight; nor does it appear that there is any royal road of escape. The judgment upon many difficult questions can only be obtained by the slow elaboration of many generations and different schools of thought. But there are some obvious considerations which may tend to shorten the discussion. The scientific reasoner may admit that, if his conclusions are shocking to the ordinary prejudices of mankind, the fact allords at least a presumption that he has left some elements of the question out of account. When reasoners in the last century had satisfied themselves that all morality was an enlightened selfishness, the disgust which their conclusion caused in some minds was a sufficient proof that they had formed an in-complete theory of human nature. The disgust, in fact, was itself a phenomenon which required to be explained, and which could not be satisfactorily explained by simply calling it prejudice. And, on the other hand, it is also true that it is generally possible to obtain tests which may be independent of feeling, and which are therefore free from one source of error. A good deal of light, for example, has been thrown upon Shakapennean controversy by an examination of the external characteristics of the versification. A tendency to use redundant syllables, or to make the phrase end with the line, may appear to be characteristic of particular poets or of particular periods of their lives. When such a conclusion particular periods of their lives. When such a conclusion has been established by a sufficient induction, it supplies a test which must override any pretence to intuitive judg-ment. The resemblance in the intrinsic character of the thought appeals indeed in one sense to a higher faculty; but unluckily the judgment upon such matters is more easily deluded. unicerry the jungment upon such matters is more easily deluded.

And, as ultimately it is a question of fact, we must assume that
the two tests will coincide, and that the variet of men of insight
will be confirmed by the verdict of the counters of syllables
and analysers of the external structure of the verse. The same The same and analysers of the external structure of the verse. The same principle applies in the more important questions which we have noticed, though its application requires more time and a wider area of observation. Whatever the difference of the intuitive judgates. ments upon moral and political questions, there are certain points of general agreement without which opinion must remain for

ever in a state of energy; everybody would agree, for ample, that a moral standard or a political arrangement wi led to the increase of drunkenness, corruption, and physical disease must be a had one. Observation of the complex phenomena of society is indeed so difficult and so obstructed by all kinds of prejudices that it is difficult to discover a satisfactory test, and almost impossible to discover one which shall be plainly decitive. To discover such tests should be the object of historical and principal interior and property of the contract of the c inquirers; and, whatever the difficulty of the problem, it would be easy to show that it is not impossible. The real difficulty is to impress the lesson when it has once been established; and that is the province in which the illegitimate interference of soutiment makes itself felt, and deserves a good deal that is said of it. Enough facts have been established to decide some questions which are still warmly debated even by people who admit the legitimacy of the methods employed, whilst they shut their eyes to the

GAMBLING ON THE STOCK EXCHANGE.

HAPPILY for gentlemen professionally interested in transce-tions on the Stock Exchange, there is no danger of the public ceasing to gamble, and almost as little risk of effectual inter-ference by the Legislature. On the contrary, the field for operations has been steadily and rapidly widening, thanks to the necessities of all ranks and conditions of mon, at home and abroad. In the good old times when the first of the Rothschilds laid the foundations of the family fortunes, Consols were about the only thing worth being dabbled in by dealers on a large scale. And when the nation was engaged in its life-and-death struggle with Bonaparte, as Consols fluctuated violently in sympathy with the convulsive efforts of the combatants, there were ample margins left for profits. In the piping days of peace that followed on Waterloo, and still more under our later policy of non-intervention, Consols have been so "stiff," except under most exceptional circumstances, that there has been little to be made of them by those who hastened to be rich. But this was of little consequence, as they have been superseded by an infinite variety of investments which contain enough of the elements of hazard to satisfy the most reckless and avaricious of gamblers. First came the foreign loans, amounting to an aggregate that is almost fabulous, many of them being held simost entirely in England. It is England that finds the capital for "permanent improvements" all the world over. We lend freely on the vaguest prospectuses of railway systems, of roads and harbours, docks and warehouses, gas-works, water-works, and the like, which are all up in the clouds in the meantime. When a Federation consolidates itself into a Monarchy; when a Monarchy breaks loose from the transmits of efficients. from the transmels of effete despotism, and renews its youth as a Liberal Republic; when a colony snaps its chains and asserts its independence; when a subversive revolution and change of government happens anywhere under the sun, it is England that is invited to lend on the security of promises and professions. When our debtors go to war to defend their honour and their credit, it is we who find the money as their sleeping partners. It is a significant and startling fact that in the course of two-and-twenty years ending in 1873, the various States of the world have contracted debts with us to the amount of 2,218,000,000/. In short, we are always lending, and never learning by experience, although the securities which represent our contributions prove so often delusive, and our debtors are perpetually breaking on our hands. Next to the foreign funds come the endless undertakings floated by private enterprise, to which the outside public can so easily associate itself, thanks to the blessings of limited liability. Notionly do we develop every conceivable industry in the British Isles and our own colonies, but we are eager to assist our foreign friends in matters beyond the means or beneath the notice of their Governments. We dig their mines and drain their lands; we light their streets and draw their water; and every concession which they are pleased to offer us becomes a more question of terms. So omnivorous are we known to be in our appetite for new undertakings. votons are we known to be in our appetite for new undertakings-that anything rejected by the shrewdines of our American cousins may generally be placed to a profit in London. In short, in the growing flush of our national prosperity we have turned bankers and money-lenders to all the world; while the glut of money has festered the tribe of ingenious gentlemen who follow the new and lucrative profession of "promoter." If we make money fast, we spend it faster; and a high rate of interest on investments is matter of necessity to men who live at high-pressure pace. Consols are gone out of date with every one except trustees and bloated millionaires; and few persons who retain the control of their property are described in the control. of their money ever dream of locking it up for a lifetime. But, as of their money ever dream of locking it up for a metime. Dut, as high interest involves a certain element of risk, we must keep a close eye on our investments, and all the purchases we make in foreign funds or limited Companies partake more or less of the nature of time bargains. The extra risks might well suggest the idea of a sinking fund by way of insurance against ugly contingencies. of a sinking fund by way of insurance against ugly contingencies. But prudence is too expensive a luxury for needy men, and indeed most people find that even with high dividends regularly paid it is hard enough to manage to make the two ends meet. We are painfully embarrassed when our foreign friends get behindhend with their half-yearly coupons, or when the reports of our justicators. Companies (limited) announce the disappointment of our reasonable expectations. We get nervously agitated over audden drups in the markets and although we are too much inclined to shut our eyes to ominous warnings, just at last, when really inglitened, we much off to realise. Sensionally these is a panic

still a grand crisis, and among a great deal of buying and selling a good many of us are relies wholesale. But, short of ruin, there are always many unlinely persons recklessly eager to recoup themselves for inconvenient lesses. Hence there are always a number of time bargains going forward between settling days, and a variety of self-titles mominally changing hands. It is estimated that of the whole business transacted on the Stock Exchange only one-twentieth part relates to genuine investments. It is certain that from 1871 to 1872 there was an increase in the number of manshers of the Stock Exchange of 170, and from 1872 to 1873 of \$6, which is sufficiently conclusive as to the progress of gambling and the growth of speculative business.

As we remarked at the outset, we do not believe for a moment that anything that can be said or written will materially diminish the amount of wild speculations by outsiders. If, however, anything were likely to produce that effect, it would be a elever treatise on "The Theory of Stock Exchange Speculation" (Longmans and Co.) which has just made its appearance. It is brief and businesslike, although pleasantly written, and it is to its author, Mr. Arthur Crump, that we are indebted for the suggestive statistics which we have given

are indebted for the suggestive statistics which we have given shove. He draws the obvious conclusions from them. He proves so mathematical demonstration that no amateur speculator can sibly hold his own in the end against the ring of professional confederates; but, foreseeing that his wise warnings will be wasted, he goes on to give amateurs who are bent on raining themselves the best counsels in his power. As to the proposition with which he starts, it ought to be pretty nearly self-evident; nor can anything be much closer than the analogies between play on the Stock Exchange and play at the gaming-table. There are fixed odds in favour of the bank in either case. At the starts is the above of commission contents to the substant of the starts of commission contents to the substant of the starts. There are fixed odds in favour of the bank in either case. At the Stock Exchange, in the shape of commission, contangees, backward ations, and all the rest of it, a man must part in advance with a considerable percentage of his prospective profits, just as there is the oprès at rouge-et-noir, and one or a couple of zeroes at roulette. In each case alike the play comes very much to a question of temperament. The man who used to lose his head and his temper at Homburg when the luck had set in against him was very speedily parted from his money; while the impassive veteran who cut his losses short and lay black setiently in home of a happing vein could at least product his an patiently in hope of a happier vein could at least prolong his enjoyable excitement. So the amateur investor who is making losses where he looked for gains is never easy until he has recouped him-The opportunity he counted upon having turned him, he will insist upon creating others. He had ventured his capital on the faith of his superior astuteness or exceptional inforcapital on the faith of his superior astuteness or exceptional information, and now he goes in for sheer gambling. As for the "information" which so often proves a deadly lure to the amateur, Mr. Crump shows at what a tremendous disadvantage he stands in that respect. On the Stock Exchange each eager philanthropist is playing his own little game instead of the game of other people; and authentic "tips" are rurely going a-begging. No bit of news that is worth the having is suffered to leak out until it has been made the most of by its original possessor. And if you attempt to bring superior shrewdness to bear upon intelligeness that is patent to the public, even then you learn that others are before you. The contents of the latest telegram are generally found to have been somehow known beforeland and discounted by parties interested. Now that news is flashed to the Exchange found to have been somehow known beforehand and discounted by parties interested. Now that news is flashed to the Exchange from all the great commercial centres, the leviathans of specularion command the markets more decidedly than ever. There are formidable syndicates which have their regular agents in Vienna, Paris, or Berlin, and which very possibly may have friends or partners among those who actually direct Continental politics. What chance has the owner of a few hundreds or thousands with admirably informed gentlemen like these? As likely as not they have prepared for a great upward or downward movement by operating to a moderate extent in the opposite direction by way of blind. If our amateur speculator is extraordinarily shrewd or sharp, he may very probably cut in just in time to be squeezed sharp, he may very probably cut in just in time to be squeezed and secrificed. And there is this to be said besides, that the speculator on a small scale is less of a free agent than he is apt to suppose. Substantial securities like Consols eway very slightly up or down, so that the professional gentleman who jobs them can afford to deal at very close prices. There will be but a margin of a very few shillings between his buying and his selling price. But the man who do a hit of cambling in an off-hand way plungs a very few shillings between his buying and his selling price. But the men who do a bit of gambling in an off-hand way plunge by preference into securities that are extraordinarily sensitive. Tidings of a revolution, or ramours of coupons to be dishonoured, may send these down a good many pounds in as many minutes. The jobber must necessarily name very wide prices by way of safeguard against such contingencies, and the speculator who has just bought at 38 may be unable to get out on the instant for anything more than 35. Add to this, that when the available aggregate of a speculative stock is very limited, it may be monopolized in the hands of one or two persons; and should they have reason to suspect that an innocent has "put his foot in it," they will refuse to let him extricate himself except on terms of their own, and combine to put him to a remoraeless ransom.

they will refuse to let him extricate himself except on terms of their own, and combine to put him to a remorseless ransom.

These and many other considerations should deter any rational being from risking his money in the face of such appalling odds. But although such continues in one shape or another have been urged over and over again, the Stock Exchange, as the have seen, has been rapidly increasing its business, just as the habite at Homburg and Wieshaden were more and more crowded that after year. And if a man is blindly bears on speculation,

we strongly recommend his taking this treatise as his guide to the philosophy of the matter. The writer will warn him to take the philosophy of the matter. The writer will warn him to take the philosophy of the matter. The writer will warn him to take the weather into account, and will tell him to buy the most delicate aneroid that can be procured for money. He will show him how, in the absence of disturbing influences, prices grow buoyant in a buoyant atmosphere; how at one season of the year the world is sanguine and willing to buy, while at another there is a tendency to depression and promiscuous selling. But he will warn him that, as a rule, he is more likely to realize by "bearing" than by "bulling, although it is the natural impulse of the uninitiated to rush to buy in rising markets. The knowing fishes will be found to swim against the sot of the general stream, and their fine instinct acquaints them with the run of the currents and undercurrents, and teaches them to anticipate the obb and flow of the ides. Again, most people can play a winning game tolerably well; the difficulty is to lose with resolution and discretion. "Cut short your losses and let your profits run on" was the golden maxima that made the fortune of one of the greatest financiers of the last generation, and Mr. Crump quotes the saying that is current is the City.—Very few men know how to "cut a loss." It is the moral of his book that they will find abundant opportunities of practising the art, although their capital is unlikely to hold out until they have made themselves perfect in their lesson.

CAUDATI.

****

NOM the twelfth to the close of the fifteenth century, and, it Would seem, as late as the Reformation, it was a common belief that, when the English elected to come forth out of the brute creation, they brought their tails with them. Grooks and Sicilians, Frenchmen and Scots, rabble, soldiers, knights, princes, historians, and poets, in the streets, on the battlements of besieged towns, in kings' courts, on the field of battle, in the cloister, and in the closet, hailed them as Condati, mon with tails. In the year 1191, Richard I. being at Messina on his way to Acre, certain Greeks and Sicilians followed him and his attendants through the streets, crying out "Caudati." When the English were besinging streets, crying out "Caudati." When the English were besieging Dunbar, on the 28th of April, 1296, the Scotch army approached to raise the siege, and the garrison displaying their banaus on the battlements shouted, "Now ye English dogs, we will slay you and cut off your tails." In the Crusade of St. Louis, in the year 1250, a grandson of Fair Rosamond, William Longsword, who claimed to be Earl of Salisbury, a perfect knight, to whom the French King gave a white horse that he much loved, was with the Crusaders in Egypt. The King's brother, the Count d'Artois, took from him by force spoil which he had taken from a rich caravan going to Alexandria. St. Louis could not prevail with his brother to return the booty; and the Earl, finding no redress, withdrew in displeasure, while the Count, with a scornful length, exclaimed:—" It were well if the noble army of Frenchmen were purged of the Condati," Salisbury had returned to the camp refere the battle of Mausourah. The Templars were in the van, the Count d'Artois led the second division. The Master of camp before the battle of Mansourch. The Templars were in the van, the Count d'Artois led the second division. The Master of the Temple wished to drive back and join the King; the Count was for spuring onward. Longsword endeavoured to mediate between them. Then said the Count aloud, "Of the cowardree of these timed tail-bearers! how fortunate, how perfect would our army be if it were but cleared of all tails, and those that bear them!" The Earl replied, with indignation, "I recken that to-day we shall be where thou wilt fear to come nigh my horse's tail." After a gallant charge the Christians were driven back: There was no hope for them but in flight. The Count, turning to Longsword, proposed to fly, and the Farl answered him, "It would be displeasing to God that my father's son should flee from the face of any Sararen; I had rather die in honour should flee from the face of any Sararen; I had rather die in honour than live in shame"; and there he died gloriously, and D'Artois also perished, either drowned in a branch of the Nile, or crushed beneath beams of timber in the narrow street of Mansourah. A hundred years afterwards Eustaco Deschamps, the early friend to whom Chaucer in his youth probably owed personal acquaintance with Petrarch and knowledge of the Roman de la Rose and the works of Dante, who loved and admired and praised our poet, and hated England with a bitter harred, regarded Greey and Poitiers by taxing the English with their tails. Alluding in a rondem to their intemperance, and playing with his words, he confessed that they were stronger than his countrymen, since they carried two tuns with a hogshead and a half - non quem - appendant :-

Certes plus foresent les Angles. Que les François communément.

Car deux tonas aux portent aden Et une queue proprenent.

In a ballad, again reminding them of the tuns and the tail, he declared that they were a beer-drinking people, brown as mastifis, and he ended each stanza by bidding them was their tails:—

Ce sont deux tonneaulx de dopin, C'est voir, et la queue de lèz.

Franche dogue, dist un Anglois, Vons ne faietes que hone vin.

—Bi faisons bien, dist le François; Mais vous fuvez le lunequin, Roux estes comme pei de mastin, Wuilsquot, de moy apprenez, Quand vous yeze par chemia, Laves yestre queue leves. And there is the burden of another ballad, written when he was taken by the English at Calais:---

-lors dis : oil ; je voy vo queue.

Another French poet, a century after Deschamps, wrote of a certain cat from Calais, that he must have been of English lineage, for he had a very long tail:—

Ce cat nonne vient de Calais, Na mere fut Cathan la Bleoë; C'est du lignage des Anglois, Car il porte—très longue quaus.

In later times the same monstrous belief was received by the Papists; but they supposed that the stigma had been set upon us at the Reformation. Du Cange was sorely perplexed by the word Candatus. Why the English should have been mocked by his people as Caudati was a mystery to him. Once he thought it might be from the points of their shoes, caudas calceorum, in which they delighted beyond other nations; but he was not well satisfied with that explanation. Next he asked himself whether it might have been because they were very spruce, and neatly combed, for the Western nations, so he teaches us from Gondelinus, called one that was combed Coti, that is, ecous, crop-tailed; but neither did this interpretation satisfy him. Last of all, taking Matthew Paris for his guide, he concluded from the story of William Longsword that the Caudati were faint-hearted, Couards, in the Italian Codardi. It fared with him as with other refiners who overlook the plain truth at their feet to run after subtleties, the mon of whom Swift declared that he had never found one to be once in the right. If, instead of tasking his wit to find hidden likenesses between things unlike, he had accepted the plain sonse, that the English were a brutal people, with the mark of the beast upon them, and had set himself to learn for what special act of brutality the miraculous punishment had been inflicted, he might have found the fable in Polydore Vergil. He tells us that when Archbishop Becket passed through Strood, on his way to Canterbury, immediately before he was murdered, the inhabitants cut off his horse's tail; by the divine will, adds the historian, it was decreed that the descendants of all the men who were partakers in that villanous deed should be born with tails, like dumb animals; but now, in our day, that mark of infamy has perished with their posterity. The words "descendante" and "posterity" may not be allowed without some reserve. It was never pretended that the curse foll upon the gentle sex. Polydore, who wrote in the Court of Hen

A curse prevails,

The babes of Strode are born with horses' tails;

and Ben Jonson, in one of his masques, the Vision of Delight, spread it over the whole county:—

The haunches of a drum, with the feet of a pot, And the tail of a Kentish man to it: Why not?

We have found in the legend told by Polydore Vergil the true meaning of the word that puzzled Du Cange, but what was the origin of the legend? Matthew Paris has preserved the grain of truth out of which the rank fiction eprang. On Christmas Day, in the year 1170, five days before his murder, Becket pronounced sentence of excommunication, from the pulpit of Uanterbury Cathedral, against Robert de Broc, who had cut off the tail of a certain horse carrying the Archbishop's victuals. Matthew Paris says nothing of the infliction of tails; neither do the four authors of the Quadriloga, the Life of Becket. But those biographers do record another, and, as they suppose, a miraculous, effect of the sentence. They say that after the excommunication, the very dogs under the table where De Broc sat would not so much a stouch the bread that he had fingered, which might be true and yet no miracle; for the dogs may have been already cloyed with flesh from those same accursed fingers. As early as the third Crusade, twenty years after Becket's death, the rumour that Englishmen were Cinidati had spread throughout Europe, and that fact, taken with the legend preserved by Polydore Vergil, leaves no room for reasonable doubt that Robert de Broc's offence and punishment gave rise to the fable. It is impossible that Matthew Paris, who was a monk of St. Albans Abboy, could have been mistaken as to the crime and the excommunication. The chroniclers of St. Albans were, above all men, especially informed of the last days of Bocket. A little while before his death, the Archbishop was at his manor of Harwes, about seven miles from the Abbey. Simon the Abbet sent him a noble gift of meat and drink, and travelled to Woodstock to intercede for him, but in vain, with the young King Henry, the eldest son of Henry II. While the Abbot was at Woodstock, his brother visited Backet daily, and supplied him with plenty of the best of food. Simon came back from Woodstock, where he had found nothing that the legend parts of the least daily, and supplied

home, entreated that he would be his companies to Contenbury, his comforter in tribulation. Simon answered that he must abide with his church at the approaching festival of Christmas. "Oh!" exclaims the monkish chronicler, "with what sorrow and sighing was the heart of the Abbot oppressed, when it was made known to him that he might have been a partaker in Bribet's martyrdom!" This honour was not reserved for Simon. This to be content with the glory of a half-martyr, which he had fairly earned, for Matthew Paris warranta, in words not to be misunderstood, that he would certainly have gone to Canterbury had he but known that he should be murdered there, he was left to find consolation in the duty of dispensing to his church some of that most excellent meat and drink with which the Archbishop had been supplied, and of which men made of the common stuff of martyrs think but little. Matthew Paris, who died in the year 1259, was born soon after Becket's death, and, as the historian of his monastery, could not fail to be well instructed in all that happened to the Archbishop from the day he left Harwes. It may be safely concluded that the horse's tail was cut off, that the excommunication did follow, and thence the legend.

safely concluded that the horse's tail was cut off, that the excommunication did follow, and thence the legend.

But Lambarde, jealous for the honour of his own county, the garden of England, the Invicts, the vanguard of liberty, affirms that the legend does not belong to Kent, but was brought from Dorsetshire by John Maier, a false Scot who gave occasion to Polydore Vergil to traduce the innocent men of Strood. Without professing to have consulted the authorities that Lambarde cites, it seems possible to trace the Dorsetshire fable to its source, and to find out how two stories, with nothing in common but affronts offered to dignitaries of the Church, became blended, one borrowing from the other, until the same miracle was evoked from the malice of one Saint, and notwithstanding the mercy of another. It is said that after the conversion of King Ethelbert, St. Angustine, preaching to the people of Dorsetshire, was insulted by the inhabitants of the town of Cerne, who pelted him with the tails of flahes; afterwards they were sorry, and he forgave them. Lambarde relates this on the alleged authority of some work of William of Malmesbury—probably, if it be in any work of his, the De gestis pontificum Anglorum. There is no reason to doubt that St. Augustine may have been ill used by some of the heathen whom he taught; and, if he ever was in Wessex, it may have been by the inhabitants of Cerne; but Alexander Assebye and Hector Boethius have added the legend of Strood, and ascribed to the merciful Angustine the avenging miracle which properly belonged to Becket. They tell how, at the prayer of the Saint, tails were planted upon his enemies. Then came John Maier the Scot, who, because Augustine, even if he visited Wessex, was more conversant with Kent, changed the scene from Cerne to Strood, making it appear that our first Christian teacher, and not Thomas & Becket, was the true performer of the miracle. Beside these gatherings from Lambarde, there is yet another version of the story in Tysilio's "Chronicles of the Ki

it happened.

The conclusion is, that whatever wrongs St. Augustine may have sustained from the men of Cerne—and he could have sustained mone there if he was never in Wessex—the dishonour to the horse-which was carrying Thomas à Becket's victuals (perhaps a parting Christmas gift from St. Albans), the excommunication and the cry at Messina twenty years afterwards, fix the legend upon Strood. It may be a lying legend, but whatever reproach it carries must, as between Kent and Dorsetshire, be borne by the Kentish men. It will seem the lighter if they believe with Stertinius that they suffer in common with all mankind, excepting such as be Stoics:—

hoe te Crede modo insanum; nihilo ut sapientior ille Qui te deridet, caudam trahat.

Qui te deridet, caudam trahat.

Believe no more than this, that you yourself are an ass; by no means, that he who laughs at you is wiser than you; he, too, drage his tail behind him.

ENGLISH CARDINALS.

of the nine names announced in a recent telegram as destined for promotion to the purple at Easter, three only will be of any interest to the general public. The six Italians said to be selected for red hats may be known in Italy, but certainly are not known beyond its borders. This cannot, however, he alleged of Mgr. De Mérode, Mgr. Déchampe, and Dr. Manning, whose names are more or less familiar to the outer world. Mérode, who was in the army before taking orders, is a Belgian, and brother-in-law of the late Count Montalembert, and is a man of some mark. The Archbishop of Mechlin is less envisbly distinguished by the prominent part he took in carrying out the infallibilist policy at the Vatican Council, and by his controversy with Father Gratry, whose crushing refutation of the infallibilist theory we subsequent "effectment" of the author can deprive of its sting. But the heat

described the three in England is of course Dr. Manning, whose three in the report is correctly described as premature; and it will, schooly another link in the long and not undistinguished the of English Cardinals. A work by Mr. Folkestone Williams the published and reviewed in our columns about six years ago (June 13, 1868), as excellent in design as it was unhappily faulty and inadequate in execution, under the title of Lives of the English Cardinals from Nicolas Brakespear (Pope Adriam IV.) to Thomas Wolsey. Two more volumes were promised, bringing down the history "from Reginald Pole to Nicolas Wiseman inclusive," but we are not aware of their having yet appeared; possibly from the author's having adopted our advice to qualify himself for the further prosecution of his task by a more extensive course of reading in both ecclesiastical and English history than he seems to have previously attempted. Indeed his proposal to commence this new series with Cardinal Pole was a characteristic specimen of his slipshod method of procedure. Pole is not the he seems to have previously attempted. Indeed his proposal to commence this new series with Cardinal Pole was a characteristic specimen of his slipshod method of procedure. Pole is not the first English Cardinal after Wolsey any more than Brakespear is the first on the list. The first English Cardinal was Robert Pulleyn the schoolman, who died four years before Adrian IV. mounted the Papal throne. And between Wolsey and Pole stands the venerable figure of Fisher, Bishop of Rochester, clothed in the red robe, not 'of office, but of martyrdom. Cardinal Fisher's appointment was solemnly promulgated at Rome by Paul III., although Henry VIII. took very effectual means, according to his own brutal jest, to prevent his wearing the hat designed for him. And as it is the promulgation, and not investiture with the badges of office, that makes a Cardinal, no chronicle of the English Cardinals from which Fisher's name was omitted would be complete. Up to the time of Wolsey there were twenty, of whom six were Archbishops of Canterbury, the last being Bouchier, in Edward's IV.'s reign, who appears at first to have shown some hositation about accepting the dignity, which even then was unpopular in this country, as may be gathered from the old saying, "It was never merry in England since Cardinals came in." And hence perhaps partly the comparatively thin sprinkling of red hat among English prelates during the four centuries preceding the Reformation. Naturally enough there have been still fower since. But still Mr. Williams's forthcoming volumes, if they ever appear, ought to contain a good deal of interesting matter. Not to dwell on the names of Fisher and Pole, there is Oardinal Allen, who played so important a part in the religious troubles of Elizabeth's reign, and the half-mythical-sounding name of the Cardinal of York, the Henry IX. of Legitinist devotion. And, to come nearer our own times, we have Cardinal Weld, whose amiable and pious the Henry IX. of Legitimist devotion. And, to come nearer our own times, we have Cardinal Weld, whose amiable and pious own times, we have Cardinal Weld, whose amiliable and plous character will be familiar to many in the pages of Mrs. Schimmelpennick's graceful autobiography, and who obtained the express sanction of George IV. to accept his dignity, and was offered a residence in Kensington Palace; and, after him, Cardinal Acton. It is rather strange that no Life of Cardinal Wiseman should have not appeared. Parkner Mr. Williams will be the first to appear. yet appeared. Perhaps Mr. Williams will be the first to supply the omission; but, although he counts among English Cardinals, it must be remembered that Dr. Manning's predecessor in the see of Westminster was an Englishman by virtue of domicile only, being of Irish extraction on his father's and Spanish on his mother's side. Still less, of course, can Cardinal Cullen come into the reckoning; and indeed Mr. Williams announces his intention of publishing separate biographies of the Scotch and Irish Cardinals.

The only surprise that can be felt by anyone at Archbishop Manning's promotion—whether it takes place at Easter, or, according to a later rumour, in June—is that it, should have been so long delayed. A distinguished foreign ecclesiastic, to whom an English traveller had expressed his regret that Dr. Newman had not been made a Cardinal, is said to have answered, with a significant smile, "My good friend, Dr. Newman is not the stuff Cardinals are made of." And to any one at all acquainted with the ways of Rome for some centuries past the force of the remark will be obvious enough. The Cardinalate is a sort of hybrid dignity, half civil, half ecclesiastical, but far more closely connected with the Court than with the Church of Rome. Laymen may be, and often have been, clothed with the sacred purple, always on the professed assumption of their intending to take orders eventually, and they have even voted in Papal Couclaves. But this right no Cardinal below the rank of a sub-deacon is now allowed to exercise. The speciality of a Cardinal is that he forms one of the inner circle of the Court, or, if we may be allowed to use an expressive mismomer—of the royal family of the Sovereign Pontiff. Hence Cardinals claim, and are allowed in Catholic countries, precedence of every one except Princes of the Blood, and a lay Cardinal even would rank above the first Archbishop in the land not being a Cardinal. They form the entourage of the Pope, and are his nearest and natural advisors. And accordingly the first and most indispensable requisite in an aspirant to the post is not power of mind, or theological attainments, or seal for the work of the ministry; he need not, que Cardinal, be à profound thinker, or a learned doctor, or a pastor of souls, though there have no doubt been Cardinals of whom all this might be truly predicated. But he must above all things he accordingly the first and most indispensable on the interests, as well temporal as spiritual, of the Vatican. In all cases where the choice of the Fope is unfitted Do

was able to obtain the red hat for Archbishop Darboy, though he was, with perhaps one exception—of a prelate who has also been jealously excluded—incomparably the greatest man in the French episcopate; but it was promptly and readily accorded to his obscure but more subservient successor in the sec of Paris. Independence of mind and character is precisely the disturbing influence which would not be welcomed in the Sacred College, and a man like Wolsey or Richelieu would not easily gain an entrance there in this day, and would certainly find himself in a very uncongenial atmosphere if he did. Dr. Newman, with all his uncompromising loyalty to the Holy See, of which he has given abundant and repeated proofs, is said never to have been a favourite at Rome, and we can quite believe it. It is many a long day since the Church of his adoption has enlisted such a mind as his in her service, but nevertheless—or rather for that very reason—it is perfectly true that he is "not the sort of stuff Cardinals are made of." The reverse is true of Dr. Manning, who rises, indeed, morally and intellectually above the great majority of his future colleagues in the Papal Senate, but who shares with them in a very eminant degree the peculiar aptitude for ecclesiastical promotion—and, above all, for promotion to the amphibious dignity of the sacred purple—which seems with some men to be a natural gift.

It is related in the Life of the late Bishop Grast of Southwark, that when quite a child his invariable reply to all questions as to what he meant to be was, "I will be a bishop"; and a bishop in due course he became. There is a class of men in the Church of England as well as in the Church of Rome who are thus "to the

England as well as in the Church of Rome who are thus "to the England as well as in the Church of Rome who are thus "to the manner born," and whose successful career might be predicted by an intelligent observer almost from the cradle. The former Archdeacon of Chichester and present Archbishop of Wastmins ter is one of them. He pursued, we believe, for a short time a secular calling in early life, but his ecclesiastical instincts were too strong for him; even in his school and college days a kind of archidisconal flavour, so to say, had been observed to hang about him; and at an age when most clergymen are still uneasily oscillating between one curacy and another, he was already a rector and archidescon, reputed to be the trusted counsellor of bishops, and to have a volce required to be the trusted counsellor of bishops, and to have a volce introduced into Parliament, whether by the Government or the episcopal Bench. The late Lord Aberdeen is said to have expressed his intention, in the event of his taking office, to bestow the first vacant mitre the event of his taking office, to bestow the first vacant mitre that might fall to his disposal on Archdescon Manning, and at all events there can be little doubt that, had he remained in the Established Church, he would long since have risen to the bench, and not improbably to the top of it. Nor were his new allies less prompt to discern his exceptional capabilities for official life. Of all the Anglican converts none have had so uniform or so brilliant a career of success in their new communion. From the first his diplomatic tact and keen sense of fitness asserted itself. Ordained priest by Cardinal Wiseman within a month of his secession, priest by Cardinal Wiseman within a month of his secession, while the foremost of his fellow-converts had years to wait, and created a doctor by the Pope soon afterwards, the ex-archdescon passed in rapid succession through the stages of Provest, and Protonotary Apostolic, to the Archbishopric of Westminster. One higher prize alone remained, short of the highest of all, which appears to be now within his grasp. And he has undentably earned by his services at the Vatical Council the most ample reward at the disposal of the Pontiff when he has done so much to sender inthe disposal of the Pontiff whom he has done so much to render infallible. It is generally believed to be only through the parrow jealousy of Roman red-tapism, suspicious alike of converts, of foreignors, and of intellect in every form, that he has been kept out in the cold so long; though it is also possible that he may not have eagerly courted a titular princedom which in his own country could receive no official or social recognition. Speculation has indeed been rife among Protestants, but only we suspect among Protestants, as to the chances of a second English Pope. Since Adrian IV. the triple crown has twice seemed ready to descend on the head of an Englishman. Cardinal Wolsey's candidature was notorious, and was backed for a time by the authority both of his own and the French Government; and some years later Cardinal Pols thought himself, and was thought by others, almost sure of being elected. But in those days there was no prescription of centuries against foreign nominees, and England still counted as a Oatholic country. If any conjecture may safely be hazarded as to the result of the next Conclave, it is that the successor of Pius IX. will almost certainly be an Italian, and quite certainly not an Englishmen. It is very unlikely that Archbishop Manning himor his friends cherish any such anticipations as have been Pope-maker if he has no prospect of becoming Pope, and his Protestant fellow-countrymen will be the last to grudge him the gratification of so natural an ambition. Cardinal Wiseman, with grauncation of so natural an ambition. Cardinal Wiseman, with all his weaknesses and eccentricities, was a man of real genius, and of far more varied learning and accomplishments than his successor in the archiepiscopate. But he was weak in just the points where Archbishop Manning is strong. If the latter had been charged with the conduct of the "Papal Aggression," the too famous Pastoral extra Portam Flominiam would have been as faultless in style as it was in fact ridiculous, and there would have famous Pastoral extra Portam Planniam would have been as faultless in style as it was in fact ridiculous, and there would have been no Durham Letter or Ecclesiastical Titles Act. Cardinal Wissman was sometimes described by his admirers as "a child of mature," and an element of unconacious childishness there certainly was about him, which led him into mistakes often sufficiently banchable, but sure in his position to be interpreted for the worst by unfriendly critics. Unfortunately for himself he had little disconnent of character, and least of all did he understand English.

character, and that is a kind of science in which Dr. Manning, who has no claim to genius, is never at fault. He knows exactly how far he may go without giving offenes, what can be safely said, and how to say it; and he has the immense advantage over his episcopal colleagues of his Harrow and Oxford training. And hence, while his opinions are really much more extreme and entagonistic to ordinary English prejudices or convictions than those of his predecessor, he has not only contrived somehow to establish for himself among Protestantara repute for moderation, which might hardly be endorsed by his co-religionists, but has secured a position—notwithstanding an occasional growl from Christ Church or Exeter Hall—such as no Roman Catholic ecclesiantic has ever held in this country since the death of Reginal Pole. The only English Cardinal since then who has attempted to assert himself provoked the nearest approach to a repetition of the Lord George Gordon riots possible under the altered circumstances of the day. Archbishop Manning, who is not yet a Cardinal, has quietly won a far more prominent place before the world than Cardinal Wiseman ever sought to gain, and holds it with the contented acquiescence, not to say the good will, of his countrymen.

PARLIAMENTARY NIGHT-BIRDS.

A MODERN poet has celebrated in gloomy verse the midnight heur when "the rats and the bats and the vipers and the creeping things come out." This is the favourite hour of the Parliamentary night-bird. It is the hour when honest folk are or ought to be in bed, and when other people make the most of their opportunities. In a thin House towards the small hours of the morning a Bill may sometimes be slipped through, or a division may be snatched, which would have no sort of chance at any other time; and until the Session before last, the only protection against a surprise of this kind was for those whose suspicions were aroused to doom of this kind was for those whose suspicions were sroused to doom themselves to literally sleepless wigilance night after night as long as the objectionable measure steed upon the Notice-paper, which might be from almost the beginning to the very end of the Session. At the close of each sitting there are always a great many subjects which are left over for another night, and these may be continually put down on the paper and as regularly postponed as two or three o'clock comes round. Many nights might thus be wasted in vain watching, for as often as there was a good attendance the matter would be put off in the hope that at some other time it might be whipped through under the blinking eyes of a handful of drowsy legislators. Late vigils for weeks and perhaps months together naturally exhaust the flesh and dull the spirit even of the most scalous members, and then at last the chance comes. If it were palous members, and then at last the chance comes. members, and then at last the chance comes. If it were known that on a particular night—no matter how late—the observations Bill would certainly come on, those who opposed it would not grudge sitting up for it in order to settle the matter there and then. What is intolerable is that it should be kept dangling over their heads during the whole of a Session, and that they should be compelled to spend night after night waiting for it to come on, with the prospect that if, by any accident, they should fail to muster in sufficient force, it would be hurried through by a snatched vote. Accordingly it was agreed a couple of Sessions are that, with the Accordingly it was agreed a couple of Sessions ago that, with the exception of a Money Bill, no order of the day or notice of motion to which opposition was offered should be taken after half-past twelve o'clock at night. This arrangement worked very well as far as the convenience of the great body of members was concerned. Instead of being kept out of bed until all hours of the morning in order to worked to work the morning in the transfer to work the morning in the transfer to work the morning in the state of the state of the state of the morning in the state of the sta instead of being kept out or bed that all hours of the incring in order to watch for a Bill that never came on, simply because it was waiting to dodge through when nobody was looking, they were released at a reasonable hour. If the subject in which they were interested had not come on before half-past twelve, they knew that it could not come on afterwards, and they could therefore go home with an easy mind. On the other hand, however, a rule of this kind is naturally offensive to those who find that it interferes with their tactics. On Tuesday night, when Mr. Heygate moved that the rule should be ro-enacted, a cry was raised on behalf of with their tactics. On Tuosday night, when Mr. Heygate moved that the rule should be ro-enacted, a cry was raised on behalf of the rights of private members. It was said that this rule dealt with them very hardly, as they had no chance of getting their proposals brought forward except at a late, or rather a very early, hour; and that a fixed hour beyond which opposed business must not be taken operated as a temptation to opponents to talk against time in order to shelve an obnazious subject. Private members who wished to try their hand at legislation were thus boxed up in a corner, and were practically described subject. Private members who wasned to try their hand at legislation were thus boxed up in a corner, and were practically deprived of the power of legislating at all. It was therefore proposed that the rule should not be held to apply to any Bill which had passed through Committee. At first sight this had the look of a plausible and simple compromise. Mr. Disraeli somewhat hastily expressed approval of it, and it was carried, but not without a division which showed how keenly the danger was appreciated by a considerable number of members.

considerable number of members.

It does not require much reflection to see that, if it is necessary to impose a check on opposed business being taken late at night, it is exceedingly unwise to relax the rule which has been in force during the last two Sessions. A Rill which has passed through Committee is very close upon being send a third time and passed; and the last stage is constitues the most important of all, because comething may be done in the manufacture of the Rill. A Bill passes through Committee character of the Rill. A Bill passes through Committee that and the next night the report of amendments.

may be period before headly anybody has seen them, unit-before anybody has had sufficient time to consider them and to understand their effect on the measure in all its After that the Bill has only to lunk in the tank corner notice-paper till there is a chance of smuggling it dirough concerted gathering of its supporters, who turn up suddenly-critical moment in an empty House just dribbling itself Moreover it is often not until a measure has reached an adv stage—even when it has not been altered—that its real dust full scope begins to be appreciated. The motion for leave to duce a Bill and the first reading are usually mere formalities. title of the Bill probably affords no clue to its intentions; the preamble is equally vague and unmeaning; and the more certainly will its object be disquised in the account given of it on the second reading. This is really the first that is heard of its contents, and care is often taken that wave little shall be heard and that what is ing. This is really the first that is heard of its contents, and care is often taken that very little shall be heard, and that what is heard shall convey a very imperfect idea of what is proposed to be done. The printed Bill is perhaps not delivered until the day for which the second reading is fixed, and it may be pushed through Committee before members have had an opportunity of studying it in black and white, and looking up the different studying it in black and white, and looking up the different statutes which, in one way or another, are to be affected by it. Nothing is more subtle and deceptive than an innocent-looking Bill, and innocent-looking Bills, like men of similar appearance, are often the worst of rascals. The roguery which is contemplated demands and suggests the cover of carefully simulated innecence and simplicity. Of course we do not mean to say that members definition had support and simplicity. Of course we do not mean to say that members of the House of Commons are constantly lying in wait to play off tricks of this kind; but it certainly does happen from time to time that measures of very serious importance contrive to slip through without adequate consideration. To headlong reformers and harum-scarum legislators the multiplied precautions of our cautious ancestors may perhaps appear to be tiresome and obstructive; but obstructiveness is not invariably an evil, and it is obvious that a net is of no use if the fish which it is most important to eatch are able to escape through its too widely opened meshes. All checks are inconvenient to people who are in a hurry, but then it is the object of checks to keep people from going too fast, and to secure deliberate and well-considered movement. It is no doubt true that the half-past twelve rule tends in some degree to discourage and repress the efforts of private legislators, but it may be doubted whether anything particularly valuable is often lost in this way to the country. On the other hand, it is certainly a means of preventing headless, accidental, or tricky legislation, and that is an important public benefit.

an important public benefit.

The legislative attempts of private members are for the most part serviceable chiefly as a means of promoting discussion and cultivating opinion on subjects which are not yet understood. Now and then perhaps a meanber may succeed in carrying a useful Bill on some side subject which deserves attention, but which the Government has not time to deal with; but, as a rule, if the subject is of any importance, it is scarcedy possible that anything can be done with it unless it is taken up by a Minister. Mr. Fawcett's Irish University Bill may be cited as an exception, but there can be no doubt that it ought to have been in the hands of the Ministry, and that it was only the Premier's petish blundering which led to an important measure of this kind being carried through the House in charge of a private member. The development of species on the principle of natural selection is quite as marked in the Parliamentary as in the animal world. It is only a very strong Bill, strongly supported that has any chance of getting through fairly, and it must be admitted that, looking to practical results, it is a very good thing that Bills which do not comply with these conditions should be smuffed out. In regard to the preparation of Bills the Ministry acts as a sort of Committee of the House. It may be assumed that a Bill which has a decided najority in its favour will be taken in hand by the Treasury Bench. It is then drafted by the Parliamentary draftsmen; it is carefully considered, not only by the departmental officials who are specially interested in it, but by the departmental officials who are specially interested in it, but by the Government of the first and it is presented on responsible authority. A private member's Bill, on the contrary, may be, and too often is, only some weak personal crotchet, or the Project of a small minority; it is parkaps drafted in a loose, unbusiness-like way, and, evan if the principle wore agreed to, would have to be remodelled before it could be carried into pra

It is to be hoped that the rash relaxation of a useful rule

A JOURNALIST OF THE EMPIRE.

Charges of M. Hugelmann, a Parisian journalist, on various charges of swindling, forms an instructive chapter of modern Present history. M. Hugelmann was one of the favoured journal liste of the Second Empire, and represents one of the type gany and corruption which sprang from its faculent and rotten He lived in much splendour during the reign of his master, provided sumptuous lodgings for various mistresses, and was a compineous figure in seciety. After the final crash he started a Bonspartist paper in London, and subsequently contrived to attant himself for a time to the skirts of M. Thiers. He has just been brought before the police magistrate at the Palace of Instice accused of fraudulant bankruptcy and other acts of dishonesty, and has been sentenced to three years' imprisonment. He is described as a good-looking man, with quick, plausible address, and a confident suile always playing on his lips. His contributions to the press were not distinguished either by wit or literary graces, but he appears to have been not wanting in literary graces, but he appears to have been not wanting in a cartain courageous cleverness and advait effrontery. It was not, however, what he himself wrote as a journalist which made him remarkable so much as the use to which he put his commexion with the press. He began life by writing, while a lad at college, a copy of verses in honour of Louis-Philippe. In 1848 he was a lieutenant is the Garde Mobile, and went over to the insurgents with his men. He then became a noisy member of various ultra-Republican clubs, and vapoured about the Commune. After the days of June ha was sentenced to transportation under the assumed name of s sentenced to transportation under the assumed name of Count de Vergny. In Algeria he made a reputation for himself by his daring insubordination, and because the hero of the more restless and reckless convicts. Escaping to Spain he married a Spaniard, and set up a French newspaper in Madrid. The Empire had by this time been established, and when a Spanish journal, ia, spoke in an offensive manner of the Empress, Hugelmann seized his opportunity, challenged the editor, fought a duel with him, and took care that the particulars should be made known in the proper quarter. He was immediately invited to return to France. He had an interview with the Emperor, and received a pardon and an appointment in his confidential service—that is, as a spy and creature of all work. A bully who could use both pen and pistol was always welcome at Court. Hugelmann wrote for the papers in the interest of the Government, attacked its adversaries, and helped to manufacture the spurious public opinion which was supposed to be the bulwark of the State. He also collected private intelligence, and made himself useful as an instrument of obscure intrigue. It may be supposed that he did not neglect the Bourse, where in those days Ministers and mouchards alike played their game. In his way he was no doubt a useful man, daring, energetic, and unscrupulous; and he made the most of his positi on.

These probably never was a Government served by so many dis-potable and dishonest persons, blacklegs, cheats, and swindlers all kinds, as the Second Empire. Some of the most prominent and intimate associates of the Emperor were notoriously tainted. French generals looted abroad. Such an one, Governor of Algeria, coublesome creditor or two at intervals to keep the rest quiet. Ministere plundered at home. They used the public money for private speculations, and every bubble Company had its commexions with the State. Like draws to like; corruption in high regions spread throughout, and the type of character which is elsewhere to be found in the more shady corners of the Turt, or on the serve of the police curve recently required to the configuration. the verge of the police-court, naturally gravitated to the confidential service of the Empire. There was a close, suspicious odour about that Court which kept honest men at a distance. It was not merely the notorious means by which its adherents gained their money, but the still more notorious and shameless way in which it was laviabled in coarse and breasen profligacy, which correded the whole system, and honeycombed it with purulent disease. Fingulament was only an underling, but he had the characteristics of his means was cally an underling, but he had the characteristics of him. He field to London, saw the Empress, and started the findam was a rich men shut up in bessiged Paris, whereas he was all the time living at his sonn expanse in London. When M. Thisney's star, was into the according, Fingulanant thought he time living to renounce Romagnetism, as an error. Bousparties, he amised to renounce Romagnetism, as an error. Bousparties, he amised to renounce to "the fillustrious citizen whom he was all the time had anised to renounce formulation as an error. Bousparties, he had been twisted from the limitatious citizen whom he was linearly met to fight against as soon as, rising above parties, he that Court which kept houest men at a distance. It was not ment not to fight against as soon as rising above pretion he make the that France must not be escribed to any of

The illustrious citizan aggrega, to have been set public to ellow Hugalmann, some hind, of open captible to silow Hugalmann same. hind of opening to sitting and Hugalmann made use of his mel or supposed connected gather bribes for the use of his influence in obtaining opened of the Legion of Honour, pardons, and other favours from the Legion of Honour, pardons, and other favours from the Legion of Honour, bad got into trouble about a contract for the revictualling of Paris after the siego. Hugalmann undertook to arrange the matter with the anthonicies and procume Larivière's release on payment of cartain sums to himself. His extracted a considerable amount in this way, and when Larivière rofused to give any more, he threatened to expose some of his transactions in one of the journals with which he was connected. The bribe demanded as the price of allance having been refused, the defamatory article was published. Happily connected. In a price demanded as the price of amount survey, been refused, the defamatory article was published. Happily this led to the suppression of the paper. In connection with Larivière's affairs, Hugelmann stated in court that he heard that the English Government was disposed to interfere in regard. that the English Government was the first the some money due on a contract. He read to M. Thiere the journals in which it was said that "the Lord Chancelles was tries journals in which it was said that "the Lord Chancelles was tries and necessary for the said that the lord that the said that the to some money due on a contract. He read to M. Thiers the journals in which it was said that "the Lord Chanceller was trie micontest, and necused France of had faith." M. Thiers listened, and said, "That is very serious"; but a solicitor was brought over from London, and the matter was arranged. It is pessible that Hugelmann's careor might have collapsed even under the Empire, and his resources were new limited by the effects of the war. He had been bankrust in 1855 and 1867, and became bankrupt again in 1873. At the moment of his arrest in this last instance he had only tan france in his pessession to provide for his family. Yet only a short time previously he had contracted with an uphalaterer to famila a suite of rooms for one of his mistusses at the cost of 30,000 france. The inquiries which were thus begue showed that his subsequent expenditure had been provided for by a series of impudent and systematic france. He seems to have spent shout five thousand pounds a year. Hugelmann pleaded in court that he was a man of weak and easy nature, and that he had all his life hear a victim of imposition. He had houses convictions, but his simplicity had been abused. The Judge, hawever, thought the simplicity had been on the part of his dupes, and sentenced him to three years' imprisonment. After the lashion of Franch criminal courts, the Judge subjected the prisencer to a close and bitterly personal interregatory, ridiculing him as "a universal genins, a political director, man of business, and courtier," and even tenuting him with the infidelity of one of the mistruses upon whom he lavished his money, but who refused to receive his visits encept from twelve to we o'clook.

Horelmann, it will be observed, was at once a Government and

from twelve to two o'clook.

Hugelmann, it will be observed, was at once a Government upy and a journalist, and the parts were no doubt occasionally interchanged by the hangers-on of the Imperial Court. Journalists of a certain stamp played an important part under the Empire, were employed in various confidential missions, and even attained high employed in various confidential missions, and even attained high public advancement. But never at any time was the press so degraded in its servility and vensity. Adherence to the Government was made profitable in many ways. Places and pensions, and the secret favour of the backstairs, were to be had by service-able writers; and the influence which they were supposed to exercise in official quarture commanded a high price, and was finally sold. The right to establish a journal was in itself a valuable consist. sold. The right to establish a journal was in itself a valuable concession. The newspapers were quite willing to work for other persons on the same terms as those on which they worked for the Government, and to puff theatres, epora-houses, singers, dancers, financial speculations, as they puffed the Empire. They became, in fact, more advertisement sheets, the columns of which were open to those who were willing to pay the price. With a few honourable exceptions, the whole system of the Parisian press was an organization of impudent imposture and extertion. What most galled tion of impudent imposture and extention. What most galled thoughtful and independent Frenchmen at this time was not so much the denial of freedom of speech to journals which criticized much the destal of freedom of speech to journals which criticized the Government as the spurious opinion which was passed off in the name of the public. It has been sometimes suggested that anonymous journalism is a shelter for dishonesty and corruption, but it can hardly be said that the experience of France proves the value of published names as a security for the personal character of newspaper writers. The perpetual fluids of rival journalists, their amegant and importance personalities, and the notorious vensity of a large number of Frenck papers, would certainly seem to point in another direction.

THE THEATRES.

THE THEATRES.

I'T has pleased Means. Spiers and Pond to open a new theatre as it part of the gigantic eating-shop which they have established in Piccadilly. If we are to regard this theatre as a fibre lounging-place after dimer we cannot reasonably complain of the moderate character of the entertainments prevaled at it. Mr. Byron has written one more comedy in which he acts himself. He utters his carn witticisms in a languid drawling manner just as he did in other plays. Many of these sayings are new, and some of them are good, but nobody else throughout the play says a single word worth listening to. The American-Lody will not increase the author's nymention, nor will it, we should think, after the first novelty of the house has worn away, draw fall andishess to the Oriterion Thante. This almost melancially to see Mr. J. Clarke trying to make mire. This almost melancially to see Mr. J. Clarke trying to make mire. Stir almost melancially to see Mr. J. Clarke trying to make mire.

that she is not the most disagreeable specimen of her class that we have met with. Perhaps this theatre is intended to become after a time a superior sort of music-hall. In this character its situation would ensure full houses, while there can be no difficulty in supplying the entertainment. At present it is simply one more addition to the number, already excessive, of playhouses of exactly the same class. Before the Criterion Theatre was erected Mr. Byron could find managers to accept any comedy he might write, with or with the court of the country of the count find managers to accept any comedy he might write, with or without a character for himself; and certainly the company which he has collected could have found employment adequate to their talents without building a house on purpose for them. If Messrs Spiers and Pond are carrying on this theatre at their own expense, we may doubt whether the experiment, at least in its present form, will be long persisted in. But if they can find a millionaire who desires to benefit mankind, that may make a difference. It is wonderful to observe the confidence with which Messrs. Spiers and Pond enter upon this now branch of business. Managers are sometimes called "caterers" for public amusement, but it does not follow that a tavern-keeper is competent to conduct a theatre. follow that a tavern-keeper is competent to conduct a theatre. Mr. Gilbert has been employed to write a short piece which precedes Mr. Byron's comedy, and thus Mears. Spiers and Pond are able to say that they have employed the best artists in dramatic work. Mr. Gilbert has not on this occasion been particularly happy, and he, like Mr. Byron, has completely failed to provide Mr. J. Clarke with any opportunity for being funny. The idea of a country where everything is upside down is not prolific of mirth, and one might almost as hopefully invite visitors to the Criterion Theatre because it is underground. The newspapers unanimously praise the decorations of this theatre, and declare that the American Lady has been "sumptuously" placed upon the stage. Messrs. Spiers and Pond can and will command for their new Messrs. Spiers and Pond can and will command for their new undertaking whatever may be bought for money, and it is unfortunate that they cannot order a new comedy like so many yards of silk for hangings. They must go either to the well known manufacturers of plays, whose stock may happen to be exhausted, or to beginners, who either have no materials at all or do not know how to use them. Messrs. Spiers and Pond deserve credit, however, for attempting to conduct a new theatre without burlesque. It remains to be seen whether the attempt will succeed.

It would be interesting to obtain statistics of rejected plays:

It would be interesting to obtain statistics of rejected plays; and perhaps when everything else has been exhibited at South Kensington, we may be allowed to witness the process of manufacturing a comedy. The stimulus to dramatic composition by the opening of new theatres must be enormous, and we almost wonder that authors of established reputation do not take pupils at a handsome premium, like engineers or equity draftsmen. At present the only way to learn to write is by writing; and if we desire harvest in autumn we must deal tenderly with the blades of corn in spring. A play called Queen Mab, which has been produced at the Haymarket Theatre, is, we understand has been produced at we could wish that the indulgence to which an by a beginner, and we could wish that the indulgence to which an early effort is entitled were less necessary. There is not, however, any special fault in the play, which is painfully similar to many There is not, however, plays by distinguished authors. This resemblance can hardly be complained of, because, if the present demand for plays continues, it can only be supplied by working up the same material again and again, as they do with paper-stuff. The opening scene of this play is transacted in a lodging in Bloomsbury, occupied by an obscure actor and a girl who passes for his niece. This is Queen Mab, who maintains herself by painting, and cooks and makes herself generally useful, as well as ornamental, in the lodging. Her uncle and his friend, who is as small in literature as he is on the stage, begin the play with British beer in pewter, and end the play with Bavarian beer in glass. This persistent exhibition of drinking upon the stage is a grave matter, worthy of the attention of the Alliance. It is apprehended by that body that attempts will be made to induce the new Parliament to relax the Licensing Act, and "in this appalling state of the British Empire," a writer in the Alliance News urges the friends of temperance and prohibition to plead with Heaven for the speedy arrest of the moral and physical plague. It is certainly worthy of remark that a great deal of drinking—not mere make-believe, but honest drinking—occurs upon the stage. The pot which is brought in full does not long remain so, the stage. The pot which is brought in full does not long remain so, and Queen Mab not only hands the pot to her uncle and encourages him and everybody else to drink and smoke, but actually talks of lighting a cigarette herself. Those who have adopted a belief in the wickedness of the stage will thus find it confirmed. The "appalling state of the British Empire" becomes more appalling still when we observe that the Criterion Theatre is a mere excrescence of a drinking-shop, and indeed it may be suspected that several new theatres have been opened partly with the view to profit by sale of refreshments to the audience. It must be ewned that refreshment of some kind becomes almost a necessity to carry one through the performance of a so-called "new Atthic refreshment between the performance of a so-called "new Atthic refreshment between the performance of the performan to carry one through the performance of a so-called "new" comedy. At this moment, however, we are concerned rather with drinking and amoking upon the stage, to which, without being devotees of the Alliance, we should like to see some limit placed. The baronet's son, who is in the Guards, amokes a cigar in the first act, and a pipe in the second act of Queen Mab. The critics say that this is a "Robertsonian" play, and certainly the lamented inventor of the comedy of our time can easily be imitated up to a certain point. Positions are peeled and sliced and put with other ingredients into a simpan by a lady, while a gentleman sits by and smokes. There is indeed, some lively talk over this cooking and the language of the language of the language of the

situations. If it were not so, the experiment would be indeed hopeless. We should not object to the suthor's excursion into what is called Bohamia, if he brought back with him anything worth the journey. But it appears that in Buhamia they are as stupid as in Belgravia, besides being values. The notion of sending Queen Mab, accompanied by him uncle, to teach drawing to a young lady in Cornwall appears to promise material rather for farce than comedy. The Guardaman ought to marry the young lady who is an heiress, and he of course continues with the drawing mistress in Cornwall the flirtation which had begun over the stewpan in Bloomsbury. There is nothing new in this, but a certain originality is displayed in making the gentleman insult both ladies almost at the same moment. This heavy swell, it must be owned, behaves disgracefully, parhaps heavy swell, it must be owned, behaves disgracefully, perhaps through his addiction to tobacco. He makes love with apparent sincerity to the mistress, and then tells the pupil that he could have no serious intentions towards a "vagabond." A hig tree conveniently enables the artist to overhear this remark upon herself, and she thereupon goes into an effective passion. upon herself, and she thereupon goes into an effective passion. The third act passes at Homburg, and ends with a marriage between the artist, who has now attained fame, and the Guardsman, who has lately done something comparatively respectable. The other lady marries an earl, who is brought in for that especial purpose, and the uncle and the uncle's friend call for Bavarian beer to drown their sorrow. All this is tedious to tell, and more tedious to see. But the language, as we have said, prevents the play from being an entire failure. If it be an early effort, partial failure is not surprising; and after all it is nearly as amusing as the latest effort of Mr. Byron.

Thus, in a new sense, extremes meet. Mr. Byron's own part

Thus, in a lnew sense, extremes meet. Mr. Byron's own part in the one play and that of Miss Robertson in the other are of in the one play and that of Miss Robertson in the other are of nearly equal merit, and there is nothing else in either beyond vulgarity or mere padding. It may perhaps be thought that with the Haymarket Theatre ill-supplied with plays there was no call for further competition in the same market. On all accounts it seems to us that a new theatre was unnecessary, unless it can do either a new thing or an old thing in a new and better way. If the Criterion Theatre is merely intended to produce ordinary plays in an expensive way, we have enough theatres of that kind already.

HOLDING A BRIEF.

IN the Spectator of the 21st of March the Saturday Review is said to be "obviously holding a brief for the Council of India" -the inference intended to be drawn evidently being that upon the —the inference intended to be drawn evidently being that upon the Bengal famine the Saturday Review expresses, not its own views, but the views supplied to it by or on behalf of the Council of India. We think it right to give an unqualified contradiction to this statement, both because it is untrue, and because it attributes to the Saturday Review conduct altogether unworthy of an independent journal. A barrister, or agent, or representative of any kind may rightly hold a brief, because it is known to every one that in his capacity of advocate he is merely stating his client's case, and not expressing any opinion of his own as to its sufficiency or insufficiency. A journal stands in a different its sufficiency or insufficiency. A journal stands in a different position. It is supposed to be expressing its own views upon the questions that come before it. Its weight with the public depends upon this; and if it morely expresses views supplied to it without giving its readers warning that they are not its own views, it is gaining influence under false pretences. It ought not to be necessary to explain to the Speciator that the relation of a journal to its readers is that of a judge employed to report upon the merits of a dispute for the information of asuperior authority, and that it has no more right to hold a brief for this or that person than a member of the Judicial Committee of the Privy Council has to hold a brief in a case upon the merits of which he has been ordered to report to the Queen. It is to be regretted that a contemporary which professes to respect the proprieties of journalism should think it consistent with its reputation to indulge in random talk of this kind.

REVIEWS.

NASMYTH AND CARPENTER'S MOON.

THE moon has been sadly neglected of late years. In spite of the vast impetus which has been given to the study of the physical nature of the heavenly bodies by the improvements effected in all descriptions of astronomical instruments, and the multiplication of skilled observers, our knowledge of it has increased but little. As the field of the first and decisive victory of the Newtonian Theory, and the only heavenly body sufficiently near to us to warrant a hope that we shall become acquainted with the minute configurations of its surface, it at one time hade fair the the minute configurations of its surface, it at one time hade fair to

The Moon; considered as a Planet, a World, and a Satellite. By Ju Namyth, C.E., and James Carpenter, P.R.A.S., into of the Education vatory, Greenwich. With Twenty-Four Illustrative Planes. Lond John Murray. 1874.

The Mean, her Motions, Aspects, Scenery, and Physical Confidence. Richard A. Proctor, S.A. Cambridge. With These Longer Photographs Rutherford (unlarged by Brothers), and many Planes and Chapter Longement & Co., 1875.

coveries. But the discovery of the spectrum-analysis threw it into the shade. As the new methods are applicable to self-luminous bodies only, or, to speak more accurately, to bodies in such a state of chieff or temperature as is compatible with the existence upon their of vest quantities of incandescent gaseous matter, the necessary conditions of their successful application were not to be found in the still face and borrowed light of our faithful satellite, and it was natural and even desirable that selenography should be for a time neglected while men were working the rich vein that had been opened out by Kirchoff's great discovery. Nevertheless we are glad to find tokens that this period of comparative neglect is drawing to a conclusion. The amount of high-class literature that appears upon a subject is not a bad measure of the interest that, is taken in it, and of the degree of attention it is receiving; and in the present publishing season there have appeared no less than three works specially treating of the moon, and all of them by authors whose names are sufficient warrants that the contents of the books will not be unworthy of the attention even of those who are best capable of being themselves teachers. It would perhaps are best capable of being themselves teachers. It would perhaps be more accurate to say that two such books have appeared, for Mr. Rutherford's splendid lunar photographs and Mr. Proctor's carefully writtes treatise should be looked upon as forming one work. Thus regarded, they give a much more complete digest of all that is known or suggested about the moon; but, in spite of this greater completeness of treatment, they will scarcely sustain the rivalry of the admirable work just published by Mesers. Nasmyth and Carpenter. Though we differ radically from these last-named writers on many fundamental points, yet it is impossible not to feel that they have given a great stimulus to the study of the physical con-figuration of the lunar surface, and that they have adopted the right method of ensuring steady progress in the future. The care that they have taken in the execution of the photographs with which the book is so plentifully supplied would deserve all praise even if it had not been crowned with such complete success; but so admirably has the method adopted by the authors answered, that the reader is well nigh placed in the position of an independent observer. He has a large proportion of the facts upon which the opinions have been based laid before him in a form which enables him to use them for the same purpose himself, with a minimum of liability to the errors usually arising from the use of secondhand evidence. The choice of objects to be thus represented as been made with great judgment, while for beauty of execution has been made with great judgment, while for beauty of execution there is no comparison between the photographs in the present work and those of Mr. Rutherford, of which we have spoken, though even these last are very fine; and the letter-press will, we think, be found to be more instructive as well as more interesting than that of Mr. Proctor's treatise. To do him justice, at least one-half of Mr. Proctor's work is devoted to matters not touched upon by Messrs. Nasmyth and Carpenter, such as the exact nature of the lunar orbit, her librations, and the different inequalities of her orbital motion. All these are treated by him as they should be by a man who is a complete master of the mathematical theory of the subject, and who never forgets that he is writing for nonof the subject, and who never forgets that he is writing for non-mathematical readers. Acknowledging the excellence of his expo-sition, we still do not feel inclined to set a high value on such writing. The number of persons able and willing to face all the difficulties of mathematical thought who have not had a mathematical training is but small, and to all others such explanations are uscless. The mathematician prefers more thorough and complete investigations in which he can avail himself of all the aids that mathematics give, while the general reader finds it impossible to grasp the hard abstract reasoning which even so incomplete a treatment must contain. And in the other helf of the work, in which he covers much the same ground as that covered by Mesers. Nasmyth and Carpenter, we must give the preference to the latter. They write like specialists who have studied the subject intimately, and have something of their own to say, and who say it with effect; while Mr. Proctor's book has much more the air of a compilation relieved occasionally by original speculations, some of which leave the reader in doubt whether the author is serious in suggesting them.

The problem which forms the subject-matter of almost the whole

of Messrs. Nasmyth and Carpenter's work is that of accounting for the peculiarities of the moon's surface. As we have said, they harely touch on the other questions of interest relating to the moon. These peculiarities are fortunately of a very definite type; there is no doubt as to the nature of the phenomena the causes of which they are seeking. The minor details are of course still beyond the are seeking. The minor details are of course still beyond the reach of even telescopic vision, but the shapes of the vast mountain chains that stud the surface, and are its most striking feature, are as certainly known, and their dimensions have been as accurately measured, as the most fastidious could desire. These mountains lie but seldom in chains like terrestrial mountains; usually they lie round the edges of vast crateriform depressions, ranging from three hundred utiles in diameter downwards. The great majority of these depressions are less than fifty miles across, but, from a breadth of one hundred miles to one so small that it is respectly visible, there is no important break in the continuous warkstion of their dimensions. And it is from this that the special difficulty of the problem is falt to arise, though we believe that in seams future time it will be pointed to as the main source of its simplicity. That the smaller of theirs depressions are similar in nature and origin to terrestrial volcanis craters is allowed by every one. Mr. Proctor perhaps excluded, who would have us believe

that they are all the marks of splashes made by the politing of large meteoric masses upon the surface of the moon when it was plastic—a suggestion which we would advise him to index under the title "Faceties" in his next edition, to save his scientific reputation from suffering at the hands of those who are too dull to recognize a joke. But all are not equally prepared to admit the possibility of a similar origin in the case of those of a larger size. possibility of a similar origin in the case of those of a larger size. Even omitting the largest of all, which are in some other respects exceptional, there are many of these craters that measure seventy miles across, and are surrounded by mountains of heights up to eighteen thousand feet. We should naturally expect volcanic disturbances on our satellite to be on a smaller scale than those upon our own planet, yet what volcanic phenomena have we that can compare in scale with these? Our craters would be insignificant chieses upon the moon, scarcely worth mapping down on our lunar objects upon the moon, scarcely worth mapping down on our lungs charts. And yet to adopt a different theory of the origin of the small and of the large craters is to refuse to acknowledge the almost infallible proof of likeness of origin which is given by unbroken continuity in the members of a series. That the difficulty of accounting for their origin is so great, unless we adopt different theories for the production of the larger and the small craters, seems to us but a poor excuse for so unsciontific a proceeding. Were our knowledge of Plutonics so accurate and deep-reaching that we were certain of the causes and history of volcanic phenomena upon our own earth, we can imagine ourselves being compelled sorrowfully to abandon the conception of uniformity of origin. But when our explanations of these are but little more than guesswork, there can be no sufficient reason to do so; and the construction of a patchwork theory by which a selection of hypothetical causes can be made to appear sufficient to account for the several portions of the unbroken chain of various-sized lunar craters is the result of that almost childish impatience of the Unexplained which drives some men to frame explanations of phenomena while their very nature is still in doubt. Not that we think that the time has not come for a true theory of the origin of those peculiarities of the lunar surface, or that the careful examination of the possible and probable causes of the same that we find in the present works will do nothing to aid the discovery of their true genesis; but we are sorry that in neither of these treatises do we find a scientific method pursued. The consequences are what might have been expected. The peculiarity of these treatises do we find a scientific method pursued. I he consequences are what might have been expected. The peculiarity of even imperfect attempts guided by scientific method is that a convergence of results speedily shows itself; while in the absence of this guidance any amount of divergence may occur at any stage of the process. That it is thus in the present case may be deduced from the fact that in these two books appearing almost simultaneously, and each claiming to represent the latest results of science, there is such a diversity that Mr. Proctor does not even mention the theory which Messrs. Namyth and Carpenter put forward as the true solution of the problem, and they in return are equally silent about the one in isvour of which he pronounces.

How do Messrs. Namyth and Carpenter propose to account for the existence of these lunar craters? They may be said to have three different schemes applying respectively to the small, the medium-sized, and the large craters. The first-mentioned they conscive to be formed in a manner in all respects analogous to that in which the craters of terrestrial volcances are formed; an eruption with or without overflow of streams of lava throws up a conical mountain with a central vent, and during the continuance

conical mountain with a central vent, and during the continue conical mountain with a central vent, and during the continuance of this eruption, or on the occurrence of a fresh one, the top of the cone is blown off or melted, or so completely undermined by the lave beneath that it collapses, and thus a wide lake of molten rock is exposed which the subsequent gradual subsidence of the lave converts into a depression of the peculiar bowl-like form which volcanic craters usually possess. This theory seems to them inapplicable to the case of the larger craters, let us say those from five to seventy-five miles broad. They very reasonably urge that, if these are to be the "basal wrecks" of formerly conical mountains, the cones themselves must have been of gigantic dimensions, and that we have no warrant for imagining that such vast mountains have ever existed on the moon, since we can find none at the have ever existed on the moon, since we can find none at the present time whose dimensions approach these. To avoid this difficulty, they suggest that the jets of ashes and lava thrown up in a violent eruption, falling over on every side, would naturally deposit the matter of which they consisted at a uniform distance from the centre of disturbance, and would thus form a ring-shaped ridge of which it would eccupy the centre. The small conical mountain which is usually found in the centre of these monstrous craters, riage of which is usually found in the centre of these monstrous craters, they suppose to mark the centre of eruption, and to have been formed by an outburst subsequent to that which formed the large crater—in fact, to have been the dying effort of the disturbance which is represented by the crater itself; and they rightly assume that such an outburst would in all probability he much feebler than its predecessor, and would be likely to form a conical hill, insamuch as we see this to be the case in our terrestrial volcaning eruptions. The level nature of the floors of the craters they account for by supposing lava to have welled up in the ages between the two periods of cruption, and the terraced character of both the inside and the outside of the ring of mountains they sacribe to landslips. Yet, even when supplemented by these ingenious subsidiary hypotheses, the theory seems woefully inadequate to account for the ring-shaped ranges of still vaster dimensions. For these, therefore, the authors of the present work have a different theory. They engagest that a vast and deep-seated upheaval has washeded a huge portion of the solid crust of the moon from its attachments to the rest of the crust, and has lifted it bodily up till

the molten matter pouring through the gap round the edges has formed a mountain-chain round the upheaved portion, and has so far relieved the compression beneath its surface that it sinks back into its former position, or even below it. We honour the courage which is daunted by no difficulty, and we feel that the authors were bound to make their theory a complete one; but we should have not the less felt bound to point out the μ laring absurdaties of this hypothesis had not the more than diffident tone in which they themselves speak of it rendered such a proceeding unnecessary.

All this is very unsatisfactory. We do not wish to be severe upon a theory which has evidently been the result of much thought on the part of its authors, but the more we reflect upon it the less there seems to be to recommend it. Apart from the fundamental defect of suggesting radically different origins to things alike in all respects but the scale on which they are formed, it requires the laws of dynamics at the moon to be different from those with which we are familiar. It is easy on paper to draw a diagram of jets rising vertically upwards and then bending over and falling at a considerable distance from their starting-point; but in the absence of wind and atmospheric resistance, what is there to cause them to do so? We are aware that most of the ejected matter would not rise perfectly vertically, and thus would not fall absolutely at the place from whence it started; but from the nature of the case the greater part must rise nearly vertically, and thus the heap of ejected matter would be highest at places very near the orifice. We need not appeal to be highest at places very near the orifice. We need not appeal to theory to show this. The writers themselves admit that the result of a feebler eruption is to form a conical hill; in other words, that of a needer eruption is to form a conical hill; in other words, that in such cases the highest portion of the pile of ejected matter is at a small distance from the oritice compared with the breadth of the whole pile. Why should the intensity of an eruption alter the general contour of the resulting pile? Is it not evident that it could only affect its dimensions, and that a violent eruption would not deposit a distant ring of ejected matter of small height compared with its breadth, with a wide level interval between it and the orifice of the ejection, if a weaker cruption in another would be appointed by the deposition of a genical hill elevation. variably results in the deposition of a conical hill closely surrounding the orifice, and sloping away on all sides from the vent which is now at or near its summit? Nor is this the only serious defect in the theory. How does it account for the fact that the bottom of a lunar crater is, at a depth below the surrounding peaks, usually from two to three times as great as their height above the surface without? It is true that we are treated to a diagram which represents the wearing away of the edges of the orifice by an eruption until the whole interior of the ring of mountains is funnel-shaped. Indeed this is necessary to the theory, for its authors admit that much ejected matter must fall short of the mountain ring, and they urge that it would slip back again down those funnel-shaped sides, forgetting how much of it would be deposited in an early stage of the eruption, and that this would effectively prevent the formation of such a funnel-shaped depression. But a diagram is not a demonstration, and if the readers of the book will just imagine this diagram to be drawn to scale, they will see that this part of the theory would require a depression of such wast dimensions that of itself it is almost sufficient to discredit the whole scheme. Abundance of similar difficulties suggest themselves when other parts of the hypothesis are subjected to a thorough examination, and the final result is to make us reject totally this ingenious theory as a piece of intelligent guesswork which has been guided rather by the consideration of external peculiarities than of less striking but more essential cha-

The most remarkable feature of the whole is that Messrs. Nasmyth and Carpenter should have adopted this artificial and clumsy theory while they had one ready to hand free from all these objections, and so natural and obvious that they themselves are compelled to mention it with something very like approval, as applied to the larger crateriform formations, though it is at least as applicable to the smaller once. The truth of the Ebullition Theory of Professor Dana is, in fact, almost beyond controversy; like Natural Selection, none can deny that it has been at work; the only question is whether it is sufficient alone to account for the phenomena. Its simplicity is certainly much in its favour. Seeing that in such enormous craters as that of Kilauca in the Sandwich Islands there is a level bottom consisting of boiling lava, either exposed to the air or thinly covered with a cooler crust, and reflecting that, in the absence of all aqueous agencies, the only way in which we can conceive any large level plain to be formed is that the whole of the matter forming it should have been fluid at one and the same time, Professor Dana suggests that all the lava in each lunar crater must thus have been in a fluid state together. This is almost undentable. And but little more than this is needed to account for their formation. Assuming that the moon was once covered by a crust of rock under a portion of which at least lay malted rock of the same nature, nothing is more natural than that the contraction of the crust should cause great overflows of lava which would spread far and wide. The outside portions would be tept at their original temperature, and the tendency would be less so often noticed in cruptions) to melt the already solidified rock with which it was in contact, and thus the original versus over that already formed, which, as the cruptions recwired in the profile of the same approaches all times; and thus we call the already formed, which, as the cruptions would spread in the same of lava surrounded by

a range of hills terraced on the outside and filling up the space they enclosed. When the contraction of the nucleus of the moses or some other cause made the melted lava subside, there would be left a deep hollow, the sides of which would be terraced inside (as is the case at Kilauea) if the subsidence were intermittent, as would probably be the case, and the depth of which would is wholly independent of the depth of the plain outside, inasmally as it was filled with a fluid mass long after all communication had been cut off between them. Add to this, slight recurrences of the disturbance to account for the central cone and the many minor craters that occur within the larger one, and whose existence this theory would lead us to expect, and that something of this kind must have happened access to be rendered certain by the presence on the moon's surface of one large crater where the last stage—the subsidence of the contained lava—has not yet taken place. The formation named Wargentin is in all respects like the other large craters, save that it is filled to the hrim. And the innumerable instances of streams of extruded matter on the outside of large craters shows that they too must once have been vast lakes of melted rock. This theory has not only the advantage of being a natural one, and one in conformity with which our terrestrial craters are formed; but it is applicable to all flat-bottomed craters—that is to say, all those which are not so small as to be the mere results of fairly insignificant disturbances, and as to the formation of which no doubt exists. So independent is it of the size of the crater, that it leaves us in the dark as to the causes that determined the size in each case, though it would seem probable that the size of the larger craters (in which we should include even the enormous Mare Crisium) was due not only to the greater violence of the disturbances, but to the early epoch of the moon's history at which they occurred. The size of the lake of melted lava formed as we have described wou

We cannot notice here many other points of interest which are discussed with great ability in the present work. The nature of the bright streaks which radiate from such centres as Tycho and Copernicus, and which traverse hundreds of miles of the moon's surface in straight lines over mountain and valley, and the nature of those still more wonderful "cracks" in the surface, which are or those still more wonderful "cracks" in the surface, which are represented as being gloomy valleys about a mile wide and some ten miles deep, and of all lengths up to one hundred and fifty miles, are problems which must for a long time remain unsolved. The suggestions of Mesers. Namyth and Carpenter are very valuable, but we think they might have been made more so by a more attention at the templing of molecules on the subject of income. tive study of the teaching of geology on the subject of igneous agencies. If, instead of appealing to a few doubtfully valuable experiments as to the expansion of metals and rocks on solidification (in one of which there seems to be grave reason to fear they have misconstrued an effect of surface-tension, and have imagined that, to be due to convection which was in reality due to capital that, they had studied the igneous and metamorphic formations which we have reason to believe to be the oldest, we think the value of their work would have been greatly increased. Though it may be true, as Sir John Herschel says, that lunar craters offer the volcanic character in its highest perfection, it is a mistake to imagine that their true analogues are the craters which are being formed now or which have the content and the perfection. which belong to comparatively recent geological ages. Astronomical tests have made it so certain that neither water nor an atmosphere exists on the moon, that to parallel the case of its volcanic phenomena we must search for such as occurred on our earth before any sedimentary strata were deposited. Even then we shall have no analogous cases if we are to believe those seismologists who ascribe volcanic disturbances to the action of water; but we trust that this hypothesis will soon be abandoned, as it rests on little but the fact that volcances are usually near the sea cosst. Physicists have since that time learnt much about the effects of temperature and pressure that they did not know before, and it seems much more likely that these disturbances are due to large quantities of matter existing in some state of little physical stability, such as that in which a body is at once a solid, a fluid, and a gas. Increased study of the moon will aid the adoption of some such hypothesis, since we cannot imagine that such typical volcanic phenomena can be due to causes totally different to those to which terrestrial volcanoes are due, and we are equally unpre-pared to admit the existence of water on the moon. If an identity of origin is finally admitted, we may hope to get most valuable in-formation as to our early geological epochs from salence why. For while on the earth there are potent agencies at work softening down the harsh outlines of igneous action, on the moon everything remains in its own primerval ruggedness. No sedimentary deposits have veiled the effects of the first convulsions, and it would seem that even upheaval has modified them but little. There is as much difference between the moon and the earth in this remuch difference between the moon and the earth in this respect as there is between a specimen that has been kept in a vacuum under a glass case and one that has been left to rut exposed to the main, dust, and mould. It is not a wild prophecy to say that in a not very distant future we shall owe most of our knowledge of the variety at the strings of the world's development to the strings of the

FROM THE INDUS TO THE TIGRIS.

In the wear 1857 Br. Bellew was appointed medical officer to the Mission sent to Cabal under Major General H. B. Lumsden. In 1862 he published a journal of his proceedings, which contained much valuable information shout Airhan manners and political in 1869 Dr. Bellew was one of the officers in attendance on the Assir of Cabul when he was received by Lord Mayo at the Umballs Durbar. One of the political questions touched on at that calebrated meeting was the definition of the boundary of Seistan, as between Afghanistan and Persia. And when, in pursuance of the policy commenced by Lord Lawrence and developed by his successor, it was resolved that Major-General Pollock should be deputed to meet Sir F. Goldsmid and come to some settlement with the Persian authorities, the author of the work now before us was again singled out to form part of the deputations of Persian diplomacy and Russian intrigues will be disappointed. But he will not fail to be interested in a graphic description of a large tract of country net often visited by Europeans, from the hand of one who is an active sportaman, a good botanist, a keen observer of scenery and character, and a finished Oriental scholar. To understand the plan of the work it is indispensable to keep in view the route which gives its title to the book. The diplomatists left Mooltan at the close of December 1871, and dropped down to Sakkur on the Indus. Thence, by Shikarpur, kelat, and Quetta, they reached Kandahar, taking, in fact, some of the line of country over which our troops marched to occupy Afghanistan in 1838. From Kandahar they struck due west, to the Helmund river and the inland lake of Seistan, now reduced to mud and clay by unprecedented drought. Here they were met by Sir F. Goldsmid and his party from Teheran. After this point, instead of crossing the great desert of Khorassan to the city of Yead, they proceeded in a northerly direction through Birjand, Ghayn, and Bijiatan, to Meshed and Nishabor. We apprehend that Dr. Bellew to a semi-Hindu or Sanscrit name.

In little more than six months the author had made something very like a circuit of the Persian Empire, had experienced every variety of heat and cold, drenching showers and cutting winds, and had stored up a vast number of observations illustrative of manners and customs, and doubtful or unknown points in geography. No one can complain that the work has failed to bring out graphically the natural features of the country. A strong family likeness seems to belong to the whole region from the frontiers of Scinde to the Turkish Arabian territory. Long dry and deserted tracts, where the bare clay gives sustenance to no tree, bush, or even blade of grass; salt efflorescence dazzling the sight and deceiving the fancy; valleys and defles dotted with huge boulders; bleak and dreary uplands; high ranges of mountains where the cutting winds chilled the marrow and froze the breath on men's beards, while the thermometer dropped many degrees below freezing point at dawn of day; stretches of country covered either with tamarisk jungle or with wild almonds, tallips, caroxylou, bulbous plants, and luxurious pasture; fountains of bitter water in some places, and, in others, limpid streams flooding the country and rewarding the toil of a scanty population with cornfields and vineyards, and orchards of lustious fruits in profusion; sheep and cows, caravans and artisaus, at particular localities; and then, again, long wastes in which the telescope could discern nothing but a solitary traveller or the advanced guard of the Turkman raiders, the terrors of the waste; ancient rains with puzzling inscriptions, which spoke of a time when Chengiz and Timur had not cleared off the population by thousands; and misery and distress imprinted on the very features of the inhabitants by the recent famine in the Persian provinces—those are the most striking characteristics which we owe to the suthor's intelligent observation and praiseworthy habit of daily jotting down his facts. We must remark, on the other hand, that many of the details, thoug

The spars to the southward have different names. . . . Khejah, Arabí, Teha, and Surkhish. To the north of the Toba spar is the Seima Dag or flat of the Seima section of Kakarm.

The Tarin infec comprises four great divisions, via, the Abdilis or Durgents, the Ter Teries, the Spin Terins, and the Zerd Terins or Zenrius.

The following might be useful to a carryon anxious to escape the hands of robbers and to get clear of a bad neighbourhood.

The Hill range (of the Nimbaluk plain north of Ghayn) is called Myenz, and the passes, from South to North, are massed Dahna, Gharosh, Magri, Rijing, Balaghor, and Dahna Buleman.

While we commend the diligence which could collect, and the method which can arrange, these intensely local psculiarities, we turn with more pleasure to the anecdotes of Afghan manners and Persian mendacity with which the book abounds. The author lit his pipe with a burning lens, whereat his native attendant of course ascribed the feat to magic, and muttered twice the word "Ropentance!" and "What devilry or misfortune is this!" Then the Afghan Commissioner, known familiarly as the Saggid, in attendance on the Mission, had acquired from books and papers some insight into European politics, but he was fairly beaten in his attempt to understand the freedom of our press, and the existence of any Government under the fits of hostile criticism. In vain was it pointed dut that a free expression of public opinion was the safeguard of an Administration. "You people puzzle us entirely. It is a very bad avetem, and encourages disaffection. It would not do for us. The Government would not last a day." Of a similar character were the comments of an Afghan priest on the use of a telescope by the party of Sir F. Goldsmid:—"Yes! the Farangis have been here, and they have gone. They mounted to the top of every high mound, and put telescopes to their eyes. They have seen all our country, inside and out, and made a map of it. God only knows what will become of us now!" The Indicrous effect of these remarks was heightened by the fact that they were delivered, not in Persian, but in the Pushtoo or Afghan language, which the speaker wrongly believed to be unintelligible to the author. Two chiefs, who in earlier days had known Major D'Arcy Todd and the unfortunate Captain Conolly, appear to have conceived the American War of Independence and the France-Prussian campaign to be contemporaneous events. "Is there such a country as Yangi Dunya (the New World)? and is it true that they have rebuiled and set up an independent Government?" "Is their country near Farangistan?" and so on. Again, "Who are these Prüss? They must be a great natio

On the whole, possibly from his longer intercourse with them, Ir. Hollew seems to have been more favourably impressed by his Afghan friends than by his Persian acquaintances, and though not blind to their fickleness, treachery, and violent bursts of passion and fanaticism, he speaks in terms of just eulogy of their independence, hospitality, and friendliness. The Persian, on the other hand, with his elegant address, external polish, and cultivated diction, seems to possess the faculty of telling silly lies with the most imperturbable face. The Mission was on more than one occasion deceived by hyperbolical language and profuse promises of welcome and supplies, while nothing was provided, and the cattle and camp followers were half starved. A fluent Captain of horse hoped that the journey had been pleasant, well knowing that everything had been done to make it as uncomfortable as possible. Once something like a practical joke was played with success, and the Englishmen were invited to visit some ruins at K6i Marut in the neighbourhood of Lash, and to read a curious inscription about the purity of the well Zamzam at Mecca and the Kaaba or temple at the same place. Part of the said inscription was cant or gibberish, in which the word "chaf" occurs twice; and as no such inscription was discovered, the conclusion is irresistible that the whole proceeding resembled an English word of very similar import and sound. Two specimens of skulls were wanted by Dr. Bellew for a learned friend. Nothing could be more opportune. Eight hundred Turkmans had lately been slain or captured by Persian cavalry, and their heads, stuck up in terrorem, would be seen at the gates of Meshed, or Mashhad. The process of desiccation was then minutely described, and the English traveller was promised as many specimens as he required. On arrival at the second city of Reza, the eighth Imam, it turned out that there had been no raid, no capture, and no bleached or unbiasched heads stasses on poles anywhere. The governor of a place called Turbat Eng

Prom the Indies to the Theris: a Marration of a Journal through, the Chambrin of Belockisten. Affiliations. Meccanism, and Iron, in intermediate which a Granythal Community and Veneralizery of the Realizer Simplesser, and a Research of the Memory and Chambert of the Realizer and Aldebudge on the Memory from the Indias to the Rights. habitual indifference to truth, something to a love of pleasantry, and something possibly to a desire of baffling and puzzling the inquisitive, energetic, irrepressible Farangi, who, with a note book and a pencil, was always collecting statistics of floods and famines, and vexing his attendants with inquiries as to kings and dynastic that had flourished long ago, and where this stream rose from, and what was on the other side of that high range of hills.

A more melancholy part of the work is the account of the traces

A more melancholy part of the work is the account of the traces of the famine of 1870, and its interest is heightened by our sympathies with our own fellow-subjects now threatened with a similar calamity in Behar. There ought, however, to be no parallel between the cases. We shall, it may be hoped with some confidence, soon see how such a visitation can be checked, if not wholly conquered, by British statesmanship and benevolence. Dr. Bellew tells us, only too graphically, how nations have fared under a sovereign of their own creed and colour. After the Mission had left Seistan the effects of drought and sterility were soon seen by the roadside, in every village, and in towns which, relatively, we may pronounce to have been till lately populous and flourishing. At Mahiabad, Ghibk, Rúm, Calát, and other places, half, or nearly, half, the population had died. Some families had emigrated. The survivors, gaunt, emaciated, with haggard features, swollen feet, and distended stomachs, had scarcely strength left to bury their dead decently, and they fought savagely amongst themselves for the loaves which the Englishmen vainly endeavoured to distribute with some regularity and method. vainly endeavoured to distribute with some regularity and method. For silver or copper coins (in Persian, kran, or pul-i-siyah) they had neither desire nor use. The cry was "Bread, give us bread." Dr. Bellew estimates the loss of life, in the province of Khorassan alone, at a hundred and twenty thousand, and for the whole Empire at one million and a half of souls. We do not make out that any measures whatever were anywhere systematically attempted either to cheer the population or to save life. It is calculated that the ravages will not be repaired for the next thirty

calculated that the ravages will not be repaired for the next thirty or even fifty years.

There are many other topics either discussed or illustrated in these pages which are full of meaning. We occasionally hear of native ideas of finance and their adaptability to an Oriental race. Whether the following can be adapted to any set of human beings, or whether it does not combine the minimum of revenue to the State with the maximum of oppression to the people, the reader may judge. The Government of Kandahar is supposed to collect from the city itself and from two hundred villages about 220,000l. But very little of this amount finds its way to the Imperial Treasury at Kabul, as each governor pays his own civil and military establishments direct. This is one of the points revenue, too, is rarely collected in cash. It is payable in kind, but the trouble of collection is avoided by giving the officials assignments on the peasantry and landholders in lieu of pay. Of course collected and officials take their full dues from the population, and as much more as they can squeeze besides. It is scarcely possible to conceive a mode of taxation better contrived for the avoidance to conceive a mode of tuxation better contrived for the avoidance of all responsibility and the stoppage of all progress. Dr. Bellew notices in the old maps an error in geography which about the time of the appearance of his book, if not before, has certainly been of the appearance of his book, if not before, has certainly been corrected. Ghayn or Kayn is to the north, and not to the south, of the town of Birjand. The error may be explained by the fact that in earlier maps there are shown two places named Ghayn or Kayn. An accurate scholar like the author will no doubt have been irritated by several misprints in Persian words which his own correction of the proof-sheets, had it been possible, would have set right. Hans for hauz, fountain, and Sadobiat for sad-o-bist, one hundred and twenty, are obvious misprints, which an elementary knowledge of the language would detect. On the other hand, the author is a little too much of a purist. It is all very well to spell new and unfamiliar names by the most minute and accurate process of transliteration. But "jungle" instead of jungal is anglicized, and we should have preferred to recognize the sacred book of the Mahommedans in its old shape as Koran rather than guess what Curan means. Our opinion of the Mission and of than guess what Curan means. Our opinion of the Mission and of this its particular result is, however, unimpaired. A political object of importance has been at length attained; two Oriental States cannot but have felt increased respect for the character and talents of our countrymen; and a remote region, strewn with the fragments and relics of ancient dynasties, has been vividly described.

> QUATREVINGT-TREIZE. (Second Notice.)

(Second Notice.)

W E have now to speak of the view given by M. Victor Hugo of Paris and the Convention in 1793. His picture of the state of Paris is one of the most graphic contributions ever made to the history of those times; but for Mr. Carlyle, it would be unique; it also has every appearance of being true. Some of the most striking characters of this combination of physical distress with danger from a foreign enemy and a critical state of politics have unhappily been reproduced in our own time so as to enable readers even without any special knowledge to judge of the internal probability of M. Victor Hugo's description. Eighty years peaced, and again the people stood in long files to receive the day's meant, and again the people stood in long files to receive the day's retain in their turn, hunger-stricken and uncomplaining.

Parks Hope Quatresing-freien. Promier riell. "Les femmes dans cette misère étalent vaillantes et étalent." So it was again in the late German siege of Paris; so tee we can believe in that arrange contrast of a scrupulous and even estentatious abhorrence of private crime subsisting together with the most unrestrained and mercilees violence of factions, and the most high-handed defiance of public law; for it was repeated, though in a less degree, in 1870 and 1871. M. Victor Hugo, on the other hand, goes eighty years backward for a parallel to the reaction that came after the Terror:—

Un accès de folie publique, cela se voit. Cela s'était déjà vu quatrevingts ans auparavant. On sort de Louis XIV comme on sort de Robespierre, avec un grand besoin de respirer; de là la Régence qui ouvre le
siècle et le Directoire qui le termine. Deux saturnales après deux
terrorismes. La France prend la clef des champs, hors du cloître puritain
comme hors du cloître monarchique, avec une joie de nation échappée.
Après le 9 thermidor, Paris fut gai, d'une agaieté égarée. Une joie
malsaine débords. A la frénésie de mourir succéda la frénésie de vivre, et
la grandeur s'éclipsa. . . . C'est ainsi que Paris va et vient; il est
l'énorme pendule de la civilisation; il touche tour à tour un pôle et l'autre,
les Thermopyles et Gomorrhe.

Poeders who know auxit bing of the author's formes marke will not

Readers who know anything of the author's former works will not be surprised at finding it still an article of faith with him that Paris is the centre of the universe. But we cannot help stopping to remark that this is perhaps the most dangerous of all the fallscies which carried away the leaders of the Revolution, and have more or less carried away French politicians ever since. All means were justified in the cause of the Republic, for it was the Republic not only of France, but of the world. "La liberté du monde et les droits de l'homme sont bloqués avec vous dans l'aris," cried St. Just. Louis XVI. must die, not because he had committed any definite offence, or because his life was dangerous to France, but for a lesson to kings and peoples all the world over. to France, but for a lesson to kings and peoples all the world over. And French writers, M. Victor Hugo among the foremost, go on to this day repeating all sorts of variations on the theme that mankind at large have derived some wonderful benefit from the French Revolution, for which France, and Paris in particular, deserves their eternal gratitude. The fact is that the French delivered themselves from a wholly intolerable state of things at a terrible price. To them the deliverance was no doubt worth the price. But what has the rest of the world gained by it? In England we had all reasonable improvement thrown by it? In England we had all reasonable improvement thrown back for well-nigh half a century. The political development of Germany was, as it seemed till only the other day, hopelessly interrupted. As for Italy, no better witness can be found than Mazzini—certainly no counter-Revolutionist—who spent almost his last breath in warning his countrymen against a blind and pernicious imitation of Parisian democracy. That the French Revolution has produced effects of heardly measurable importance throughout Europe it would be idle hardly measurable importance throughout Europe it would be idle to deny; but that those effects are matter for unmixed congratula-tion (although the assumption is constantly made) it seems at least hazardous to assume. After this word of necessary protest we may give M. Victor Hugo's own general account of 1793:—

may give M. Victor Hugo's own general account of 1793:—
93 est la guerre de l'Europe contre la France et de la France contre Paris.
Et qu'est-ce que la Révolution? C'est la victoire de la France sur l'Europe
et de Paris sur la France. De là, l'immensité de cette minute épouvantable,
93, plus grande que tout le reste du siècle.
Rien de plus tragique, l'Europe attaquant la France et la France attaquant
Paris. Drame qui a la stature de l'épopée.
93 est une année intense. L'orage est là dans toute sa colère et dans toute
sa grandeur. Cimourdain a'y sentait à l'aise. Ce milieu éperdu, sauvage et
splendide convenait à son envergure. Cet homme avait, comme l'aigle et
splendide convenait à son envergure. Cet homme avait, comme l'aigle en
er, un profond calme intérieur, avec le goût du risque au dehors. Certaines
natures ailées, farouches et tranquilles, sont faites pour les grands vents.
Les âmes de tempête, cela existe.

On the Convention he is, as usual, wildly oracular in generalities, while clear and forcible in detail. He gives a kind of Homeric catalogue of the members of the Gironde and the Mountain, almost every one brought into relief by a special trait or anecdote. He also describes the general aspect of the Assembly in a passage which on a first reading seems obscure from the multitude of local and architectural details, but gradually becomes luminous. The obscure and timid majority of the Convention is disposed of in a few paragraphs of consuments accomments. few paragraphs of consummate scorn:-

few paragraphs of consummate scorn:

Au-dessous se courbaient l'épouvante, qui peut être noble, et la peur, qui est basse. Sous les passions, sous les hérolsmes, sous les dévouements, sous les rages, la morne coue des anonymes. Les bas-fonds de l'Assemblée s'appelaient la Plaine. Il y avait là tout ce qui flotte; les hommes qui doutent, qui hésitent, qui reculent, qui ajournent, qui épient, chacun eraignant quelqu'un. La Montagne, c'était une clite; la Gironde, c'était une élite; la Plaine, c'était la foule.

Les cures les plus généreuses ont leur lie. Au-dessous même de la Plaine, il y avait le Marais. Stagnation hideuse laissant voir les transparences de l'égoisme. La grelottait l'attente muette des trembleurs. Bien de plus misérable. Tous les opprobres, et aucune honte; la celère latente, la révolte sous la servitude. Ils étaient cyniquement effrayés; ils seviles tous les courages de la lâcheté; ils préféraient la Gironde et choisisseient la Montagne; le dénoûment dépendait d'eux; ils verseient du cêté qui réussissait; ils livraient Louis XVI à Vergulaud, Vergulaud à Danbon, Danton à Robespierre, Robespierre à Tallien. Ils piloriaient Marat vivant et divinisaient Marat mort. Ils soutenaient tout jusqu'au jour ch ils sunversaient tout. Ils avaient l'instinct de la poussée décisive à donner à tout ce qui chancelle. A leure yeux, comme ils s'étaient mis en service à la seu-versaient tout la frait de la latent le peur. De là l'audece des térpitudes.

Will it be believed that in various places besons and after this.

Will it be believed that in various places before and after this Mary Victor Hugo writes of the Convention as a whole in terms of immensured admiration? No more unworthy and undignified essentily is known to history than this Convention, elected in the midst of panic and massacres, sitting day by day with their frame and pretences of sovereignty, in the midst of simual violence, out-

lawing their own members at the command of rioters, and dis-regarding every principle of ordinary justice while they talked about regenerating humanity. But M. Victor Hugo thinks all such notions are short-gighted. The glory of the Convention is too great to be looked from closely:

Jámais rien de plus beut n'est appara sur l'horizon des hommes. Il y a Himaleya et il y a la Convention. . . La Convention fut tolsée par les yopes, alle, faite pour être contemplée par les aigles.

Its general behaviour is excused by a figure of speech which in any writer for whom we had less regard we should call transparently impudent:—"I.a. Convention a toujours ployé au vent; mais ee vent sortsit de la bouche du peuple et était le souffie de Disu." If M. Victor Hugo had happened to think of Shakspeare's Coriolanus he might have seen that his metaphor was dangerous.

In another part of the book is an extraordinary piece of metaphysical politics, being nothing less than an à priors demonstration that the Republic is the best form of government, and this because it is truly patriarchal:—

it is truly patriarchal:-

Est-ce donc que la révolution avait pour but de dénaturer l'homme? Est-ce pour briser la famille, est-ce pour étouffer l'humanité, qu'elle était faits? Loin de là. C'est pour affirmer ces réalités suprêmes, et non pour les nier, que 80 avait surgi. Renverser les bastilles, c'est délivrer l'humanité; abolir la étodalité, c'est fonder la famille. L'auteur étant le point de départ de l'autorité de l'autorité étant incluse dans l'auteur, il n'y a point d'autre autorité que la paternité; de là la légitimité de la reine-abeille qui crée son peuple, et qui, étant mère, est reine; de là l'abaurdité du roi-homme, qui, n'étant pas le père, ne peut être le maitre; de là la suppression du roi; de là la république. Qu'est-ce que tout cela? C'est la famille, c'est l'humanité, e'est la révolution. La révolution, c'est l'avénement des peuples; et, au fond, le Peuple, c'est l'Homme.

We should gladly have dwelt more on the parts of the work where the author puts forth his true powers, and have said less of these vagaries; but the very title of the work so manifestly amounces it as a political romance, and the chapters of political digression are so considerable in proportion to the whole, that honest criticism

has no choice.

The device by which the Convention is brought into the story is a meeting between Danton, Robespierre, and Marat, at which Cimourdain comes in, and by a sudden thought of Robespierre's receives the commission which takes him to Gauvain's army. The figures of the three formidable leaders of the Mountain are drawn to the commission of the three formidables are strongly and device of the three formidables are strongly and device of the three formidables are strongly and device of the three formidables are strongly and the strongly are strongly as the strongly as t strongly and decisively. There is no attempt to make them amiable, or to construct any particular theories of their good intentions; and the picture, though of course ideal, and concentrated in a manner that should strictly be reserved for dramatic art, is probably just. M. Viotor Hugo's concrete representations are definitely and faithfully worked out, notwithstanding the vagueness of his abstractions. The dialogue is hot and even quarrelsome; and at one point Marat is made, by a somewhat daring exercise of the novelist's discretion, to wind up a long tirade on conspiracies, high prices, and other dangers of the nation with the prediction, "Robespierre fera guilletiner Danton."

We have yet to notice some points of style and execution besides what we have incidentally touched upon. The peculiarities in small matters are such as might be expected. The Absolute and the Infinite are frequently invoked; one curious phrase of this kind is "l'inexprimable mansuetude de l'infini." And occathis kind is "l'inexprimable mansuétude de l'infini." And occasionally we find other strange turns and conceits which interfere
with general artistic effect. But there are also epigrammatic
phrases of much power and felicity scattered through the book.
Thus of Fonché, "ame de démon, face de cadavre"; of the Vendean
war, "résistance bête et superbe," "paysans contre patriotes."
This is put into Danton's mouth:—"En temps de révolution, les
prêtres se fondent en citoyens comme les cloches en sous et en
canons." These are only specimens which we have happened to
note, and very possibly not the best.

In the course of the book there are two enjacdes of bettle.

In the course of the book there are two episodes of battle. One is the surprise of Dol by Gauvain's troops, where the enemy barricade themselves in the market-place, but are driven out by Gauvain boldly taking their position in the rear with twelve men and seven drummers. The story is told, we will not say in M. Victor Hugo's best manner, but in his good manner. It is not equal to the defence of the barricade by Enjolras and his in M. Victor Hugo's best manner, but in his good manner. It is not equal to the defence of the barricade by Enjolas and his companions in Les Misérables, which indeed we cannot expect to see equalled even by M. Victor Hugo himself; but it is quite worthy to be ranked as a pendant on a smaller scale to that matchlese narrative of obscure heroism. The other fight in Quatrevingt-treize is the storming of the castle of La Tourgue by the Republican troops. This is not so happy; there is a long preliminary account of the castle, overladen with architecture and antiquities, and the fighting itself is both tedious and revelting. Napier's account of the breach at Bachjos, splendid as it is, yet borders on the horrible. M. Victor Hugo gives us all the possible horrors of storming a breach, which are, if anything, increased by the whole affair being on such a small scale—for it is a simple round tower garrisoned by less than a score of men—and he does not give us any splendours. Whether this tower of La Tourgue ever existed, or, in spite of the minute test graphical and archeological description, is as fictitions as its limits, the Marquis of Lantenac, we think it unnecessary to conside, as M. Victor Hugo had at any rate a perfect right to invent its. But he has repeated one or two listorical fictions which not even a novelist has any right to repeat. He alludes, without the least corpression of doubt, to the legand of the Vengeur, and event to Pitt's hired assessme and forged assignate. Indeed these Ri a whole cargo of forged assignate in the ship which

brings the Marquis of Lantshao. Possibly it may be said that a romance-writer is justified in adopting vulgar errors which were current at the time in which the action takes place; but then, as M. Victor Hugo obviously prides himself on minute accuracy, he can scarcely claim a license of this kind. But all this does not revent him for the can be considered. prevent him from being unique among modern writers of romands, or his book from being one in which any reader who is not enslaved to commonplaces must find much to admire, and, by the exercise of a little judgment, may find a good deal to learn.

THE NORMAN PEOPLE.

THIS anonymous book is very much less wild than we had an pected from the title-page. We thought that a book with such a title was going to be an extravagant genealogical rhapsody in honour of this or that English or American family. We thought we were going to have all the myths in Sir Hernard Burke dished up again with a special American garnish. Of this kind of thing the book is quite guildless. It is throughout quiet enough; it has simply the weaknesses which belong to every writing in which a man goes at a subject which he does not fully understand in all its bearings, and therefore mends a good deal of time in fighting against shadows. and therefore spends a good deal of time in fighting against shadows. Our author takes infinite pains to prove that the Normans who settled in England at and after the Conquest were not merely a settled in England at and after the Conquest were not mersy a military aristocracy, but had among them people of all classes. His intense seal to prove this brought home for the first time to our mind that it was a thing which anybody could ever have doubted. The Norman seal of our anonymous writer is exactly like the Scandinavian seal of Dr. Dasont and his admirer in the Times. Indeed the present writer takes up Dr. Dasent's notions with some fervour, as serving to help out his own. The only thing is that we cannot make out who it is that either the Scandimaxian or the Norman enthusiasts are fighting against. We cannot make out who the culprits are; all that we know is that we ourselves are quite guiltless. It never came into our heads for a moment to think that the Norman settlers in England were merely noment to think that the Norman settlers in England were merely a small military aristocracy. We never heard of anybody else that ever thought so, and we needed no arguments to prove that the case was quite otherwise. How could any man think that the Normans in England were only a small military aristocracy, when we have the fact staring us in the face in Domesday that the Conqueror brought his cooks with him? Surely was taken to be a valid that we have taken some pains to explain to the world that Thomas, citizen of London and Archbishop of Cantarbury, was no "Anglo-Saxon" champion, but the son of Gilbert of Rouen no "Anglo-Saxon" champion, but the son of Gilbert of Rouen and Rohesia of Caen. Yet he was surely not a member of an aristocracy, and if, at one time of his life, he showed military tustes, he gave some scandal by so doing. Then again our author fights strongly against certain unknown people who have taught the doctrine of the "extinction" of the Norman race in England. We at least have never held that the Norman settlers in England became extinct, but rather that something much better happened to them—namely, that in a wonderfully short time they were turned into very good Englishmen. So far we have really nothing to dispute about with the author of the Norman Prople. We would gladly join our forces with his in a common attack on his opponents, if we only knew where his opponents were to be found. Nay more, we have to thank our author for doing very good service in upsetting several mythical pedigrees. The third shapter, headed "Criticism of Family History," vigorously sweeps away several of the fables in which Stanleys, Ashburnhams, and others have devised for themselves forefathers of whom history known nothing. The chapter on the whole must be pleasant reading for the Ulster King-at-Arms. But, when the author goes on to make certain inferences from these undoubted facts, we are by no means prepared to follow him. He tells us in his preface that his object

to show that the Norman settlement at the Conquest consisted of something more than a slight infusion of a foreign element—that it involved the addition of a numerous and mighty people, equalling probably a moiety of the conquered population—that the people thus introduced has continued to exist without merger or absorption in any other race.

"Moiety" is perhaps Norman for half; so we conceive that this means that the Norman settlers formed something like a third of the whole population of England. We now begin to shake our heads, and, when we get to the denial of "merger or absorption into any other race," we can subscribe only in a non-natural sense. That is to say, the Norman settlers in England were certainly absorbed into the general mass of the English nation, but then that was not absorption into another race, because the Normans and English were of the same race. What was the real Norman, as distinguished from the Frenchmen, Bretons, and others who followed William as well as his own Normans? The Norman was simply a Danc-in some cases a Saxon—who had learned to talk French. The blood of a man from Coutances was much the same as the blood of a Yorkshireman, and the blood of a man from Raysuz was much of a Yorkshireman, and the blood of a man from Haysux was much the same as the blood of a man in Hampshire or Sussex. In whatever character they came into England, whether as conquerors or as peaceful settlers—for we must never forget that the Conquest was hardly more important as a conquest than as opening the way to peaceful settlement—they came, not indeed to the lands of their fathers, but to a land packied by other colonists from the lands of

The Norman People and their cristing Descendants in the British ninions and the United States of America. London: Henry S. King. Dominions and & Co. 1974.

their fathers, who had not, as they themselves had, failen away from the speech and ways of their fathers. In short, as it has been epigramatically put, the Norman was a Dane who had gone into Gaul to pick up a slight French varuish, and who came into England to be washed clean again. We believe that the real kindred between Normans and English—a kindred which we may be quite sure that neither side thought of at the time—had a great deal to do with the case with which the Normans in England turned into Englishmen. turned into Englishmen.

turned into Englishmen.

But here comes the question, Why was it that the fusion of the long-catranged kinsfolk took the form which in the end it did take? The Normans became English; the English did not become Normans. The long struggle between the two tongues ended, not in the English-speaking people learning to speak English. Why was this? French had everything on its side but one. It was for a long time the Court language, the fashionable language, the literary language, the Janguage of public business, and even of law. It had the advantage over English of not being a tongue pent up within a single island, but a tongue which for some centuries was the means of communication between large classes of people was the means of communication between large classes of people in all lands from Scotland to Palestine. It would not have been wonderful if the new form of Latin had almost as thoroughly supwonderful if the new form of Latin had almost as theroughly supplanted English in England as the old form of Latin had ages before supplanted Celtic in Gaul. There can be only one reason why it failed to do so—namely, that the English-speaking part of the population was at all times an enormous majority of the population. If the Norman settlers, warlike and peaceful, had, with all their other advantages, made up a third or a fourth of the whole population of England, it could hardly have failed but that French would in the end have supplanted English as the language of England. Instead of this, English, discouraged in every way, and, paradoxical as it may sound, really for a while every way, and, paradoxical as it may sound, really for a while more discouraged as the natives and the foreign settlers drew nearer together, always remained the language of the mass of the nearer together, always remained the language of the mass of the people, and in the end became once more the fashionable and literary as well as the popular speech. The results of the struggle are of course to be seen in a large French infusion into the English tongue; the speakers of French, in learning to speak English, greatly changed English; still it was the speakers of French who learned to speak English, and not the speakers of English who learned to speak French. This one simple fact seems to us to upset any amount of theories and inferences. Nothing but an altogether overwhelming majority of the population could. but an altogether overwhelming majority of the population could, under such circumstances, have won a victory for its tongue over a tongue which had on its side every advantage except that of numbers. Still less do we understand what the writer means when he goes on to say that "the Norman settlement as a race is as distinguishable now as it was a thousand years since." A thousand years since Rolf and his comrades, if Rolf had begun his exploits so early as 874, spoke good Danish—according to the Tours Chronicler, they spoke English; their descendants now speak, some French, some English, and we do not see how they are to be distinguished from other speakers of French or of English. Here in England, if the author of the Dialogus de Sessocarie in the time of Henry the Second could not distinguish Englishmen from Normans, we cartainly cannot undertake to do

Singlishmen from Normans, we certainly cannot undertake to do so now. We cannot guess why Smith should think it fine to turn himself into Vernon; still a real Vernon, who has always been Vernon, is by this time as good an Englishman as Smith.

The argument to show that so large a proportion of the present English people is of Norman descent is chiefly based on an examination of surnames. The writer takes for granted that every bearer of a name which is, or can anyhow be made out to be, French or Latin, must have been of Norman descent. By this present he costs towather a yest number of what he sets down as means he gets together a vast number of what he sets down as distinctively Norman surnames, which are certainly borne, as he says, by persons in all ranks of society. But, first of all, if they all are Norman, we suspect that our Smiths and Wrights alone would go a long way towards outnumbering all of them; and we altogether deny that many of them are any sign whatever of Norman descent. Clark, Clarke, in its endless spellings, is set down as a Norman name, because forsoth Chricus is a Latin word, and hone was the Clarke in Norman latin word, and Olark, Clerke, Clerke, in its endless spellings, is set down as a Norman name, because forsooth Clericus is a Latin word, and because there are Le Clercs in Normandy. It would be strange if there were not; the same causes which produced Le Clercs in Normandy produced Clerks in England. "King" too appears on the list, because "Rex" and "Le Roy." are found in Normandy. "The great number," we are told, "of this name is Normandy explains the number in England." We really think that we were capable of inventing the sarname King for ourselves without translating it from the Latin or French; and, if anything, one would think that Normandy, which had only Dukes, would be more likely to borrow the name from England, which had Kings, than England was to borrow it from Normandy. It seems never to have entered the writer's head that, in the times when England and Normandy had a common severeign, Normandy might semetimes learn something from England as well as England from Normandy. In the same page with King we find Kilby spelt two or three ways, and this too is ruled to be Norman, from Guillebourf in Normandy, because these was a Robert de Kilebourf in Normandy in 1180. The writer did not stop to think that Richard or John Miller in England, either in 1180 or now, was at least as likely to this his name from Kilby in Leicestonhim as from Quillebourf in Normandy, Smith himself, to our utter eurprise, appears among the Richard or man, because it was "originally Faber or La Fèvre."

was called Smith, was in Latin called Falor, and in B Privac: that is, always suggesting that Fabre represent and does not rather represent Wright. On the supposeibility we are saided to believe that Godricus h the Suffell D appears among a long string of Englishmen day, 339 b, was a Norman, as well as divers others whose neighborove them beyond all doubt to be Englishmen. The writer assumentarly to forget how many men from the twelfth century enwards look like Normans who were perfectly good Englishmen. A. Godric or a Wulfstan cannot be a Norman, but a Richard or a William may always be an Englishmen. Our old friend the Estate or a long light ground of the state of william may always be an Englishman. Our old most descriptordshire crusader and martyr, so crossly forgotten by his own county historian, Robert the son of Godwine, is typical. If his father's name had not happened to be preserved, we should not have known that he was not a Norman or even a Frenchman.

As for a chapter on "the Gothic Origin of the Normans, Danes, and Anglo-Saxons," and the present diffusion and numbers of the Gothic race, followed by a "Genealogy of the Gothic Nations,"

it is kind to hold our peace. When a man undertakes to tall us where our forefathers and kinefolk were and what they were doing, in the year 2000 B.C., we no more undertake to dispute with him than if he were talking about Pelasgians or Draids.

CURWEN'S HISTORY OF BOOKSPLLERS.

WE begin our review of this stout little hook with the state ment that it is unquestionably arousing. Ill-started indeed must be the reader who, opening it anywhere, lights upon six consecutive pages within the entire compass of which some good anecdote or amart repartee is not to be found. Among tradesone, our booksellers perhaps more than any other class are rich in traditional pleasantries, rendered additionally pleasant by a literary flavour. Indeed to some of the best known tales we have heard the term "Bookseller's Joe's" applied. Such a name would exactly fit the ancient legend of the student who, having asked for some work connected with medical science, was immediately presented with Burton's Anatomy of Melancholy—a le known to every bibliopolist in the United Kingdom. a legend probably om. With stories

of this kind Mr. Curwen is lavish, not to say prodigal.

For the motto on the title-page he is indeleted to Mr. Carlyle, who says that "in these days the ordinary histories of kings and courtiers were well exchanged against the tenth part of one good history of booksellers." Whether, when he made the remark, the Chelses sage had in his mind a work of exactly the same kind as Chelsee sage had in his mind a work of exactly the same kind as the gossiping book before us we may reasonably doubt, for that nation must have reached the height of preverbial felicity the history of any two or three of whose kings does not comprise events more important than most of those which make up the bulk of Mr. Curwen's record. The chronicles of a prosperous firm are interesting to the members thereof rather than to even that omnivorous personage the "general reader"; and though the story of the man who comes to London from the country with the inequirable half-grown in his breeches-nocket, and after many soubs evitable half-crown in his breeches-pocket, and after many saubs and annoyances attains wealth and honour, is likely to fire the young aspirant with a lofty spirit of emulation, one hero placed in such desirable circumstances will quite answer every purpose, nor does the moral gain new point when we learn that, as Brow throve, so throve Jones and Robinson. Even the eminence reached by Alderman Kelly, who, the son of a Kentish shepherd, was "more than a Lord Mayor—he was a true friend; he was a loving, dutiful, and tender son-qualities not always ensured even by commercial success"—even this high enlogy does no more ethical work than the tale of Dick Whittington; and we may remark generally that in the record of the very great and deserved prosperity of some of the best men in the trade, there is pretty sure to be something in the shape of a "lucky hit" which corresponds to the ancient Lord Mayor's cat. In the case of this very Alderman Kelly the secret of his advancement lay seemingly in his hitting on and working out the notion that the sale of books could be greatly increased if furthered by the process of "canvassing" (otherwise hawking) adopted by ballad-mongers from time immemorial :-

time immemorial:—

For the first two years [says Mr. Curwen] his operations were confined solely to the purchase and sale of miscellaneous books on a small scale, and the limited experiment proved successful. Of Backan's Domestic Medicine herought one thousand copies at a low price, and, having prefined a cheer memsir of the author, and divided them into numbers or parts, he went out himself in quest of subscribers; and a thousand copies of the New West's Preparation were treated in a like manner, and with similar success. Therefore the resolved to print at his own risk, always adopting the actional method, and working his books, from first to last, entirely through the hands of his own agents; and the profit he found in this scheme depended almost entirely upon the happy knowledge he possessed of lumma character, and the entitus florating that with which he was able to select his canvasaers. One of the first works he published in this manner was a large Family Hibis, Pamily Hibis. To each of his canvasers he gave steek on credit, worth flows sol, the subscribers right research upon, and the plan issues a speedy return of capital. The Hibis extended to 17g numbers, and the entity work cost the subscribers right righ course, in weathy or monably driblets; and as 80,000 copies were soon add, the great receipts must have reached about a so,000. To the Hibbs entended the Little of Carist, Food's Ministers, and the History of Haddeline, and all in fallet, with coppendent and the cubic papers. Manuscribe of the Hibbs entended the Little of Carist, Food's Ministers of the Plant with the cubic cubic papers. Manuscribe of the paper of the subscribers of the Hibbs entended the Plants of Carist.

inciple of champess. On the contempy, his books, disfigured as they
are by hideous engravings, would have been found monatrously
are had the fall price for them been paid at once. He simply adsensed the large shass who would rather pay sixpence a week than
confered, not for diffeen, but for ten guineas cash, would have
been sejected with indignant surprise. In the book trade he was
that the "tallyman" is in another branch of commerce. With been sejected with indignant surprise. In the book trade he was what the "tallyman" is in another branch of commerce. With the movement for the diffusion of knowledge, with the three energetic promoters of the movement named above, with the publishers of the highest class who now send forth handsome editions of British classics at prices that our fathers would have deemed fabulous, he had nothing in common. In tracing the beginning of the movement Mr. Curwen merely names Bell and Cooke. He might also have mentioned Walker. There was a day, not very long past, when sertain standard works were chiefly presented to the public in Cooke's or in Walker's editions, and it may be added that their books were very respectably illustrated.

ooks were very respectably illustrated.

To a cortain limited extent a history of booksellers is, when press over a long period, a contribution to the history of literature; spread over a long period, a contribution to the history of literature; but it is to be observed, on the other hand, that students of literary history generally derive their knowledge from the biographies of the authors themselves, and that many, when they have learned of Murray through Byron, will not greatly care to learn about Byron through Murray. To those who are acquainted with the lives of Scott, Byron, Moore, &c., several of the states recommed a propos of their publishers will appear terribly familiar. Still there is no harm in arranging old facts according to a new classification, and the classification adopted by Mr. Curwen is highly to be commended. His chapters respectively treat of to be commended. His chapters respectively tract of the "Booksellers of the Olden Times"—which "olden times" extend from the invention of printing to Lackington, of Finsbury Pavement; of the "Longman Family," as patrons of classical and educational literature; of "Constable, Cadella, and

classical and educational literature; of "Constable, Cadell, and Black," associated with the origin of the Edinburgh Review, the Waverley Novels, and the Encyclopedia Britannica; of "John Murray," encourager of belles lettres and travels; of "William Blackwood" and his Magazine; of "Chambers, Knight, and Cassell," promoters of popular literature; of "Henry Colburn," shade for three-volume novels and light literature; of the religious "Rivingtons, Parkers, and James Nisbet"; of technical literature, represented legally and medically by "Butterworth and Churchill"; of "Moxon" and poetical literature; of "Kelly and Virtue," as distributors of numbers; of "Thomas Tegg," first in the "remainder trade"; of "Thomas Nelson," providing our children's literature; of "Simpkin, Marshall, and Co.," as collectors for the country; of "Charles Edward Mudie," the grigantic circulator, and "W. H. Smith and Son," purveyors of intellectual fare for railway travellers. A chapter on provincial booksellers concludes for railway travellers. A chapter on provincial booksellers concludes the series. These divisions, however, must not be too logically criticized. While, for instance, we find Scott, Byron, and Moore associated with the older firms, we can scarcely accept Mr. Moxon as the main representative of poetical literature. For practical purposes—that is, for the benefit of these who wish for some easy guide in their search after gossip—the arrangement is sufficiently

Notwithstanding Campbell's toast in honour of Ronaparte be-Notwithstanding Campbell's toast in honour of Ronaparte because he had recently shot a bookseller, the impression conveyed by Mr. Curwen is that the makers and vendors of literature have, in spite of sundry squabbles, generally been on pretty good terms with each other, and we find ample record of hospitalities of which Sootland is especially the scape. The two parties being exhibited in their social as well as in their commercial relations, an opportunity is afforded of bringing in several characteristic aketches of men noted in their day; and though much of the matter is to be found elsewhere, the figures of Christopher North, of Theodore Llock, and others will to many readers be new as well as entertaining. entertaining.

It is, however, chiefly as a book of anecdotes that the chronicles of Mr. Curwen will be consulted, and from the abundant store before us we pick out two or three almost at random. By no means had is one that relates to Charles Rivington, the founder of a well-known firm which has now flourished for more than a dred and fifty years :-

A poor view in a remote country discose had presented a serment so perspirable to his parishioners that they begged him to have it printed, and hall of the honour conferred and the greater honours about to some, the clargyman at once started for Losdon, as recommended, to filtrington, to whom he triumphantly related the object of his journey. Rivington aponin his his proposels, and asked how many copies he would like structured. "Wiley, sir," suplied the dergyman, "I have coloured that there are in the distribution ten thousand parishes, and thus each pashs will at least take one said ellumn many, so that I think we may vertical to print thirty-live or initial discounted option."

Charles Rivington, we are taid, purchased to act on this a magnetion, but two months passed believe the dampy me the result of his venture. Growing impatings, he saked this result in the account absolute Browing his custors

-

Shortly afterwards he received a letter in which the good-natured bookseller contessed that he had merely been jesting with this reverend friend, having really printed no more than a funded copies, of the expenses of which he made a present to the author. Another story is told of another member of the same thankly, James Rivington, who crossed the Atlantic in 1762, and having been appointed "King's Printer to America," advocated the Printer to America," advocated the Printer to America, advocated the Printer to America, advocated the Printer to America of the articles were remarkable for their personality, and the reservice of cowhiding had, even in those days, come into commune practice of cowhiding had, even in those days, come into comments use. Mr. James Rivington, cited by Mr. Ourwen, shall stil within own words the story of his interview with Etham Allen, a realous Republican who called upon him with a hostile intention:—

own words the story of his interview with Etham Allen, a sealous Republican who called upon him with a hostile intention:

I was sitting down after a good dinner, with a bottle of Madeira before me, when I heard an unusual noise in the street, and a busza from the boys. I was in the second story, and, stepping to the window, saw a tall figura in tarnished regimentals, with a large cooked bat, and an anormousty long sword, followed by a growd of boys, who occasionally cheered him wish huzasa, of which he seemed quits unaware. He came up to my door, and stopped. I could see no more—my heart told me it was Etham Allen. At the hour of reckening had come—there was no retreat. Mr. Stayles, say clork, came in, paler them ever, chaffing his bands. "Master, he has using I's "I know it." I made up my mind, looked at the Madeira, possibly teather, plans. "Show him up, and if such Madeira cannot modify him, he must be harder than adamant." There was a fearful moment of angeness; I heard him on the stairs, his long sword clanking at every step. In the house there word, my dear Colonel, until you have belien a seat guid a glass of old Madeira." "But, sir, I den't think that it's proper—" "Not another word, my dear Colonel, until you have belien a seat guid a glass of old Madeira." "But, sir, I den't think that it's proper—" "Not another word, my dear Colonel, until you have belien a seat guid a glass of old Madeira." "But, sir, I den't think that it's proper—" "Not another word until you have taken mother glass, and then, my dear Colonel, we will talk of old affairs, and I have some queer events to detail." In short, we finished three looties of Madeira, and parted as good friends as if we never indeasuctors be otherwise.

The following content to seat a fearful mind cause to be otherwise.

The following extract from the funeral sermon preached by Dr. Hamilton at Regent's Square Church in honour of the leading Frangelical bookseller, Mr. James Nisbet, though intended and doubt to be pathetic, has a tinge of sly humour about it which apparently has not altogether escaped the notice of Mr. Curwon:-

With a sanguine temperament, he [Mr. James Nishet] had strong consisting and an sugger spirit; and, whilst he sometimes magnified into an affair of principle a matter of accondury importance, he was imperiant of opposition, and did not always concelle to an opposite the sincerity he sajustly claimed for lunself. Then, again, his openness was almost exceeding and his determination to flatter nobely sometimes left him to say things more plain than pleasant.

Those only could appreciate his another was confined to the walks of his habitual homeolenes.

Dr. Hamilton was clearly of opinion that the dectrine implied in the proverb "De mortula, &c." ought not to be carried too ax, even in a funeral sormon. Not a doubt is thrown on Mr. Niebev's character as that of a conscientious and charitable man, but an impression is left that he was one of those persons with scheme one does not care to pass a long evening. Mr. Curwen, though he is at pains to record his many virtues, cannot place him among the magnates of the trude, but takes leave of him thus these books he issued were chiefly of an enheueral religious class, and books he issued were chiefly of an ephemeral religious class, and literature is certainly less indebted to his success than were the charitable institutions of the day."

Those who like to meditate on the uncortainty of human fame may take pleasure in this statistical summary of the marvellous productiveness of Mr. G. P. R. James, who appears in connexion take Mr. G. P. with Mr. Colburn :-

Mr. Curven makes the sum total amount to 223, but even our smaller figure is sufficient to justify his l'antagruelian remark that the labour of the once celebrated novelist was "Corporatuan." Wet who reads or even affects to read the works of Mr. James now?

Accuracy of expression is not one of Mr. Curwen's constant stributes. He tells of the Rivington family as "the oldest still existing in bookselling annals," whereas his first chapter records the same of Jacob Tonson and others who are still older, and of when, if they did not "exist in annals," we should know nothing. No doubt he means that the Rivingtons are the oldest of actually existing firms, but he does not any so. The commercial operation which we to the publication by Tenson of Drydan's translation of Figil is, necessities, not rendered intelligible to us by the following

Thate were two classes of subscribers, the first of whom paid five guiness said, and were individually heavested with the dedication of a plate, with their arms energyed underneath; the second class paid two guiness only.

The first class counted zor, and the second ago, and the money thus received, minus the expense of the engravings, was handed over to Dryden, who received in addition from Tonson fifty guiness a book for the Georgics and Eneid, and probably the same for the l'astorals collectively. But the price actually charged to the subscribers of the second class appears to have been exorbitant, and reduced the amount of Dryden's profits to about twelve or thirteen hundred pounds.

On the strength of this statement we seem entitled to assume that the subscribers of the second class were compelled to pay more than the stipulated two guineas. But however that may have been, we do not see how the wrong, inflicted upon them affected the pocket of "glorious John."

As we have said already, this History of Booksellers is unquestionably an amusing book, and we may add that it is not altogether uninstructive. But we want the reader not to read too much of

uninstructive. But we warn the reader not to read too much of it at a sitting, as the similarity of the several biographics to each other is apt to produce a sense of monotony. Let him take a chapter at a time, and recreate himself by contemplating the portraits of the booksellers, who have become somewhat prim under the hands of the woodcutters, but by no means attempt to get through the whole without pause or interruption.

JUPITER'S DAUGHTERS.

JUPITER'S PAUGHTERS is pleasantly unlike its rather fantastic title. It is an agreeably told story of French life, depending for its interest more upon the careful working out of character than upon violent or unusual incident. It opens in St. Gloi, a thriving third-rate provincial town, whose inhabitants are somewhat excited by the expected arrival of a M. de Saye who has just succeeded to the inheritance of an old château and a considerable property. Hence arise conjectures as to his marrying in has just succeeded to the inheritance of an old château and a considerable property. Hence arise conjectures as to his marrying in the minds of the mothers of St. Gloi. Probability seems to point to Madlle. Pauline Rendu, daughter of the wealthiest people in the town, whose mother has made a departure from the usual practice of the place by sending her to be educated at the Sacré Cœur, in Paris. Old Madame Jorey, Pauline's godmother, had remonstrated at this. "It is best to abide by the old ways," said the old lady:

However, when Pauline returned home, no one could discover that she was a whit the worse for her sejourn in the Paris convent. Nowhere could you see more frank eyes, a mouth more innecent. She was like a fine clear sky—full of promise; modest, not sky; willing to please, not anxious to shine; nothing apparent that would lead you to imagine there were any finer elements in her character than in those surrounding her; nothing to militate against her doing as other girls did, and as she was expected to domarry the man chosen by her parents, have her trip to Paris, visit the Palais-Royal Theatre (that smbittion of month-old matrons), buy new furniture to last a lifetime, and return home, at the end of six weeks, to settle down into a careful housewife.

The difference between French and English manners in the matter of marrying and giving in marriage is very strongly brought out in this book—is indeed the pivot upon which the whole turns. Given the same incidents in English life, the result of them would be far different. Gaston de Saye arrives and takes up his abode at his château, bringing with him M. Vilpont, a friend of his, as his guest; and this fact gives rise to much question and quantion among the and this fact gives rise to much question and suspicion among the inhabitants of St. Gloi, who, as the author says, "did not understand friendship; they only understood relationship. 'A snake in the grass,' was a pretty general opinion." Madame Rendu alone is absolutely uninterested as to who and what Vilpont may be, while her mind is uneasy about M. de Saye, whose probable union with her daughter has become matter of general gossip; and when the two man call upon her she daystes burself to keeping the Saye the two men call upon her, she devotes herself to keeping De Saye at a distance, determined not to encourage him until she can be sure of his making a good son-in-law. But St. Gloi, though willing enough to flatter and bend to Madame Rendu in most respects for the sake of her wealth and position, is not ready to give up the chance of excitement afforded by the presence of a rich young man among many unmarried girls. There is a Madame Chambaud, who has adopted match-making as the business of her life, and having accomplished two successful marriages, overcoming great difficulties with greater tact, has resolved to bring about a third, yet more successful, between M. de Saye and Pauline Rendu:-

The stagment waters of life were distasteful to Madame Chambaud, and The sagmant waters of the were distantent to Malame Chambaud, and no place had a more complete coating of stagnation than respectable St. Gloi. Destiny loves contradictions. The active find themselves in a position where there are no legitimate openings for their activity; while the dull or the lovers of quiet, are plunged into a vortex which destroys their

peace of mind.

What a godsend, then, for misplaced Madame Chambaud, was the arrival of a handsome, numarried, tolerably well-off young man, within a stone's-throw of the cotroi of the town!

Madame Bendu might like it or not, but Madame Chambaud was not going to give up her projects. Whether it failed or whether it succeeded, the hatching of it would be amusing. Match-making to her was what filtration is to younger women.

Accordingly Madame Chambaud sends out cards for a dinner at which the Rendus are to meet M. de Saye, who comes merely in the character of his friend's umbra. But, as often happens, fate steps in to interfere with the schemes that have been so dieverly laid; it is the supposed ahadow who turns out to be the important substance; it is M. Vilpont, not M. de Saye, who engages the attention of Pauline; M. Vilpont who plays duets with her, who talks to her in a title-d-title longer than generally takes place between a Frenchman and a French girl; M. Vilpont

Figure's Daughters. By Mrs. Charles Jenkin, Author of "Two French larriages," So. London: Smith, Elder, & Co. 1874.

with regard to whom she fears her mother's re way in which by slow degrees, but half perceived by berself, he acquires a place in her heart, is well and naturally indicated by a few touches in some letters which she writes to Madanie Agnes, one of her friends among the ladies at the Sacre Cour. As arele, letters in novels are extremely tiresome, being very generally employed as a clumsy device for the relation of facts the introduction of which in another way might give more trouble to the duction of which in another way might give more trouble to the writer, who thus saves himself at the expense of the reader. To this rule Pauline Rendu's letters are a happy exception. Then follows a pretty scene at the Château Ste. Marie, the residence of Madame Jorey, Pauline's godmother, round whom the members of her family are accustomed to gather every Sunday in accordance with that strong feeling for the ties of relationship which prevails perhaps more in France than in England. Vilpont, brought to this assembly by one of the sons of the house, encounters l'auline again unexpectedly as she is employed in making bonbons and chocolate with the rest of the girls, from which occupation they are disturbed by a call to vespers. The Parisian, who like Falstaff has almost forgotten what the inside of a church is like, accompanies the family to the evening service, and who has raised has almost longotten what the inside of a church is like, accompanies the family to the evening service, and there the dim religious light, the music, and the associations of the place awake in him such a crowd of recollections as for an instant brings tears to his eyes. Here as elsewhere the writer's true perception and delicate touch turn to a picturesque account an incident which in less competent hands might run the risk of being ridiculous or mawkish. To deal with a man's emotions in this direction is a difficult task for any author, and especially for a woman. Few will doubt that Mrs. Jenkin has been true to woman. Few will doubt that Mrs. Jenkin has been true to nature in ascribing to the somewhat roue Vilpont, under the circumstances wherein she places him, the momentary outburst of feeling which, observed by Pauline, puts the finishing touch to her nascent inclination for him:—

Pauline saw—as women do see everything in any one who interests them—she saw that sudden filling of his eyes. How describe their effect upon her? In a second she had deified this man of the world. Her letters to Madame Agnes have shown the cravings of her young heart—have shown how her nature shrunk from the void of having no one to whom to give a woman's devotion. In this moment that void was filled by a joy that transfigured her sweet face. The period of crudeness and defiance, special to the girl who has never felt a preference, was about to vanish. With a new and vivid sensation she set aside her chair; and kneeling on the bare stone, her innocent soul associated this almost stranger with her inmost prayers. prayers.

Meanwhile Vilpont is looked upon with growing suspicion by the inhabitants of St. Gloi, which develops into dread and dislike, not unmixed with contempt, when the discovery that he is an author leaks out somehow. Omne ignotum prohorribili is a motto which prevails in the narrow groove of their life, and the profession of literature, being entirely unknown to them, is regarded much in the same light as was the stage not so very long ago in country towns on this side of the Channel. Influenced partly by this, partly by the coldness with which Pauline treats him in consequence of a speech of his repeated to her with a wrong interpretation by "some damned good-natured friend," he makes up his mind to leave St. Gloi, and sows cards of adieu broadcast through the town. But on the eve of his departure, at a party where all the cream of the town's of his departure, at a party where all the cream of the town's society are assembled, the tide of popular opinion is turned in his favour by the revelation of his real fame and importance made by a party of Parisians who are staying in the town for a night. One of these offers to read aloud the celebrated author's last poem. of these offers to read aloud the celebrated author's last poem. While this goes on, Vilpont, sitting in a corner, observes Pauline slip gradually behind the window-curtain, and hopes that she does so to conceal her emotion, but is disappointed by hearing her say to the reader when she emerges, "Oh! forgive me, but it was so long, it sent me to sleep. Poetry always does." It is perhaps needless to say that Vilpont was right in his first conjecture as to the cause of her disappearance, and that her unkind speech was made merely with the view of disguising her real feelings; but this she only confesses long afterwards, when Vilpont has formally proposed for her hand to Madame Rendu and been refused. The time which elapses between the events just spoken of and this proposal is occupied with the old story of waning and waxing love between Pauline and Vilpont, described, however, with a grace and tween Pauline and Vilpont, described, however, with a grace and skill which saves it from all the weight of tediousness which one is propared to encounter under such circumstances. In the interview which Vilpont has with old Madame Jorey, whom he employs as his ambassador in the matter of his proposal, it comes out that he is really the heir to an old marquisate; but this recommendation goes for nothing in the eyes of Madame Rendu, who desires for her son-in-law a man rich and orthodox, and rejects Vilpont according to Evench custom, without taking Pauling's forling into according to French custom, without taking Pauline's feelings into any account. The incident which leads immediately to Vilpont's proposal is his rescue of Pauline from the dangers of a trombe, a sudden storm which overtakes a large party who are assembled on the first day of the vintage at Ste. Marie. The contest of feelings in Pauline's mind at and directly after this rescue—on the one side the over-strict sense of propriety taught by careful drilling, on the other love—is well described.

Vilpont disappears supplied the rejection, and at the and

the over-strict sense of propriety taugut my careful values of the love—is well described.

Vilpont disappears soon after his rejection, and at the end of some six months, spent by the Rendus in travelling about Switzerland, such a son-in-law as exactly mosts Madams Rendu's wishes turns up in the person of a M. Léon Subar, a young man of a singularly dark complexion, due to the fact of his having been born in Algiera, but, in saits of that, very handsome and also very wealthy. In other respects he is no worse than

ordinary young men are, and assuredly no better. This man Pauline, wearied out with her mother's continual attacks, hopeless of ever becoming mitch to Vilpont, accepts as her husband with a quiet resignation which rather startles and frightens her mother, who is prepared for a flat refusal and a consequent scene of enterests and maximization. However, the requirement takes when quiet resignation which rather startles and frightens her mother, who is prepared for a flat refusal and a consequent scene of entracty and recrimination. However, the marriage takes place with great smoothness, if not with happiness on Pauline's side, and the couple settle down in a magnificent hotel at Paris. Then, of course, follows a meeting with Vilpont, of whom the first that Pauline hears is that he is the author of a play, of the Supplice of one femme type, on the eve of production, about which all Paris is agog with excitement. She is taken by a friend to see this play, and renews her acquaintance with the author, who comes to call upon her, and, having come once, comes again and again. The housekeeper, and practically the mistress, in the Hôtel Subar is an Algerian woman named Zelie, foster-sister to Sûbar, with whom in her early youth she has been desperately in love; and as a not unnatural result of this she is jealous of his wife's influence in the house, and only too ready to catch her tripping if she can. At one time Vilpont's visits became so frequent, and the existence of Pauline's old feeling for him so crident, that the reader is afraid lest Zelie's malevolent suspicions should find some justification. Vilpont, however, has so true and should find some justification. Vilpont, however, has so true and loyal a feeling for Pauline that he makes up his mind to ward off the danger from her, and succeeds in attaining this end, although he employs somewhat questionable means to reach it by plunging into a violent flirtation to which the world gives a worse name with a certain Madame de B——. Why this lady alone among all the characters in Jupiter's Daughters should be distinguished by an initial only, instead of a full name, is difficult of explanation. After this follows the outbreak of the Franco-Prussian war, which has done service in many novels already. One cannot but be grateful to Mrs. Jenkin for the good taste which she displays in sparing us all attempts to describe minutely the painful events of that period, which certainly offer a tempting bait to a novelist. M. Subar departs to the East soon after the first threatening of war, in order to set his affairs there as straight as he can, and his wife, over whose welfare Vilpont watches at a distance, establishes a hospital in her hotel when the number of wounded demanding shelter begins to increase. As one would expect, Vilpont is brought into it with a dangerous wound from the peril of which he escapes mainly by the careful nursing of Pauline, who however, as soon as he recovers consciousness and recognizes her, transfers him to the care of a Sœur de Charité. Finally they part, in a scene which is told with considerable pathos, and the malignant treachery of Zelie, who, though little has been said of her here, is one of the best-drawn characters in the book, having been exposed, M. Subar, whose fortunes, though not wrecked, are shattered, and his wife, settle down with the Rendus at St. Gloi. The latter part of the book is not equal either in construction or working out to the beginning, but on the other hand it is a good deal better than is any part of many nevels which pass for being good. Of the merits of Jupiter's Daughters it is not easy to give an adequate idea, except by extracts more copious than we have room for. Its faults are a want of centralization of interest and a laxity of style which leads the author at times to write such a sentence as this—"He did not remark a studied coldness in the manner his bows were received." To any one who would read a cleverly and pleasantly told story which makes no call upon his capacity for violent excitement Mrs. Jenkin's book may be safely recommended.

DAHOMEY AS IT 18.º

DOOR Mr. Skertchly went to the West Coast of Africs to make collections in natural history. Unluckily for him, when staying at Whydah he received an invitation to visit the King of Dahomey, with a promise that he should return to the coast in eight days. Curiosity to see the celebrated monarch, and the hope of new discoveries in entomology, induced Mr. Skertchly to accept the invitation. Gelelé, however—that is the King's name—appears to be a man of greater amiability than might be supposed from some of the stories about his habits. At any rate he took such a fancy to Mr. Skertchly that he could not make up his mind to part with him. Honours and presents of every kind were heaped upon the white visitor with unprecedented predigality. Before his departure he was made a prince with a very imposing ceremony. Four suits of clothes were wound round him; he received an umbrella of silk velvet, surmounted by a gorgeous allegorical design, to say nothing of a stool, a quantity of liquor, and a hundred heads of cowries; twenty-four slaves were added to carry the presents, and to act as his servants; and finally he received what seems to be most accurately described as the honorary colonelcy of the Ashantee regiment. Happy is the man whom the King delights to honour! But his happiness in this case was considerably diminished by the fact that he was detained for eight months in the country; that during that time he was never allowed to ramble about alone, and that his time was chiefly spent in looking at the celebrated "customs" of Dahomey, which, however impressive in themselves, must have become not a little wearisome in time. Under these circumstances entomology suffered. A cartain number of specimens, indeed, seem to have presented themselves.

Dahomy as It Is. By J. A. Martehly. London: Chapman & Hall.
 1874.

gratuitously. Mr. Skurtchly gives a pathetic account of a night which he passed in the midst of cockronches, centipedes, and large hairy spiders. The climax was reached when a huge fat green centipede, of about a pound weight, dropped upon his face during his attempt to sleep; and Mr. Skurtchly records with pardonable complexency how he struck a light, caught the centipede, and dropped him into the middle of the fire. No serious hunting for insects, however, was possible. Even when he made an expedition to the interior he was obliged by the King's orders to march at the rate of thirty miles a day, which, under a vertical sun, is not compatible with many deviations from the line of march; and the natives whom he persuaded to hunt for him were not intelligent enough to bring him anything worth preserving. Mr. Skertchly was thus compalled to devote himself exclusively to compiling a court circular giving the fullest details of the elaborate ceremonials which appear to occupy the chief part of the royal energy.

rate ceremonials which appear to occupy the chief part of the royal energy.

Mr. Skertchly, we may remark, is no lover of the negroes in a general. He considers them as forming an inferior variety of the human race, and has very little sympathy with philanthropiats, abolitionists, or missionaries. If, indeed, the account which he gives of the condition of missionary enterprise at Whydah is at all an accurate one, it must be admitted that there is room for improvement. Unless Mr. Skertchly be a writer of libels, it is not surprising that Christianity does not make such rapid progress among the natives as might be desired. In spite, however, of his contempt for the negroes and his disbelief in their spiritual advisers, Mr. Skertchly is anxious to correct the extravagant rumours as to Dahomey atrocities. The King is described by him as a tall, athletic person, with a pleasing expression of face, and with a considerable share of natural acuteness. One of the royal remarks certainly shows more power of thought than we royal remarks certainly shows more power of thought than we should have expected in a savage. Mr. Skertchly explained to him should have expected in a savage. Mr. Skertchly explained to him that eclipses were caused by the moon coming between the sun and the earth. If so, asked the King, how does it happen that there is not an eclipse every month? We have known a good many undergraduates to whom the difficulty would never have occurred, and who would certainly have been incapable of solving it. The King moreover appears to be superior to the prejudices of his subjects, and anxious to establish commercial intercourse with Europeans. He seems to have regarded Mr. Skertchly as a European potentate reproved an interviewer and was anxious to have pean potentate regards an interviewer, and was anxious to have a fair account of himself published to the world at large. Our disagreeable associations with Dahomey are chiefly due to the human sacrifices which form part of the customs; and we are glad human sacrifices which form part of the customs; and we are glad to accept Mr. Skertchly's corrections of current exaggerations. That a good many men are put to death every year is undeniable; though, according to Mr. Skertchly, the Ashantees are far more murderous than the Dahomans. About two hundred executions seem to have taken place during the eight months of Mr. Skertchly's stay; and he suggests that, if we hanged all our murderers at one period of the year, we should make as good a show as Dahomey. The statistics may be doubtful; but Mr. Skertchly has other pleas for Dahomey. In the first place, negroes do not much mind being trussed and gagged and having their heads backed off with blunt knives. He saw a number of victims who were talking and laughing cheerfully aaw a number of victims who were talking and laughing cheerfully when ungaged, and, when gagged, beating time with their heads to the music. Some of the persons executed are prisoners of war, who of course have no right to complain; and the others all appear to be criminals who have forfeited their lives for crimes which would have been capital not very long ago in England. If the dead bodies are exposed after a rather disgusting fashion, we may remember that the fragments of gibbets are still standing by English roads, and that the heads of rebels were to be seen upon Temple Har down to a very recent period. Still Mr. Skertchly endeavoured to impress upon the King that the ceremony was objectionable and excited prejudices in the minds of foreigners. During the early period of his stay he refused to be present on these occasions, though courteously invited, and hoped by his abstinence to impress upon the King's mind some consciousness that the executions were disgusting saw a number of victims who were talking and laughing cheerfully mind some consciousness that the executions were disgusting to a well-regulated mind. Towards the end of the customs, to a woll-regulated mind. Towards the end of the customs, however, Mr. Skertchly's austerity seems to have relaxed, or his curiosity became too strong for his sense of propriety. Anyhow he witnessed and describes a good many of these performances; and his inconsistency has at least the advantage that he is able to reduce to its true proportions the sensational story of the lake of blood. It was said in England that the King filled with blood a lake so large that he could paddle about in it in a cance. On this occasion, a pit was dug about three feet square by three feet deep: a number of fetich images were arranged by the side. deep; a number of fetich images were arranged by the side, together with a small silver cance; the blood of various fowls, ducks, and sheep was then allowed to flow into the pit; and afterwards five captives were beheaded over it. The performance seems to have been brutal in a high degree, but the difference between this and the reddling story is certainly considerable.

seems to have been brutal in a high degree, but the difference between this and the paddling story is certainly considerable.

These executions are the culminating point of a set of performances which seem to prove conclusively that savages are at least as capable of worrying themselves by elaborate ceremontal as more civilized human beings. Indeed we must add that Mr. Skertchly's minute accounts, however creditable to his persevering pursuit of knowledge, become not a little tiresome. Day after day he sat for hours watching interminable processions of the Amazons, and treamed dances designed and sometimes executed by the King in person, and scrambles for cowries, all of which he has set down as

if he were a herald preserving the records of a coronation corremony for the benefit of future generations. A good deal of feating of course filled up the intervals; but Mr. Skertchly's chief distraction seems to have consisted in watching the Portuguese Governor of Whydah, who, like himself, was a compulsory visitor, but was treated with less respect, and had therefore greater difficulty in keeping his tamper. A brief account of one day's ceremony will serve as a sufficient specimen of the whole. On the second day of the customs a priest of distinction goes to fetch certain secred water for the King. Mr. Skertchly took his seat under his umbrella at ten in the morning. A fence was set up from a temple or fetich lut near the palace to the sacred fountain. Long poles were crected at intervals; at the foot of each alternate pole was a fetich-herald with a hideous musical instrument. Guns were fired and horns blown, and a troop of Amazons marched down if he were a herald preserving the records of a coronation cerevere fired and horns blown, and a troop of Amazons marched down the road, firing as they walked, and carrying a white flag emblazoned with a blue alligator. Behind them came twenty-two emblazoned with a blue alligator. Behind them came twenty-two princesses, bearing water-pots for the sacred water. Then followed 123 fetich-women, devoted to the worship of various deities. Next appeared the "ghost-mothers," who are supposed to be inhabited by the spirits of the King's deceased ancestors. Finally came a rear-guard of Amazons. This procession went to the fountain, and filled the sacred pots, with various ceremonies, during which Mr. Skertchly had breakfast. He returned in time to meet the procession coming home with the water in a furious state of excitement, firing guns in every direction, and ready for a dance and a feast. The solemnity was barbaric enough; but essentially it comes to pretty much the same thing as we may see in more it comes to pretty much the same thing as we may see in more at comes to pretty much the same thing as we may see in more civilized regions. A number of people marching along a road in coloured clothes, with more or less finery, and cheering, seems to be all that the human mind can contrive by way of expressing its emotions on very solemn occasions, whatever its grade in the scale of life. Drinking and dancing are national practices in other places than Dahomey, and if in Europe people do not express their loyalty by literally grovelling in the dirt, satirists may tell us that they sometimes perform an equivalent process not so offensive to the senses.

The Dahomans, it is true, appear to be a long way behind us in their religion, the account of which by Mr. Skertchly is one of the most interesting passages in his book. Yet even here we may detect some resemblances not altogether flattering in their character. They have a crowded pantheon, consisting of all manner of local and other deities, whose ranks have apparently been swelled by the admission of deities from many conquered races. These deities are under the superintendence of one Mau, a very authropomorphic person, who does not interferemuch, but judges the souls of the dead, and either allows them to return to spirit-land, or sends them to and either allows them to return to spirit-land, or sends them to animate a new body in this world. So far we may recognize some analogies to exploded forms of European belief. But in addition to this they have a doctrine, apparently of more practical use, which recalls the most modern form of European superstition. They have "mediums" who communicate with the souls of the dead, fall into trances, and occasionally make expeditions to the spirit-land. The theory of human sacrifices, as is well known, is that the slain are sent with messages to the ancestors of the present king. The one doctrine which is curiously absent from the Dahomey creed is the belief in witches, which deprives them, fortunately, of one additional motive for manslaughter. On the whole, their creed, like their political institutions, seems to be advancement on a larger and the world the seems to be a development on a larger scale than usual of those common amongst the inferior races of Africa, and Mr. Skertchly's descriptions of it are worth notice, and decidedly more interesting than his accounts of the wearisome "customs."

CAMPBELL'S SOPHOCLES.*

IN the performance of his task of providing English readers with a worthy transcript of Sophoeles, Mr. Campbell could have found no better field in which to exhibit his author's genius and his own aptitudes than the instalment now presented to us. The Edipus King is without comparison the most tragic of tragedies. The Philocotetes has more in it to stir the emotion of pity, and more that is exceptional in its character, in the way of a display of hoos, than almost any of its fellows. Both represent the riper and more finished phase of this great dramatist's art, when he had laid aside artifice of style and obscurity of language for easy and natural composition, concentrating itself on the clear and gradual evolution of his plot so as to arrest and detain the reader's or spectator's interest from first to last. It cannot, indeed, be pretended that there is so consummate an exercise of the Sophoclean irony in the Wildest and in the Children of the Sophoclean incompanies. in the Philoctetes as in the Cilipus King; or that the repentance and return of Neoptolemus to his nobler self is so tragic a revolu-tion or contrast as the gradual and utter collapse of the fortunes, high estate, and honoured repute of Œdipus, evolved step by step in the unconscious words and deeds of the prime actor in that terrible tragedy. Yet we doubt whether art and simplicity are anywhere more thoroughly wedded in Sophoclas than in the *Philoctetes*—simplicity in the skilful outline, art in the consistent and well-developed delineation and filling-up of the characters. And if, coming after the *Œdims*, it strikes the reader as beneath it in point of tragic interest, it may be remembered that

* The King Cedipus and Philocetes of Sophocles. Translated into motion Verse. By Lewis Campbell, M.A., L.L.D., Professor of Greek in Maiverstry of St. Andrews. William Blackwood & Sons, Edinburgh of Leudon. 2824.

this only illustrates more forcibly the genius of Sophecles, who could carry his audience with him no less through the tamer windings of Ulyssean subtlety, until it is eventually foliad by the inborn uprightness of a genuine hero, than through the blind and tragic persistence of Codinus in unconsciously accumulating evitragic persistence of Gedipus in unconsciously accumulating evidence and information destined to tell so terribly against himself. It is well that those who "have no Greek" (to bester a Welsh idiom), and who at the same time, it may be, have a prejudice in favour of modern literature and modern dramatists, should have an opportunity of studying trustworthy versions of two such plays, uncumbered with note or comment, and rendered so faithfully as to put the reader in the next hast place to that of the bright and cultivated Athenian next best place to that of the bright and cultivated Athenian audience. To reflective minds they cannot but suggest a contrast between the subtle and delicate coherence of tissue with tissue in the interweaving of the ancient drams, and the filman fabrics that are run up nowadays for present exigencies, to tickle the palate of uncritical and ill-trained spectators.

the palate of uncritical and ill-trained spectators.

Mr. Campbell, we should perhaps remind our readers, has followed the excellent example of the late Professor Conington in qualifying himself for the task of a translator by first of all acquiring a commentator's familiarity with the text and interpretation of his author. One half of his critical edition of Sophocles has already appeared, and has proved that—whatever may be thought of the elaborate prolegomena which usher in the three plays—he has thought and spelt out the meaning of every phrase, sentence, and passage by the light of collateral parallelism, the best way to arrive at the understanding of an ancient writer. Bringing to his editorial task, in his commentary, no small share of poetic insight to assist in right and probable interpretation, he of poetic insight to assist in right and probable interpretation, he now—as in his former instalment of a verse-translation—recommends himself to the confidence of critical readers by a manifest regard, in his poetry, for the footprints and tracks of the Greek. In the main, therefore, his version may be relied upon as one of the best substitutes for the original, although there is still room, we think, and that without sacrifice of spirit or grace, for an even closer cleaving to the very lines of Sophocles. It is hard to see how the substitution of another figure or metaphor for that which the original author has used can consist with entire faithfulness on the part of a translator. But though, as we shall show hereafter, Mr. Campbell is not faultless in this matter, it is but justice to admit that his general practice is to respect accuracy and antiquity in his reproductions; and if he finishes his work as he has begun it, we think he will be clearly entitled to the first

rank as an English translator of Sophocles.

For samples of neat and poetical translation from the iambic parts of the two plays, we may take one or two brief excerpts; the first is from the speech of (Edipus when he has come forth from the palace-doors, and meets the Chorus with the gore still streaming from his principal. ing from his maimed eyes, the horror of his situation provoking retrospection, and leading him to dwell on what might have been but for his own unwitting acts. In the first place he justifies his self-mutilation (τοιάνδ' ἐγὰ κηλίδα—γλυκύ):—

And was I then,
By mine own process branded thus, to look
On Theban faces with unaltered mien?
Nay verily; but had there been a way
To stop the hearing fountain through the car,
I had not faltered, but had closed and burred
Each gate of this poor body; deaf and blind!
So thought might sweetly dwell at rest from harm,

And, shortly after, he breaks out into a pathetic reminiscence of the scene of his unintentional parricide:-

O cross-road in the covert of the glen, O thicket in the gorge where three roads met, Bedew'd by these my hands with mine own blood, From whence I sprang—have you forgotten me?
Or doth some memory haunt you of the doeds
I did before you, and then came and wrought
Fresh horrors here?

Then follows a characteristic summary of the complications arising out of the murder referred to, and culminating in the ain and sorrow which make the tale of Thebes the most awful of ancient tragedies. Mr. Campbell has gone through the list with a ancient tragedies. Mr. Campbell has gone through the list with a delicate hand, of which it is not too much to say that it has some of the tact of the great master whom he reproduces. Apropos of the "cross-roads," however, we would remind him that in another passage, where reference is first made to them, (Ed. T. 733-4) there is a verbal inexactness in his translation-

The parted ways Lead from one point to Daulis and to Delphi—

which is avoided in Mr. Plumptre's rendering :-

And the made From Daulis and from Delphi there converge.

But this is a very small matter, and it is fair to add that the average and level passages of the two plays are rendered for the most part with combined accuracy and dignity. From the Philocoste the best proof of this that we can adduce is a smatch of the quarrel in monostichs between Neoptolemus and Ulysses, when the young warrior's better nature rebels against the timeserving leader with whom he is associated, and he refuses to play Philocotetes has, and to rob him of his bow:—

UL. How? our chief's con! What word hast then disclosed?
NEOP. Must the again syllables be thrice thrown forth?
UL. Once was the much. Would they might rest unsaid!
NE. Enough. Thou hast heard my counsel charty told.

what power shall balk thee in the dead, head shall hinder me? But little wit or wisdom show'st thou here.
Neither thy words nor thy design is wise.
But if 'his righteous, that is better lux.
How, righteous, to selesse what thou hast ta'm.
By my device? Nz. AL. By my device?

I shned a shameful sin,
And I will do my utmost to retrieve it.

How? Eser'st not the Achmens in this act?
In doing right I reck not of thy fear.
I call thy power in question.

Then I'll fight,

Wet with Trong's legions, but with these Mr. UL UL. Not with Troy's legions, but with thee Come on, UL Let fortune arbitrate.

Thou seest my hand Nz Feeling the hilt. And me then soon shalt see
Doing the like, and dailying not. And yet
I will not touch thee, but will go and tell
The army that-shall venge this on thy head. Uz.

This dialogue adequately represents the Greek, and it would be difficult to amend the rendering of a fine speech of Philocottes, when he first learns the trick of which Neoptolemus was designed to be the unwilling instrument, and apostrophizes the birds and beasts within range of the cave where he believes himself still destined to linger in pain and loneliness.

But we must glance at the choral parts of the two plays. In the first ode of the Edipus there is observable, besides general grace and fidelity of translation, a satisfactory definiteness as to one or two expressions which, in the utter absence of notes, more especially call for precision in rendering. Thus, in v. 184, agray wapa papers is rendered, as a parallel passage from Æschylos, cited by Erriurit, shows it should be, "Along the alter-strand"; and in the next strophs, rikes γdo if τε νέξ ἀψῷ, ταῦτ' ἐπ' ἡμαρ ἐργετα, 198-9, a sentence of some seeming ambiguity, is sufficiently represented by the gist of Elmsley's interpretation—namely, "Day ruins what night spares." In the second chorus some slight sucrifice of nictures among a in naticeable in the rendering. picturesqueness is noticeable in the rendering :-

> μ λιος μελέω ποδί χηρεύων, With none to share his moan;

which omits all mention of modi. Here Mr. Plumptre gathers up all in his version:—"In dreary loneliness with dreary tread." But in the rest, and in the sublime hymn beginning it not kevern pipowers, Mr. Campbell is fully equal to the occasion. Perhaps, however, it may be more convenient to quote, as a specimen of his metrical translation, a bit of a chorus in the Philoctetes, which depicts the sufferer's wretchedness in his exile at Lemnos, and contrasts it with the happier lot which is in store for him if Neoptolemus fulfils his promise to convey him home. After describing how he sustained life by the captures of his bow, the chorus adds:—

Poor soul that never once in ten years' space Brighten'd his face. With the fruit of the vine. But ever seeking to some standing pool, Not clear suc cod, Drank it for wine. But now consorted with the here's child the wingeth eventuers and a joyful change. But now consorted with the here's child
He winneth greatness, and a joyful change
From that low state; over the water wild
Borne by the friendly bark beneath the range
Of Eta, where Sperchens fills
Calm basins between lovely hills,
Haunted of Melian nympla, till he espies
The roof-tree of his father's hall,
And high o'er all
Towers that majestic form, whose home is in the skies.

This is prettily turned, and for the most part faithfully also. em hypercritical to demur to the line we have italicized as baving less warranty in the Greek words στατῶν εἰς ἔδωρ (716) than convenience as regards rhyme. But, to say the truth, it is just on this point that we think Mr. Campbell's translation susjust on this point that we think Mr. Campbell's translation susceptible of improvement—namely, that he is too fond of importing a foreign idea into his rendering of the Greek, and a trifle lax in his regard for the letter of his original. This, we know, is a matter on which critics differ; but it surely cannot be wrong to contend for a reproduction of the images, if not the ipsissima verba, of a master. For our own part we should be loth to render $d\rho\chi\eta\nu$ $\beta\rho\sigma\chi_{\epsilon}la\nu$ thatfor "a little floor of hope," though we are aware that to object to such a slight departure from exactness seems to service. But what can be the object of templating savour of purism. But what can be the object of translating such a line

ыс плывтог ын тойд анонгос автыс (Œd. T. 763).

So to live as far As might be from the very thought of Thebes?

Or who would discern that the English appended to the line we are about to quote from the Philocicles (443-4) was meant for a reproduction of the Greek of Sophocles? Philocicles, inquiring about Thersites, designates him as one

de obe do eller eledant elado, brov undelt ichy.

Who no or made commission to utilat speech, where all Cried " Whisht!"

There may be excuse in a chorus, too, for such a heating about the

gracion gonnen eit quehuns Xbil.an,

(CDA, E. 876-9)

To topmost height Sours madly, and then sinks to sudden night, 'Mildst flut-perplexing shocks Of sciamentine rocks Propared for stumbling mortals by dask fate;

but we can see no excuse for the license of alteration which in v. 945 of the same play renders Jocusta's bidding to her attendant

ῶπρώσπολ', οὐχὶ δασπότη κ.τ.λ.

Quick, Chloe, run, and tell this to thy lard

an importation of names where no name is in the original, and where it is contrary to the usage of Greek tragedy, and suggestive rather of a comic or furcical element.

We think we need hardly add that these remarks are made under a sense of deep obligation to Mr. Campbell for what we have

already described as an able and excellent translation.

SWEET, NOT LASTING.

IN going through exhibitions of modern pictures it has often struck us how much truer taste and how much greater skill are shown by the artists than by the writers of those novels which it is our unhappy fate to have to read in such numbers. The Dudley Gallery of this year is but poorly spoken of. Yet even there have brightly would the second and third-rate artists shine forth if their work, were converted with that of the artists shine forth if their work was compared with that of the second and third-rate novelists! It is difficult of course to compare a picture with a hook. Yet, as we were the other day looking at some of the sketches in this Callery, we found ourselves regretting that must of the novelists had not either given themselves up to painting, or elsa, before they wrote, had made a study of the art of writing. We before they wrote, had made a study of the art of writing. We have no reason to suppose that there are more people been with a capacity for painting than with a capacity for writing. For the one art, however, a long and careful training is required, while for the other art there is no training at all. To be sure a young nevelist has read no doubt hundreds of nevels, most of them worthless. But this no more tits him for writing than long wanderings through galleries of poor paintings fit a man for painting. The woman who takes to writing has this advantage, so far as it is an advantage ever the man, that she has from early years far as it is an advantage over the man, that she has from early years been a great letter-writer. She has acquired thereby a considerable command over her pen, though not perhaps over her words. she has, as the phrase goes, learnt to express her ideas; but then unfortunately too often she has no ideas to express. Now what is clearly required, so as to give the novelist the same advantages as the artist, is an Institute of Novel-Writing. There, under the guidance of professors, students would learn, not certainly to write an original work—for originality same not be taught—but to make a composition which should not be compared to the contract of the in glaring violation of all principles of good taste. The canons of chiaroscuro, for instance, have not as yet been laid down, so far as we know, in the novelist's art; and for want of such canons the writers of the present day put in much too much shade. It would not be difficult, however, to tix a limit to the amount of shade that might be thrown into a story. At all events something would be done if an estimate were made of the number of pages there are to each crime in the works of a great variety of novelists. The number of jokes would have in like manner to be ascertained, and it would be then seen how many jokes a great writer makes to give light and relief to each murder. Then, too, how much do our novel-writers need to know that they must only paint what our novel-writers need to know that they must only paint what they have themselves seen! The young artist does not begin by painting the marble halls in which every young lady a few years ago used to dream she was living. On the contrary, he is set to paint what he has himself seen, and what he knows quite well. The novelist, on the contrary, neglects too often his village gossip as beneath his pen, and draws in the strongest colours dukes and murderers as if he had been hob-nob with them all his life. Novelistic with the reals they attempt to describe in want of familiarity with the people they attempt to describe is shown not only by the monstrosity of the pictures they draw, but also by the trouble they are at in describing that which strikes their notice merely because it is unfamiliar. If we could imagine that a ploughnan should suddenly gain the power of writing a novel, and if he should take as his subject the life of "well-to-do" negation in the sound to the subject the life of "well-to-do" negations. novel, and if he should take as his subject the me or wender do" people in the country, he would, no doubt, in describing their everyday life, not forget to mention that they washed their hands and brushed their hair before dinner, and before their sould their sould unfolded their napkins. He would they swallowed their soup unfolded their napkins. He would describe how his heroine, suffering from a violent cold, drew a clean describe how his heroine, suffering from a violent cold, drew a clean handkerchief out of her pocket and blew her nose, and how his hero, when he first came down on a Sunday morning, was in his Sunday clothes, not waiting till after he had his breakfast "to clean himself" up." Absurd as a novel written in this fashion would seem to any one of the middle class, scarcely less absurd is a novel in which lords and ladies are as plentiful indeed as arums in apring, but as unnatural as a dolphin in the woods or a wild boar attacks the waves.

Amest, not Lasting. A Noval. By Apple B. Lefurt. London : Sampson Lieu & Co. 1874.

In this novel of Sweet, not Lasting, we have the Duke and Duchess of Tanthallon, the Marquis of Staffs, Lord Hilton, Lord and Lady Darraghmore and their children, Lord Camelford, Lady Ermegilda Hildebrand, familiarly called Erms, and Lady Gwendaline Hildebrand, no less familiarly called Gwenny. The author does her best to make us quite at our ease with Gwerny. The author does her best to make us quite at our ease with such great people, yet we cannot but feel that we should find ourselves much more among living people if we were invited to dine on some Sunday afternoon in Madame Tussaud's wax-work show. We read of "the dressing-bell and the period sacred to the cares of toilette," of "the cares attendant" on a gentleman "on placing himself and his convoy at table," how "there comes a sudden hush, and Lady Darraghmore rises, and the ladies file from the room," and "the ordeal of dining is ever." We read how "Lady Darraghmore and Mrs. Percival settled down into their respective easy-chairs," and we are glad to find from this use of the word "respective" that in high rank, even in Ireland, two people do not sit on one easy-chair like two Templars on one horse. We read that "coffee over, the piano was opened, the group in the centre of the room resolved itself into couples, and every one put on an air of expectancy." We read that when Lord Hilton in the course of the evening said he had come in hearch of the ladies, on an air of expectancy." We read that when Lord Hilton in the course of the evening said he had come in search of the ladies, "'You did not go far,' laughed Lady Gwendaline. 'Did you expect to find us among the ferns? Oh!' (holding up one playful finger, and looking radiantly beautiful as she spoke). 'You have both been smoking.'" We read that there were lunch bells and dressing bells, "which always rang punctually at half-past six o'clock." In fact, we are allowed to see a great deal of the inside of high life, but all the while we seem to see but the reflection of some reflection. We should doubt whether the author has for her copy gone even to those who have drawn the great from life. She has gone even to those who have drawn the great from life. She has been, we fear, but the copier of some copier. But our readers shall judge for themselves :-

When the Autumn beauty was at its fulness, and arrayed in its richest sobes of searlet and gold, going forth to meet its death like the ill-fated daughter of Judah; when all these events of which we have written had taken place, Lady Ermegilda Hildebrand came back to Darraghmore. She travelled back from Kingstown, where the Duke of Tanthallon's yacht had restored her to Irish earth again, after the cruise to Norway. Travelling back with much state and circumstance, with many wrappings of rich furs; with heavy jewel-boxes and dressing-cases; a French maid, and all the other imposing accessories which belitted the first-born of her specient line.

We do not so much object to a writer calling a dressing-case and a French maid "imposing accessories." We are by this time used to big words, and know the Latin word for three-farthings as well as any man. In big and foolish words there lies no great offence. We do dislike, however, this vulgar and minute descriptions. offence. We do dislike, however, this vulgar and minute description of matters which are in themselves utterly petty, and which in real life would be scarcely noticed, certainly not described, by any person of a cultivated mind. Imposing as were the accessories of this Lady Ermegilda, no less imposing was she herself. "When she walked her gliding motion reminded you of that of a swan "—not, we suppose, of a swan walking, as is almost implied. She was aware of her beauty, and used it and her "imposing accessories" only too well. "It may be said of her," we read, "as of him of Macedon, that her thirst for conquest only increased with the number of kingdoms which owned her victorious sway." The talk of this Lady Ermegilda Hildebrand was as big as her name. "I this Lady Ermegilds Hildebrand was as big as her name. "I want to see real love," she cried out; "I want passionate love; I crave something stronger than warmed ice-water to drink." This speech of hers was too much for her sister, the Lady Gwendaline,

said in a low, soft voice, "You and I differ much in our ideas of love, I am afraid. Let us not descerate love by likening it to that sort of thing!" And queenly Erms herself could not have emulated the depth of scorn revealed in that one sentence, spoken in that low, soft tone.

"Dear Gwenny," said the latter, surprised, "you are too romantic in your ideas! Far too idealistic!"

This wicked Lady Ermegilda, or Ermegilda Regina, as she is called, in her disgust of warmed ice-water, wantonly set to work to rob the heroine of her lover. He was one Dr. Halket, or Bertie Halket, as he is generally called. It is curious, by the way, how fond ladies are who take to writing novels, not only of calling but also of introducing all the young men of the story by their abbreviated names. Thus we have, besides Bertie Halket, also Gus Bennett and Fred Brady. Doubtless we should have had a few more, only, as the rest of the characters are mostly loveds, their few more, only, as the rest of the characters are mostly lords, their Uhristian names are not used. This Bertie Halket had the reputation of being "a very dangerous detrimental," whatever that may be, and so Ermegilda Regina, with the thirst of "him of Macedon," looked upon him as a worthy conquest. She, "this glorious woman," as she is described, "with her regal brow, her queenly dignity and grace?" (why not her queenly brow and her regal dignity and grace?) "her rich silken robes and glittering jewels, her graceful attitudes and swan-like motion," met this "very dangerous detrimental," much as Alexander met Darius, and the samusign thus onened: campaign thus opened :-

"We only said how much niour the world would be if there were no men

"And you thought it, did you not?" asked Dr. Halket from his corner.
"Of course we did," said Nellie.
"So I should have supposed," again observed Dr. Halket.
"I appland your spirit, Nellie;" and Lady Erma as she spoke, flashed a lance of defiance into the sorner. "Tea and scandal may be nice—it seemes very much on people's tastes; but tea without scandal is nicer still. Tea, I quite appland your spirit, Nellie, and your sentiments too,"

imperturbable Doctor from his dark corner. He was not to be proveded into an argument just then.

Lady Erma's vanity was piqued, but she reflected that hard-won victories were often the most decisive, and she turned to Mr. Brady, resolved that Doctor Halket should feel what it was to be left out in the celd for the rest

She gains the day, it is true, but at one time she felt so exhausted that seeing "a dainty" (everything is dainty in the modern north) "little equipage of rare china and bright silver, she said, putting two white jewelled hands up to her temples, 'My brain is overworked. A cup of that ambrosial beverage is the only thing to restore the wasted fabric.'" Finely as tea sounds when called "an worked. A cup of that ambrosial beverage is the only thing to restore the wasted fabric." Finely as tea sounds when called "an ambrosial beverage," it scarcely equals the supper which follows under the name of "a grand symposium over the grilled dbris of the turkey which had graced the dinner-table." It is not only by her calling tea ambrosial and turkey-bones a symposium that the author displays her classical reading. She has read the mythology, even if she somewhat confounds the persons. "Poor Ariadne," she tells us, "must have often prophesied the departure of Paris, long before she awoke and saw his white sail vanishing in the distance." The wicked Ermegilda Regina robs the heroine of her lover, fools him to her heart's content, and then marries the Marquis of Staffa. The heroine goes back broken-hearted to France to the convent where she had been educated, and Bertie Halket does not turn up again till the winter of 1870, when in Orleans, "under the very statue of Joan of Arc Frenchwomen sit smiling, selling fruits and vegetables" (not ambrosial beverages or a symposium, let us be thankful) "to the invaders." He is called in to see an English nurse who is dying, and of course finds it is the heroine. A French Sister of Charity, with a disregard of the rules of gender which under the circumwith a disregard of the rules of gender which under the circumstances may be looked upon as a touching trait, prays over her, "Faites luire sur elle votre éternel lumière," and then with this false concord in her ears she dies. Bertie Halket after this prospers false concord in her ears she dies. Bettle Halket after this prospers so well that, though it is no such very distant time since the war of 1870, he is described as "a famous English surgeon in Paris; a man now high up in his profession." Silly as this story is, it is nevertheless very harmless. The author does indeed bring in young men who talk of taking "B. and S." when they mean brandy and soda-water; but her "fast" young men are innocent enough. We should be glad to know, however, what she means when she again that the Bannett "had graduated into a full-bluwn when she says that Gus Bennett "had graduated into a full-blown 'S. I.'"

AMERICAN LITERATURE.

N the course of five years' experience in the Territories and in the Pacific States Mr. Beadle appears to have filled a variety of functions, to have gone through many rude adventures, and to have acquired a knowledge of what he calls the "Undeveloped West". which may be useful to many of his readers, and can hardly fail to be interesting to all. He has not, like so many recent authors, confined himself to the beaten track created by the Pacific Italiway, or to that which, before the railway was undertaken, was marked out by the stages and waggon caravans which imperfectly fulfilled the office of conveying passengers and goods between the Eastern States and the distant community which long before the intermediate region was seriously invaded, had peopled California, or the rude mining settlements which were growing up here and there on the Eastern slopes of the Rocky Mountains. He has traversed the Indian country, and has a good deal to say about the character and prospects of the "Nations" there settled, much of which will be new to the English public. He has lived in New Mexico, and made himself acquainted with the peculiar laws and manners of its inhabitants of Spanish blood laws which in many cases seem to show a stronger element of ancient Mexican than of medieval Spanish civilization. He dwelt for some time in Utah as editor of a "Gentile" newspaper, and has formed an opinion of the Saints and their leaders which, if not easily reconcilable with established facts, has at least the ment of independence and differentiable forms that commonly the merit of independence, and differs widely from that commonly formed by visitors to Salt Lake City. He draws distinctions between different portions of the vast interior region between the Mississippi and the mountains which have not been sufficiently marked by many of his predecessors; and, boasting that he has no interest in puffing any railroad scheme or promoting the sale of railway lands, he points out a variety of considerations which greatly affect the value of the land grants obtained from Congress for the purpose of raising capital to make the lines. His remarks deserve the careful attention, whether of intending emigrants, or of those who are or may be interested in the fortunes of the railways themselves. In the first place, the land rises in a steady slope from the valley of the two great rivers to the base of that vast mountainchain which forms the watershed, and divides the narrow but very fertile belt along the Pacific coast from the remainder of the continent. The first part of this alope is all that has been represented; rich, and well-watered land, capable of supporting as large a population to the square mile as any agricultural country in the world; enjoying a pleasant and healthful climate,

"The Undereloped West; or, Five Years in the Territories. Being a Complete History of that Vast Region between the Mississippi and the Pacific, its Resources, Climate, Inhabitants, Natural Curlosities, &c. &c. With Two hundred and forty Illustrations. By J. H. Beadle, Western Correspondent of the "Cincinnati Commercial," and Author of "Life in Utah," &c. &c. National Publishing Company: Philadelphia. London: Trübner & Co.

a shundant recom for a much larger number of in are likely to settle there in the course of tury. This belt varies in breadth, but extends dred and fifty or two hundred miles from the the next century. This belt varies in breadth, but extends for some hundred and fifty or two hundred miles from the rivers. Its border is marked by the gradual disappearance of crees and ordinary grasses, till a region is reached where the binalo grass and other coarse but eatable herbage affords excellent reasure, but shows the soil to be fit only for grazing purposes. Mindo grass and other coarse but eatable herbage afforms excellent pasture, but shows the soil to be fit only for grazing purposes. Then comes the great alkali desert, with its peculiar vegetation, which can fied nothing; which, according to an American phrase, a jack-rabbit could not cross without carrying a havresac. Then there is a vest territory whose elevation renders it most unpromising for cultivation—a great table-land whose lowest point may be taken at 4,000 feet above the sea-level. Here the frosts often continue through the whole year: the air is as proparicable for drynges. as for cold clear purity, and the want of water often concurs with the low temperature to deprive the soil of vegetation. But it is here that the country presents other and not less powerful attractions to the adventurer in search of fortune or of bread. This is the mining region, with its incalculable mineral wealth, its peculiar geological conformation, its rapidly developing industry, and its mushroom cities, suddenly springing up and often suddenly deserted, on sites ranging from 6,000 to 9,000 feet in altitude. This country has generally a surface as unpromising to the cultivator as its hidden wealth is valuable to the prospector and the miner.

Of course, in the midst of the least favourable of these regions there are extensive tracts which bear a different character; cases in the desert, containing tens or hundreds of square miles, whose peculiar situation exempts them from the curse of barrenness which prevails around them, and creates those splendid "parks" which promise in a few years to be turned into huge grazing farms, and even districts where the farmer can raise corn and vegetables. And the Pacific belt presents a most striking contrast to the country on the other side of the mountains. California is, like all countries near the Equator, liable to suffer from drought, and in many parts the farmer can only prosper by means of careful, extensive, and systematic irrigation. But her soil and her climate seem to conspire to render her the very paradise of the English race. They can live there in perfect health; they enjoy the most splendid scenery and the most delicious air; they can raise nearly every important staple of cultivation that the temperate zone can produce a these tables of the control of the con duce—wheat and maize, silk and wine, almonds and oranges, apples and peaches—the fruits and cereals of England side by side with those of Italy, of Michigan, and of Carolina. The magnificent fields of wheat, covering two or four thousand acres; plantations of almond-trees, twenty acres whereof, after five or six years' tending, become a handsome and permanent fortune; the vineyards, which need nothing but skill and a sufficiency of labour to rival those of Champagne or the Rheingau; the serilabour to rival those of Champagne or the Rheingau; the sericulture, which ere long may seriously compete with that of China, have been amply described by authors whose works have been previously noticed in these columns, and we do not propose to follow Mr. Beadle over familiar ground. The most original part of his work is probably that which describes the settlement of the Indian territory. Its occupants are not those savage warriors whose exploits from time to time spread terror through half a Western State, and force the Federal Government to incur the expense and employ all the parade of war to put down a few the expense and employ all the parade of war to put down a few scores of depredators far less formidable than a small Highland clan of the seventeenth century. They are distributed into a few important nations, numbering less than one hundred thousand in all, and living in tolerable quiet under what has at least the semblance of government. The Cherokees, for example, have a Legislature and an Executive whose work seems to be done with less of show and noise indeed, but not less effectively, and certainly not less honestly, than that of their prototypes at Washington. The Pueblo or Village Indians of New Mexico seem to belong to a different race—probably to some one of those which successively occupied Mexico—and retain the relics of a simple civilisation. There seems to be no reason why, if protected against the greed of the white settler and the treachery of Federal officials, these tribes should not settle down as peaceable cultivators of the soil, and be gradually absorbed into the mass of a heterogeneous population; and Mr. Beadle points out very clearly the absurdity of intrasion on their lands while Kansas, for example, remains not half-peopled, and the folly, as well as the iniquity, of the bad faith which has hitherto been observed towards them. They are not, like the Maoris, strong enough to fancy themselves capable of maintaining a struggle with the white man; they are not, like the Australian aborigines, hopelessly degraded in the scale of humanity; and their preservation does not seem by any means a feat beyond the political skill of American statesmen, if once loyally undertaken and consistently earried out. belong to a different race-probably to some one of those which

cal skill of American statesmen, if once loyally undertaken and consistently carried out.

Mr. Phillips's Explorer's, Miner's, and Metallurgia's Companion's a very elaborate work on every part of the miner's business as practised in America. He describes the geological formations in which the various metals are chiefly to be sought; the special as well as the general indications of their probable presence in any part of those formations; the older and ruder and the newer and more elaborate modes and machinery of mining and extraction; pumping, stamping, crushing machines, modes of coasting ore, and, in short, every process which the miner may have to use, as

well as every circumstance which it behaves the explorer in meants of mines to bear in mind. Parts of the work, especially the two or three earliest chapters, may have some general interest as illustrative of the rude science and ruder practice of American gold-hunters; but in general its technical character randers it of little value save as a manual for those who intend to pursue the craft with which it deals craft with which it deals.

The Skylight and the Dark Rosm is the title given by Mr. Anderson to a somewhat rambling treatise on photography and on optics and chemistry so far as they are connected with photography. We do not attempt to pronounce on the technical value of that portion of the work which actually deals with the practice and principles of the art; but the preface is ridiculously flippant and silly, and the elementary instruction proffered in chemistry and optics is not of a kind to convey a clear notion of the first principles.

optics is not of a kind to convey a clear notion of the first principles of either science to the student who requires such teaching.

Messrs. Scribner, Welford, and Co. of New York have reprinted for American circulation the Report of the Committee of Exploration in Palestine, entitled Our Work in Palestine †, with which the majority of our readers must be already familiar. The American edition is cheap and convenient, but the illustrations appear to

can edition is cheap and convenient, but the illustrations appear to have suffered from use, or from copying, and certainly appear inferior in execution to those we have already seen.

Dr. Beard's Treatise on Legal Responsibility ‡ in Old Age, read before the Medico-Legal Society of New York, though most unfortunately printed in bad type and got up in the meanest and most unattractive fashion, is a work deserving the attention of competent judges, and likely to excite the curiosity even of the unlearned public. The author maintains, despite the supposed experience of mankind to the contrary, that the mental powers of man keep pace with the physical in decline as well as in growth; that the decline begins at forty, and after fifty is marked and decided, if not rapid; that moral power also wears out; and that the offences of which men who have borne an irreproachable character for whole decades, perhaps for a whole life, are occasionally guilty in old age, are to be ascribed to causes as little within their control as are the impulses of the insane. We have heard a man of large experience, and a close moral observer, within their control as are the impulses of the insans. We have heard a man of large experience, and a close moral observer, say that men often "take a turn for the worse," as regards their moral character, after five-and-forty, but, as regards intellect at least, and especially as regards judgment, the general opinion of mankind in all ages seems to testify to an experience contrary to Dr. Board's theory. Men in the prime of life would hardly have yielded the reputation of wisdom, and the right of civil if not of military rule, to their seniors, from the time of Homer until now were there no foundation for the helical which Homer until now, were there no foundation for the belief which connects wisdom with grey hairs. The very fact of the double sense of the words γίροντες, senators, senior, seigneur, &c., bears strong evidence on this point. However, Dr. Beard argues his state of the sense his theory. We can only recommend it to the curiosity of the public and to the study of those scientific men who are best qualified to deal with so startling a heresy.

Mr. Samuel R. Wells, an American phrenologist, has published an elaborate work entitled New Physiognomy \$\(\), in which professes to discern the minutest traits of character no longer by the bumps on the head, but by the varying peculiarities of the face. Homer until now, were there no foundation for the belief which

the bumps on the head, but by the varying peculiarities of the face, the length and shape of the nose, breadth of nostril, proportion of upper and under jaw, prominence of teeth, &c. We cannot pretend to discuss the probability that particular moral qualities may thicken the dividing membrane of the nostrils, or cause the eyes to assume a longer or rounder shape; but we should have thought that, if the shape of the cranium were the cause, or at the concentral sign of character is rounded to produce any rate the congenital sign, of character, it would be needless to seek in the flesh of the nose and lips what is recorded on the bones of the skull. We should further be inclined to doubt the propriety of connecting destructive qualities with a hooked nose on the ground that carnivorous birds have a hooked mandible.

The mandible helps the bird to tear its prey; but men do not fight with their noses, so that the analogy appears altogether defective.

We do not usually notice translations, especially when the originals are either well known or would find their proper place in another part of our columns. But we may briefly mention the appearance of a translation of a work which few Englishmen are likely to read in the original—The Alchemy of Happiness ||, of

and, in short, every process whom the namer may mave to use, as

ned al Ghazalli one of the chief of Moulen theological Meditioned al Ghanall; one of the chief of Mosion theologisms and Milosophers. The work is religious in its character, and sufficiently practical in spirit to be in great measure distinted gible to European as to triental readers, when once the former have understood the manner in which Al Ghanall mas "the heart" to signify the governing powers of the human being ; the controller, not the seat, of the passions; the reasoning order; sometimes even the immortal soul. The translation is free from affected Orientalism, and seems to have been executed with pains and care, as a real labour of leve.

The Prostrate State is a description, by a writer who repudiates all sympathy either with slavery or secession, of the present political condition of South Carolina. We cannot here follow him in detail through the long list of crimes that have disgraced the new rulers of what was once the proudest State of the Union, and, through them, the Federal Government which alone supports them. It is enough to say that the tyranny of the conquerors gave votes to a majority of utterly ignorant creatures, just emancipated from slavery and belonging to a race whose instrictive to even the lowest European races has been proved by the experience of ages, and set them to govern a minority of men of experience of ages, and set them to govern a minority of men of English blood, owning all the intelligence, all the property, all the traditions, all the education of the community. Northern silventraditions, all the education of the community. Northern adventurers separated the negroes from their masters, and taught them to return a negro Legislature, which was to be the instrument of keeping the intruders in power. By that Legislature and its leaders fouth Oarolina has been systematically oppressed for eight years. Ruined by the war and the damoralization of her labourers, her taxes have been much more than doubled, and her debt enormously increased; and the chief part of the proceeds of loans and taxation has been appropriated by negro orators and Northern adventurers. The state is practically insolvent, her real people ruined and degraded by being the subjects of the most ignorant of their countrymen. Were they but left to themselves, as Oalifornia was in the days of the Vigilance Committees, in one weak they would have swept away the whole gang of peculators that calle itself the State Government, and restored a decent and honest Government. But I rederal power imposed on them a honest Government. But Federal power imposed on them a negro Government. But Federal power imposed on them a negro Government, with all its consequences, and Federal power maintains that Government and its creatures. Those who speak with admiration of General Grant, and profess to believe in the honesty of Republican statesmen, should read this book, and bear in mind that for the state of things it describes General Grant and the party in Congress that supports him are directly resorbestible. responsible.

Miss Grace Ellis has put together, out of Miss Aikin's memoir and a few other materials already known to the public, what purports to be a new Life of Mrs. Barbauld prefixed to an edition of her works. So far as we can see, it might have been enough to reprint the original memoir; for Miss Ellis has little of value to add to it.

A Self-Made Woman 1 is a novel with a purpose—that purpose being to teach women that hundreds of them "have genius and great intellectual powers, which can earn them fame and free them from opprassion." Those who admire the doctrine may possibly accept the story; but the story will hardly win new votaries for the doctrine.

Some more Last Poems of Alice and Phase Carey 5—feeble, washed-out imitations of Mrs. Hemans—may, we trust, prove to be really the last of this gushing source of easy, empty verse. The "America" Cup || is a narrative of the International Yacht Races, on particularly line paper, with excellent illustrations, in particularly had verse; verse whose slovenliness, prosiness, and blunders would disgrace a schoolboy.

THE ARMY.

THE ARMY.

The happened that on the same evening that the officers and trootic engaged in the Ashantee war received the hands of Parliament, the Secretary for War made his minust pract on the general position and prospects of the troot. The House of Commons passed from paying honour the gallett little band which has lately shown what Engaged the property of the consideration of the consideration, and the distribution of the pasts, the composition, and the distribution of the pasts, the composition, and the distribution of the pasts. The composition of the army scalled the fact that the troops engaged in the Ashantee war were not pathed troops, selected for a difficult enterprise. The regiments employed happened to be regiments of great traditional fame, but they were sent merely because him was first on the rata for service abroad. They were that the first on the rata for service abroad. They were that the first on the rata for service abroad. They were that the first on the rata for service abroad. They were the tall first of the first which the British army is able to apply in the force of the service abroad. They were the first of the first of the British army is able to apply in the first order. Had different regiments stiply in the ordinary course. Had different regiments been on the rota, those regiments would have been sent without the slightest misgiving on the part of the authorities. Lest they should not be fit for their work. In less the suggest misgiving on the part of the authorist less they should not be fit for their work. In a large way, talthough the officers other than those in apparaul perfected from the army at large. It was not large adaptations spirits who wished to con Handard Hundreds w adventurous spirits who wished to go. ad to be disappointed in order that ten might be satisfied with the coveted favour of being allowed to fight a dangerous campaign in one of the worst climates in the world. Sir Garner Wolselley was chosen simply because se was believed beforehand to be what he has since shown himself, exactly the right man for the task. His selection was not due to interest or friendship, or any of those umerable motives which in old days used to determine the choice of British commanders and the fate of British troops. He was sent simply because it seemed wise to send nim, and the whole army may be said to have contributed him, and the whole army may be said to have contributed him to the needs of this particular service. On the other hand, when we look at the Army Estimates and find that the army, after successive Ministries have tried their hand the army, after successive Ministries have tried their hand the army, and when we are tempted to ask what we get for the interpretary, it is some satisfaction to be able to think that what more we get may be descure, but that at least we have got an army the first three regiments of which selected by accident may be trusted to behave like the tempton that have interpretary that have just fought the Ashantee war: that an s: that have just fought the Ashantee war; that an a practical knowledge of his profession, and a comhighest flyman standard of excellence is taken, may ely be pronounced excellent; that the army contained divide of officers equally competent and ardent to share the biscopin and face the trials of the expedition; that inen followed their officers with absolute confidence; ader of the forces received not merely personal, encouragement from the Duke that the arra made by the s for stores, supplies, medicines, and goldier were all that could be d millions and a half we get, he took multions and a man we got he is, should represent regular troops, which a significant manner, and although the fine mind require most universal and the manner of linguist be more and the manner of the manner

well officered, ably commanded, excellently provided, and, as was said of a British force on a memorable occasion,

able to do anything and go anywhere. Mr. DISRAKLI, in moving the vote of thanks in the Commons, gave a somewhat elaborate history of the Ashantee expedition, in order to lead to his conclusion that glory is not won by great armics alone. The comparison, indeed, which Mr. Distable made between the adventures of Sir Garner Wolseley and those of Course and Puttero is one that must have occurred to many minds, and is one that must have occurred to many minds, and not perhaps without suggesting the anxiets thought have it has happened that the countrymen of Courts and Pizarro could now no more carry of a successful Laborate expedition than they could fly. Mr. Disration did, of course, ample justice to the difficulties, and especially the natural difficulties, that had to be encountered and to the shall have difficulties, that had to be encountered, and to the skill by which they had been overcome. He also did justice to the promptitude with which the late Government despatched white troops when Sir Garner Wolseley asked for them in consequence of his finding native levies utterly useless. Mr. DISEARLI naturally assumed that the original plan of the late Government was to fight the war with black troops under English officers. But Mr. GLADSTONE disabased him of this notion. The Government had no precise plan. They really knew nothing about the Gold Coast, and could get no information worth having. There were a few British troops on the Gold Coast, and it was not until last summer was far advanced that the Ministry abandoned the hope that this force, aided by the natives opposed to the Ashantees, would suffice to settle the questions in dispute; and except that Captain Grover's expedition was authorised. nothing was done until in August Sir Garner Wolseley was selected to go to the Gold Coast and see what was to be done. Sir Garner Wolseley was not appointed to command an expeditionary force, but an expeditionary force was sent to be under his command. Although, however, the whole decision as to what course was to be adopted was left to Sir GARNET WQLSELEY, yet the regiments ultimately sent from England were at once told off to join the expedition if necessary, and arrangements were made for their transport, so that everything was ready when the despatches were received saying that the help of English troops was indispensable. The late Government has been so much abused that it is only fair to notice that on this occasion they did everything they could do, if the war was to be undertaken at all, to make it short and effectual. At the Mansien House on Tuesday Sir Garner Wolseley expressed his conviction that the war could not have been avoided, that it was the result of a deliberate plan of the Ashantee King. Large stores of powder and munitions of war had been collected for years previously to hostilities being commenced; and as each Ashantee King is expected to distinguish himself by one successful war, the present monarch determined to win glory by crushing the Fantees, in spite of the protection bestowed on them by the English, whose military reputation had almost faded away on the Gold Coast. was thus forced on Sir Gainer Wolseley as acting for the English Government. The difficulties, especially of transport and climate, with which his troops had to contend, appear even now to oppress the mind of the commander, who is better able to judge than any one else what his men had to face, through what discouraging embarrassments his pliners had to win their way, and what he owed to the courage, the patience, the skill, and the enterprise with the way and the enterprise with which he was supported on the pert of all concerned.

Supported the pert of all concerned.

Language of the Army.

Language of the Army.

Language of the Army.

new to the duties he has undertaken. as far as possible in the groove marked out for him predecessor. He has adopted not only the mere clines of the system which Lord CARDWELL introduced, but many minor changes which Lord CARDWELL was setting himself to bring about. Still there was a marked difference of tone in dealing with numerous points in which the army is interested, sufficient to impress on the minds of his hearers the recollection that a new Government has come into office. The abolition of purchase was accepted by Mr. HARDY as irrevocable; but he expressed a wish that those who carried the abolition had managed to settle satisfactorily the difficulties with which it was surrounded; and he significantly intimated that there were in his opinion officers who had been hardly treated, and that he would not shrink in due time from remedying in a very liberal spirit the grievances they have to urge. He did not exactly quarrel with the system of examination which bars the progress of Militia officers who seek commissions in the line; but he observed that, whereas Lord CARDWELL had described this examination as offering no obstacle to any man of good education, the particular gentlemen of good education who had tried to pass it found it so serious a barrier that loud complaints were made that only two failures were permitted. But it was especially at the close of his speech, when he spoke of the mistake of regarding officers and men as pieces on a chess-board who could be moved about without regard to their feelings, sympathies, traditions, and prejudices, that he made it apparent how much in some important respects he diverged from the opinions of his predecessor. Probably he will have to get harder and sterner as the exigencies of office press on him, but he cortainly did all he could to inspire a belief in the army that it has now got a friend in office. As to the details of the management and condition of the army he had little new information to offer, and he was much too predent to commit himself on points which he was aware to might only understand imperfectly as yet. Much the greatest cause for anxiety as to the future of the army is afforded this year, as it was last year, by the startling promotions which describes hears to recruiting Very portions which desertion bears to recruiting. Very nearly four thousand men deserted in 1873, and the percentage upon recruiting was nearly thirty-three per cent. of the whole. In the infantry of the line it was thirty per cent., in the Foot Guards fifty-one per cent., and in the Army Service Corps it had attained the extraordinary proportion of 146 per cent., so that, if the corps were recruited a little more assiduously, the whole corps would soon melt away. There is great difficulty in getting recruits for the line, and a still greater difficulty in getting recruits for the Militia, one reason in the latter case being the disinclina-tion of the men to serve under canvas; and when the recruits are got with infinito pains and at great expense, one man in three runs off, and shows his dislike of his new trade by seeking his fortune elsewhere. It is obvious that, if this state of things continues, some remedy must be found; and Mr. Hardy intimated that he had already begun to consider very seriously whether some modification would not have to be made in the whole scheme by which service is now adjusted, so as to make his calling more attractive, because more lucrative and more permanent, to the soldier.

THE CARLIST WAR.

Somorrostro is still uncertain; nor is it known whether he was prepared for the delay which has taken place in his operations. On the 25th of March he had taken some outer works which have since been strengthened. On the evening of the 26th he informed the Ministers at Madrid that he expected on the following day to take San Pedro Abanto, which appears to be at that point the key of the Carlist position; but the attacking force has gained no ground since the first day of the struggle. An armistice of three days has since been concluded; but it would seem that the Carlists dictated the terms of the arrangement, as the bombardment of Bilbao continued during the intermission of hostilities at Somorrostro. Serrano's motive for agreeing to the armistice is explained by the statement that Carlisted De Rodas, one of the ablest of the Spanish Generals, is advancing by forced marches to his assistance. The Compander in Chief may probably be anxious for the arrival of a capable lientenant as well as for a strong reinforcement. General Primo Mr Rivera has

been severely wounded, and, according to some accounts, General Lona also has been injured. It would seem that Seemano's communications are open, although the interception of supplies would be a tempting object to the Carlist bands which are not incorporated in the main army. As long as Seemano continues the attack it may be assumed that he has a reasonable prospect of success, but it is impossible to form at a distance any confident of the confident of the results. The Carlist position is already proved to be extraordinarily strong; but the troops which hold it are apparently unable in consequence of their want of artillery to attempt the recovery of works from which they have been driven. If the Carlist accounts may be trusted, the plan of attack has totally failed, in consequence of the inability of Loma and Primo di Rivera to reach the point at which they might have co-operated with an intended flank movement which was to have been executed by Serrane in person. The Chief of the Madrid Government bears testimony to the courage and tenacity of an enemy who is certainly not to be despised.

The Republican army, as it is called, is apparently too weak in numbers to cut off the Carlists from their base of operations in the districts south and east of Bilbao. command of the sea would probably in case of disaster secure to Serrano a line of retreat and a supply of provisions. On the other hand, the Carlists will, if they are unable to maintain their positions, merely relinquish the siege of Bilbao. It is reported that General Ollo has been killed in one of the recent combats; but the veteran Elio who holds the chief command evidently possesses considerable ability. Although there are some precedents for such an enterprise, it must be a difficult and delicate operation to continue the siege of a town in the presence of a superior force which threatens the line of circumvallation. risk is increased by the vicinity of the naval squadron under Admiral TOPETE on the coast and in the estuary of the river. When the attack of Moriones on the entreuchments was repulsed three or four weeks ago, the Carlist leaders had probably good reason for not following up their success. Bilbao still continued its resistance; and it was known that the Government of Madrid could dispose of superior forces. If SERRANO in turn fails to penetrate into Bilbao after he has received his expected reinforcements, the Carlists will perhaps be for the first time equal or superior to the enemy in the field. Nevertheless it still appears doubtful whether they can safely leave the provinces from which they derive all their strength. It may perhaps be thought expedient to transfer the war for a time into new districts for the purpose of obtaining additional resources. Whether temporary success would facilitate negotiations for fresh supplies of money is a question which it is difficult to answer. It might have been supposed that the insurrection must have long since collapsed for most of funds which have pororthology been in some for want of funds, which have nevertheless been in some mysterious manner provided. The private fortune of the ex-Duke of Modena can scarcely be adequate to the maintenance of a regular campaign.

It is barely possible that under the pressure of the Carlist war the anarchy of the rest of Spain may be partially restrained. A common enmity to a foreign invador, or even to a domestic Pretender, has sometimes been found an element of union among internal factions. Progressists, Moderates, and Republicans have hitherto been equally opposed to the Absolutist Pretender; nor have the military leaders of the national forces anything to gain by his accession. The Federalists or Communists indeed facilitated the commencement of the present Carlist insurrection by their intrigues against the discipline of the army, and by the treasonable enterprise of Carthagena; but it may be doubted whether Pi y Margall or Contreras himself would under present circumstances voluntarily accept the succession of Serrano, with the accompanying burden of the war. Almost the only contingency in which Don Carlos can hope to occupy Madrid would be the re-establishment of the Republic as it existed from the abdication of Amadeo to the expulsion of the Cortes by Payla. In Spain, if in no other country, it is at last fully understood that the only modern Republicans who know their own minds are the professed enemies of society and civilization. The part of Castella and of his well-maning associates has been played out, not before the former life, though probably he may recursions to the familiar phrases. His less enthusiastic predecessors in office, the

ZOREGIAS and the SAGASTAS, have probably more or less immpletely patched up the divisions which were caused by inflicting jobs and personal jealousies. For some time to the third division of Madrid must necessarily be a self-in clibbank County and the control of the control o administered by a soldier, although Serrano may probably, if he fails in his present enterprise, he displaced by some military rival. On a superficial view of the condition of Spain, it might seem to matter little whether constitutional liberty was suspended under a nominally Liberal Government, or ostensibly suppressed by a legitimate King; but the contest between Serrano and the Carlist Generals really involves the same issues with the civil war of forty years ago. It was then a question whether Spain should relapse into the stagnation of the eighteenth century, or attempt to take a place among modern civilized States. The defeat of the grandfather of the present Don Carlos provided an opportunity for a series of constitutional experiments which have not been successful; but since the accession of Isabella II. there has never been an avowed or settled despotism, and sanguine patriots may always have hoped for improvement. The petty revolutions of the Court and the camp during the regoncy of Chris-TINA and the reign of her daughter failed to interrupt the most rapid material progress which has been enjoyed by any country in Europe. The majority of the population, which has regarded with indifference changes of Ministries, and even of dynasties, would be strenuously opposed to the restoration of the system of FERDINAND VII. No alternative, except perhaps a Federal Republic, would be equally odious.

The operations connected with the siege of Bilbao have been sufficiently important to disturb the characteristic tolerance with which one among many factions seems to have been regarded, even while it was engaged in an armod rebellion. Until lately Carlist newspapers were published in Madrid, and agents of the party in many of the principal towns scarcely attempted to disguise their activity. The defeat of Moriones and the difficulties encountered by Serrano may perhaps produce on a lower political organization some part of the effect which was caused in the Northern American States by the capture of Fort Sumter. In one respect a claim to the sovereignty of the whole country asserted by the commanders of a regular and not inconsiderable army is more alarming than a notice of secession. Although Don Carlos seems to have few partisans in the centre or south of Spain, his troops could only be prevented by a superior force from occupying the capital. The cost of the war absorbs the whole revenue of the State, which now finds by experience that dishonesty to the public creditor has been the worst possible policy. The customary weakness of Spanish credit is for the moment aggravated by the intimation that Don Carlos will, in the event of his accession to the throne, repudiate all loans which may have been contracted by the Republican Government since the beginning of the civil war. It is true that sufficiently liberal contributions would render the execution of the threat impossible by securing the triumph of the actual Government; but capitalists will scarcely have so much confidence in Spanish solvency and integrity as to make advances for the purpose of insuring former ventures.

MR. GLADSTONE AND THE LIBERAL PARTY.

IT is not surprising that the Liberal party should have expressly or tacitly accepted on his own terms Mr. GLADSTONE'S offer of remaining at their head during the present Session. He has intimated to his followers that he will frequently require rest and occasional absence from London. but there is no reason to fear that, when he is able to attend the House, he will fail to display his wonted activity and vigour. He officially congrutulated the Brakes on his

while to attend the House when the Budget is produced immediately after the Easter recess. There is no reason to suppose that he will be eager to offer captious objections to Sir Stafford Northcorn's proposals, but he will perhaps be tempted to indicate the outlines of his own Budget, which has been already partially and prematurely disclosed. The immediate duties of leader of the Opposition could be discharged by Mr. GLADSTONE alone, inasmuch as they are chiefly contined to the task of apologizing for the outgoing Government. It would appear from the speeches which he has hitherto addressed to the House that he is prepared to discharge his office with excellent temper and taste. No member of either House will be inclined to imitate the Duke of Somenser by indulging in useless attack or recrimination against the late Government; and Mr. GLADSTONE'S authority will repress any undue impatience among his own adherents. It is not known whether he intends to countenance by his presence and support the annual motions which are to be brought forward by extreme Liberals in their regular order. Mr. GLADSTONE is pledged to the principle of Mr. TREVELYAN'S motion for household suffrage in counties; but he may perhaps think that the motion is inopportune because it is for the present hopeless. It is not the business of a Parliamentary leader of the highest rank to take part in the tentative skirmishes which prepare the way for future political struggles.

When the time comes for discussing the choice of a permanent leader, the Opposition will not be inclined to dispense with the services of its natural chief. By that time it may be hoped that Mr. GLADSTONE will have recovered from the fatigues of office, nor is it improbable that he may have in some degree recovered his natural and landable pugnacity. It is at least within the range of possibility that Mr. DISRAELI may have said or done something to provoke the moral indignation of his adversary, who may desire to achieve one more victory before he finally, like ENTELLUS, lays aside his weapons and his skill. The plea of advancing years can scarcely be admitted in modern England. It is only in the immutable traditions of the stage that sexagenarians are supposed to be approaching their dotage. Mr. GLADSTONE is by several years younger than Mr. Disraeli. Lord Palmenston was ten years older when he gaily entered on a successful term of six years of office as Primo Minister. M. Thiers at seventysix leads the French Opposition against Marshal MacManon, who is older than Mr. Gladstone. A statesman who has spent his life in political and legislative activity can by no possibility regard with indifference the conflicts from which he may have temporarily retired; and, if he is conscious of a power of intervening with decisive effect, he cannot abdicate the duty which attaches to his character and position. Sir ROBERT PEEL during the last four years of his life was the first member of the House of Commons, though he had censed to be either a party leader or a candidate for office; but the rupture which had recently taken place between himself and his former followers made his neutrality both necessary and justifiable. Mr. GLADSTONE, in spite of excusable irritation and private expressions of discontent, is still recognized by all sections of Liberals as their undoubted chief. His presence in the House of Commons would fatally impair the authority of any successor; and it is not understood that he meditates an irrevocable retreat into private life or the House of Lords. The deliberations of the Opposition, if they are invited in the course of next winter to select a leader, can only have one result.

Mr. GLADSTONE'S devoted admirers in the press were perhaps too ready, on reading his ambiguous letter to Lord GRANVILLE, to take him at his word. The consequent suggestion that the office of leader should be both put in commission and converted into the prize of a competitive examination was worthy of the sentimental school of political theorists. Mr. Lows was, according to this plan, to divide with Mr. Children the duty of criticizing the re-election; he has since accorded the vote of thanks to the troops engaged in the Ashantse war; and in the successive debates on the Address and the Report he took a leading part, chiefly for the purpose of correcting misspprehensions which might have prevailed as to his conduct, and his intentions. On all these occasions he abstained, as might be expected from any demonstration of hostility to a Government which as yet has merely occupied official seats which had been wilfully vegeted. There is nothing in the modest list of measures amounted in the Quant's Speech which is likely to provide senious. The ingenious projectors of the scheme

forgot that the leader of a party has other functions than those of a critic of the conduct of official departments. It is his business to arrange debates, to select the occasions of Parliamentary contests, and to encourage or restrain sluggish and impetuous members of the party. Those ex-Ministers who still remain in the House of Commons may perhaps be able to distribute among themselves their respective duties; but unless they are regularly organized under a leader, they will have no means of controlling independent and ambitious members. Sir W. HARCOURT, before he accepted office, not unfrequently found it incumbent upon him to criticize or oppose the measures of the Minister whom he nevertheless acknowledged as his leader. It may be doubted whether he would implicitly obey instructions as to the conduct of business conveyed to him by one of the half-dozen members of an experimental Committee. During the present Session, when Mr. GLADSTONE happens to be absent, a certain amount of anarchy in the Opposition may perhaps be tolerated without inconvenience. The only vicegerent who could have exercised with effect a delegated authority was lost to the party when Mr. CARDWELL migrated to the House of Lords. It is not understood that Mr. GLADSTONE has any intention of appointing a lieutenant.

If any additional reason for avoiding a change were required, it might be remarked that the character, the closer or laxer union, and the predominant policy of the Opposition have yet to be determined. A few extreme democrats have raised a clamour for a reorganization of the Liberal party which would begin by excluding the majority of its pre-

sent and former members. A meeting was lately announced to be held at Manchester for the purpose of constituting an exclusively Radical party; but either the project has been abandoned, or the result of the deliberations has not been published. The weekly organ of the faction in London lately propounded five points of a new charter, of which the most significant is the undisguised transfer of property in land from the owners to the occupiers. That revolutionary agitation of this kind will hereafter again become formidable is not only probable but certain; but the season for proposing the disturbance of all rights and institutions has not

yet arrived. Although Mr. GLADSTONE seems to have persuaded himself that his defeat was in a great measure caused by the negligence of local election managers, the primary lesson taught by the late election is that the country is not at present disposed to entertain subversive proposals. It is highly probable that the return of Mr. Bright to the Cabinet, and the violent speeches and letters in which he proclaimed his sympathy with the extreme Radicals, largely increased the Conservative majority. A new League for upsetting Church and State would throw further discredit on a cause which is temporarily unpopular. Many individual members have pledged themselves to extreme views; but as long as they are content to remain within the old Liberal organization they will not force their moderate allies to precipitate a disruption which

is perhaps ultimately unavoidable. Mr. GLADSTONE will probably command the obedience of all sections of the party as long as he thinks fit to guide the common policy. He has never broken with the remnant of the Whigs, although

he has been with reason suspected of inclining rather to the more advanced division of the party. If, notwithstanding the exercise of his authority, the Liberals should break themselves up into distinct bodies, the time for a readjustment of party relations will have arrived; and probably Mr. GLADSTONE will decline to associate himself with any

new organization.

PRINCE BISMARCK AND THE MILITARY BILL.

THE illness of Prince BISMARCK has occurred at a moment when the absence of the Chancellor and sole Minister of the Empire from the Imperial Parliament is much to be regretted. The Government has proposed a new Military Law, to which the Parliament hesitates to give its assent. An increase of forty thousand men is

great, and that industry and the general well-being of the population must suffer. The difference, however, between their views and those of the Government on head does not appear to be very great. The Government is said to be prepared to reduce the amount of increase demanded, and every one seems willing that the standing army in time of peace should closely touch on 400,000 men. Nor is there any difficulty about money. The Germans know that an army strong enough to protect Germany must necessarily be very expensive; but they can afford to pay for it, and are ready to do so. But when they are asked to vote money and men once for all, Liberal members feel as if the Parliament were asked to give up being a Parliament. They would agree to fix the size of the army, and assign funds for its maintenance in the highest degree of efficiency, for a term of five or six years; but to place so very large a part of the national expenditure beyond the sphere of Parliamentary control for ever seems to them an abandonment of the position which they were elected to uphold. If Prince BISMARCK had been able to be present, he would probably have either given such an explanation of the reasons which have determined the Government to make what seems a somewhat unjustifiable demand, or he would have initiated or accepted some compromise which would have satisfied the Opposition, and yet left the dignity of the Government unimpaired. But he has been ill, and during his illness he has once more been interviewed. It appears that too much reliance must not be placed on the first sketches of the communications supposed to be made at interviews of this sort when Prince BISMARCK is concerned. Either the memory of his visitors does not quite serve them, or the Prince does not quite like the look of his monologues when he sees them in print. The account of each interview is followed after a short lapse of time by an intimation that the views of the Prince have not been quite correctly reported. What was thought at Berlin of the general character of his remarks on the Parliamentary opposition to the Military Bill may be gathered from the simple and timid confession of some of the most loyal Berlin journals, that the Prince must have been rather ill when he received his visitors. He has been ill, and his illness has been of a painful kind, long sleeplessness being one of the symptoms. Even a man of iron is naturally unhinged and made a little nervous and irritable by physical suffering of this sort. And when the Berlin journals had recognized that the illness of the great Chancellor might not improbably affect him as such an illness would affect other men, the explanation gave a sense of relief, and it was assumed that the Chancellor when he gets well again will see things in a rosier light, and, made pleasant himself once more, will again make everything pleasant for his admiring country.

The Parliament has adjourned for a few days, and the President is stated to have called on the EMPEROR in order to assure him that a force of 384,000 men would be voted in a manner acceptable to the Government. The Liberal Opposition will do its utmost to avoid anything like a rupture with a Government which has in general its cordial approval and admiration. It must be owned that Prince BISMARCK gets his way in the Parliament with a completeness which ought to satisfy even his susceptible mind. The Council has agreed on a set of new ecclesiastical laws by which refractory ecclesiastics may be banished from any German State, and, if banished, are not to be permitted to reside in any other; and so rapid has been the advance of public opinion in this direction, that the representatives in the Council of the King of BAVARIA were instructed to offer no opposition to the measure. The press law has been put into a new shape, and one concession has been made to Liberal feeling by a clause providing that the police shall not seize on or suppress a paper before it has been regularly condemned by a tribunal; but at the request of the Government this clause is not to operate in Alsace. Nor is it only that the majority of the Parliament is sincerely anxious give its assent. An increase of forty thousand men is asked for, with a corresponding increase of funds; and men and money are to be voted once for all, so that those who are charged with the defence of the country may know that the size and maintenance of an adequate army are placed beyond the fluctuations of Parliamentary opinion. The proposal has excited considerable opposition even smong those who are ordinarily steady supporters and the concession of which would amount to a suspension in one important direction of Parliamentary government, that the Military Rill has been in danger.

Why there has been this opposition, reluctant and half-hearted as it has been, seems clear enough to us in England about Parliamentary ideas; for to fix the sise of a his standing army and to provide its funds in per-petuity is totally inconsistent with that proper autho-rity of Parliament to which we have been accustomed. It is therefore more instructive to turn to the other side of the question, and to ask how it happens that so much importance has been attached by the Government to the success of its proposal. Whatever amount of toning down the first account of the interview with Prince BISMARCK may have subsequently received, there can be no doubt that he felt strongly and spoke strongly on the subject, that he discussed the matter as if his whole policy was in question, and that he stated he would rather resign than be answerable for the fortunes of Germany if the Government was defeated. The EMPEROR, too, only a few days ago used language of a very similar character. In answer to a very loyal address presented to him on his birthday, he replied that he should have thought he had served his country too well to have been exposed to the mortification of seeing measures questioned which he knew the safety of the country demanded. Marshal von MOLTKE and one General after another insisted during the discussion in Parliament that the matter was one of extreme importance, and solemnly warned doubtful listeners how serious might be the consequences if the project of the Government was rejected. These are the project of the Government was rejected. men who have done most to make Germany what it now is, and to whom the German Empire and the German Imperial Parliament owed the possibility of their existence. They may be wrong, but they must have some idea to which they are clinging, and some ground for conduct and language which certainly seem at first sight extraordinary and exaggerated.

The main notion of the group of statesmen who at present preside over Germany seems to be that Germany is one huge entrenched camp. That the Germans are in such one huge entrenched camp. a camp, and are consequently protected by strong bulwarks against enemies, is the result of the late war. Had that war gone against them, then Germany would have been trampled under foot, spoiled, and left defenceless. What is the good of all the German victories, it is sometimes asked, if at the end of a career of conquest it has to keep up huge armies, busy itself with new fortifications, and keep an incessant watch on the machinations of its enemies? The answer of Prince BISMARCK and his counsellors is, that the good to Germans is that Germany is now tolerably sure of being able to defend itself. But it cannot be sure of this unless it at once realizes its danger, and watches and provides against it with unflagging vigilance. How is this to be done? Mainly, German statesmen reply, by having a military system adequate for all needs perfected in every detail and pursued with unvarying perseverance. Those who are charged with the safety of Germany demand a machinery at their command on the effectiveness. demand a machinery at their command on the effectiveness of which they may always rely. They do not want to be unable to foresee how many troops will in three years' time be available for this purpose or stationed in that quarter. They want an unfailing material with which to work money, arms, officers within prescribed and unalterable limits always forthcoming and at their disposal. They shrink from the thought that a Parliamentary vote in two or three years' time might knock off ten thousand men, and thus leave some little corner in the entrenched camp unguarded. 'The very success of the measures they take may, they apprehend, be a source of danger. Germany will be so well protected, that it will be hard to realize that it is an entrenched camp after all, and then persons ignorant of military affairs and sarcious for temporary notoriety or petty party triumphs will ask that reductions shall be made in the army, and laugh at those whose danger when safety seems to be smiling that the cold way to quard against this fatal feet. laugh at those whose danger when surely seems to be smung on every side. The only way to guard against this fatal feeling of false security coming over the country is to put the adequateness of the defences of the country beyond the assaults of popular caprice. This is the policy which has found expression in the irritation and strong language of the sick Charcellos, in the querulousness of the aged. REFERENCE, and in the solemn warnings of Von Moltke. It may be a mistaken policy; it may be based on a wrong conception of probabilities; it may even, as seems not improbable, keep alive that animosity on the part of the proposes to seems Germany; but a single statement as a disavowal of Lord Graptone's undertaking; and the Russian Government resident the option of treating the bargain as void or valid as future expediency might suggest. Mr. Graptone perhaps indistinctly apprehended the fact that Russian French against which it proposes to seems not institute in the suggest. Mr. Graptone perhaps indistinctly apprehended the fact that Russian at any rate it is a policy worth understanding, and it is a transport of the real position of Germany in Limit Granusport's neutral territory into a protectorate, and

Europe which Germans cannot free themselves from without making great changes in the general direction of their offsire.

THE CORRESPONDENCE ON CENTRAL ASIA.

THE Government has thought fit to publish Lord Granville's latest despatch on the affairs of Central Asia, with Prince Gortcharder's curt reply. The tenor of the correspondence, especially on the part of England, might easily have been anticipated. The Russian assurances of peaceful intentions, though they conform to many precedents, are less explicit and definite than on some former occasions. It is difficult to understand why the Emperor Alexander should have thought it worth while about the end of 1872 to offer, through a confidential officer of his own, a formal undertaking that the expedition to Khiva should not result in conquest or annexation. event of the enterprise exactly corresponded to expectation, nor was the resistance encountered sufficiently stubborn to explain any change in the policy of Russia; yet the submission of the KHAN was only accepted on condition of his unqualified acknowledgment of Russian sovereignty, and of the cession of an important part of his territory. By a of the cession of an important part of his territory. By a strange oversight the Khan of Kniva is, in the English translation of the fourth article of the Treaty, designated by the title of "Majesty." No such recognition of titular rank is to be found in the official French version, which, as it may be supposed, accurately represents the original Russian text. Lord GRANVILLE " sees no practical advantage in examining too minutely how far these arrangements are in accordance "with the assurances given me in January last by Count "Schouvaloff as to the intentions with which the ex"pedition against Kbiva was undertaken." It would in fact have been impossible to reconcile with the Empkron's assurances arrangements which are nevertheless perfectly intelligible. It was from the first improbable that the Russians would be contented with an Ashantee campaign against Khiva, which must have been repeated on every new provocation. There may probably have been some difference of opinion between the Commander-in-Chief and the Government of St. Petersburg, for the haughty language of the treaty or capitulation imposed on the KHAN may be interpreted as a formal repudiation of Count Schouvaloff's assurances. From the first the semi-official Russian papers maintained that the EMPEROR had only expressed his intentions, and that he had not bound himself by any promise. It would have been useless to reply that a great potentate who voluntarily announces his policy to an interested party is ordinarily supposed to have pledged himself to abide by his declarations. If the interior history of the transaction is ever disclosed, it will perhaps appear that the personal opinions of the EMPEROR were overruled by his advisors or agents.

The mission of Count Schouvalorr was connected with a negotiation of a more permanent character, which was, however, conducted through the resident Russian Embassy. Lord CLARENDON had in 1869 proposed to Prince Gok-TCHAKOFF the recognition of some neutral territory between the Asiatic possessions of England and of Russia. It was agreed in 1871 that the dominions of Shere All should be exempt from Russian interference; and in the beginning of 1873 Prince Gortchakoff accepted the English contention that the provinces of Badakshan and Wakhan formed part of Afghanistan. The English Government agreed to use its influence to dissuade the AMERR from interference in the affairs of Bokhara; and in his closing despatch Prince GORTCHAKOFF adroitly assumed that England had guaranteed the neutrality of Afghanistan. Lord GRANVILLE by his silence virtually accepted the Russian interpretation; but Mr. GLADSTONE, always nervously anxious to shrink from national responsibility soon afterwards verbally disclaimed in the House of Commons any control over the policy of Afghanistan. The caution of the Foreign Secretary and the eager timidity of the Prime Minister placed the Government in the worst possible diplomatic position. The journalists of St. Petersburg and Moscow instantly fastened on Mr. Gladstone's statement as a disavowal of Lord Granville's undertaking; and the Russian Government retained the option of treating the baggest. Mr. Gladstone pathaps indistinctly apprehended the fact that Russian naturations had already been rewarded by a diplomatic stringing. Prince Gosterakors had gradually converted family. Prince Gosterakors had gradually converted family. he now proceeded to impose upon England a liability for the acts of an independent State adjacent to the Russian possessions. The original object of preventing collision between the rival Empires was thus practically abandoned; but unfortunately Lord Granville had acquiesced in the Russian theory of the joint understanding; and Mr. Gladstone's protest was too late for any purpose, except to compromise the character of the English Government. The apprehensions which prompted his tardy declaration have been already justified. Within a year from the close of the correspondence Lord Granville had occasion to call the attention of the Russian Government to a danger which arises exclusively from the ambiguous relations of Afghanistan to England. The inevitable contact between the great Asiatic Powers has been accelerated by the definition of a neutral zone which proves to be the reverse of neutral.

The Ameer Shere Ali has communicated to the Indian Government the reasonable alarm caused by the report of a Russian expedition to be directed against Merv and the Turcoman tribes on the North-Western frontier of Afghanistan. The AMER apprehends that the Turcomans will take refuge in his territories in the neighbourhood of Herat, and that he will then be required either to become responsible for their penceful conduct or to admit Russian troops to exercise reprisals within his dominions. GRANVILLE adds that rumours of the projected expedition have reached him from various quarters, and that the project has been strongly advocated by the Russian press. Prince Gortenakoff's statement that no such expedition is contemplated may be set aside as purely conventional. Transparent diplomatic fictions are not even dishonourable. The Russian Chancellos are not even dishonourable. The Russian Charcellos explained his meaning by the ironical remark that the maintenance of peace depends on the Turcomans, or, in other words, on the abandonment by predatory tribes of their immemorial propensities and habits. He adds that the American will do well to make the Turcomans understand that they have no assistance or support to expect from him. Lord Granville had almost apologized beforehand for any aggressive measures which the Russian Government may undertake. In 1864, as he reminds Prince GORTCHAKOFF, the adoption of a final line of frontier, which has long since been overpassed, was announced in a formal Circular. 1869 the Emperor declared his intention of restoring Samarkand to Bokhara; but in 1873 Prince GORTCHAKOFF confessed that the place must be retained. It would be unreasonable to complain of any defect of candour in the recent correspondence. It may be assumed that Merv will be conquered, that the Turcomans will be driven into Afghan territory, and that the Amcor will then be held responsible for their conduct. It would in truth be impossible, when Russia and Afghan territories had become conterminous, that border forays should be allowed become conterminous, that border forays should be allowed to proceed with impunity. The purpose of Lord Granville's communication is not easily intelligible. He suggests indeed to the Russian Government that the Merv expedition may produce complications with Afghanistan, but he abstains from protesting against the measures which he deprecates. If the Russian Covernment, in attacking Merv, will be acting within its rights, it seems scarcely dignified to intimate that hostilities against the Turcomans will be unpalatable to England. The only diplomatic representation likely to be operative would be a notice that an advance beyond a certain point would be followed by an immediate rupture. Such an intimation would probably be at present premature; but in the meantime verbal renionstrances are inopportune and useless.

The commercial treaty which has lately been concluded with the ruler of Eastern Turkostan may possibly produce hereafter a controversy with Russia. In his late despatch Lord Granville referred to an assurance given by Prince Gortchakoff to Lord Clarendon in 1869, that Russia had no hostile intentions against the Atalie Ghazer, nor any desire to make conquests in his dominions. A declaration with respect to Central Asia dated four years back may be regarded as obsolete. The Atalie Ghazer, who has now by grant of the Sultan of Turkey assumed the higher title of the Ameer Yakoos Khan, has recently sent a mission to apologise for certain outrages committed by his subjects on Russian merchants. The effence will probably not be condened except on conditions. Any exclusive commercial advantages which may be demanded by Russia will be inconsistent with the stipulations of the English treaty. It is the policy of England to admit all foreign pations to the common enjoyment of facilities

of trade which may be obtained by negotiation; but free competition in the markets of any part of Central agia would not be regarded by Russia as a boon. To tensive trade with India can be established by w. of the difficult mountain passes which were traversed by Mr. Forsyth on the way to Kashgar; but there are perhaps more accessible roads between the two countries. The object of the America is probably rather political than commercial. The kingdom which he has formed for himself is threatened both on the East and on the West. The Chinese have, with characteristic pertinacity, lately reconquered a part of the tarritory which had been dissevered from the Empire during the great Mahometan revival. According to Mr. Forsyth, Yakoon Khan succeeded not directly to the Chinese Government, but to insurgents who had already established their independence; but, as opportunity offers, the Imperial authorities will not fail to attempt the recovery of Eastern Turkestan; and the Government of Pekin would perhaps not reject the co-operation of Russia. It will be difficult to aid an ally beyond the mountains; nor is it to be supposed that the Indian Government has entered into any embarrassing engagements. There is no reason to expect that Lord Derry will, either in Asia or in Europe, depart from the policy of Lord Granville; but probably he will be well advised in abstaining from any diplomatic correspondence with Russia, unless it becomes necessary to indicate the point at which further acquiescence in Russian aggrandizement will become impossible. Merv is on the road to Herat, which may be considered as on that side the key of India. Merv lies outside of Afghan territory; but any further advance would be dangerous and objectionable.

FRANCE.

PERFECTLY unexpected incident has to all appear-A ance made a complete breach between the Duke of Brooms and the Extreme Right. On Friday week M. DAHIREL suddenly proposed that on the 1st of June the Assembly should pronounce definitively on the form of Government, and asked that his motion should be declared urgent. Upon this latter demand the Assembly divided. Urgency was refused by a lurge majority, but this majority was merely a scratch one. The Left were not agreed among themselves, and while M. GAMBETTA and his immediate followers voted with M. Dahirel, M. Ledru Rollin, M. Baroder, and others of the most extreme section voted with the Government, and this reinforcement just balanced the defection from the Right, and so saved the Duke of Broglie from defeat. If this were anything more than a chance vote it would be impossible for the Duke to carry on the Government. He has never taken kindly to the idea of a majority composed of the Centres, and a majority composed of the Right Centre and the Radical Left must be still more distantant to him hasides being utterly unwerkable. It may fairly to him, besides being utterly unworkable. It may fairly be doubted, however, whether the division on M. Dahirri's motion was anything more than a chance vote. Extreme Right have never promised not to make the Duke of Broglis's tenure of office uncomfortable. The utmost they have thought themselves bound to do is not to turn him out of office. They can be trusted, that is to say, on a vote of confidence or no confidence, but they can be trusted on nothing else. The motion for urgency was put to them in a way which made it very difficult for them not to support it. When a Legitimist is challenged point-blank to say whether he wishes the Assembly to decide between the whether he wishes the Assembly to decide between the Monarchy and the Republic, he has hardly any choice in the matter. He would be false to the pledges he has been making all his life if he were a party to any postponement of the decision which is to give France a King. But supposing that urgency had been voted, there would still have been time for manouvres by which the vote on the main question might have been evaded, and in this interval. question might have been evaded, and in this interval even M. Darinzi himself perhaps looked forward to being somehow won over to the side of the Government. The mere declaring the motion upgent need not of itself have upset the Ministry. It might even have being contained that respect for Marshal MacManon semanded that the implied attack on his authority should be disposed of with the least possible delay. The Extreme Right probably think the Duke of Brockets way much too ingenious for an honest Royalist, but as this quality would enable him to device some way out of the difficulty, they would have

no scruple about bringing him into it. Of course it might very well have turned out that they had mistaken their man. It is never possible to calculate with absolute precision the amount of ignominy to which a Minister will subset. The more long-suffering he is, the more unexpected his interest will appear when it is at length roused. Bus is not necessary to suppose that the Right had made up their minds to break with the Duke of Broglis because ey voted against him.

If the whole of the Opposition had on this occasion voted with the Government or not voted at all, it might have been thought that their leaders foresaw that M. DAHIREL'S otion would be no more than a barren demonstration. It is less easy, however, to explain why the Left Centre and the more moderate section of the Left should have voted with M. Dahirel. The action of the extreme section of the Left is intelligible enough. They have made the denial of all constituent authority to the existing Assembly a matter of principle, and from this point of view their refusal to declare a motion urgent which recognized the constituent power of the Assembly was perfectly consistent. Politicians of the type of M. Ledeu-Rollin are not accustomed to postpone the indulgence of a crotchet for any practical object, however important. In this respect the return of M. Ledeu-Rollin to the Assembly may prove a real misfortune to the Left. There are probably several deputies who would not separate themselves from M.
GAMBETTA on a matter of Parliamentary strategy
unless they could find shelter under some wellknown Republican name. M. Ledru-Rollin's example gives them just the sanction they want. They can act without regard to consequences, they can upset carefully-They can act without regard to consequences, they can upset threining-laid plans, they can set party discipline at defiance, and if their constituents find any fault with them, they can turn off their criticism by a few commonplaces about the venerable apostle of universal suffrage. The Left has good reason to wish that M. Ledru-Rollin and a few of his chosen allies could be sent to join M. HENRI ROCHEFORT in that irresponsible, but not unpleasant, exile to which his skill in swimming has lately consigned him. Perhaps, however, the opposition of the extreme section of the Left to M. Dahirel's demand to have his motion declared urgent is best explained by their fear lest the Republic should after all be proclaimed by the existing Assembly. It is not likely indeed that matters would have gone so far, or that between now and the 1st of June the Government would have failed to find some means of putting off the decision. But on the assumption that the vote had really been taken on the 1st of June, and had gone, as in that case it must have gone, in favour of the Republic, the administration of the Septennate would probably have been modified. The Duke of Broglin would scarcely have remained Minister after the Government had been formally deprived of its provisional character, and he would naturally have been succeeded by a politician whose opposition to Republicanism was at all events less decided. This result This result would in no way have suited the extreme Radicals. To them any Republic, except one of exactly their own type, would probably be more distasteful than even a Royalist or Imperialist restoration. The very symptom which is most hopeful in French politics—the acceptance of the Republic by the Conservative classes—is the symptom which gives them most alarm for their own future. M. Gambetta's faith in the Republic is more robust. He accounts it a fath in the Republic is more robust. He accounts it a gain to have the form of the commonwealth settled once for all, and the field of controversy correspondingly narrowed. Consequently, M. Gambetta is anxious, above all things, to get rid of the Duke of Broglie; Marshal MacManon he is apparently willing to accept, provided that he does nothing inconsistent with his position as President of the Republic. From their several points of view, both M. Gambetta and M. Ledre-Rollin voted consistents on M. Dambetta motion. sistently on M. Danmer's motion.

An able writer in the Pall Mall Gazette of Thursday throws doubt upon what has just been spoken of as the most hopeful symptom in French politics. He maintains their the success of the Republican candidates is more apparent than real, that they are chosen because "any "steme will serve to pelt the Government with," and that a party which "contains members whose Conservation a party which "contains members whose Comercances" would shippy surpass Lord Excours, and members "whose revolutionary violence would next to shame "Tolk Paint," can never turn the position of power to any lasting account. This theory of the situation and lasting account.

whose Conservatism would almost surpass Lord Ellow's should now for the first time be found in the Ropublican Under the Empire, no doubt, men of very Conservative tempers associated themselves with the Liberal Opposition, but this was because it was the only effective way of showing their dislike of the Empire. wanted to polt the Government, and they could not be expected to be scrupulous in their choice of stones. But why should Conservatives hate the present Government, unless it be that they distrust its power to hold its own against the assailants of public order, and have more faith in the power of such a Republic as M. THIERS would have set up if he had remained at the head of affairs long enough, and as Marshal MacManon would perhaps set up still if he could be freed from his alliance with the Duke of BROOLER? The effectof such a change of feeling must tend, as it seems to us, togive the Republican party an element of ballast which has hitherto been wanting to it. It would be different if these men merely professed themselves Republicans because no more accurate denomination was open to them. But there is an ample store of names from which they might make their choice. The Orleanists actually control the action of the Cabinet; the Legitimists are the strongost section of the Ministerial majority; the Bonapartists have just polled nearly fifty thousand votes in the Girondo. These Conservative Republicans might safely identify themselves with any one of these parties; why should they pass them all over in favour of the Republic, unless it is that they feel a conviction, which hitherto they have not felt, that the Republic has a greater promise of stability than all of them? It is needless to say that the existence of this conviction is no proof that it is well founded, but on the other hand it must be admitted that it belongs to the class of convictions which tend to provide their own justification. If Conservatives of the school of Lord Elbon have come to think that the stability of the Government and the prosperity of the country will be best secured by acquiescence in Republican institutions, this is at all events a fact in French politics to which there has not as yet been any parallel.

THE STRIKES.

T is extremely unfortunate that, at a time of commercial dulness arising from other causes, a large part of the industry of the country should be paralysed by conflicts between employers and workmen. There are actual or imponding strikes in almost every great coal and iron district of the kingdom; and the contagion of disturbance will probably extend to many of the trades which are dependent on these important commodities. The farmers and their labourers are also at war, and agricultural operations have been suspended over a considerable region. The cause of these disorders is easy enough to discover, though the remedy is as perplexing as ever. During a period of remarkable prosperity wages in the coal and iron trades went up rapidly. Colliers and iron-workers who have been enjoying high wages are naturally anxious to resist a reduction now that business is declining, while loss fortunate workmen in other occupations have been tempted, partly by natural emulation, partly by the pressure of rising prices, to try to better their condition. That the reaction has come more quickly and more sharply in the coal and iron trades than in any other branch of industry is due simply to their exceptional prosperity during the last few years. They had reached a higher point of elevation, and the fall is proportion-ately more severe. The iron-workers in Lanarkshire lately submitted to a reduction of ten per cent. in their wages without a strike, and the colliers are now fighting against a reduction of fifteen per cent. In Durham, Northumberland, and South Staffordshire the miners are asked to accept a reduction of twenty per cent. Coal, which was kept up for some time at an absurdly inflated price, is returning to its former value; and the iron market has just been shaken by a still more violent fall. What has beppened is only what might have been foreseen. Increased cost has produced diminished consumption. Traders seldom and the manage to do without their goods and they promine to be realisted. Lord Exact's, and members to do without their goods, and they require to be reminded by such exact the persons of power after all, a limit to the amount which consumers can afford the situation of the situation of power are willing to spend. For some time an idea was presented by why is in that men waters that prices could be raised all gound, and that each

class of producers or traders could recoup themselves for increased expenditure by simply adding to their own charges. This delusion has now been pretty well exploded, and producers have been taught that they cannot dispense with the consent of consumers to the readjustment of their tariff. In point of fact, when the prices of important articles go up, there are some trades which must be prepared to reduce their profits. There has been a considerable decrease in the use of coal both for domestic and manufacturing purposes, and the excessive cost of iron has produced a similar result. In many trades dealing in articles of less necessity the decline of business must have been very serious.

On the general question of strikes there is of course nothing new to be said, and we should almost have hoped that nothing needed to be said. It might have been supposed that every one by this time perfectly understood the conditions under which the employer, the workman, and the consumer contend with each other. The employer seeks the highest attainable amount of profit, and the workman the highest possible wages, while the consumer is workman the highest possible wages, while the consumer is anxious to get his supplies at the lowest price. There is no sort of reason why an employer should not enjoy the same liberty as other people with regard to buying or refusing to buy any article at a particular price. The employer is, as regards his workmen, simply a shop-liceper who sells wages, and if they are dissatisfied with what he offers, they must just try to get what they want elsewhere or go without. This obvious principle is pretty well understood as applied to the trades in which strikes usually occur. It has been brought home to the strikes usually occur. It has been brought home to the public that they are not mere on-lookers, but, in point of fact, parties to the conflict. When anybody's wages are raised it always comes out of somebody's pocket; and many persons have become more cautious in their charitable advice to A, the master, to pay B, the workman, whatever he asks, since they have discovered that a share of the bounty is likely to be drawn from their own pockets. It would appear, however, that the agricultural labourer is still regarded from the sentimental point of view. The Bishop of MANCHESTER, in a letter in which he seems to be anxious to balance his economical orthodoxy on the Bengal famine by his gushing enthusiasm about the labourer, has denounced the farmers for not paying their men the wages demanded; indeed he would go beyond the demand, and give the men three shillings a week additional, though they profess that they would be content with an extra shilling. He points out, as a reason for concession, that the language of the Unionist leaders is becoming daily more violent, and even "insurrectionary and menacing," and that the result may possibly be a "peasant war." It is obvious that a surrender to intimidation of this kind would simply provoke a repetition of it in support of fresh demands. The Bishop has, however, another ground for his advice. He holds that it is impossible for a labourer to keep himself and his family on less than 16s. a week. To this the farmers might reply that this estimate leaves altogether out of account the carnings of the family and various allowances which ought to be reckoned in the labourer's income, and that in any case it does not affect the real question, which, from their point of view, is not what is an "equitable wage" for the labourer, but whether a farmer is bound to carry on his business on terms which he regards as unprofitable. If it were the case that a labourer could not live on less than 16s. a week, while he could only earn 13s., that would not prove that the farmer ought to subscribe 3s. a week in charity to make up the difference. It would only prove that agriculture had ceased in that particular district to afford a livelihood, and the labourer would have to seek some other employment. Nothing can be more abourd or preposterous than the idea which pervades the whole system of Trade Unions, that because a workman has chosen to go into a particular trade it is the duty of somebody to provide him with work in that trade at a sufficient wage to make him comfortable. The only wages to which he is entitled are the wages he can get; and if he cannot get what he wants in one quarter he must look for it in another. If it were possible to fix an equitable profit for a farmer, it might be possible to fix an equitable wage for a labourer; but each has clearly the same right to decline to work except on his own terms. Less nonsense would be talked about strikes if people would only reflect how such questions bear on their immediate personal relations. Farming is only a business like any other business, and must be conducted on similar conditions.

It is unfortunate for the labourers that a bad system

. 1

cannot be suddenly reformed so as to do justice on all sides cannot be suddenly reformed so as to do justice on an sides without injury to any one. There can be no doubt that the labourers in many parts are wretchedly paid, but it does not follow that they are paid less than they are worth to the farmers who employ them. It may be taken as foltrably certain that where very low wages prevail there is a such a case an improvement in farming is essential to an amelioration of the labourer's condition; but it may happen that labourers who in physical energy but it may happen that labourers who in physical energy or intelligence are unequal to the conditions of superior husbandry may have to be sacrificed along with farmers who find themselves similarly out of place in a new set of circumstances. The agricultural labourers of the future will certainly profit by the movement which is now set on foot, and no doubt the farmers too; but for a time it can scarcely fail to tell very hardly on many persons of both classes. How far the farmers are correct in their assumption that they cannot afford to increase the wages of their men we cannot presume to determine, and in any case that is a question on which they are entitled to use their own discretion. There is, however, one point on which we cannot help thinking that they have made a mistake. They have locked out all Union men, and they have that this is not a temporary measure, and that they mean to shut their gates permanently against the Unionists. The object their gates permanently against the Unionists. The object of this policy is of course to crush the Union before it has time to grow bigger and stronger; but this policy has been tried in other trades, and we are not aware that it bas ever succeeded. A Union is not a pleasant body for employers to deal with, and it often works in an evil spirit; but it is quite clear that the men cannot do without Unions, and in some respects their influence on apployers is precessary and respects their influence on employers is necessary and beneficial. The armers would undoubtedly be on safer ground if they limited their resistance to the demand for higher wages. The labourers have a perfect right to belong to a Union and to ask for what wages they please; but, on the other hand, the farmers are equally entitled to form their own judgment as to what it is worth their while to pay.

THE COLLEGE OF PHYSICIANS AND THE HOUSES OF THE POOR.

THE College of Physicians has at length moved in a matter upon which their opinion is especially weighty and, if judiciously pressed, especially likely to have effective results. They have addressed a memorial to Mr. DISRAELI in which they point out, first, that in the daily exercise of their profession they have convinced themselves that disease, drunkenness, and immorality are largely caused by overcrowding, and especially by overcrowding in unwholesome and ill-constructed habitations; secondly, that this overcrowding has been in many cases caused by wholesale demolition of houses inhabited by the poor; thirdly, that private enterprise is not strong enough to provide the fresh and improved house accommodation which is required to meet the evil; and lastly, that the intervention of Parliament is necessary to secure suitable sites for building.

There can be no need to insist further upon the first of these statements. The fact that overcrowding exists is not denied; the fact that it makes the observance of common decency impossible is not denied; the fact that those who are subjected to it have neither physical nor moral inducements to keep sober is not denied. All the controversy turns upon the consequences which follow from these admissions. It seems strange that there should be any need to insist upon the second point raised by the memorial. It stands to reason that if, when a hundred houses stand upon a given space, there is overcrowding, the mischief must be intensified if seventy out of this hundred are destroyed and their inhabitants distributed in part over the remaining thirty, in part over others in the neighbouring districts which are already equally overcrowded. Yet it is evident that this obvious consequence is not properly understood, because Parliament goes on Session after Session passing Bills miscalled improvement Bills, which apply this disastrons system to fresh areas of population. Wherever a new street is opened up or a railway allowed to come a step further into London, whole nests of poor dwellings have to be swept away, and as a rule no provision is made for the rehousing of those who have lived in them. All the great metropolitan railway stations stand on ground which was once densely inhabited, and any one who locks down the streets that

abut upon any of the great new thoroughfares may see for himself what has usually been the character of the houses when have been displaced. It must be remembered the for all the misery thus created Parliament is directly responsible. There are many evils which legislation might have prevented. This is an evil which it needed legislation to call into being. These wholesale purchases of land cannot be carried out except by Act of Parliament, and, in some cases at all events, Parliament has been distinctly warned of what must follow upon passing the Bill, and notwithstanding this warning has deliberately passed it. This fact is of itself sufficient to dispose of any soruples as to the propriety of legislating on this question. Only the Legislature can undo what the Legislature has done.

The third position in the memorial decidedly understates the case. Private enterprise is unable to deal satisfactorily with overcrowding for two reasons; first, because of the difficulty of getting sites—which is the difficulty mentioned by the College of Physicians—and next, because of the difficulty of inducing the poor to take decent rooms so long as rooms which are not decent are to be had close by for less money. The victims of disease, drunkenness, and immorality are not the persons who most keenly feel the wretchedness of their condition. It takes, ordinarily speaking, some amount of education or some experience of a higher standard of comfort to appreciate this. But the difficulty of finding an extra sixpence is thoroughly appreciated, and when the choice lies between rooms which are ill-drained, ill-ventilated, overcrowded and cheap, and rooms which are superior in the first three respects but less cheap, it will in the great majority of cases be the former that will have the preference. The spectacle of whole rows of new and well-built houses standing vacant, while overcrowding was as rampant as ever all round them, would not tend to edification. Closely connected with this difficulty is another to which the memorial hardly gives sufficient prominence. It is this. Even if there were no overcrowding, the dwellings of the London poor would still produce disease and drunkenness. The way in which they are built; the utter inadequacy of sanitary accommodation in houses originally intended for one family and now inhabited by half-a-dozen; the omission of the landlord to do even the most necessary repairs; the imperfection, if not the entire absence, of drainage, would cause or predispose to disease even if the house had only a tenth of its present occupants. And the physical condition produced by these defects is precisely the condition in which a man most feels the want of strong the condition in which a man most feels the want of strong Men employed to empty cosspools have to be kept up during their work by frequent drams, and the lives of too many of the London poor are passed under circumstances which do not greatly differ from these.

There are three things which Parliament might do to remedy this state of things. These measures do not involve any scheme of State help. They only apply principles which have already been to some extent recognized, and which are in constant operation in other fields of legislation. The first is that no new Railway or Street Improvement Bill shall be passed without proper provision being made for the accommodation of the people who will be turned out of their borress by the charge. It should be income by their houses by the change. It should be incumbent upon the promoters of the Bill to state how many persons they propose to displace, and to show that enough ground has been reserved in or near to the improve-ments, not merely for the rehousing of the inhabi-tants of the destroyed dwellings but for their rehousing tants of the destroyed dwellings, but for their rehousing under proper sanitary conditions. So long as Parliament does not insist upon this being done in every case in which its aid has to be invoked before an improvement can be made, it is really sacrificing the welfare of the poor to the interests, often the imaginary interests, of the well-to-do community. It would not be expedient to make the premoters of the Bill do more than reserve sites, because, where these can be had on reasonable terms, there does not seem to be much difficulty in finding persons willing to build upon them. The second thing that Parliament can do is to remedy in some degree its neglect in not inserting similar provisions in former Improvement Bills. To do this com-

·清·流"。

the ordinary speculative builder either easier or more profitable than it already is. The last and by far the most important of the three measures is a law which shall assimilate the responsibilities of vendors of houses to the responsibilities of vendors of articles of food. Suppose that the health of a large part of the population was being destroyed by eating unwholesome bread, it would not be enough to take care that wholesome broad should be sold side by side with it, unless care were also taken that the wholesome bread should be sold at the same rate. would Parliament set to work to accomplish this latter object? Certainly not by ordering the vendors of wholesome bread to sell it at a price which would not yield a profit. What would be done what is done in factbe to forbid the sale of any bread which was not wholesome. So long as unwholesome houses are allowed to be let there will always be tenants to occupy them. Rooms in a house which is ill-built, ill-drained, and never repaired can obviously be let at a lower rent than rooms in a house which is properly built and drained and to the repairs of which timely attention is paid; and while this difference exists, the cheaper rooms will have the call. But if Parliament applies to houses the principle already applied to food, and decrees that no house shall be let which does not conform to certain prescribed sanitary conditions, and which is not kept in conformity with them by the execution of all necessary repairs, the rivalry between healthy and unhealthy houses would come to an end. Some houses, of course, might be more healthy than others, because, in laying down the requirements which a house must satisfy in order to come into the market, it would not be expedient to take any extreme or funcy standard. But the essentials of health would be secured in the same way in which the Adulteration Act secures, or may be made to secure, the essentials of health as regards food. We hope that the College of Physicians will supplement their memorial in this sense, and that they will not let the PRIME MINISTER alone until he has consented to take the matter in hand.

PROGRESS OF THE ULTRAMONTANE STRUGGLE.

THE imprisonment of the Archbishop of Cologne, which had for some weeks been anticipated, took place on Tuesday last, and adds another to the lengthening catalogue of episcopal confessors in Prussia. It proves at all events that Prince Bismarck's illness and threatened retirement have not as yet produced any change, or even check, in the ecclesiastical policy of the Government. But every fresh prosecution under the Falk laws not only serves to embitter the controversy, but inevitably reopens in the popular mind the previous question, so to call it, of the justice and expediency of the course on which the Imperial Government has entered. Many opportunities have already occurred for indicating our own view of the matter, but a highly characteristic apology for the new legislation which appeared the other day in the Daily Telegraph supplies amusing evidence of how little one section of English Liberalism has succeeded in mastering the first elements of the question at issue. The Telegraph notices with reyret that of the question at issue. The Telegraph notices with regret that there are English Liberals who have taken the wrong side in the quarrel, and it solemnly admonishes them that "on the main point in dispute between the Prussian Government and the Catholic in dispute between the Prussian Government and the Catholic clergy, the sympathies of Englishmen must in all fairness go with the former," this main point being, as far as we are able to gather from the context, that, as a matter of principle, "the clergy should obey the civil law." It appears to have escaped the writer that the whole dispute is about the application of the principle. Even the doughty Archbishop of Posen would probably admit the ordinary duty of obedience to the law, but he would plead, plausibly enough, that there must be some limit to this obligation or there would be no security against any excess of arbitrary oppression. To confine ourselves to the religious aspect of the question, it is obvious that, if the duty of civil obedience is absolute and universal, the early Christian martyrs were morally as well as legally criminal in preferring their faith to the commands of the divine Emperor. As to where the line should be drawn there is room of course for infinite diversity of opinion. Some people profess conscientious scruples about vaccination, and people profess conscientious scruples about vaccination, and others about giving medicine to the sick, which the Legislature very properly disregards. But few unprejudiced observers are likely to deny that the Prussian Government has overstapped the provisions in former Improvement Bills. To do this completely is impossible; but something might be effected by including the provision of houses for the poor among the science. Nor is it any answer to say, even supposing it to be including the provision of houses for the poor among the objects for which land may, under certain circumstances, be compalsorily purchased. Proper processions, of course, would have to be taken that these compulsory powers were not invoked except to promote the public objects of diminishing overcrowding, and putting healthy houses in the place of unleasibly ones. There is no need to make the business of himself. He admits that many of the provisions of the halk

laws are scarcely consistent with our notions of right and justice, and illustrates his admission by specifying nearly all of them. But these are precisely the points on which the whole controversy hinges, so that the natural inference would seem to be that "the

hinges, so that the natural inference would seem to be that " the sympathies of Englishmen must in all fairness go with the" victims of legislative injustice and not with its authors.

On one point only does the Telegraph argue explicitly in defence of the late Falk legislation, but, unfortunately for the argument, the exception fixed upon is just of that kind which helps to prove the rule. There is no doubt a good deal to be said in the abstract against obligatory civil marriage. Considering how closely the stability of the entire social fabric is bound up with the sanctity of the marriage tie, it has in all ages been deemed important by statesmen as well as priests to invest the matrimonial union with all the solemnity of the highest religious sanction. It was on this express ground, if the highest religious sanction. It was on this express ground, if we recollect aright, that a Parliamentary Commission appointed to examine the marriage laws reported some years ago squinst the general enforcement of civil marriage in the British Empire. But it is evident that difficulties may arise in a country of mixed religions of which this is the only feasible solution, and we are not at all prepared, after 1r. Völk's recent exposition of the present condition of affairs in the German Beighetter to deny that much condition of affairs in the German Heichstag, to deny that such may now be the case in Germany. At all events, the civil marriage law, though it may be widely disapproved of both by the Ultralaw, though it may be widely disapproved of both by the Ultramontane and Evangelical clergy, stands on a totally different ground from the laws of last May; it belongs to a distinct, not to say opposite, order of ideas altogether, and points towards a disruption of that very union of Church and State which the Falk legislation is intended to rivet more closely than ever. And the Ultramontanes, moreover, may fairly be reminded that they have themselves created the necessity for its introduction by their vexatious interference with the anti-infallibilist members of their flocks. One hindrance we will frankly admit there is, though it is not noticed in the Telegraph, to our forming a decisive judgeis not noticed in the *Telegraph*, to our forming a decisive judgment on the pending quarrel in Germany. Mr. Frederic Harrison has stated it in his accustomed trenchant manner in the Harrison has stated it in his accustomed trenchant manner in the current number of the Fortnightly Review, where he says that "the unsuspecting English reader, while accepting what is given him under the elastic title of 'Correspondence,' is really digesting, in one case, a bare memorandum drawn up in the Chancellor's 'Intelligence Department;' in another, the dithyrambic revelations of M. Karl Marx; in a third, the authentic communiques of some Catholic 'martyr.' But then he adds at once that the official "Intelligence Department" has so immense a superiority in publicity that it carries the well-informed English public nearly wholly in its hand. And the official department, we need not say, is sure to report in the sense most favourable to the Government. It may report in the sense most favourable to the Government. It may be, as the *Telegraph* suggests, "one of the most curious problems of the day" whether Prince Bismarck can succeed in setting up a new Catholic Church; but it appears to us one of the simplest truisms that he is bound to respect the legitimate liberties of the existing Church.

There are signs certainly of a spread of Old Catholic principles, both in the direct form of separate outward profession, and within the borders of the established system. Thus, even in the Chapter of Trèves there are dissidents from the Ultramontane majority. The Provost and one of the Canons have refused to sign the address of sympathy with their imprisoned Bishop. The Provost, it seems, was formerly a member of the Prussian Landtag, but was defeated at the last election by an Ultramoutane candidate, and the Canon is known as an archnologist. In Baden a country parish has been handed over to an Old Catholic pastor by the votes of a majority of the parishioners, who decided by fifty-seven to three against the Vatican dogmas. On the other hand, the Commission against the vation degrees. On the cluer hand, the Commission appointed at Munich for investigating the matter has reported against the legality of acknowledging Bishop Reinkens; but this decision is based on the provisions of the Bavarian Concordat, and may not improbably lead the Government of follow the example of Austria in rejecting it altogether. The mention of Reinkens reminds us of what certainly looks like the desperate attempt of a party which feels itself beaten to retaliate on its successful rivals. Charges of gross and habitual immorality, which have been bruited about amongst his assailants, at length found expression in two of the infallibiliat organs, and the Bishop felt it due to his character under the circumstances to prosecute them for libel. His principal accuser, though cited to appear, shrank from coming forward, and the defendants were condemned with costs. A Correspondent of last week's Tablet, who retails the charge with undisguised and some what indecent actisfaction, must have written before the judgment of the Court was pronounced, for he affects to anticipate a different verdict. It would perhaps have been more prudent to consider the extreme improbability of such an indictment being made good against a personage who has occupied a prominent position for at at least twenty years past among the German Catholic clergy as a professor, preacher, and theologian. But the occur theologicum is apt to be a little indiscriminate in its selection of weapons of offices. Meanwhile the Architecture of Munich has taken advantage of the celebration of the six hundredth anniversary of St. Thomas Aquinas to make what capital he can cut of the alleged infallibilist teaching of the Angelic Hoster. It is a question, however, on which competent what indecent satisfaction, must have written before the judgment mat capital he can cut of the alteged instituting to eaching of the ngelie Boster. It is a question, however, on which competent sites are divided, whether Aquines really did teach Papal infallifier, and there can be no question at all that his opinion on the lifest is in any case of little value, at it was notoriously hand on the lifest is in any case of little value, at it was notoriously hand on the sites and alter a purious, but which the historical knowledge, or rather ignorance, of the

thirteenth century supplied no means of correcting.

If from Bavaria we turn our eyes to Austria, these If from Bavaria we turn our eyes to Austria, there better hope of a peaceful solution of the ecclesiastical non-plications. The Austrian Government is much more modesn't have the Prussian, and Cardinal Rauscher is a very different pleasure from the Archbishops of Posen and Cologne. It has indeed been resolved to suppress the Jesuit Theological Faculty at Innspruck—a measure clearly within the competence of the State—and a motion for the expulsion of the Jesuits from the Empire is to be brought forward after Easter by two members of the advanced Liberal party, who reckon on considerable support from the Left. But there is nothing to show that they will have the countenance of the Ministry in this extreme proposal. The long-promised memorandum of the Austrian bishops on the new ecclesiastical legislation has at last been published in the Volkefreund. It is a lengthy document, and bears thirty-two signatures, headed by Cardinal Schwarzenberg's and including the names of many prelates besides those who have seats in the Upper House. The various details of the proposed laws are reviewed in order, and the introduction of civil marriage is deprecated, the example of France being cited as a warning against it. cated, the example of France being cited as a warning against it.

And the declaration concludes with these words:—"We repeat
that we do not regard the demand for justice based upon the Concordat as extinct, and we are ready to respond to the requirements of the civil authority as to the external and legal relations of the Catholic Church, in so far as they are in substantial accordance with the Concordat. But we never can or will submit to exactions perilous to the welfare of the Church." This is not the language pernous to the welfare of the Unurch." This is not the language of overt defiance, and indeed the whole document is pitched in a tone of moderation which betrays the hand of the Cardinal Archbishop of Vienna, one of the most stranous opponents of infallibilism at the Vatican Council, and one who has never eater his words with the eager voracity of his episcopal brether in the North. North. According to the Kolnische Zeitung, the second leading paper in Germany, the manifesto is not so much directed against the proposed Church laws as intended to convey a conditional problise of submission, and its appearance is therefore held to put out of the question the threatened danger of a conflict between Church and State. Still it must be borne in mind that the Pope has himself descended into the arena, with an Encyclical by no means equally moderate in tone, and that there are some among Cardinal Rauscher's suffragans who do not reflect the conciliatory sentiments of their chief. We shall watch the progress of the debate in the Upper House at Vienna with considerable interest when the time comes, but there does not, so far as can be foreseen at present, appear to be any reason to anticipate a repetition of the Prussian occlesiastical crisis in Austria.

THE BOAT-RACE.

THE boat-race has come and gone once more, and, as usual, we I must bestow a few comments upon its chief incidents. A good many profound observations have suggested themselves to the omniscience of sporting Correspondents. We have read many learned speculations as to the effect of sliding-seats, the style of every member of each of the crews, and the illustrations afforded of the theory of the art in general. We do not propose to go far into any such questions. We frankly confess that we should be antid of venturing beyond our depth. But we may say briefly that the secret of the race appears to us to have been a very simple one. Contemporaries, it is said, rarely understand the events which are transacted before their eyes. They have to wait for the light thrown upon affairs by the publication of memoirs and despatches. We are not in possession of any such documents on the present occasion. The distinguished carsnen who have acted as "coaches" and "presidents" of the University crews have not seen fit to take us into their confidence. And yet as we have seen fit to take us into their confidence. And yet, as we have said, we venture to think that we could make a very fair guess as to the really decisive circumstance. Everybody admitted that the Cambridge crew was in almost every respect superior to Oxford. They were stronger, in better training, and in better form. They were able to row a quicker stroke throughout the race; and it did not appear to us, though we do not venture to pronounce dogmatically, that the stroke lost in length what it gained in rapidity. In spite of these advantages, the Oxford crew went as fast as the Cambridge for more than half the distance; and at one fast as the Cambridge for more than half the distance; and at one period seemed to have a fair chance of winning. How is this to be explained? Simply, as we imagine, by the fact that the Cambridge boat was a bad one and the Oxford boat a good one. Directly the crews got into the wind and a little rough water, Cambridge seemed mysteriously to stop; and the mystery was easily solved by anybody who saw how very differently the two boats behaved under the same conditions. Now we will not go so far as to say that the best crew which ever rowed a University race could be reduced to the level of the worst by a slight change in the boats, but the statement would hardly be extravaguat. On this was no previous occasions the ill-luck of Cambridge in this matter nearly counterbalanced their great superiority, in all the eliker elements of fortune. Everybody knows of the celebrated race of 1859, when Cambridge was swamped, and might missibly have won in a different elike; and the same disactionings had been very nearly faint to the same University in

the different expensions Combridge declar the secondar. The that their heat would not easy them, had been talling quainet in during their whole stay at Pulmey; it accounts he their are to improve so had been superted from them; and we seek that, if that secret history of which we have apolented aver be published, we should find that the Cambridge which had to contend with a severe more depression produced to have come, and that the last formight of preparation was of severe trial for the tempers of the crew and their attents. The question, therefore, which was decided at Putney a filter action of severe trial for the tempers of the crew and their attendants. The question, therefore, which was decided at Putney last Saturday was simply this; whether a strong and well-trained crew, rowing in excellent style, could propel a bad boat through the water quicker than a crew comparatively weak in all those points could propel a good one. If there had been more wind, as there was on the following day, Oxford might have won; and if there had been less, as there was last year, Cambridge might have had an easier victory. We shall content ourselves with drawing the conclusion that in rowing, as in more serious matters, the conditions which it is convenient for historians to overlook are frequently the most important. Armies have been delook are frequently the most important. Armies have been defeated, it is said, from the fault of the shoemaker as well as from the mistakes of the general; and, if justice were fairly distributed, Messra. Searle, Clasper, Salter, and other builders would frequently deserve a large share of the glory or the blame which is too exclusively bestowed upon the carsmen and their trainers. We will venture to ask in conclusion whether it is absolutely necessary for the decision of this important matter to be left to a time when no change is possible, however clearly desirable. A boat, of course, must suit the particular crew; but we should have thought it possible to make sure of at least a tolerably satisfactory

boat at an earlier period than the fortnight before the race.

We will not, however, discuss a question which would take us into technical details. We turn to a matter of more importance to the Universities generally. The present race will be memorable by the Oxford men's refusal of the Lord Mayor's hospitalities.

The amount of the control of the c The general opinion seems to be that, whilst the mode of refusal was unfortunately objectionable, the refusal itself was perfectly right. We should, indeed, have said that the opinion was universal, instead of general, were it not that the Daily Telegraph, in a very characteristic article on the morning of the race, made some poetical or highly rhetorical remarks intended, so far as we could understand the beautiful language employed, to intimate a different opinion. The *Telegraph* reminded the Oxford crew that fame was the reward of the contest; and that fame would be very limited if the race were rowed on Windermere or would be very limited if the race were rowed on Windermere or the "Bedford level" (the level, we may observe incidentally, is not a stream but a plain; but the meaning is sufficiently clear). This means simply that, if it is the object of the crews to be cheered by a London mob, they ought to dine with the Lord Mayor. As it is our opinion that they already receive much mere "fame" than is good for them, that it would be a healthier state of things if they could row a fair race at Oxford or Cambridge, and that the least the London mob has to say in the matter the better for everybody concerned, we are glad that they made the and that the less the London mob has to say in the matter the better for everybody concerned, we are glad that they made the only protest in their power by refusing the Lord Mayor's turtlesoup. We think it, therefore, a cause for congratulation that, with the exception of the *Telegraph's* rhetoric about Naiads and Pindar, and the "tornado, cyclone, and Sargasso sea of shouting" which, it appears, greets a University boat-race, the tone of our contemporaries has become far more reasonable than it was a few years ago. There are, in fact, signs of a reaction. People are beginning to see that the excitement about the race has been overstrained. It has been bad for the lads themselves, for the interests of the Universities, and even threatening for the interests of the Sport. The Lord Mayor, though we doubt not that his intentions were admirable, may be regarded for this purpose alone as the incarnation of the evil principle. He is the representative of the public which insists upon thrusting itself into what quality to be purple which insists upon thrusting itself into what ought to be a purely private affair, and which, if it were not checked, would speedily corrupt whatever good qualities the sport at present possesses. The most gratifying circumstance about the race of this year is that, so far as we can judge, it appears to have excited less interest than has lately been shown; we would hope that a more common-sense view will gradually be taken, and that London will not annually go mad over an athletic contest. When the importance of the event is estimated in a

atthetic contest. When the importance of the event is estimated in a reasonable way, we see no reason why the race should not flourish, and be on the whole a healthy display of animal activity.

It has, indeed, suggested some reflections which deserve their due weight. The list of the Classical Tripos at Cambridge appeared shortly before the race, and some comparisons were natural. The young athletes who exhibited themselves at London naturally realized more allows for the manner, then the students are the received more glory for the moment than the students who had distinguished themselves in the intellectual arena. But, it was said, both contests are an illustration of the effect of competition. corsmen probably damaged their frames more or less carsus probably damaged their frames more or less decidedly by their muscular exertions; and the victors in the classical examination no doubt over-exerted their brains. Twenty years hence the athletes will suffer from enfeabled hearts, and the students from exhausted brains. In both cause the excessive competition amongst young men leaves the seeds of injuries which are likely to amongst young man leaves the seeds of injuries which are likely to be developed in future years. Though we are no friends to excessive competition, we think that this mode of stating the case is father fallacious. The hask published a year ago by Thr. Morgan showed that the qualities of disease definitely traceable to the contests on the river has been very much exag-

gurated; though he could not deny that some injury had been received. The evil resulting from over-exertion of the intellectual kind is, as we believe, of still less importance. Here and there undoubtedly a young men may be found who has permanently injured his constitution by excessive reading. But, so far as our-experience has gone, these cases are the rare exception; and we can say without hesitation that, if we were to pick out the min who in later life have shown themselves capable of the most promined and severe intellectual labour, we should generally take those who have distinguished themselves at the Universities. If it to true that Cambridge men have not been so prominent at the Bar or in who have distinguished themselves at the Universities. If it be true that Cambridge men have not been so prominent at the Bar or in political life as was formerly the case, the reason is sufficiently clear. A high degree is a good recommendation in other professions, but it is specially valuable in the schools in profession; and as that profession has lately become more attractive, it is only natural that many high wranglers and first-class men have-taken to the career of teaching at schools and universities, where their labour is not less severe, though it leads to less conspicuous results, than in Parliament or at the Bar. With all the talk about intellectual exhaustion, we suspect that very few unequivocal cases could be produced, and that, as a general rule, the best of all preparations for strenuous labour in after-life is strenuous labour at the University. The true evil of excessive competition is of a different kind. It injures education by narrowing it rather than by making it more trying to the excessive competition is of a different kind. It injures education by narrowing it rather than by making it more trying to the strength. It encourages a young man to devote himself exclusively to that kind of training which is useful in examinations, instead of that which gives him the widest culture or best develops his special idiosyncrasies. The Cambridge system, for example, forces many young men of promise to devote those years of their life which for educational purposes are most valuable exclusively to a mathematical training. However good a system of intellectual gymnastics may thus be provided, it cannot be denied that in such

uses the development is strangely one-sided.

The really objectionable tendency of excessive athletic competition is of the same kind. We put aside the question of the injury actually inflicted upon the constitution. Probably the case as put by Mr. Skey was overstated; and with due precautions the evil might be still further diminished. But, in an educational sense, the evil is obvious. When that which should be the amusement of spare hours and a pleasant relief to serious work comes to be considered as the main object of a lad's University career, he must clearly be wasting precious time. We have no doubt that the sixteen young gentlemen who have just been exhibiting themselves are not only magnificent animals, but, in the best sense of a much abused phrase, are thoroughly good fellows. That at least has been our experience of their predecessors in the same career. On the other hand, they can hardly be mortal if the "cyclone and Sargasso sea" of cheering does not produce in thom an exaggerated estimate of their own merits. Probably they have too much sense to sit at the feet of the Daily Telegraph; but in so far as they are intoxicated by the coarse incense which it offers, they are taking a false view of life and are likely to suffer in consequence. No student ought to be told, You have done your duty so as to deserve the thanks of a grateful have done your duty so as to deserve the thanks of a grateful country, because you have retained enough school-learning to scramble through your examinations and have made yourself into a finished waterman. Nor is it really sensible to tell such a lad that he is a here because he has lived a regular life for six weeks and gone through twenty minutes of hard exertion at the end of it. A man is a here when he risks his life or his health. To be a here therefore in a University beat-race is to be a fool; and if a lad is not, and ought not to be, hereic for such an object, he should not be told that he is. The exercise is in every way healthy and admirable so is. The exercise is in every way healthy and admirable solong as it is confined within due limits; but the tendency of Telegraphic eloquence and Lord Mayor's dinners is to invest the whole affair with a false glory which is thoroughly mischievous. whole affair with a false glory which is thoroughly mischievous, and which, we are glad to observe, shows signs of decline. The University ideal should be as high as possible. To hold upsuccess in examinations as the natural end of three years' exertion is a very questionable dectrine; but it is still worse when athletic competition comes to stand upon the same level of popular applause. We hope that in future years the race will descend to its natural position, and the pursuit of rowing be fully understood to be an amusement instead of a profession. In that case we shall wish it all legitimate success, and we shall feel more confident that it will be beneficial as well in a sanitary as in a moral sense. moral scuse.

CHARTERHOUSE.

THE county of Surrey and the ancient foundation school of Charterhouse may alike be congratulated on the conjunction which has been effected between them. What Carthusian can fail to rejoice in seeing Smithfield shaken off, and his beloved Domus transplanted from the chimney-pots, the smoke of impending factories, and the costermongers quarter, which formed its ancient surroundings! The genus loci was eminently unsure that the content is the times which Mr. These transplants are the collections of the content of the content of the collection of the content of the collection of the hending factories, and the contentions loci was eminently un-its ancient surroundings! The genius loci was eminently un-seventy in the times which Mr. Thackenge—who may be called the genius loci in another sense—seemed never tired of im-mostalizing. There are doubtless not a few—boys then but men nostalizing. There are doubtless not a sew-cuty state the sum of the who remember well his visit thither to renew his recollections, with a view to shedding a pathos fresh from the life round the last days of "Colonel Newcome," It was a rare privilege to

hear his talk of old times in the form of a discursive lecture, hear his talk of old times in the form of a discursive lecture, tenderly unravelling to masters and boys the labyrinth of early recollections, not forgetting that "Red Cow" just outside the gates, "to the milk of which animal we were all so much addicted"; nor yet the Charterhouse Latin Grammar and Greek ditto, brought out by the then Head-Master, "to which smusing works we all subscribed." "Gownboys" and "Dayboys" and "Virites" are known no more. They may perhaps be representatively charished on the rest grown or adjacent sloves of a broadtatively cherished on the rase crown or adjacent slopes of a broad, bold, green knoll overhanging Godalming, but to their native site

they are lost.

These remarks are suggested by the consecration on Lady Day of the newly-built chapel of Charterhouse School, the anniversary, as we learned on high authority, of the consecration of the old chapel in London. This occasioned the first great gathering within the new walls since the rustication of "Domus"—or at least of its youthful moiety—to the Surrey greensward. But although novelty is the dominant feature both of site and fabric, the least of its youthul molety—to the Surrey greensward. But although novelty is the dominant feature both of site and fabric, the institution combines the prestige of age with the vigour of youth. It is not more new than it is also old. Nor was any attempt made to force a sensation. The whole routine of the day was simple and natural—a morning service with Holy Communion, a lunchoon, a serenade on the terrace (if a serenade can be at 2 r.m.) by the boys' band, then coffee and tea, and then vespers. The presence of the diocesan is of course an indispensable part of the ceremony of consecration, which was in the usual form, including a warm and hearty sermon from Dr. Haig Brown, the Head-Master. The Great Hall of the building was entirely filled at lunchoon. Beyond the official circle, however, which included the Earls of Dovon and Harrowby, Lord Chelmsford, the Master of Charterhouse, and the Public Orator of Cambridge University, there was rather a dearth of notables. Of living Carthusian bishops we can call to mind none except Bishop Thirlwall, who might well plead age and distance for his non-attendance. There are, we believe, two ex-Head-Masters still living, but both perhaps too remotely situated to appear. Among the enthusiastic ranks of old Carthusian alumni we failed to detect any of marked celebrity, whether in army, navy, law, or any of marked celebrity, whether in army, navy, law, or politics. It ought to be remembered that for a generation, if not more, Charterhouse has been, owing to the growing sense of the more, Charterhouse has been, owing to the growing sense of the disadvantages of its position, a comparatively small public school. And among small numbers, although great prizes of fortune or station may opportunely fall, yet the chances are proportionably against their so falling. The Head-Master therefore judiciously fell back upon the worthies of the older period, and named an illustrious triumvirate, two of whom have passed away, George Grote, Julius Hare, and Bishop Thirlwall. Thus the two modern English historians of ancient Greece are both scored to Charterhouse; besides the greatest, as Carthusians will doubtless hold, of English humourists of recent memory, the bent of whose mind seems to have been strongly influenced by his schooldays. These together English humourists of recent memory, the bent of whose more seems to have been strongly influenced by his schooldays. These together form a literary group recalling the celebrity of Addison and Steele, and not to be surpassed probably in public school annals anywhere. But, if we except one or two professional scholars of high celebrity as editors and translators, we hardly know where to look at present for Carthusian hands to pass on the sacred torch. The school for Carthusian hands to pass on the sacred torch. The school indeed, we think, stayed too long in the vicinity of Goswell Street and Clorkenwell for its popularity and efficiency. There was a great want of expansiveness inseparable from the site, as well as of elasticity due to the system, or rather systems; for two communities coexisted, in some sense rivals, on one area—namely, the old pensioners and the boys. The minor evils of the difficulty of keeping turf alive for an efficient wicket, and the hardship of every moderately hard drive or cut which the fieldsman missed being motoratory hard drive or cut which the holdshift inseed being stopped by a brick wall, and the dangerous practice of a football "scrummage" being packed in a narrow cloister between hard walls of brick and on a hard pavement of stone, were only illustrative of the absence of elasticity and want of expansiveness to be found in the system in general. The boys Sunday under the old system was, we fear, the most unedifying day of the week, simply owing to the routine of hours being fixed in reference to the case of the pensioners rather than to what was advantageous for the school. The school and the hospitium for elderly men of narrow circumstances were too long united in a Mezentian union; they are free of each other at last-better late than never. The separation ought to have been effected a generation ago at least. Every Carthusian knows what, or rather who, was the chief obstacle; but de mortuis nil nisi bonum. It is true that since the removal of the cattle-market from Smithfield some of the more offensive features had been abated; but the mass of brick and morter interposed in every direction between the schoolboys and atmospheric purity had become more hopelessly dense; and the vitality of the school grew more and more to resemble that of a toad in the heart of a tree.

From this state of suspended animation "Domus" now emerges, From this state of suspended animation "Domus" now emerges, let us hope like $\Delta \tilde{\eta} \mu a_c$ in the last act of the Aristophanic Knights, with a ronowed lease of youth, dignity, and vigour. There can be no better union of happy auspices than a name of old renown united with an estate disencumbered, and a free margin for development every way. Magnus ab integro susclorum muscitur ordo. Charterhouse starts on a new point of departure from this greatest event in its history as a school. We congratulate the Head-Master on the chance which has thrown this new era in his days—te consule inibit; nor is it unfit that it should be so, since to his energetic agitation of this question of change of site the fact of its accomplishment, we believe, is in great measure due.

The school boarding-houses are said to be full to the utmest limit of their present capacity, and as the masons are still busy, and the site seems ample, we may expect that the numbers will continue to rise. As regards the architecture we hesitate to pronounce. The members of the whole pile are effectively grouped from the chief points of view; but there seems a shallowness on the whole chief points of view; but there seems a shallowness on the whole in the reliefs of surface which perhaps indicates a limit in the ways and means rather than a lack of power in the architect to ty' his opportunities to account. Of course all the fittings and acco. modation in the chapel interior were extemporized. A covered way to the chapel door along the south wall is a desideratum, and we regret to see no indications of its being intended. The east end of the chancel is in Salviati's best manner, and is very effective, but the long parallelogram of the chapel area without any outlying members forms anything but an impressive interior. but the long parallelogram of the chapel area without any outlying members forms anything but an impressive interior. But out of doors nature cannot be spoilt, nor do we think that any public school has such a noble site, or presents such a magnificent outlook, and so many inspiring features of scenery. Lord Bacon long ago observed on the importance of the choice of site, wherever the establishment of a soat of learning is in question, "Imprimis sedes apibus statioque petenda est." Breezy leagues of heathy or copse-clad upland are the chief scenery, with the meadows and river bottom and little town of Godalming below. The position and surroundings seem to warrant salubrity as completely as those of Smithfield forbade it. The change has been long in coming, but, tandem aliquando, it is complete.

The neighbouring gamekeepers will perhaps have a trying time of it at first, and other more strictly agricultural interests may have something to put up with. They will, however, look up under

something to put up with. They will, however, look up under the influence of a constant and, we hope, an increasing market; and where interests pull on the whole together, the difficulties to which we refer are always found capable of adjustment. On such occasions as that of the 25th ultimo it is an unhappy necessity to drink a certain—on this occasion indeed strictly limited—number of toasts. After dinner this is bad enough, but after luncheon, with breeze and sunshine waiting outside, it is addy tantalizing to submit in sedentary resignation. However, "let the toast pass," and the quicker the better, is all one can say. It is difficult not to pity the indispensable orators who probably keenly feel all that

they inflict.

The Godalming station is an easy seventy minutes from that of Waterloo, and this convenience of access is a great point in favour of the resort of boys. Charterhouse has henceforth in this respect the advantage of Winchester, while Eton, and still more Harrow, are for some purposes of discipline inconveniently near London. The great benefit which will accrue from this well-chosen site, The great benefit which will accrue from this well-chosen site, besides facility of access, consists in the remoteness of many vulgar forms of temptation to light-minded youth. But to complete this facility of access the half-mile or so of road between the station and the school should be decently repaired, or rather, we should say, constructed, for the most elementary principles of way-making seem to have been neglected here. Whose business it is to make this omission good we do not pretend to say, but the common interest of all concerned points in one direction—namely to coninterest of all concerned points in one direction—namely, to construct a road where wheels and springs may not prove unequal to their work.

The foundation of Charterhouse is now, we believe, quite open. The Governors used to nominate each about once in three years. Now competition rules. The old system was not on the whole productive of distinguished culture. Gownboys were only too well taken care of to find a stimulus in their position. They were tolerably sure of an exhibition to the University at the end of their school career; and thus, once on the foundation, they found self-exertion superfluous and generally voted it beneath young fellows of spirit. superfluous and generally voted it beneath young fellows of spirit. Of course there was here and there a striking exception, but this was the rule. Now, probably, the opposite extreme has set in with a rush, and a forcing system may be generated, sacrificing everything to the stimulation of intellect. The result of this change will accordingly require careful watching on the part of the authorities, who may else learn too late that the benefits of a great school include objects far broader and more suited to the multifariousness of life than a long score of academic and athletic triumphs.

SOCIAL EXTRAVAGANCE.

THE recent financial panic in America appears to have been followed by some results which must tempt many persons in this country to wish that English society might, in a mild way, be this country to wish that English society might, in a mild way, be subjected to a similar discipline. It has made economy fashionable, and though economy may not be practised in the most reasonable way, still the tendency is wholesome. The New York Times, which distinguished itself by attacking the Tammany Ring, has since made it its mission to denounce the reckless extravagance of personal expenditure which came into fashion about the same time. It admits that its expostulations had very little effect until the panic came to solve expect, but it thinks it can now recent came demonstrates. came to sober society; but it thinks it can now report some de of progress towards reasonable moderation and simplicity. The subsided a false standard of luxury, have for the time subsided, and people care less for the imputation of being mean "since secondary has been held up as a patriotic act, and has been practised as such by those families who are in reality the true leaders of society." The number of entertainments, we are told, has greatly diminished, and their thursday has been comparatively inexpenless given, but the favourite autsetainment of the winter season has been the instilledrum. This seems to be an expansion of the afternoon reception known by that mase in London. It is held between three and seven o'clock, and is attended chiefly by ladies, men at these hours being busy elsewhere. Not only have bettledrum has also been substituted for more coastly parties, but the style of the interestive of

would seem to have lately taken rather an uncomfortable line.

It is melancholy to reflect how much even educated women still cling to the beads and feathers of the primitive savage, and any curtailment in the insane extravagance of skirts and flounces may be welcomed as a sign of advancing civilization. But it may be doubted whether, even in the interests of economy, it is worth while to substitute a riot of slops for an ostentatious banquet, which would be more suitably replaced by a good plain dinner. It would seem that in entertaining their friends the Americans have run from one extreme to another, but they console themselves by sitting down to better dinners than ever when they are by themselves. We are told that "while the kettledrums have been thus stinted, it does not appear that there has been any diminution in the use of table luxuries." On the contrary, there is "a constantly increasing expenditure for domestic purposes." Hospitality degenerates into tartines and tea, but "men live better at home, drink more wine, have more luxuries, and indeed are becoming more civilized, if the number of wants may be taken as an indication of civilization." Thus civilization in its latest phase in New York takes the form of panyering oneself at home, and then economizing by being shabby to one's guests. The increasing consumption of clives and foreign chesses may perhaps be regarded as an innocent indulgence; and if it is a test of genuine patriotism to try to make believe that American champagne is very nice, the hypocrisy of the performance may be forgiven on account of its honourable motive and the private increasing which must accompany it. In the interest of public health a "Missouri Imperial Sparkling" war would probably be more to the purpose than a whisky war, if it is true that last year there was a consumption of 2,487,108 bottles of this remarkable beverage. If the upper classes of New York have given up dining, they seem to make up for it by lunching heavily. "There are houses where, if one has the est

When any one dies friends consider it their duty to send a cross of canalitas, costing 100 dollars, or a crown (150 dollars), or a wreath, or an anchor, each equally expensive, as a mark of sympathatic affection. At a marriage the wanton torture of the bride and bridegroom exceeds in ingenious cruelty even that to which they are subjected at an English wedding breakfast. Camellias, tuberoses, blush and tea roses, and other flowers are woven into the shape of a bell, sometimes of considerable size. This bell is fastened to the ceiling in one of the parlours, and the unhappy couple are placed immediately under it, with the bridesmarks grouped in a semi-circle on either side. Every guest as he comes up is expected to numble a conventional allusion to the saying "Happy as a marriage bell." Some of these bells are said to cost as much as 600 dollars, "but these were vary large." Beau Brummel, when the disordered state of his finances was represented to him, exclaimed, "Ah! I see I must retrench in the rose-water for my bath"; and the retrenchment of the Americaus in flowers is equally suggestive of a wide margin of fantastic luxury.

A little touch of financial pressure might certainly be welcomed in our own country if it would have the effect of checking the extravagance of modern society; but it is to be hoped that any retrenchments which in such an event may be attempted will take a more rational direction than in America. Instead of ceasing to ask friends to dinner, it might be perfectly consistent with economy to ask them more frequently than at present, if only the conditions of denner-giving, and, we may add, dinner-going, were made less onerous. The weak point of the dinners of the period is that, as a rule, there are too many guests and too many dishes. What is wanted would seem to be simpler dinners, attended by fewer people. Dinners might then be given more frequently, and hospitality might expand, and yet the dinners would not be more expensive than at present, and would be much more pleasant. A round table, four couples, and not more than half-a-dozen dishes, would relieve social existence of much of its oppressiveness. With a large party and a long table, a shuffling of partners at intervals might encourage hope and relieve depression. If the object of hospitality were to give pleasure to those on whom it is bestowed, it would certainly not be thought necessary to convert the entertainment into a mere exhibition of ostentatious grandeur. Many persons who have assisted at these dismal functions must have reflected with the late Mr. Walker, the police magistrate, that anybody can dine, but very few know how to dine so as to ensure the greatest amount of health and enjoyment, and must have deplored that at the present day it is still the fashion for everybody to strive after the same dull style. There is much in the Original to make it worth the while of some benevolent society to reprint it for circulation among the benighted middle and lower-upper classes, and the following passage deserves especial attention at the present moment:—"The affluent would render themselves and their country essential service if they were to fall in

THE PROCLAMATION OF THE SWISS FEDERAL COUNCIL.

W E have before us the Proclamation which has been put forth by the Swiss Federal Council in preparation for the popular and cantenal vote which is fixed for April 19th. The document is of a class to which we are unaccustomed in Monarchies, and for which there would not be room in many kinds of Republica. It is not a King's Speech or a President's Message addressed to an elective Assembly from without, nor yet the speech of a Minister addressed to an Assembly from within. It is rather the advice offered by a Ministry to a Sovereign, the Sovereign in this case being no other than the nation itself, Sovereign not merely in a figure, but as exercising a real sovereignty by a formal act. The proposals for the revision of the Constitution which have passed the two Houses of the Assembly are now recommended by the Federal Council to the favourable consideration of the power which has finally to settle the matter by a vote of Yea or Nay. The Federal Council express their full approval of the measure in the form in which it is to be laid before the people, though they allow that, as a human work, it is most likely imperiect ("Wir wissen wohl dass such dieses Work des Menschlichen an sich trügt"). This approval of the work of the Legislature on the part of the Executive, though what we may fairly look for from the relations which exist between the two in the Swiss Federal system, is still not a matter of course. As the Federal Council has no direct share in legislation, and no negative voice on the acts of the Assembly, it is plain that a scheme of which the Federal Council did not approve might have passed the Assembly, and might be waiting for the confirmation of the Cantons and of the people. In this case however the Federal Council strongly, though in a tone of much moderation, exhort the sovereign power to accept the proposals which are laid before them. The Proclamation gives a short history of the question of revision since the rejection of the former scheme in 1872. That rejection, the Federal Council argues wit

revision in any shape was shown, it is argued, by the election a few months later of a National Council a large majority of which was pledged to revision. But the Federal Council does not make the inference which we should make from these facts—namely, that if the nation is favourable to some kind of revision, but objects to this or that proposed scheme, the right thing is to give the nation the opportunity of voting for one proposal and against another, and not to force a single vote of Yea or Nay on a mass of proposals, indicial, military, educational, eccles astical, and strictly constitutional, all at once. We have often said this before, and we are more convinced of it by reading the very Proclamation before us. The Federal Council go through the chief points of the proposed scheme, and show, what is perfectly true in the case of most of them, that much has been yielded by the Revisionist party to the other side, whether we call it Conservative or Federalist, and they call on the nation to accept the scheme in its present shape as a fair compromise. From the proposed military changes, where it seems to be generally allowed that some change is needed, the document goes on to the legal reforms, pointing out that, as they now stand, the extreme general centralization which was so much dreaded, especially in the Romance Cantons, is there no longer. The Federal Council then refer to the direct share in Federal legislation which it is proposed to vest in the people, to the great reform by which a proper Court of Law will deal with many of those appeals on which so much of the time of the Executive and the Legislature has hitherto been wasted, and to the other great reform on behalf of the proposed or Niederyelassenen.

Thus far the thing is plain sailing; many of the proposed changes are undoubtedly excellent; all are matters of fair political discussion, where no wrong is done to any one, and where the defeated side has nothing to do but to submit as gracefully as it can to the judgment of the majority. But when it gets to the religious difficulty, the tone of the Proclamation seems to change. It begins to moralize and to become apologetic, to talk about the rights of conscience of all confessions, while recommending laws which are distinctly aimed at one confession only. We turn from the Proclamation to the Report of a Conservative or Catholic meeting in the Canton of Luzern which appears in the same number of the Rund in which we have just read the Proclamation, and we cannot but feel that the malcontents—Conservatives, Catholics, even Ultramontanes, as they may be—really have a case for themselves. The Federal Council enlarge on the special importance of the religious question, how it touches the matters which are dearest and most important to man, how in such matters which are dearest and most important to man, how in such matters which are dearest and most important to man, how in such matters which are dearest and most important to man, how in such matters which are dearest and most important to man, how in such matters which are dearest and most important to man, how in such matters which are dearest and most important to man, how in such matters which are dearest and most important to man, how in such matters which one dearest and to be rights of the members of one confession from disturbing the rights of the members of another. The proceedings of the Catholic meeting at Sursee give us a comment on the way in which the actual carrying out of these principles is looked on in the eyes of one of the two great confessions between which the land is chiefly divided. They complain to be sure of other things in the new Constitution. They wish, for instance, to keep the vague requirement about "good morals" in the citizen of

Nul ne peut être contraint de faire partie d'une association religieuse, de suivre un enseignement religieux, d'accomplir un acte religieux, ni encourir des peines, de quelque nature qu'elles soient, pour cause d'opinion religieuse.

A hostile judge might easily take this to forbid any kind of spiritual censure, though surely the business of the temporal power is simply to take care that the spiritual censure carries no temporal consequences with it. They complain also of Article 50, which they say is devised in the interest of the Old Catholics. The passage to which they object runs thus:—

Les contestations de droit public ou de droit privé, anxquelles donne lieu la création de communantés religiouses, ou une scission de communantés religiouses existantes, peuvent être portées par voie de recours devant les autorités fédérales compétentes.

It is certain that we can hardly conceive such a provision as this except when controversics have arisen, such as those to which the Old Catholic movement has led. It is not the kind of provision which one would expect to find in a great constitutional pact; it reads more like an enactment made for the nonce under the influence of a momentary excitement, something like our own Ecclesiastical Titles Bill in less distinct language. It does read very much like a provision for helping the Old Catholics to get possession of the ecclesiastical property of Catholic communes. And, whether this be a good or a bad object, it is hardly the kind of object which we should expect to find aimed at in so solemn a document as a Federal Constitution. Surely, as the Constitution now stands, there is full means of appealing to the Federal power in case of any boak fide question of property which may arise between Catholic and Old Catholic claimants.

The Luxern Conservatives go on to complain of the 51st Article which, in addition to the old provision against the Jesuits, gives the Federal power the right to extend the same prohibition to other religious orders, which they say is meant to be used as a means

of getting rid of the Capuchina. If this be so, we can only say that any special or momentary object of this kind is not the proper object of constitutional legislation. They complain too of the 52nd Article, which forbids the foundation of new, or the restoration of suppressed, monasteries. Here again the question is not whether monasteries are good or bad things, but whether a Canton which wishes to allow monasteries should be hindered from doing so. Lastly they complain of the 65th Article, that which decrees the abolition of ecclesiastical jurisdir tion ("die geistliche Gerichtsbarkeit ist abgeschafft"), as to the exact bearing of which we have already confessed ourselves puzzled. In the eyes of the meeting at Sursee it threatens to hinder the exercise of ecclesiastical authority of any kind ("bedroht in dieser allgemeinen Fassung die Ausübung jeder kirchlichen Autorität"). If the Article simply means that no temporal consequences are to follow on any ecclesiastical sentence—saving of course the temporal loss which may follow on the deprivation of an ecclesiastical office—no principle can be better; but it flight be easily taken to mean something which would stand in the way of every kind of censure or rebuke administered by a bishop to an erring priest or by a priest to an erring parishioner. It is impossible not to see the spirit of all these provisions, a spirit which clearly aims at the humiliation of a particular religious body; and we cannot wonder that members of that religious body kick at legislation of this kind, especially when it comes in the shape of a Federal Constitution. All this has been brought upon the Roman Catholic body are not therefore deprived of their right to just and fair dealing. And we cannot think it just and fair dealing to put provisions of this kind, which would be harsh as a piece of ordinary legislation, in so solemn a document as the Federal Constitution. Again we ask, though it is now too late to ask, why a man should not be allowed to vote against Articles of this kind,

which are found in some other parts of the scheme?

In other respects the tone of the Proclamation is simple and dignified, worthy of an appeal made by the chosen leaders of a free people to the free people itself. There is a pleasant flavour of old times when men are addressed, not as "Gentlemen," Messieurs," "Herren," Kippon, but as "getreue liebe, Flidgenossen." And whatever glee may be said of the document, it shows that whoever is the mouthpiece of the Federal Council has not wholly turned his back on the noble tongue of his forefathers. Perhaps we might ourselves cherish a lurking wish to see the acts of the Everlasting League in the kindly Allemanian of Edlibach and the Schillings. But the Proclamation is easier to understand as it is, and it is at any rate Dutch and not Welsh. We must copy one sentence in

the original:—

Inden hierauf folgenden, eben so sorgfältig als gewissenhaft durchgeführten Vorhandlungen mussten die gesetzgebenden Räthe die Ueberzeugung gewinnen, dass wenn man zu einem gedeihlichen, in höherem Grade befriedigenden Ziele gelangen wolle, der Weg freundeldgenössischer Verständigung und bundesbrüderlicher Versöhnung zu betreten sei.

We should like to see how "freundeidgenössiche Verständigung" and "bundesbruderliche Versöhnung" would look when translated into the jargon for which some of our German friends think it fine to exchange their own glorious tongue.

JURIES.

A PRIVATE member has given notice of a Bill with reference to Juries, but it is to be hoped that the subject will be taken up by the Government. This is just one of the things which might be conveniently dealt with at a quiet time like the present, when there are no large or exciting questions to engross attention. The fatal error of the Attorney-Goueral's Bill last year was that it attempted to revolutionize the whole system. It might have been a very good Bill if we had been going to introduce trial by jury for the first time. There is no magic in the number twelve, and plausible reasons may be suggested why absolute unanimity should not be insisted on. These points, however, happen to have been settled in a particular way long ago, and it is unnecessary to disturb them. Twelve is, on the whole, a convenient number for a jury, not being too large for deliberative purposes, and at the same time affording a sufficiently broad representation of ordinary opinion. Nobody would think of extending the number, nor could it be reduced without weakening in public estimation the authority of the jury. If unanimity were dispensed with, it would also tend to diminish popular respect for and confidence in the verdict. If no point of fact, juries generally contrive to agree, and when they are unable to do so, there is usually a reason to be found for it in the perplexing contradictions of the evidence. If a verdict were to be voted by a majority, each juror would be tempted to give his vote offhand without troubling himself to argue the question in order to bring about an agreement. The Chief Justice in his summing-up in the Tichborne case made some researchs on this point which deserve to be remembered. He told the jury to bear in mind that the great purpose of trial by jury was to obtain unanimity and put an end to further litigation; and that each juryman was bound to address himself in all humility and all difficence in his own judgment to the tank he had to par-

the rest of the holy were able to put forward, and not to allow any self-conceit or vain presemption of superiority on his part to spend in the way. It may be said that the verdict of a majority hild paralyse an obstinate minority, but on the other hand it self-defended an ecourage dissession by relieving it of the grave responsibility which now attaches to it. No serious practical grievance is connected either with the number of the jury or the unanimity demanded from them; and it is always undesirable to meddle with old traditions and customs, unless there is a strong necessity for it. It is not surprising, therefore, that there should have been a general indisposition to have anything to do with a measure which contained so many innovations as Sir J. Coloridge's Bill. There is no reason, however, why the simple and practical reforms which

contained so many innovations as Sir J. Coleridge's Bill. There is no reason, however, why the simple and practical reforms which are really urgently required should be mixed up with experimental questions affecting the traditional constitution of the jury. It cannot be denied that at present jurymen are not treated considerately or fairly. Attendance on a jury cannot be regarded as an attractive occupation, and it is impossible that it can be made fully remunerative to all who are engaged in it. It must always remain a service to the public rendered by private citizens at more or less cost and inconvenience to themselves. It is obvious, however, that the cost and inconvenience ought to be reduced to the lowest possible point. The recent memorial of the jury on the lowest possible point. The recent memorial of the jury on the Tichborne case brings out very strongly one of the defects of the existing system. They have each received three hundred guineas for attendance at a trial which occupied the greater part of a year. attendance at a trial which occupied the greater part of a year. By law they had no right to any remuneration whatever, and the Treasury probably thought that, as an act of grace, the sum which they allowed was very liberal. The jurymen, however, were under the impression that they were to be paid at the rate of two guineas a day, which would bring their claim up to 376 guineas for the whole trial, as the Court sat 188 days. An application for this rate of remuneration was made by the jury in court at the end of May; the Judges said they thought it was not unreasonable, and the counsel in the cause assented. Of course the Judges have no authority to bind the Treasury, and it appears that the officials of this department have no formal record of what passed in court, and repudiate the understanding which was then supposed to have been agreed to. Three hundred guineas may or may not be an adequate roturn for the hundred guiness may or may not be an adequate roturn for the personal sacrifices which the jurymen had to make; but nothing can be more unseemly than that there should be any higgling on such a matter. There ought to be no room for higgling. What should be paid to jurymen ought not to be a matter of favour on one side or of bargaining on the other. It should be regulated by fixed and published rules, so that there should be no misappre-hension on the subject. Jurymen are quite as much an essential part of the judicial establishment as the judges themselves; and they ought to be recognized as such, and provided for in a regular way. What would be said if, in the middle of a trial, the judge were to interrupt the proceedings by a pitcous appeal for an increase of salary, and beg the jury to endorse his claim. It would at once be denounced as scandalous and indecent that it should be possible for such a question to be raised in this manner. The judges are very properly paid according to a fixed scale of salaries, and there ought also to be a fixed scale, which should not be departed from, for the remuneration of jury-It is true that special jurymen are entitled to a guinea fee, but they are occasionally, we have heard, subjected to attempts on the root of suitors to heat down their terms. There are on the part of suitors to beat down their terms. There are persons who make a business of serving on juries who are quite willing to fall in with this practice; but it requires no argument to show that bargaining with a jury is quite as improper as bargaining with a judge. Common jurors are not entitled to any fees, although various small sums are usually paid to them. It may be questioned whether, if any jurors should be bound to serve for nothing, it should not be special jurors, who are men of some means, rather than common jurors, who are comparatively poor men, to whom the loss of a day's work is a serious deprivation. men, to whom the loss of a day's work is a serious deprivation. The Tichborne jury have been paid at a higher rate than would be allowed to special jurors in an ordinary case; but it can hardly be said that the two guineas which they claimed is an excessive compensation for neglecting private affairs in order to discharge a public duty. The aggregate cost of the jury in this case amounts, no doubt, to a formidable sum; but a trial of this kind is altogether out of the ordinary way. Most trials are concluded in a day or two, and a more just and liberal treatment of jurymen in ordinary cases would not amount to a serious tax either on suitors or on the

two, and a more just and liberal treatment of jurymen in ordinary cases would not amount to a serious tax either on suitors or on the public. It is certainly desirable that the expenses of legal proceedings should not be unduly increased; but, on the other hand, those on whom the burden falls of serving on juries have also a claim to some consideration. In strict logic it might be argued that the State ought to bear the expense of providing jurors as well as judges; but at least jurymen ought not to be neglected, from whatever source their payment may be derived.

It is unnecessary to quote Blackstone in support of the proposition that the participation of the public in the administration of justice is of the utmost importance. Chief Justice Cockburn lately expressed the conclusion on which all authorities are agreed when he said that a jury assisted by a judge is a like better tribunal for the clucidation of the truth than a judge imassisted by a jury. But if juries are to be employed it is important that they should be encouraged to discharge their duty willingly and cheerining. It cannot be said that the treatment to which they are at measure subjected is calculated to produce these results. Juross

ought to receive some moderate renuncration according to a fix scale, not for their services, but for the inconvenience, and perha-loss, to which they are put in withdrawing themselves from the loss, to which they are put in withdrawing themselves from their private business; and common jurors are, to say the least, as fully entitled to this compensation as special jurors. Again, the accommodation at present provided for juries is alamefully deficient; they have to sit on hard wooden scats, penned up in narrow boxes, and packed so closely together that they can searcely obtain the relief of a change of posture. There is no reason why a juryman should not be allowed to make himself as comfortable as a judge, who has a convenient desk, a comfortable easy-chair, and as many cushions as he likes. Lefore a juryman is admitted to the box, he has probably to spend hours and perhaps days waiting to be called in the crowded and stifling back benches of the Court. This is not exactly, one would say, the best sort of preparation for the calm and unruffled exercise of judicial functions. When at last his turn comes to assist in the administration of justice, he finds himself sick, sore, and weary, irritated by the wanton tortures to which he has been subjected, and faint with mere physical exhaustion and fatigue. Nothing, in fact, can be more crued and barbarous than the whole of the arrangements for the accommodation of jurors in court. If a box is provided for them, that is thought to be enough. Sir J. Coleridge last Session stated that it was notorious that great corruption was practised in sumamoning jurymen, and that while some persons escaned, others were called was notorious that great corruption was practised in summoning jurymen, and that while some persons escaped, others were called much more frequently than they should be. The changes which he proposed in order to cure this evil would no doubt answer the purpose, and there is no reason why they should be connected with any alteration in the constitution of the jury. Service as a juror any alteration in the constitution of the jury. Service as a jury is one of the few obligations, apart from the mere payment of rates and taxes, which now fall upon an ordinary citizen. He need not be afraid of being pricked for shoriff, and his chance of being drawn for the militia is equally remote. It is a good thing that private persons should occasionally be called to render personal service for the benefit of the community, but it is equally abaurd and unjust that the service should be made wantonly irritating and oppressive.

THE ALLIANCE AGAIN.

THE atmosphere of the new Parliament is not likely to favour crotchets. The United Kingdom Alliance has been received with so much courtesy and patience by the Home Secretary that we are reminded of the late Lord Campbell at the Old Bailey ordering a chair for a murderer when he afterwards sentenced to be hanged. The deputation of the Alliance successively delivered the same speeches that have been heard from them a hundred times before. Mr. Cross is used to listening to counsel at Quarter Sessions, and will not therefore be easily disturbed at Quarter Sessions, and will not therefore be easily disturbed by long-winded oratory. It is all in the day's work, and Mr. Cross will earn considerable reputation by his labour if he is able to repair the blunders of the last Parliament in reference to the sale of intoxicating liquors. We ought not to represent, however, that there was no novelty in the speeches of this deputation, for one member of it propounded a view of the method of successfully conducting International Exhibitions which certainly we never met with before. "The Great Exhibition of 1851 was the only one in which intoxicating liquors were not sold, and it was a remarkable fact that this was the most successful of and it was a remarkable fact that this was the most successful of all Exhibitions." It probably did not occur to the speaker to reflect that repetition becomes tedious, and that it is possible to have too much even of such good things as International Exhibitions and speeches from members of the Alliance. If, however, in course of years, South Kensington should be at a loss for novelty, the managers can if they please announce an exhibition upon tectotal principles. It is possible that the managers of the Crystal Palace may be unwillingly compelled to make an experiment of this kind, and, if they do, we shall see how it succeeds. In that case, we shall expect to see a grand exhibition of plass and stone bottles in the grounds. The same speaker touched upon the difficulties experienced by those who were endeavouring to establish houses where non-intoxicating liquors were sold through the presence of licensed houses. But we venture to say that this difficulty may be overcome by perseverance. It is not merely that the publichouse is attractive, but the coffee-shop is positively repulsive. The drink, whether it be called ter or coffee, is about nable, and the tables and benches are arranged so as to inflict the utmost possible discomfort. If capital could be judiciously expended in this branch of business there are fortunes to be made out of it. A large capital has been expended in rendering publichouses attractive to a taste which we admit is coarse and barbarous, and the Alliance desire to destroy this capital in order to make clear way for their own experiments. But they must be content to work under competition, and if they will work steadily they will succeed. The inhabitants of London will not fail in the long run to appreciate and reward attempts to promote their comfort and convenience. A single well-conducted coffee-house in a busy part of London would do more good to the cause of temperance than all the speeches that were inflicted on the House Secretary, and all the reports of those speeches that the Alliance can print and circulate.

The Alkiance Nove has, however, lately entered upon more markful work by collecting and publishing opinions of medical man

on the subject of intemperance. There is no doubt that very many persons in the upper and middle classes of life take more stimulant than is good for them, and they are encouraged, or at least not discouraged, in doing this by their medical attendants. In almost all popular novels "soda and brandy" is largely consumed, and upon the stage the consumption of liquors must be no inconsiderable item of expenditure. The conduct of the Alliance towards the mass of society resembles that of the Puritans after the restoration of King Charles II. Instead of mingling with the world, and trying to infuse into the light-hearted Cavaliers a wholesome savour of their own gravity, they stood aside and scowled and awaited Divine judgment on a generation which had flung aside the fetters they imposed. The gloom, pertinacity, and long-windedness of the Puritans are well represented in the leaders of the Alliance, and we are not concerned to deny that those qualities are sometimes useful, and at most only troublesome. Unless it be the Home Secretary, no man is compelled to listen to their speeches, which are perhaps more tedious than anything that has been uttered since persecution ceased to stimulate the eloquence of the Covenanters. But it is a pity that they cannot be shorter and more practical. Instead of trying to shut up the grocers' shops as regards the sale of wines, it would be easy to show that many of these grocers soil articles which are necessarily deleterious. Without prejudice to the question whether good wine is a good thing, we may admit that bad wine is a bad thing, and that most of the wine sold by retail is very bad indeed. Still the human system may become used to bad wine, and may take a good deal of it without mischief. One of the doctors quoted by the Alliance News said, "Patients tell me they cannot do without their glass of wine every day at 11 o'clock. He thinks that the wine did her no good, and that if she had chosen to try she might have used herself to do without it. He admits that she would have bee

their work, and it is to be feared that most of them look forward to a heavy drinking bout when it is finished.

This suggests a remark applicable to the cases brought forward by the Alliance of estates or districts in the United Kingdom where prohibition is patiently endured. Did they never hear of the soldier who said that he did not care for his pint of beer a day, but liked to have a "good drunk" once a month? Do we not know of people who live irreproachable lives in the towns where all their butgoings and incomings are known, but occasionally and unostentatiously disappear? The soldier of unimproved times been the hardships and privations of the siege in hopes of the unbridled license which was to follow the successful assault. It is easy to be self-denying stogether. Indeed the water-drinkers would hardly deny, and some of them take pleasure in asserting, that they eat more and with greater relish than the drinkers of beer and wine. One might readily collect medical opinions that many people eat too much, and do themselves as much harm thereby as others do by drirking. Mr. Stanley, when he travelled in search of the lamented Dr. Livingstone, made tea and collee his principal drinks, partly porhaps for health, and partly for convenience of carriage. But he carried a bottle of champagne all the way from the coast to Ujiji that he and Livingstone might drink together in worthy liquor when they met. This fact alone ought to convince the Alliance that they are fighting against human nature. Many of their supporters probably think that, although prohibition may never be carried, yet the organization is valuable to procure restraint. The objection to this view of the matter is that they have provoked an organization on the other side as powerful and determined as their own, and they make the Licensing Acts a subject of the highest political importance.

portance.

The best service that reasonable men can render to their country at present is to restore this question, if possible, to its proper place. The Home Secretary may do at least one good thing easily, and that is to render the licensing law intelligible. Those who expect relief from irritating prohibitions will do well to remember that the Government may not be prepared to undo that which they would not themselves have done. They are watched by a band of implacable zealets who will agitate to the utmost on the smallest pretext. We have no scruple in saying that some of the changes made in London under the last Licensing Act are inconvenient and annoying, but it does not necessarily follow that we should advise further changes. A bad law well administered may be tolerable, and the publicans will do well

to remember that they have a clear gain in substituting Mr. Orose for Lord Aberdare at the Home Office. Only let it be understood that there is to be an end of niggling both in making the law and administering it. The Alliance may, however, disabuse their minds of the notion that they are going to shut up the grocers. We may have our dyn opinion as to the quality of grocer's sherry, but people are used to it, and will have it. We think also that the superior class of mechanics who are getting high wages will enjoy them after their own fashion either in their own homes or at public-houses. Indeed, we may safely leave the Alliance to a hopeless contest against the tendencies of the age. Archbishop Manning, who is one of their most distinguished leaders, thinks that if a public-house were set up in a fashionable West-End street, it would speedily be got rid of. But if he will look rather more closely at the West-End of London, he will find that public-houses of rather superior quality are sufficiently abundant; and if he will taste the beer, he will find it excellent. In fact, the customers of these houses will have comfort and quality, but they do not insist on having a public-house built in the middle of Grosvenor Square—perhaps for this reason among others, that it would cost too much money to keep up.

POLITICS IN THE ISLE OF MAN.

THE Isle of Man has undergone a sort of coup d'état in which the Lieutenant-Governor humbly imitated Mr. Gladstone. The island is, or lately was, engaged in a general election, and we have examined the columns of Mona's Herald to discover what are the questions likely to be agitated in the House of Keys. It appears that there are in Man the Government and the patriotic party, and the principal topics of discussion are finance, the franchise and ballot, and the Permissive Bill. A candidate on the patriotic side was reported to have declared that he was "opposed to taxation of every kind," but he explains that he was misunderstood, and only pledged himself to keep a sharp eye on expenditure. We gather that representative institutions are only eight years old in Man, and were conferred to facilitate taxation. The popular journal eloquently warns Manxmen against the extravagance of their Government, which has been lately shown by spending 700l. in sinking a well to supply the pump of a Lunatic Asylum with water. This sum is equal to a rate of a penny in the pound for the whole island. If water is so costly, we should not think that the Permissive Bill would make much progress. Indeed one of the candidates for election said, with laudable frankness, that he believed it would be just as possible to put a law in force that the lads should not kiss the lasses. The revenue of the island has been mortgaged for harbour works, of which the cost, as usual, largely exceeds the estimate. Probably the works were considered necessary to render the island accessible by visitors; and the practical question appears to be whether the visitors spend enough money in the island to make it worth while to build harbours for their reception. Little is likely to be got out of dues on vessels entering these harbours, because, if those vessels bring goods for consumption in the island, the dues are merely added to them in another. At all sea-side places as much is got out of visitors as possible, and no ingenuity can get more. It appears to

A candidate for the town of Ramsey bearing the historic name of Christian may be taken as an example of what we should call among ourselves a Liberal in politics. In the first place, he believes in the power of legislation to advance the moral and material advantage of a community, and it is decidedly comfortable for a member of Parliament to be able to believe in the efficacy of the work which he himself shares. Since the election of the first reformed House of Keys more has been done, he says, for the welfare of the country than during any former similar period of time. There are, we believe, enthusiasts among ourselves who are capable of describing in similar terms the course of British legislation since 1868, to which, however, cold-blooded observers have applied the phrase "meddling and muddling." As regards the future of the island, the Liberal programme includes increased control by the House of Keys over expenditure, which may perhape not be incompatible with an increase of the expenditure itself. A better provision for the relief of the poor is promised, which, while meeting the fair claims of the indigent, shall avoid the cost and westeful management of England. This sounds well; but when each lunatic in an asylum costs 40% a year, and 700% is spent upon a pump, we doubt whether economy in pauper management is likely to be attained. Another proposal is certainly in one sense of the word economical; but we should be sorry to see it included in the programme of any political party among causalves. "The entire suppression of the Insular Volunteer force, which involves a large annual grant and is interly useless," is suggested as a step towards "the wise administration of the sarghus revenue" of the island. We do not know whether the Idbard party in the siland. We do not know whether the Idbard

strength of Britain or the forheavance of Britain's enemies; but we should have thought that an efficient Volunteer force would be regarded by patriotic Manxmen as the best viliant of the moral and material progress of their community. In whill shad containing several forts and castles such a force will find itself under the best conditions for effective service, and if the Volunteer force cannot be placed on a satisfactory footing, we shall have small faith in the capacity of Manxmen for popular government. Another candidate places himself on the simple platform of "No more Taxes," and intimates his opinion that "our representative House of Keys" has been sailing for the last seven years on the wrong tack. He thinks that the utility of every measure to be proposed in the new House may be tested by this rais, "No more Taxes"—which has at least the merit of simplicity. If he should be sent to the House of Keys he would say to the talking members of it, "Very good, gentlemen, I will sit and

rale, "No more Taxes"—which has at least the merit of simplicity. If he should be sent to the House of Keys he would say to the talking members of it, "Very good, gentlemen, I will sit and listen to you, but no more taxes."

The island in which these momentous questions are agitated is about thirty miles long and from eight to eleven miles wide. It was, as many readers will remember, held under a Royal grant by Percy, Earl of Northumberland, and on his attainder for treason was granted by King Henry IV. to William Stanley and his heirs, afterwards Earls of Derby, in recompense for aid in putting down the wards Earls of Derby, in recompense for aid in putting down the rebellion of Henry Percy and his son Hotspur. James, Earl of Derby, a devoted adherent of King Charles I., was taken prisoner Derby, a devoted adherent of King Charles I., was taken prisoner and executed at Bolton in 1651. His wife Charlotte, of the French house of La Tremouille, defended Castle Ruthin, in the Isle of Man, to which she retired, until Christian, on whom she Isle of Man, to which she retired, until Christian, on whom she relied, and who had the command of her forces, capitulated to the generals of the Parliament. The island was granted by the Parliament to Lord Fairfax, whose daughter married the Duke of Buckingham. But King Charles II., on his restoration, gave the island to the Earl of Derby, son of the Earl who had been beheaded. These are the historical facts on which Scott founded his novel Peveril of the Peak. "King of Men," says the young Earl of Derby, yawning over a page of Homer; "I hope for Agamemnon's sake that he had a merrier office than being King of Man." The Kingdom, or rather Lordship, of Man passed from the Earls of Derby to the Dukes of Athol, and was sold by them in the last century to the King of Great Britain. Perhaps, if representative government and newspapers had been invented in the seventeenth century, the Earl of Derby would not have had to complain of the dulness of the office of King of Man. The Lieutenant-Governor will shortly meet the House of Keys, of which some members are pledged to the broad principle of "No more Taxes," while members in general are prepared to insist on more Taxes," while members in general are prepared to insist on economy in harbour works, coupled with suitable provision for the trade of the particular town which the member happens to represent.

Francoux unlike sharity does not begin at home. The present. Economy, unlike charity, does not begin at home. The young Earl of Derby supposed that the three legs without a body were devised as the most preposterous device to represent his most absurd Majesty of Man. Perhaps they might be taken as a symbol of an island which has three or more expensive harbours, and almost no area of land to support producers and consumers. In old times the men went fishing, and the harvest, such as it was, had to be reaped by women. Farming is still, we believe, the most important occupation of the island, and we observe that a candidate takes credit to himself for knowing nothing about agriculture, and therefore possessing a mind likely to be receptive of the views of his constituents. Our own notion is that the Isle of Man prospered in a certain sense as long as it was a focus of contraband trade and afforded protection to debtors, outlaws, and smugglers under the rule of its hereditary lords. But it is hardly conceivable under the rule of its hereditary lords. But it is hardly conceivable that any trader should carry goods thither for the mere purpose of carrying them away again. The Manxmen appear to have got Home Rule if they can make anything of it, but it is to be feared that neither Imperial nor local Parliament can create trade by the simple process of building harbours. We see advertisements of several hotels and lodging-houses, and we assume that the ordinary sea-side lounger is as well off in Man as anywhere else, when he gets there; but then getting there is the difficulty. Our affaminate generation complains even of the passages—fruidulently ordinary sea-side lounger is as well off in Man as anywhere else, when he gets there; but then getting there is the difficulty. Our effeminate generation complains even of the passage—fruudulently represented by steamboat managers as lasting only eighty minutes—from Dover to Calais, and why should they go to the Isle of Man by water when they can go to other sea-bathing places by land? After all, one watering-place is as good as another and better. You want a beach and pier to lounge upon and a ruined castle for picnics and flirtation, and these the Isle of Man doubtless supplies. Perhaps, as the land is chiefly farmed, the trout streams of which Scott speaks have not been poisoned by mines or manufactories. But if there are no fish to be caught, there are doubtless young ladies to be courted, and we can only hope that young gentlemen who visit the island may have as good a time as Julian Peveril had with Alice Bridgenorth, and may not feel their ardour so disagreeably chilled as his was when it comes to "speaking to paps." An account of the Isle of Man written five-and-thirty years ago states that all its laws are contained in one small volume, and that there are no barristers and few attorneys, as suitors generally plead their own causes. It is to be feared that the progress of civilization has subarged the statute-book since that them. There appears, however, still to preveil great simplicity of manners, and the high-landed Counters of Derby who caused Christian to be shot would, we think, have sympathized with the Vicar of a parish who lately holescockinged a member of his School Counters of their case, but it was known at an the Vicar regarding

from the complainant an undertaking that he (the Vient's limits he at liberty to flog him when he gave the Vient the lie direct. The High Bailiss, with a lamentable insensibility to the value of this system of Church discipline, bound the Vient over to keep the peace, and in default of bail committed him to prison. It appears to be the practice to elect ministers—but probably only Noncomformists—to the House of Keys. This is shown by the fact that a deputation waited on the Rev. W. B. Christian to ask kim to become candidate for the town of Ramsey. We cannot help wishing that this pugnacious Vicar could be sent to the same Assembly and could apply the reasoning which he used in his own School Committee. If any member of the other side contradicted him in the heat of debate, the reverond member could produce his whip and bring the argument to a summary conclusion. In such presence the only safe line of debate would be to repeat "No more Taxes." Even Sir Lucius O'Trigger could hardly make a quarrel out of that.

REVIEWS.

THE INDIAN ADMINISTRATION OF LORD ELLENBOROUGH.*

WE must confess to a tendency to projudice at first starting against a book which is printed throughout in inverted commas. The use of these marks in printing is to distinguish between original writing and quotation, but one might as well use inverted commas in writing a letter as employ them throughout a volume which consists entirely of letters. Otherwise no fault can be found with the editing of this volume. To have appended a really useful commentary in explanation of the correspondence of which it is made up would have required an unusual degree of knowledge of the subject-matter. Lord Golchester has therefore wisely chosen to print the correspondence without note or comment of any sort, and the letters are so clear both in style and matter that they could hardly have been better meading if prepared specially in view to publication.

spondence of which it is made up would have required as usual degree of knowledge of the subject-matter. Lord Golchester has therefore wisely chosen to print the correspondence without note or comment of any sort, and the letters are so clear both in style and matter that they could hardly have been better reading if prepared specially in view to publication.

The first, and nearly a third, part of the volume consists of letters addressed by Lord Ellenborough to the Queen during his administration of India, and which certainly assume a remarkable degree of knowledge of the subject on the part of the illustrious recipient. We believe that such narrative letters are still submitted by the Viceroys of India, although not in the same degree of fulness and frequency as these of Lord Ellenborough; but after one's puriosity is satisfied by learning the terms employed by a Governor-General when addressing Royalty, the reader will turn with greater interest to his correspondence with the Duke of Wellington, Lord Ellenborough's share in which contains a consecutive and fairly complete account of his proceedings. The correspondence turns of course almost wholly on operations of war, for with these Lord Ellenborough was mainly concerned, and the reader will probably at once look to find what was the Governor-General's confidential at once look to find what was the Governor-General's coindential opinion, on his arrival in India, of the situation in Cabul. And thus much appears plain, that Lord Ellenborough failed, like many others, to see through the mists which surrounded it after the so-called destruction of the British army. There seems to have been no clear perception on his part of the fact that as a military catastrophe the loss had, been greatly exaggerated, that the larger part of our forces in that country were will intest and in good ages and that the diseases which has some still intact and in good case, and that the disaster which had over taken the remainder was not due to any merits of the enemy, but to the extraordinary imbecility displayed on our side. Further it does not appear that Lord Ellenborough at all apprehended the paramount necessity for re-establishing our reputation by vigorous retaliation and recovery of the ground which we had lost—in fact, by making the advance which was afterwards carried out, All his by making the advance which was afterwards carried out. All his aim seems to have been to withdraw the remaining garrisons as quickly as possible. It is not of course at all wonderful that the (lovernor-feneral, arriving a stranger to the country, should be infected with the despondency which at the time possessed almost the transfer to the country and the critical despectation. whole Indian service; but certainly his conduct at this crisis does not exhibit the superior military foresight which his admirers have claimed for him. And if Lord Ellenborough at this time did not rise higher than those about him in his views about the proper course to pursue in Cabul, he seems to have been equally blind as to the extraordinary risk run from the establishequally blind as to the extraordinary risk run from the establishment of our faulty base of operations beyond the India, with the Sikh nation between our troops and their supports. It was not in reality the Afghans, but a rising of the Sikh soldiery—even then turbulent and mutinous—in our path that was to be most feared. Had this happened not a soul could have excaped from the force beyond the India, and we should have gone magner to losing India than even in the Mutiny; but Lord Ellesborough appears to have had scarcely a suspicion of the danger. He like every one else, underrated the military power of the Sikha, although at a later period he foresaw clearly the coming struggle with them.

On the waved angestion of Lord Ellenborough's action regarding

On the vexed question of Lord Ellenborough's action regarding the Eritish prisoners in Afghanistan these letters throw a good deal of interesting light, while confirming the account made public

^{**} History of the Indian Administration of Lord Ellerborough, in his Chromponalates with the Date of Wellington. To which is prefixed, by per-wiseless of the Mejesty, Lord Ellenborough's Letters to the Queen during that puthod. Edited by Lord Colchester. London: Eschard Bentley &

in Sir John Kaye's history of the war. In his letter to the Queen of the 21st April, 1842, he reports having directed the retirement of General Nott on Sukkur and the Indus, and states the point consideration to be whether, the troops having been withdrawn from a state of peril, they should again advance upon Afghanistan by a new and central line of operation, or whether it would not be better to fall back on India and do nothing more. There is not a word about rescuing the prisoners. Again, in a letter to the Duke of Wellington written in June 1842 (after Pollock had relieved Sales at Jellahabad), he says that, besides the difficulty of moving Pollock's army (not forwards but backwards), from want of transport.

A greater difficulty exists in the influence of the political agents, the men anxious for revenge, and the others naturally clinging to the hope of relleving the prisoners. All these, since his arrival at Jelialabad, have got round Major-General Pollock; have led him to misunderstand the plainest instructions, to miscalculate the value of objects, and to act on the passion of others, not upon his own reason.—P. 253.

From this Lord Ellenborough was evidently opposed at that date to making any effort in favour of the prisoners. And in a letter to the Queen written in the previous month he reports that, while he has authorized the exchange of prisoners, he will not agree to any ranson, adding that "the same care must be taken in offecting the release of the lowest sepoy as for effecting that of the first European" (p. 32). A very proper sentiment, if any effort had been made to obtain the release of either. It must in fairness be added that the Duke of Wellington himself writes in reply:—

Great interest is felt in this country for the fate of these prisoners, particularly for the ladies; and I would incur some risk and some expense to save them, if any such prospect or opportunity should offer. But it must never be lost sight of that even a successful operation—an attack upon the point of successful operation—an attack upon the ment, the surrounding the village or town in which they should be residing, supposing them to be in such locality—would not of necessity give you possession of their persons. On the contrary, such a course might compet those who keep them as prisoners immediately to put them to death.—I'. 273.

The Duke certainly goes on to say that the presence of a victorious army in Afghanistan might exercise a useful moral effect, and influence negotiations for the surrender of the prisoners; but his cold and cautious advice may fairly be deemed to amount to approval of what was generally considered Lord Ellenborough's unworthy action in the matter at first. However, all's well that ends well. Nott and Pollock were allowed to go to Cabul, which they did with trifling resistance and astonishingly small loss; and by a piece of fortunate treachery the prisoners were restored, and the army was drawn off from Afghanistan to be received in triumph by the Governor-General at Ferozenore at the head of the army by the Governor-General at Ferozepore at the head of the army of reserve.

We have not space here to discuss the conquest of Scinde, which followed next. The history of this transaction has already been given to the world in an authentic form, and the present contribution is valuable chiefly for the light is throws upon Lord Ellenborough's own view of the matter, and the transparent sophistry with which he justifies to his own mind this act of spoliation. So long as our armies were beyond the Indus, and it was all-important to retain Scinde as a safe base of operations, we spoke the Ameers fair. As Lord Ellenborough says at several places in this correspondence, one thing at a time; but, the danger over, there was an immediate change in the Governor-General's tone, and certainly a better example of how to pick a quarrel with a weaker party is scarcely to be found even in Indian history. Given a Governor-General vanigherious, an army looking for employment, and a company to the internal control of the int trovernor-treneral vanugiorious, an army looking for employment, and a general burning to distinguish himself, and the issue is soon arrived at. The politicals, that is, the men who knew the country, the people, and their language, are discredited; negotiations are entrusted to a general ignorant on all these points; and the American are soon bullied into fighting, which they did gallantly enough, and finally their country is taken from them. That the american of Scinde was politically advantageous to the British is little doubtful, and the recons of the general way have benefited by the change and the people of the country may have benefited by the change, but that the proceeding was quite unjustifiable hardly admits now of doubt. It is an amusing illustration of the power of self-deception that we find Lord Ellenborough descenting with satisfaction on the comfortable state in which the Ameers find themselves in their exile on the wilds of the Hengal frontier, so comfortable, indeed, that they are thinking of sending for their wives and

families.

Scinde conquered and the China war concluded—a quarrel with the picking of which Lord Ellenborough had nothing to do, but which he followed up with great energy—there came next the brief and decisive campaign of Maharajpore. It seems very doubtful if this war could have been long staved of by any degree of caution, while there can be no doubt as to the wisdom of sairing any fair opportunity to suppress a powerful and scarcely governable military force which had risen up in the centre of the Empire, so that we might be left free to prepare for the coming struggle with the Sikha. That this struggle was inevitable Lord Ellenborough saw clearly enough; indeed his letters are full of scarcaces to the subject, while it is to be inferred that, if he had remained much longer at the head of the Indian Government, we should have advanced into the Panjab to put down the Sikh army, instead of awaiting its attack on our side of the Sutlei. In that case, by choosing our own time we might have been better that case, by choosing our own time we might have been better prepared, but the Sikhs fighting in defence or their country would probably have shown even a better front than they actually did, while clearly Lord Ellenborough did not appreciate their fighting qualities at their full value; although it should be in fairness addled that closer observers, including such a man as Sir Henry Lawrence who had had ample apportunities of becoming acquainted with them, were no wiser.

Lord Ellenborough's recall was due not so much to disappre bation of the annexation of Scinde as to the personal animal excited against him in the Court of Directors. The Govern General, as is well known, made a dead set at the Indian Civil Service, openly expressing his preference for military officers and courting the popularity of the army at the expense of civilians. This of course was to would the Directors in their tenderest point, for the Civil Service was the home of their offspring; but he also offended them by writing direct to the Transl of Courted instead of the characteristics. them by writing direct to the Board of Control instead of to the Secret Committee of the Court (which was in reality the Board under another name), by omitting to communicate to his own Council his proceedings while absent from them, and generally by overriding rules and disregarding official etiquette. Considering the composition of the Court of Directors, even nominal subordination to such a body must naturally have been galling to a proud and able man. Lord Wellesley chafed under it as restlessly as did Lord Ellenborough, and made his relations with these a source of continual vexation to himself. The wise Duke, however, in these letters continually advises prudence, concilistion, and adherence to prescribed form. Thus when Lord Ellenborough, in writing to him, pleads urgency as a reason for incurring expense for barracks and other objects without the previous sanction of the Court, the Duke replies :-

I anxiously wish that you had followed the course pointed out by your own regulations in carrying into execution these measures, for I am certain that it is yourself that, in the year 1830, made the regulation to which the Court of Directors refer in their Report, forbidding the execution of any work without their previous sanction which should cost more than resources. I am aware that some inconvenience might have been folt, and some additional expense incurred, by the delay for a few months to execute these works, till the consent of the Court of Directors could have been received. But I have sufficient experience and knowledge of these matters sions.—1'. 374.

This was sound advice, which others besides Lord Ellenborough may take to heart with advantage; but indeed it is not necessary to override the authority of one's superiors in order to exercise authority oneself. No Governor-General ever wielded more absoauthority oneself. No Governor-General ever wieded more assolute power than Lord Dalhousie, and none over acted more constitutionally or within rule. His demeanour to the Court was always scrupulously deferential, while, by carefully bestowing a liberal share of the good things at his disposal on the sons and relatives of individual Directors, he made himself personally extremely popular with them. The Scotchman was thus wiser in extremely popular with them. The Scotchman was thus wiser in his generation than the Englishman. But Lord Ellenborough's vanity exhibited itself in general disparagement of almost all who served under him. According to him his great deeds were always performed with indifferent tools, to the greater merit, of course, of the master workman. Thus of Nott he says (p. 252), "I regret to say that in Major-General Nott I do not entertain the smallest say that in Major-General Nott I do not entertain the smallest confidence as an officer. He is a brave man, but his own troops do not respect him as a general." (It is proper to add that he afterwards took a juster view of Nott's qualifications.) Of Pollock he writes (p. 257), "I cannot make a general, and it [the army] wants that more than anything else . . . If he had any real mind he would not be in the hands of the boys about him." The politicals, who, whatever their faults, were certainly the picked man of the army, are distincted continuously, whenever referred to as a hardwards. their faults, were certainly the picked men of the army, are dismissed contemptuously whenever referred to, as a harebrained lot without sense or discretion, and especially obnoxious because holding the Afghans cheap. As for the services generally, "there is a sad want of business-like habits everywhere. Men work but to small account. I have no assistance" (p. 445). Of his Council he can hardly speak too contemptuously; and when, acting on the Duke's advice, he returned to Calcutta to rejoin his Council, he writes after a month's residence there (p. 384), "The experience of that time satisfies me that, although the communications rience of that time satisfies me that, although the communication necessary with the Council consume time and delay business about twenty-four hours at least, more commonly forty-eight hours, they do not in the slightest degree affect the ultimate decision." As if not in the singulest degree affect the ultimate decision." As if in ninety-nine out of a hundred cases that come before a Cabinet or a Council a delay of two days was of the smallest importance. This is an amusing illustration of the Governor-General's vanity, not to say common sense. Lord Dalhousie never completined of his tools, most had he occasion to do so. In his day the Indian services were found equal to any demand made on them.

(To be continued.)

PARKER'S INTRODUCTION TO GOTHIC ARCHITECTURE.

THIS new edition of Mr. Parker's little book has b a new work as compared with the editions of 1849 and of 1861. In all its stages it is a curious study. No man knows the details of medieval architecture in England and in a large part of the Continue to better than Mr. Parker. No one has manufacely given time, energy, and money for the advancement of his favourite study. Of English demestic architecture Mr. Parker is coefficiently

An Introduction to the Study of Gothic Architecture. By John tor, C.R. Paurth Edition, Revised and Enlarged. Online and Loss Purhar & Co. 1974.

the measure. We listen to him when he explains a house as we listen to Mr. Chirk when he explains a castle. And we listen to him just as much when he explains a church, so long as he listes to its details and to the dates which are proved by the inse of such and such forms of morddings and tracery. It is when the subject calls for anything like historical knowledge or artistic perception that Mr. Parker breaks down. And this is the perception he represented because in each of the changes which his perception that Mr. Parker breaks down. And this is the more to be regretted because, in each of the changes which his book has gone through, he has clearly striven to widen and savengthen his ground. The book started from a narrow insular besis; it was all about England. Mr. Parker has been constantly putting in matter bearing on the architecture of other countries; but it all remains in the form of additions cleaving on to the original atracture; it has never been really worked into the older fabric. In that it could not really be worked in without pulling the whole fabric down and rebuilding it. A book which older fabric. In fact it could not really be worked in without pulling the whole fabric down and rebuilding it. A book which fiegan as a mere treatise on English architecture cannot become a treatise on architecture in general merely by sticking on sections about France, Germany, and Italy. Mr. Parker has got together a great number of very useful facts about Continental as well as about English architecture, but he fails to greep the links which tie all the various forms of the art together. No man has a keener power of observation than Mr. Parker, even if his observation is a little too much under the sway of fancy; only, from want of historical and artistic range, he does not know what to do with his facts. He nowhere gives any clear sketch of the history of the various forms of mediaval architecture. The history might possibly be picked up by scraps here and Thus, for instance, Mr. Parker remarks that in many parts of Germany, in the Royal Burgundy, and in the Pyrenees, buildings are to be found very like the "Anglo-Saxon" buildings of our own island. He also notices the growth of the Norman and some of the other local forms of Romanesque. But he nowhere puts the two things together; he nowhere brings out the very short and very clear history of Romanesque architecture in Western Europe namely, that up to the eleventh century there was only one style, the direct imitation of Italian models; that in the course of the eleventh century various local styles grew up in Italy, Gaul, and Britain, while Germany clave to the elder style and kept on developing and improving it till it gave way to the Gothic in the thirteenth century. This is really the whole story, and it is a very simple story; but in Mr. Parker's little book, so far as we find it at all, we find it only piecemeal. Indeed, from the title which the book still keeps, a clear and scientific sketch of this kind could hardly be looked for. It is still called, by the title of five-and-twenty years ago, an Introduction to the Study of Gothic Architecture, though it has quite as much to dwith Romanesque as with Gothic. We will not dispute as to the origin or propriety of the name Gothic; as a fact, it has, wisely or foolishly, come to mean the style which uses the pointed arch as its namely, that up to the eleventh century there was only one style, foolishly, come to mean the style which uses the pointed arch as its main feature of construction, and which accompanies its main feature of construction with an appropriate system of ornamental detail. So of course the Romanesque style is the style which deals in the same way with the round arch, using it as its main feature of construction and accompanying it with appropriate detail. This is the kind of thing which Mr. Parker never brings clearly out, which he hardly seems fully to understand. He warns his renders with great truth, that the mere form of the arch is not an infallible sign of date; that, when convenience or caprice dictated such a course, the pointed arch was freely used before, and the round arch was freely used after, the time when each was the received form of construction. No one doubts this; here and there, especially in military buildings, round arches of the fourteenth century are not uncommon; but then they have not Romanesque details. And what is far more important, there are whole styles of architecture, some forms of the Mahometan styles as well as the Christian Saracenic of Sicily and the Romanesque of Aquitaine, in which the pointed arch is constantly used with Gothic detail. Mr. Parker afraid lest anybody should take the roundheaded fourteenth-century doorways at Malmesbury and Brecon for Norman, that he will hardly allow the form of arch to be of any importance at all; that

is, he simply wipes out the whole artistic history of architecture. The title of the book, the extension of the name "Gothic" to all medieval architecture, is the index of this confusion.

On the English part of the book we will not dwell. The early sections simply put forth over again the dreams which we have so often exposed, the baseless theories which have been upset at least yearly for the last thirty years, the stock passages misapplied or misquoted, which have been corrected almost as often. On all this way will not dwell for a moment, says to point out our size in the we will not dwell for a moment, save to point out one singular fact. Nothing in all history is more certain than that the church of Monkwearmouth, built by Benedict Biscop late in the seventh century, was repaired by Ealdwine in the days of the Conqueror. The work of the two dates is there in the tower as plain as anything can be. Benedict built a porch; Ealdwine carried it up into a tower. Benedict's doorway is there, and the line of his porch can be clearly traced. Mr. Parker has a notion that it was all done in 1075, and his woodcut accordingly leaves out Benedict's doorway and the lines of his porch. We do not for a moment thigh that Mr. Parker had his woodcut made to fit his theory. We have sure that he made his theory by trusting to an inaccording woodcut instead of looking at the building itself. But one would like to know how and by whom so misleading a representation was palmed off upon Mr. Parker. vill not dwell for a moment, save to point out one singular fact.

se palmed off upon Mr. Parker.

When Mr. Parker beens his theories and gets to facts in its quite another men. No men is a letter guide to the details of Eaglish architecture from the thirteenth to the sixteenth santury. Here his careful observation stands him in good stead, and his last of historical grasp is not of much consequence. Heatill thinks (see his note in p. 11) that Bada's statements about Scottish buildings in the seventh contury prove something about English buildings in the tenth; he is not likely to fall into the kindred error of going to a writer of the days of Henry the Second to prove something about the architecture of Henry the Second. All Mr. Parker's account of the various forms of Gothic in England is, within its own rather narrow range, sound enough. It is more important to track him on the Continent. In his French chapter Mr. Parker well and clearly points out the differences in own rather narrow range, sound enough. It is more important to track him on the Continent. In his French chapter Mr. Parker well and clearly points out the difference in detail between French and English Gothic; but he is constantly hampered by his lack of grasp of historical geography. When he tells us that England and Normandy were once provinces of one kingdom, it is perhaps only a blandering way of saying that the kingdom and the duchy once had a common sovereign. But he has listened too much to Frenchmen with its modern boundaries as something external; so we on France with its modern boundaries as something eternal; so we on France with its modern boundaries as something eternal; so we get such odd statements as that in the eleventh century there were certain main roads of commerce "through France," "one ascending the Rhone from Marseilles by Avignon, Vienne, and Lyons, and branching off in various directions, as to Grenoble and Geneva eastwards, to Lo Puy and Auvergne westwards." What has this to do with France? Every place named, save Le Puy, is a city of the Empire, and even a man at Le Puy would have thought it queer to be called a Frenchman. Still all this is most likely only the confused way of speaking which is natural to one who has not set himself free from bondage to the modern map. It is harder to guess according to what geography it is that, in p. 226, Nevers and Vezelay are placed in Normandy. Still, on the whole, this French section is a very useful one, and Mr. Parker deserves much credit for withstanding the pretensions of some of the French antiquaries, who are eager to make out that, in this matter and in all others, l'aris was always in advance of the rest of the world. A good deal too may be picked up from Mr. Parker's world. A good deal too may be pieted up from Mr. Parker's remarks on Italian buildings, though there is much that needs correction. It seems odd to light here, as a kind of Appendix to English Gothic Architecture, on Mr. Parker's peculiar theories about the walls of Rome in the time of the Kings. But this is a point on which Mr. Parker must be humoured. At Florence we have to thank him for some healthy accompanies on the character. have to thank him for some healthy comments on the sham Cothic of Italy, and on the wonderful taste by which it is supposed to be a great feat to make a building look much smaller than it is. And it needs some daring, though it is an utterance of simple truth, to stand by the Duomo and Campanile of Florence and say, "So much black and white panelling gives to English people too much the effect of Tunbridge mare, and gives the notion of a fine toy rather than the solemnity of a cathedral church." At Ravonna, rather than the solemnity of a cathedral church." At Ravenua, contrary to his usual fashion of making out every building as late as he can, Mr. Parker refers the round towers to the sixth century; whereas it is plain from Agnellus that none of them could have been built when he wrote in the middle of the ninth. of Pisa and Lucca and the Lombard and Pisan styles is a good deal confused. There undoubtedly is a Lambard style, and also a Pisan style; that is to say, such buildings as St. Ambrose at Milan and St. Michael at Payis are wholly different from anything at Pisa or Lucca. We do not understand what Mr. Parker means when he says that Lucca. "belonged to the republic of Pisa at the time that most of the churches were built or rebuilt." There were indeed constant wars between Pisa and Lucca in the eleventh and twelfth centuries. in which the Pisans always claimed the victory; but there was no subjection of Lucca to Pisa till after the latest date—1308—which Mr. Parker gives to anything at Lucca. We cannot at all understand Mr. Parker's notions about either the Pison or the Lucchese churches. The Duorso of Pisa was undoubtedly begun in 1063 or 1067, and consecrated—so much of it as was built— in 1119. It is clear also that at Pisa, as at other places, there were breaks in carrying on so great a work, and as west fronts were very often left unfinished for some time, it is quite possible that at Pias the front was not finished till early in the thirteenth century, as was undoubtedly the case in the Puomo at Lucca, which was begun about the same time. But this, which is true of a vast proportion of the churches of Europe, is something very different from the general heightening and lengthening of a former church which Mr. Parker fancies. There is no change of style whatever, except where the cupola was patched up in the Medican times. We should be well piessed to say a little more as to Mr. Parker's views on the Lucchese churches, but it could not be done without entering into over-minute details. Still, with all this, as notes on Italian buildings, this part of Mr. Parker's book has a real value. But Germany, with all its vast stores of so many dates and style, is slurred over in two or three pages. Mr. Parker sowever does see the common between the primitive Remanesque of England and of Germany, though he strangely adds, "This style of tower spreads over the whole of the north of acus, "These style of tower sprease over the whole of the north of Germany, and into the German part of Switzerland, where we also find at Remain-moutier a church, with other parts beside the tower of Angle-Saxon character." That is to say, Homain-moutier, which is not in the German part of Switzerland, but in the old kingdom of Hurgundy and the present Canton of Vaud, is the one large church of the primitive style which still remains.

In short, we could not wish for a better guide than Mr. Parket, wherever his long experience of English and French architecture is enough; but his book, like so many others, shows that it is impossible to deal with the history of architecture or of anything else without a firm grasp of the political history and historical geography of the times which have to be dealt with.

ON THE ROAD TO KHIVA.

M. KER, as our readers may remember, was Correspondent of the Daily Telegraph during the Khivan expedition, and made an unfortunate slip in one of his letters which caused much scandal at the time. A certain "old savage," who sat for a graphic portrait to Mr. Ker on the Volga, turned out to have presented himself in the same attitude in the Orimea, and to have suggested a train of reflection so similar as to be partly expressible in the very same words. Mr. Ker says, rather strongly, that the discovery of this coincidence made him appear to his countrymen as "a liar and impostor"; and in the preface to this volume he gives some explanation of the true state of the case. It does not gives some explanation of the true state of the case. It does not really want much explanation. Nobody will doubt that Mr. Ker actually went to Samarcand, as he tells us, or will suppose that his correspondence was composed in London instead of at the place assigned for it. The error into which he fell is perfectly intelligible, and, as he admits it to be "perfectly inexcusable," we need not discuss the degree of blane to be attached to it. He was, as he says, travelling under circumstances which made writing very difficult; he was obliged to be constantly writing, whilst he had to conceal the fact that he was a Correspondent; and, as he was also suffering from ill-health, he "was glad to lessen the strain by using familiar words, even while conscious that he must have used them before." The "old savage," in fact, was merely one of those commonplaces which come in very conveniently for a Correspondent bound to make bricks without straw; and he saw the original of his portrait reproduced not merely once, but "at least a dozen times." The only thing which strikes us as remarkable under the circumstances is the retentiveness of a memory which enabled him

circumstances is the retentiveness of a memory which enabled him to reproduce his own language with so much accuracy.

Meanwhile, though we do not think it necessary or desirable to administer any further reproof to Mr. Ker for an error of which enough has been said, and from which rather overstrained inferences were drawn at the time, the fact is rather significant from a purely literary point of view. It lets us into some secrets of the Correspondent's trade; which are further illustrated by the style of the whole work. The book might have been written in illustration of the maxim—a very true one in a certain sense—that what tion of the maxim tion of the maxim —a very true one in a certain sense—that what a traveller finds depends chiefly upon what he brings. A Correspondent who confined himself to a faithful and unadorned account of the actual objects before him would often be unable to fill his space, or would have to fill it with uninteresting matter. A discerning public must be provided with a certain number of columns, whether nything has h appened or not, and the natural consequence is that the art of making nothing go a long way, and at the same time investing it with a certain air of smartness, has been brought to a investing it with a certain air of smartness, has been brought to a high pitch of perfection. Mr. Ker's book illustrates several of the most obvious expedients which may be used for this purpose. He is a clever and fluent writer, who can dash off with sufficient vigour a description of the "graphic" variety. But then he had really very little to describe beyond a series of extremely uncomfortable journeys over bad roads, in detestable carts, and in a trying climate. He travelled from Orenburg pretty easily to Kazalinsk, on the Syr Daria, not far from the Sea of Aral. There he was detained by the Governor for seven weeks; at last he received permission to proceed, and ascended the valley of the Syr Daria to Tashkent, from which place he afterwards went to Samarcand. Here the parative rather and ascended the valley of the Syr Dana to Tashkent, from which place he afterwards went to Samarcand. Here the narrative rather abruptly finishes, Mr. Ker remarking briefly that the narrative of his homeward journey would be "only a monotonous beadroll of hardships, aggravated by illness and less of blood." The outward journey, however, would not be very much more were it not for the art of the Correspondent. Mr. Ker doubtless did his best, but he unluckily missed everything that was most worth seeing. He met the troops on their return, instead of accompanying them on their way out. His detention at Kazalinsk was little better than a mild imprisonment; and a man shut up in a dreary village in a remote corner of the world for many weeks of irritating suspense becomes more bored than interested, and has no great opportunities for observation. How then was Mr. Ker to fill his book?

One method, which is more or less applicable under any circumstances, is to favour the public with a certain amount of personal history. Mr. Ker throws out incidental remarks which would be very useful to a biographer. We learn, amongst other things, that he is a man of considerable pedestrian powers. He has not only been up Mont Blanc, now rather a humble feat, and distinguished himself at the "Crick run" at Rugby, but he informs us that he made the circuit of Jerusalem without the wells in fifty-four minutes during the month of June, and that he marched twenty miles uphill in South America within four hours. We may remark parenthetically that we should be glad of a little more information as to this last feat. Twenty miles in four hours is very fair walking even along a level road in England for a man not engaged in a match; but the same rate "uphill" approaches to One method, which is more or less applicable under any circum-

On the Road to Khiva. By David Ker. London : Henry S. King &

the marvellous if we are to understand anything really steep. Wary few men, we will venture to say, can go uphill, as that word is used, for example, in Switzerland, at more than half the rate indicated for any length of time; but we admit that there are hills, and hills. These athletic performances are introduced by way of accounting for a feat which Mr. Ker performed for the astoniahment of the Governor of Kazslinsk. He walked sixteen miles or thereabouts under a burning sun, supported by "the bull-dog instinct of the Anglo-Saxon," and seems to have deserved, though he luckily escaped, a sunstroke for his pains. What, he sake, would such a performance have been in heavy marching order? We presume that Russian soldiers do not under those circumstances indulge in Mr. Ker's "regulation pace" of five miles an hour; but somehow or other they do without the "Anglo-Saxon" instinct. We could wish that the said instinct did not lead to fine writing as decidedly as to fast walking.

These personal details, however interesting in themselves, do not tell us much about the country. Mr. Ker's next expedient is more

These personal details, however interesting in themselves, do not tell us much about the country. Mr. Ker's next expedient is more to the purpose. He indulges, whenever he has a chance, in picturesque description. There are various common forms ready for use on such occasions which considerably facilitate the task. Wherever, for example, you happen to see together two or three men of different nationalities, it is easy to remark that they form a striking group. Put together a sturdy Russian, a tall, stately Bokhariote, a "bunfaced" Kalmuk, and a wiry Cossack, and the thing is done. A good many such groups are naturally encountered in various parts of Asia, and a slight variation in the phrases and in the order will make one bit of graphic writing serve and in the order will make one bit of graphic writing serve for all. The unfortunate "old savage" of the Crimes was merely one variation upon this popular expedient. Whenever Mr. Ker is at a loss he can introduce a "bunfaced" native just as Mr. Ker is at a loss he can introduce a "bunfaced" native just as easily as the artist of an illustrated newspaper uses one or two well-known lay figures for the foreground of each of his pictures. The only question which suggests itself is that unfortunate one, how far Mr. Ker is drawing from life and how far he is indulging in the license permitted to travellers. Another formula often employed on such occasions suggests a similar scepticism. We should like to know, as a matter of statics, how many Eastern throughout how how reminded of the Archive Wights and here accurated travellers have been reminded of the Arabian Nights, and have assured their readers, as Mr. Ker assures us, that in one corner of a bazear they saw a disguised captain of the Forty Thieves, and in another Sinbad the Sailor, and in a third the Prince of the Winged Horse. We can remember at this moment two or three instances of the use of this convenient illustration by authors of reputation; and doubtless there was a time when it was new and fresh. Just now like the New Zealander and the German describing the camel like the New Zealander and the German describing the camel, it has become rather stale; and we could wish, were it not for its extreme utility to unlucky Correspondents, that it might be banished altogether from literature. However, we may assume that Mr. Ker was in some sense reminded of the Arabian Nights, and at any rate it struck him when he was looking at the bazaar that there was a favourable opportunity for working in an old scrap once more. In other places he is apparently diverging a little further from the plain prosaic facts. He gives, for example, a number of highly dramatic reports of conversations, which, as he could not take them down in shorthand, must obviously be more or less a work of imagination. In Tashkent he met Mr. Ashton Dilke, who imagination. In Tashkent he met Mr. Ashton Dilke, who accompanied him in his visit to Samarcand. The two gentlemen converse with a brilliant display of American anecdote and English slang which is calculated to excite the envy of common travellers. Two Englishmen alone in a foreign land are app rather they are such other than to speakle with such more contract. to bore each other than to sparkle with such incessant wit. However we must not complain if Mr. Ker has picked out the plums of the conversation, and thereby made it rather more entertaining that a full report could have been; nor will we even suggest that we could sometimes wish that the space filled by a repartee of Mr. Dilke's had been occupied by some fuller details of the crucioties visited. For Mr. Ker wants to be very vivacious, and we need not be hypercritical as to the means amployed. But this habit of repositing convergences approach. employed. But this habit of repeating conversations suggests another mode of filling one's pages. If he did not see much himself, Mr. Ker saw a great many people who had seen something. Nothing could be more natural and proper than that he should repeat some of the scenes described to him. Unluckily he becomes so lively in his descriptions of what he avows himself not to have seen, that we begin to be in doubt as to how far he is merely reporting and how far he is filling up details from his imagination. Thus, for example, the prisoners released from Khiva had reached Kazalinsk two or three months before Mr. Ker's arrival. This was unlucky; but as the scene of their arrival was described to him by one or two of the inhabitants, he thinks that he had to him by one or two of the inhabitants, he thinks that he had better give the story in his own words. Accordingly the story is given with a number of petty details, inserted with the landshle purpose of making it lively, but which are obviously mere fancy work. A conversation is given between three Russian traders sitting over their tea-urn. A sudden trampling of horse is heard, and the Cossacks ride in, and are duly described. Afterwards a cluster of specks appear on the plain, which resolves itself into a party of men on horseback, led by a handsome man on a magnificent Arab, with silver-laced trappings; at sight of whom a scarred and grey-haired Cossack exclaims, "I know that foremost fellow," and goes on to give after dots about him. Then the growd increases; we have the graint Turkoman, the bullet-headed Tartar, the "bunfaced Kalantock" over again, and so on; and we are told all that they do or say,

and how one man make for his only brother and finds that he is not amongst the prisoners. In the same way Mr. Ker describes the heroic defence of the citadel of Samarcand by the Russians in 1868. He could not be more graphic if he had been on the spot and seen "the set grim look of the Northmen when fairly brought to hay," and all the rest of it. Doubtless the main facts are truly reported, but Mr. Ker is apparently incapable of simply telling what was told to him without covering it with this kind of warnish, which effectually conceals from his readers the facts which he is merely reporting from those which he is imagining. The story would really be far more impressive if he did not treat us like children and try to spice his narrative by bits of rhetoric and a free use of the "historical present." But undoubtedly it would be less in the sacred style of the newspaper Correspondent. Thus, though the book is smartly written enough, and may amuse a gare half-hour, we are left in an uncomfortable state of uncer-

a space half-hour, we are left in an uncomfortable state of uncertainty as to its real value. Mr. Ker no doubt wishes to tell us what he has seen and done; but he is in such fear of being dull that he cannot be content without twisting and torturing every page into writing which reminds us inevitably of the picturesque novel. He describes which reminds us inevitably of the picturesque novel. He describes things which he tells us frankly that he has not seen, as minutely as those which he has seen. He mixes up with genuine description fragments of half-remembered fine writing which seem to be more or less appropriate; and at best the whole result resembles a coloured photograph. It is neither pure art nor pure nature. The main facts are correct, or at least stated with a sincere desired that the state of to be correct; but they are so inextricably mixed up with Correspondent's commonplaces, so coloured and touched up with irrelevant eloquence, that we feel no confidence in the colouring. It may be true to nature, or it may merely represent the preconceived notions which Mr. Ker carried with him. As he is intending another journey, we may simply advise him to sacrifice smartness to accuracy on a future occasion; and even to dare to bore us a little rather than to throw in touches which cannot have been derived from actual observation. from actual observation.

CLEASBY'S ICELANDIC DICTIONARY.

CLEASBY'S ICELANDIC DICTIONARY.

OME four years ago we noticed the first part of this Icelandic-English Dictionary, which now lies before us completed by Mr. Vigfusson, and accompanied by an introduction and a sketch of the life of the late Richard Cleasby, written by Dr. Dasent. "The history of the book, for books have histories just as much as men" (the italics are ours), "has alroady been partly told in the preface," says Dr. Dasent. And it is, briefly stated, as follows. Richard Cleasby, a City man of opulent means and great literary tastes and aptitude for learning, conceived in the year 1840 the idea of turning his means and powers to account by compiling an Icelandic-English Dictionary. But, most unfortunately for learning and science, his career was cut short by death in 1846. His heirs, however, anxious to carry to its legitimate end the incompleted work of their eminent kinsman, went on advancing sums for the purpose for some eight years more. But when, in 1854, sums for the purpose for some eight years more. But when, in 1854, a fresh demand came from Copenhagen for more money, and the heirs found the progress of the work incommensurate with the sums expended on it, the eventual fulfilment of the work being still problematical, it was resolved to have the MSS, brought to Empland. In 1855, Dr. Desent proposed to the believes of the England. In 1855 Dr. Dasent proposed to the Delegates of the Clarendon Press to publish the Dictionary, and undertook to see it through the press. At the end of eleven more years he came to through the press. At the end of eleven more years he came to the conclusion that this was not a work to be done by him, and at the expense of the Delegates of the Clarendon Press engaged Mr. Vigfusson, a native of Iceland, to complete the undertaking. After seven years of incessant work, Mr. Vigfusson has now brought to an end a most praiseworthy task, and enriched philological science by a work which reflects credit alike on his scholarship, his in-dustry, and his perseverance. Dr. Dasent has read the proofs of the first two sheets conjointly with Mr. Vigfusson, but otherwise he has no part in the work beyond what we have stated. Apropos, however, of his connexion with the Dictionary Dr. Desent says:

The writer who has watched over it, so to speak, from its birth, and who has been, as it were, a second father to it, ever since the untimely death of its natural parent, cannot but feel a glow of exultation as he beholds it issuing from the press in all the maturity and fulness which at one time it seemed hopeless that it could ever assume.

We have nothing to say to all this, except that now, when there was an opportunity for Dr. Dasent to show himself a good father and to give to the child an outfit worthy of the father's fond pride, and to give to the child an outfit worthy of the father's fond pride, he has failed to an extent which we could not have imagined. Will it be believed that of the three main questions with which an introduction to the Dictionary might be expected to deal—the development of Icelandic literature considered from a lexicographical point of view, the present state of Icelandic lexicography, and the principles on which the editor has framed and carried out his lexicographical method—not one should be even alluded to in a single word? We are not even told what was the precise character of the transcripts from which Mr. Vigitisson has edited the work. We gather that he had to rewrite the whole, because the quotations which now are given in full in the Dictionary were in the transcripts only indicated by bare references. But, ignoring

An Estandic-English Dictionary. Bused on the MS. Collections of the Biohard Closeby, unlarged and completed by Gudbrand Vigitiaton A., with an Introduction and Life of Richard Classby by George Webbsel, D.C.L. Ozford: Clarendon Press. 1874.

7 X V

entirely the topics which most readers will consider he ought to have treated in his introduction, Dr. Desent is careful to bring into it one which we should have thought had no place there at all

Still more would be [i.e. Mr. Vigitison] find himself rewarded if his labours should be the means of restoring her old Bible to Iceland. It would be for the good of all, and even for the beginner in Icelandic, if he could find a sure stay to his first flootsteps in the grand old Icelandic translation of the Bible of Bishop Gudhrand of the year 1384, which may compare with our own Authorized Version for purity and strength; but this Version has, most unhappily for Iceland, been replaced in recent years by a paraphrastic translation which it should be the aim of all true friends of picty and learning to discourage and disclaim. ing to discourage and disclaim.

As we understand this not very clear passage, it appears that Mr. Vigfusson would find himself best rewarded if his labours on Mr. Vigfusson would find himself best rewarded if his fabours on this Dictionary should be the means of restoring the 1584 Bible translation to Iceland. We do not quite see how a dictionary can do this more effectually than the Bible translation itself, which always will tell its own tale best. We can understand, however, that an editor of a dictionary might quote abundantly from a rare book of such excellence as is here ascribed to Gudbrand's Bible, for the purpose of anyhow giving the general reader throughout the world the benefit of these excellences, which, by reason of the scarcity of the book, he would otherwise have to forego. But what is the case here? That the editor has ignored the words peculiar to this Bible translation to the extent, have to forego. But what is the case here? That the editor has ignored the words peculiar to this Bible translation to the extent, not of dozens or scores, but of hundreds. We cannot fully substantiate this assertion within our present limits, but we may give a partial illustration of our statement by subjoining a list (not exhaustive) of words found in the Gospel of St. Matthew alone, but not occurring in the Dictionary:—I. kveisuejukr (napadorusée, otherwise translated in a variety of ways); 2. hernadarsveinar; 3. fornema; 4. hórunarslekte: 5. sædars; 6. ofurtroda; 7. uppsetningr; 8. leiòtogari; 9. tierligr: 10. fiskakorn; 11. klafbæriligr (!); 12. flatskapr (frequent elsewhere); 13. harökvæli; 14. forstyttr; 15. drykkjurútari: 16. formáttr: 17. læg; 18. prautkesti; 19. forhøyra; 20. undirvisun; 21. formega (verb); 22. forlita; 23. pessidagg; 24. svefnkofi; 25. tilreiða. Words used in this Gospel in meanings peculiar to this Bible translation, but not taken notice of in Oleasby, are still more numerous; we can only mention a few:—skammifylla (σκανδαλίζω), to offend; feisa, to travel; spilling, waste; skikka, to givo, to send; and, finally, the form bleif (xxi. 17; otherwise of frequent occurrence), which Mr. Vigfússon, from its very monstrosity, no doubt, positively asserts is never used; see dict. s. blifa. We need not conjecture why these deformities, as most of them are, with hundreds of the like, have been banished from Oleasby by Mr. Vigfússon; we think he shows his good sense by having done so. But then we are rather at a loss to understand on what ground he can hold up such a translation as a pattern of perfection, purity, and grandeur. We venture to add that this very Bible translation is, on the whole, the worst that Iceland possesses. Extravagantly paraphrastic, it is the most corrupt in point of grammur, choice of words, and style, and exceeds all the rest in instances of renderings not only domonstrably wrong, but often flagrantly at variance with common sense, by an overwholming majority. In illu ignored the words peculiar to this Bible translation to the extent, cereds all the rest in instances of renderings not only demonstrably wrong, but often flagrantly at variance with common sense, by an overwholming majority. In illustration of the last-mentioned peculiarity, let these few examples be adduced:—Matth. vi. 16: "Ner pier fastit, pa skulu pier cigi vera kamleitir (i.e. kamleitir, see Cleasby-Vigfüsson, sub voce) so sem Hrosnarar, puiat peir syrta sina Asionu, so ad synest fyrer mönnum ad peir faste" (When ye fast, then shall ye not be grimy of face like hypocrites, for they blacken their countenance in order that it may seem to people as if they fasted); xiii. 20. "Enn sa sem i grytta Jörd er addr er sa huer ordit heyrer" (but he who into stony earth is sown is he who the word heareth); 22. "Enn hanu sem a millum byrna er addr" (but he who among thorns is sown); 23. "Enn sa i goda Jörd er addr" (but he who into good earth is sown! No scholar would think of editing this one Gospel without emending it in at loss three hundred and fifty places, and even then he would be dealing leniently with it; and yet the Gospels may be said to be well executed in comparison with the Epistles. Such is the real character of a work for which Dr. Dasent professes boundless admiration, and which he actually compares with our Authorized miration, and which he actually compares with our Authorized Version for purity and strength. Possibly it might be found on inquiry that there was room for two opinions as to the real value of that other "translation which it should be the aim of all true friends of piety and learning to discourage and disclaim."

We gladly leave this matter to speak of the Dictionary itself. We

We gladly leave this matter to speak of the Dictionary itself. We have here a copious Dictionary—not full or exhaustive by any means, but at all events the most copious extant—particularly well stocked with quotations and references, and generally a pretty safe guide to the meanings of the words, especially in its latter part. To each word we have a constant accompaniment of comparative etymologies, Gothic, Old-English, Teutonic, and Scandinavian, varying in fulness according as the editor has been able to verify the extraneous parallels. This work, exceeds all existing Icalandic Dictionaries in the number of phrases, words, proverbs, &c., referring to peculiarly Icalandic subjects; and the explanation of them may be relied on all the more confidently since the editor is a native of the country, and therefore familiar with these matters, either from study at first hand or from actual experience. In many instances Mr. Vigfusson throws out consecural hints on disputed readings and passages, which generally perience. In many instances Mr. Vigfússon throws out conperience. In many instances Mr. Vigfússon throws out conpectural hints on disputed readings and passages, which generally
tage the merit of being ingenious. Ir. his etymologies, too,
he is sometimes as happy as at other times he is unfortemate. Among valuable etymological hints we especially call
attention to lyritr, although we still have a doubt whether hy

stands for löy, chiefly on account of the utter absence of all analogy to bear out such a vowel-transition. In our former notice we exsed the opinion that oro in bana-oro must be connected with the Old-English ord, origin, cause, Icel. urbr, but had nothing to do with ord = word in its modern sense, verburn. This Mr. Vigfusen now concedes, though somewhat tardily, saying, "May word and there not be some etymological connexion between word and weird, Icel. or and uro? The notion of weird, doom, prevails in compounds as ban-oro (sio) dauda-oro death-weird, fate." While on this subject we must call attention to an unfortunate erratum which has crept into the article on Skuld, where under II. this word is said to be "the name of one of the three works" instead of weirds, Skuld being one of the three fates of Northern mythology.

mythology.

In the case of ostr, cheese, and jastr, yeast, Mr. Vigfússon cannot possibly be right in his comparative etymologies. Ostr he makes "probab." identical with jastr, and then derives both from English yeast, and jastr further from the "Middle High Germ. jest and gest, Germ. gischt, Norw. jest and jestr." To these otymologies may be added Old-Engl. gist, Germ. gischt, gischen, and güschen, the Middle High Germ. verb, gise, jas-jaren, yejasen, the Swed. jäsa, gäsa (verb), and jüst, Dan. gære, gær, Icel. geist. These etymologies unanimously declare the meaning of justr to be gush, froth, fermentation, the verbs to gush, froth, ferment. And no doubt they all of them bear witness to the physical law which finds its embodiment and illustration in the fermentation of yeast. But can that also apply to ostr, cheese? Is cheese ever known to have been produced by any process the working of which partook in any manner of the nature of fermentation? We cannot help connecting ostr with Old-Engl. beost, byst, bysting, which also occurs in the important form ysting, without the b which thereby is proved not to be radical, but a prefix, Old High Germ. biost, Germ. biest (biest-milch), Engl. biestings. The meanings of all these words settle their etymological kindred with ostr. As we said before, the absence of b in ysting shows that b is not a radical letter, and, that being granted, the process is exactly the natural one by which Old-Engl. be-ost and Old High Germ. bi-ost come to be ost-r in Icelandic, which sternly refuses all be-prefixes uniformly. no matter whether the case is one of verbs or nouns. In to be ost-r in Icelandic, which sternly refuses all be- prefixes uniformly, no matter whether the case is one of verbs or nouns. In fact the relation between these forms and ostr is very similar to the relation between that Lancashire verb os or oss, about which we heard a good deal some time ago, and the Old-Engl. b-ys-yu, business, Icel. yss. We had in our previous article traced beiskr to bita, to bite, and this derivation Mr. Vigfusson, under the letter Z, refuses to accept on the ground that beiskr is connected with biestings, and consequently with the whole tribe to which that word belongs, which he again connects with Goth. beist — Greek Zun, a leaven. By such etymologies many uncomfortable riddles in comparative philology become easy of solution. In the case of boost and all that tribe the primitive vowel they point to is u; we are not aware of any satisfactory analogies of Goth. ei running over into either co, ia, or ie in Old-English or in German dialects; and Dieffenbach calls attention to that difficulty in this very case, though he fact the relation between these forms and ostr is very similar to bach calls attention to that difficulty in this very case, though he follows others (not Grimm however) in grouping best with beest, follows others (not Grimm however) in grouping best with beost, &c.; but he does it on their authority, not his own. But we have here to observe that not only does Grimm connect beist with the fundamental notion of biting, but he says expressly that beistr is to be derived from Goth. beitan, to bite (Gramm. ii. 278). The absence of z in the MSS, in such cases avails nothing against sound etymological principles, especially when, as in Icolandic, that letter has always been undistinguished from the s in sound, and interchanges with it most irregularly. To set up such preposterous etymologies as geistafully not derivable from geit; at lest not derivable from late, for the purpose of knocking them down on the very ground of their absurdity, and then to leave it as a matter of inference that these are cases parallel to our etymology of beiskr, has scarcely even the merit of ingenuity. etymology of beiskr, has scarcely even the merit of ingenuity. As Mr. Vigfusson himself shows, sess from seta, setja, and rissi from vita are never spelt with a z in the MSS., and consequently prove that the MSS, sometimes do not write z where it should be written according to the laws of ctymology. As to the Icelandic beizli being derived from bita, and having nothing to do with bridle, which means a different thing and comes from a different -viz., from the Old-Engl. bredun, Icel. bregon, to twist, referring to the workmanship of the reins—on this point there can be no doubt, and the editor's opposition to this derivation seems to us particularly weak; the chief point of it being that beist is written in the MSS. with s, while it is also written with z perhaps as frequently.

With regard to the very important word mal in mala-epist, With regard to the very important word mall in malla-mp/st, malla-jdra, malla-sar, mulla-sterium, we are of opinion that Mr. Vigitisson's derivation from Goth. mêl=γραφή and γράμμα, Hel. mâl imago, and the thence secured meaning of "drawing, inlaid ornaments" on spearheads, cannot possibly be the right one. First let us say that malla-sax is another reading in a different recension of the same story for malla-jdra. Whichever of the two readings we adopt, it is evident that both words signify one and the same object, and we adopt as the better reading malla-jdra, it being of a nucle for the two readings we adopt as the letter reading malla-jdra, it being of a nucle for the two readings we adopt as the letter reading malla-jdra, it being of a nucle for the two readings we adopt. frequent occurrence than the very questionable mile-sax. In order new to approach the real meaning of mill in these words we must take into consideration the context where they occur. The locus shape of their Surson, where the ceremony of taking the oath of sworn brothership is de--: acribed

They now go down to "the Ere" and out them out of the earth authinof the sward in such manner that both ends were still fast in the earth ingle they "propped it up with" a mile-spict, one, of which the socket-nail might be reached by stretching the hand up to it. Thereunder they were to grather four of them together; now they draw blood each from his own body, the let it run together into the mould which was out up from under the swardstripe, and stir both together the blood and the mould; whereupon they sill fall a-knee and sweer the oath that each shall wreak revenge for the other, even as if he were his own brother, whereunto they call witnesses all the gods.

From this context one of two things is evident; the was propped up by the mdla-spjot either head upmost or shaft-end upmost, the former alternative being more in the spirit of the tent. But then we must ask, if mdl means here only ornament, or remes, how is it receible approximately approxim how is it possible, supposing the former alternative to be access now is it possible, supposing the former alternative to be accepted, that such a thin prop as a pointed piece of iron could support a heavy strip of sward, stretched at a great strain, of course, to a height considerably above the head of a grown person? or, supposing the latter alternative to be adopted, how can this possibly be effected by a spear-shaft only slightly thicker than the either case the spear shafts always tapered towards the end? In either case the spear must have run through the sward-strip as a needle through a sheet of paper, and left it to fall unsupported on the ground. Foreseeing that the thinking reader would query his statement from these alternate points of view, the historian takes care to obviate all doubt by saying that the strip was propped up by a mala-sijót. The mal, therefore, gives to the spear the quality required for the purpose; and on the interpretation of mal here it depends whether this passage turns out to be a remarkable and trustworthy description of an extremely important and interesting heathen rite, or it falls to the ground as utter nonsense. On the interpretation of mal here also depends its signification in all the compounds adduced above.

Now, the mall being the peculiarity about the spear which made it do service as a prop under the sward-strip, we see no other way open but to take mill as signifying a cross-bar sticking out from the spearhead on two opposite sides, and to translate mula-spit a cross-spear. By interpreting it thus the passage reads quite intelligibly, and leaves no doubt open as to its grauineness. This interpretation, too, makes another passage in the same Saga pertectly intelligible, which under the old interpretation is proposterously improbable. Theorem Nose, to wit, is made to forge in one day a mala-epjot out of the fragments of the famous "Grey-steel." If it was a spear with inlaid ornaments, it is evident that the work could not be done in one day. If it was a spear with runes accred on it, as Dr. Dasent in his translation takes it, the author of the story of (ifsli knew not, in this particular instance, how to write Ice-landic grammar. He says, namely, nall corn t, i.e. mail were in (it, in the spearhead); a construction which cannot be used in the Icelandic language, and never has been used in it, to signify scoring, carving, or any kind of ornamentation on the surface of anything; instead of mal voru i, the construction must be mal voru d if mal is taken to mean either ornament or scored runes; but for a crossbur wrought with and in the spear the phrase is perfectly correct. The word mala-steinn, which Mr. Vigfússon identifies correctly with lufsteinn, a healing stone-about which he, equally correctly, remarks, "Such stones are recorded as attached to the hilts of ancient swords"—stands here as a further support of our interpretation, the hilt of the sword being a cross-bar of iron. A mala-stein is even recorded as enclosed within the upper hilt of mada-stein is even recorded as encosed within the upper into a sword, which bears out the same argument still. In Sagas where Christian superstitions prevail, as in the case of Omn Storolfseen, a man who had already received the sign of the cross, the form mida-join is commonest, and occurs chiefly as a charm against evil spirits. Thus Orm lays a mida-join in the mouth of the cave of the giant Brusi in order to prevent him getting out. In Berghúa pattr one recension makes a be-nighted traveller put in the opening of a cave haunted by evilwights for his detence a mala-jarn, while another makes the same man make the sign of the cross with his sword. In other words, the latter recension translates mad as cross. These examples may suffice for our inference, which is, as already stated, that mal in these compounds signifies a cross-bar; it happens to mean a crossbar of iron because the context admits of no other interpretation; but we think it need have nothing to do with iron at all; otherwise the combination mala-jarn, irons-iron, would prove it to be a word of foreign origin or an archaism which the Icelander a word of foreign origin or an archaism which the Icelander did not understand, but naturalized by a somewhat similar process to that of viki-vaki (for vigit-vaki, from vigitia), prop. wake-wake, whereof the viki has nothing to do with vika, a week, as Mr. Vigfuson thinks. This interpretation is settled, we think, beyond dispute, by the Old-Fingl. med = cross, Cristes med, Christ's cross; med and mid being thus cognates, if indeed mid is not a case of pure foreign adoption, it is evident that the old interpretations and etymologies fall utterly to the ground.

Of the very numerous cases of etymology where we are at variance with the editor, we must have what we have said to stand as specimens. But we would finally call attention to the very important word mörk, where there has crept in a bad slip of the pen, the editor counting eighty, instead of 260 members to week. There are many such slips to be met with in Cleaning and the laborious reading of proofs having been done in an abnormal sort of way. In the word sket, having-sket, ke., which is a good application of archi-

tectural terminology of genuine Northern growth, the true meaning has escaped the editor, it being an sials, not a wing.

It is certain that the book has gained very much in scholarship by having been revised, so far so the English of it goes, by two such able men as Br. Liddle and Mr. Kitchin. We hope and wish that this generous literary enterprise of the Clarendon Press may be rewarded by a speedy sale of the first edition of the Dictionary, and that we may look forward to no very far distant feture for a thoroughly revised and corrected second edition.

A STILLBORN HISTORY OF WATERLOO.

THE last literary bequest of the Second Empire deser notice than it had the good fortune to obtain. Pub notice than it had the good fortune to obtain. Published but a few weeks before the declaration of war with Prussia, there was no time allowed to those for whom it a few weeks before the declaration of war with Prussis, there was no time allowed to those for whom it was designed to peruse it before they were plunged into a struggle as fierce as that of fifty-five years earlier which it described, and of dimensions so much grander as to dwarf the great Napoleon's campaigns by comparison. Some significant circumstances attending its form will be noted presently, as curiously characteristic of the regime under which it was produced. Passing these by for the moment as a matter apart, the execution of the work was very creditable to its avowed author, and indeed marks a distinct step in advance to its avowed author, and indeed marks a distinct step in advance in the historical study of French military history as hitherto understood and practised by the countrymen of Prince Edouard de la Tour d'Auvergne. And if this improvement was forced on

them by circumstances, it is not the less noteworthy and desirable. How it came about may be simply enough explained by looking back at the circumstances of the time.

Up to five or six years since the French had been content, in their belief in the First Napoleon's military infallibility, to treat Waterloo from a point of view exclusively national. They knew that he had been the greatest of all generals, and they knew that, notwithstanding this and the devotion of the soldiers of 1815 to his standard, he had suffered one of the most disastrous defeats on record on the plains of Belgium. He had fought certainly against ness sandard, he had suhered one of the most dissistious deleasts on record on the plains of Belgium. He had fought certainly against greater numbers; but to give this as the only reason of his failure appeared insufficient, since in his earlier campaigns he had dealt easily with the same odds. He had, however, written elaborately on the subject of Waterloo during his subsequent exile, and as the records he offered turned on the personal arrows blindness and excuses he offered turned on the personal errors, blindness, and omissions of individual followers, they chimed in happily with the national egotism, and became on the whole, notwithstanding that national egotism, and became on the whole, notwithstanding that certain French critics had impugned parts of them in detail, almost a matter of national faith. M. Thiers, in concluding the splandid epic which he is pleased to call a history of The Commutate and Empire, applied all the powers of his fascinating style to crystallize this mythical belief into a masterly sketch of the campaign drawn from the Napoleonic point of view; and he succeeded in constructing a story which will remain whilst French is read a monument of its author's literary ability, however little credit it reflects on his honesty of purpose. For some years it satisfied the popular mind entirely, and the eloquent Academician was in one sense the truest supporter of that Second Empire which he vainly struggled against in his other character of Daputy. Of course struggled against in his other character of Daputy. Of course sensible Franchmen were aware that their national version of the last campaign of Napoleon was not that of Prussians or Englishmon; but they were for the most part content, in M. Thiers's men; but they were for the most part content, in M. Thioras favourite phrase, to assign "interested motives" to all those who differed with him, and to take the gilded structure he had based on the St. Halena narrative, if not for a perfect history, at any rate for the nearest approach to it that could anywhere be found. Besides, was it not notorious that the German writers were entirely at issue with those of Great Britain, as to some of the leading points of the cumpaign? What more probable than that the Frenchman who disregarded both was in the right track? chman who disregarded both was in the right track?

The first blow to this comfortable state of things came from two of the many exiles who assailed the Second Empire with their literary shafts from outside its dominions. Colonel Charms, their literary shafts from outside its dominions. Colonel Charms, and, following him, M. Edgar Quinet, undertook to expose the falsehoods on which the St. Helena story was built up. The one was laborious and full of knowledge, the other clear and incisive in the use of his pen. Colonel Charms spared no pains to get at the truth and set it forth completely. M. Quinet found the materials ready prepared by his predecassor's research, and was himself gifted with the brilliancy of expression which commands the attention of French readers more than the most faithful devotion to truth. Under the shocks dealt to it by these critics, the "Napoleonic legend" (as Quinet happily called it), which had covered the events of 1815 with a false growth of remance, began to wither and shrink. Carefully excluded as their works were from the Paris boolutalls, they made their way into French filmaries. And although their attacks on the First Empire were should prompted in the first place by the authors' animality to the Second, they were not to be altogether explained away by this, except in the eyes of those who were thoroughly local to the existing order of things and unwilling to have their faith in Mapoleonism disturbed.

Philosophy as chief materials for his own, came another writers are shownedly as chief materials for his own, came another writers.

Materico, Éliscie de la Compagne de stêrg. Par le Hei Estènia Edopard de la Tour d'Auvergne. Paris : Flon.

whose book found its way more largely into Ennes. Channey succeeded in reconciling the Gurman and English Cheency succeeded in reconciling the Curman and English bistudies so far at least that his book was much read in his own country, and became adopted as the official text-book for preferance study in Prussia. Its large acceptance in a German form naturally caused its republication in French; and, as an English work translated in Belgium could hardly be officially excluded by the country him at Paris it was found in the could hardly be officially excluded by the consorship at Paris, it soon found its way to that capital, and was read by many who only knew of the writings of their countryment Charras and Quinet through its means. No reader of ordinary intelligence who statistically a statistic property of their countryment of their countryment of their country intelligence who statistically a statistic property is means. intelligence who studied either of the three could believe any longer in the fable of Napoleouic infallibility, even when dressed up in in the ratio of Napoleonic infallibility, even when dressed up in the tasteful periods of a Thiers. The necessity seems to have been recognized of abandoning the attempt to impose on the world through the latter, and of beginning alresh the defence of Napoleon with less doubtful materials than his own Memoirs. The work before us embodies the result; and, though adopting outwardly an independent line of view, the Prince de la Tour d'Auvergne was manifestly holding a brief for the Second Empire when he undertook to write the full of the Prince

manifestly holding a brief for the Second Empire when he undertook to write the fall of the First.

In his preface he refers pointedly to the Histories just speken of. Charras and Quinet are mentioned as having, in their criticisms on the St. Helona narrative, fallen, in an opposite direction, into the very exaggeration which they condemn in Thiors, who defends it. Channey is credited with honesty of purpose in breaking with those long-standing English traditions which are not unfairly described as "more patriotic than just"; and the author only ragrets that he so closely reproduces the judgments given before him by Charras. But the remarkable point of the Prince's introduction lies in the utter abandonment of Thiers and his supposed authority. "He has not succeeded" (it is briefly said) "in gaining acceptance for his conclusions. His twentieth volume, though so enthralling, so patriotic, is considered to be a pure romance, in which there is nothing real but the sublime herosan he has depicted in the most brilliant of styles." It is something indeed to have resaded this standard in a matter in which the French were, up to within a very uriment of styles." It is something indeed to have reached this standard in a matter in which the French were, up to within a very few years, under such extraordinary self-deception. The whole plan of the work follows this key, and treats the campaign in as favourable a light as possible for Napolson, but pointedly omits to make any use of his own inventions after his fall, as though they were historic proofs of the cause of his failure.

The course followed in the narrative is nearly that pursued by Charras, and among ourselves by Colonel Chesney, of dividing the days of the campaign carefully, and tracing out the events of each in detail from the various evidence before proceeding to comment on them. The spirit in which this is done may be briefly shown on them. In spirit if which this is done may be used y shown one or two well-known points, as the supposed neglect of Ney to seize Quatro lives in time, and assist with one of his corps the Emperor's action at Ligny; or again that of Grouchy to move to his master's aid on the crowning day of Waterloo. As to the former, Ney's conduct and that of his liquitenant, D'Erlon, are examined carefully in the light of the well-known documents already ransacked by other authors. One document, however, is omitted, and that is the fatal narrative known as Courgand's, which was dictated by Napoleon just after the events, and before the fallen Emperor had had time to invent the more elaborate version of the Memoirs; and which proves at a glance that he know nothing relutators of the memorate that he knew nothing whatever of the movement towards Ligny of the corps of D'Erlon, which Thiers blames Ney violently for calling back to its proper point at Quatro Bras. Ney is mildly charged by the Prince, as by some French writers, with having neglected the opportunity of crushing the Dutch-Belgians at Quatre Bras in the forenoon, a charge which is confuted by the proofs abundantly the forenoon, a charge which is confluted by the proofs abundantly given that he was simply awaiting the Emperor's orders to move at all. This, however, is plainly stated not to be the cause of the incompletoness of the Ligny victory. The real blame of the miscarriage is laid entirely on D'Erlon for obeying Ney's order of recall. And this upon the strange ground that "his resolve to go back off Quatre Bras was the greatest misfortune to us. Let ue one say it was covered by Ney's order. Such an order cannot cover a general at the head of a corps [our Imperialist author says a généralen-chef, an evident misuse here of a technical title] who has been ent-ner, an evident misuse here of a technical title who has been entrusted with 20,000 men and 50 guns, and whose right and duty it is to think." This is an ingenious new view certainly of an old problem; but as D'Erlon's corps happened to form nearly the half of an army entrusted to Ney for certain objects, and as he was not a general-in-chief, while Ney was, we may be pardoned for refusing to entertain any such liberal construction of a corps commander a duties. Once admit it, and no commander-in-chief in any future bettle could mossibly count on beinging his army into negation battle could possibly count on bringing his army into position. Thought is no doubt valuable; but no sound reflection could ever teach a subordinate general to act in direct contradiction to his own superior's pressing order without any higher authority than his own unaided judgment.

As to Growthy, and the famous discussion on his conduct on the 18th, here our author is on much more difficult ground, since there is no possibility of finding some new culprit to whom to transfer the blame hithorto laid by the French nation on the unfortunate Marshal. And it has long since been shown from Napolean's own despatches that he fully approved of that very more. ment on Wavre by his lieutenant which kept the latter far beyond any range of tactical usefulness for the day. The solution which the Imperialist writer offers lays the blame, as of old entirely as fireucky, but dose so on altogether new grounds. Continue all notice of the specryphal orders of the Emperor to the Manual,

mentioned in the Memoirs, the authenticity of which had been effectually exploded long before Thiers deliberately quoted them in his recent editions, Prince de la Tour d'Auvergne uses only the genuine correspondence. He is of course compelled therefore to admit that Grouchy's movement was apparently approved of by the Emperor up to the last. But the latter's despatch, he says, was but a reply to Grouchy's own incorrect information. Had the Marshal seen what he ought to have done, as he might have seen it, he had free liberty of action for the other course, and his march direct on Waterloo would have been reported, and, as a matter of course, approved of. The reply to which is that, if Napoleon was ill-informed and outwitted, who lay much nearer to the Prussians on that fateful night than his lieutenant did, the latter can hardly be blamed for being not better aware of what Blücher was about. mentioned in the Memoirs, the authenticity of which had been blamed for being not better aware of what Blücher was about. And to the Prince's remark that the Prussian assertion is not proved, that in any case Blücher could have held back Grouchy's 36,000 men with 40,000 of his own, and still had available the 50,000 that were actually brought into line of battle at Waterloo, the answer is only too obvious, that the Prussian argument has certainly facts to support it, inasmuch as 16,000 of these troops under Thielemann did actually serve to delay Grouchy before Wavre all the afternoon. On the whole, however, the Imperialist writer is even at this crucial point far in advance of his pre-decessors in moderation and good sense, as well as in adherence to proper evidence; and his narrative, though dry, is much better worth study than that of Thiers or any other lessor ornament of the French national school.

We would willingly have closed our review here. we would willingly have closed our review here. But, as we have before stated, the book on our table is plainly a book with an object, and the object—that of supplying the Paris market four years sinco—was sought for by means more characteristic, we are sure, of the then existing Government than of the gallant writer, who is said to have carried an historic name untarnished through some of the severest reverses of the late way. For hadde the volume lies another so like it historic name untarnished through some of the severest reverses of the late war. For beside the volume lies another so like it in appearance and form, and even in the very lettering on the cover and title, that it is only by a very close inspection one discovers that they are not two copies of the same work. The one is entitled *Étude de la Campagne de* 1815, *Waterloo*; the other, *Waterloo*, *Étude de la Campagne de* 1815. Each is *Par le Lieutenant-Colonel*, whose name is printed in small type. But the one is the Brussels edition of Colonel Chesney's *Waterloo Lectures*; the other is the Imperialist version of the same campaign which was other is the Imperialist version of the same campaign which put out in the last days of the Second Empire, that heedless buyers might have something safer to read than so severe a condemnation as that pronounced by the English critic on the great Napoleon's last essay in strategy.

HUTCHINSON'S TWO YEARS IN PERU.*

TWO years of active and observant travel in Peru, with the capacial advantages offered by the position of H. M. Consul at Callao, have enabled Mr. Thomas J. Hutchinson, who is already well known by his records of previous impressions of the South American and African continents, to present us with a series of vivid and instructive pictures of the most promising as well as the most interesting of the Southern Republics. A zealous searcher after antiquities, no less than a keen-aved judge of modern well. most interesting or the Southern Republics. A zeatous searcher after antiquities, no less than a keen-eyed judge of modern progress, he is studious to estimate at their true significance and value the remains or records of long-gone generations, whilst heedfully noting the signs of growing civilization and the capacities for future development. Notwithstanding the apprehension felt by him at first starting that all which was to be said of Peru, ancient and modern had been said sources of times allowed to the said sources of times allowed to the said sources. and modern, had been said scores of times already, we have to thank him for a pair of volumes filled with the experiences of a careful observer and enriched with the taste of a lover of the

picturesque in nature and art.

The two main points to which Mr. Hutchinson addresses his re-searches, and which he considers himself to have established by abundant proofs, are the fabulous and worthless character of the chronicles of Garcilasso de la Voga and others, based upon supposed records and monuments of the Incas, and a range of antiquity for the ruins and other relics of native civilization extending far beyond the furthest date of the Inca rule. The Incas he regards indeed with furthest date of the Inca rule. The Incas he regards indeed with the most profound unbelief, or rather contempt. So far from founding or building up a dominion, a civilization, or a cult, it was their end and function to east down, obliterate, and destroy all trace of what made the land when they crossed its boundaries fair, prosperous, and civilized. Cities, religious monuments, fortifications, and burying-places of high antiquity or admirable contemporary when he first went to Pay in April 1871. "in the tions, and burying-places of high antiquity or admirable construction were laid low or descerated by them. Albeit himself, as he confesses, when he first went to Peru, in April 1871, "in the Inca groove," like most people who take an interest in Peruvian literature and antiquities, he became convinced, after travelling and exploring along the coast from Arica to San José—a seaboard of more than a thousand miles—inland further than Arequips, and to ha, through the Jejetepeque valley, and up to Machucana, that the relics of art and architecture between the first line of Cordilleras and the Facilic belong to a time "far and away" before

Two Years in Peru; with Exploration of its Antiquities. By Thomas Hutchinson, F.R.G.S., F.R.S.L., M.A.I., Author of "Impressions of their Africa," "The Parama, and South American Recollections," &c. Manua and numerous Illustrations. 9 vols. London: Sampson Low

,

that of the Incas. The reputed temples of the Sun behind.
Trujillo and at Pacha-Cámac seemed to his eyes only mythically to be invested with an Inca character, nor had the fortress of to be invested with an Inca character, nor had the fortress of Paramunca the feeblest claim beyond the pee dirit of Garcilasso and Rivero to be the monument of the Incas' victory over the Chingon-On the contrary, he holds it to have been erected and garrisoned by the Chimoos themselves. How far back, indeed, we are entitled by the evidences accumulated of late years by Squier and other explorers, including our author himself, to carry the period of human occupation on the Pacific seaboard, is a problem of no little vagueness or difficulty. One test of antiquity confidently relied on by our author is found in the guano deposits which have of late years drawn the attention of Europe to Peru. Under accumulations of bird-droppings extending to a depth of thirty-five feet or so there was found at the Chincha Islands more than one idol carved in wood, and at another spot in the same islands one idol carved in wood, and at another spot in the same lalands were an image and water-pots of stone at a depth of sixty-two feet. How many thousands of years, he asks, are to be allowed since the race who moulded these by no means inartistic emblems and vessels rose to this pitch of culture and passed way? Of higher art still are the regal emblems and household gods of wood and coarse potters drawn for Mr. Hutchingen, found at what denth and coarse pottery drawn for Mr. Hutchinson, found at what depth he is not fully aware, but very far down.

Now calculations of this kind must be framed with a great deal

Now calculations of this kind must be framed with a great deal of caution. Mr. Hutchinson himself, though without any apparent misgiving, mentions as a proof of similar antiquity the finding on the Guanape Islands, under thirty-two feet of guano, of the body of a penguin flattened to but half an inch in thickness by the pressure of the superincumbent deposit, but otherwise perfect and capable of being set upright for the sketch given in the present volume to be taken. Under it lay a piece of cloth, which with the body was given to the author by Captain Bird. What probability is there of the bird having been preserved in this state for anything like the ages contemplated by Mr. Hutchinson, whatever allowance may be made for the antiseptic properties of the guano under which it was embedded? If, on the other hand, we note the rate at which accumulations of this sort are formed by the rooks, jackdaws, and other birds who flock to the formed by the rocks, jackdaws, and other birds who flock to the belfries of our cathedrals and churches, we may see cause to doubt whether the multitudinous waterfowl that hover like a cloud over the equatorial islands would take untold ages to enrich the world with sixty feet or so of their valuable refuse. enrich the world with sixty feet or so of their valuable refuse. That these combined vestiges of art and nature do carry back the annals of human life and of comparative civilization to a time which was already remote when the Spaniards first came upon the scene, or when the Incas first set up the monarchy which the Spaniards overthrew, we may well admit without extending the tale of years from hundreds to thousands. What amount of caution is needed in dealing with evidences of this character may be further judged from the fact that among Mr. Hutchinson's collection of human skulls and other spoils picked up near Ancon in April 1872, and sent by him to England, was found, as we read in Professor Busk's Report, the entire hoof of a mule, which could only have dated from the intrusion of the Spaniards. The Report of Mr. Price upon the pottery and other objects submitted by Mr. Hutchinson to the Anthropological Society, and included with that of Professor Busk in the Appendix to the present volume, speaks of the exquisite finish and high state of present volume, speaks of the exquisite finish and high state of preservation of the nets, as well as of the coloured jars, as hardly to be reconciled with the idea of great antiquity. We agree at the same time with Mr. Baldwin, the author of Ancient America, in regarding these as the relics of a people who were driven out either by the Chinchas or by a tribe who preceded them; the Chinchas themselves, be it remembered, being anterior to the Yuncas, who were conquered by the Inca Pachacutec in the fifteenth century. Similar remains bespeak, in our writer's view, the presence of the same race at Pisco, Ica, the Canete valley, and elsewhere, and convince him that the aboriginal South Americans are of far older descent than the Indians of the Northern continent, who probably came originally from the East across Behring's Straits, and who are represented still by the Koraks and Chookchees of that corner of Asia.

Setting aside the fables swallowed and reproduced by Montesinos,

still by the Koraks and Chookchees of that corner of Asia.

Setting aside the fables swallowed and reproduced by Montesinos, Garcilasso, and the whole host of Spanish tradition-mongers, and used with too little critical discretion by writers like Prescott, there are materials in the buildings, the burial-places, and other abiding relics of the past, which in the hands of Dr. Tschudi, Mr. Clements Markham, and the writer before us, may be said to have become the groundwork of some positive edifice of Peruvian archaeology. With somewhat more of skill in arranging his facts and grouping his arguments, Mr. Hutchinson might have done much towards rearing such a structure. As it is, hurrying us in his footsteps from place to place, he allowshimself no time for methodizing his impressions, and gives his readers no halp towards a connected view of what he has to propound in the end as an antiquary or an historian. Aided by his illustrations, he gives indeed to these scattered relics of the past the power to tell as far as may be their own tale, to which not a little was contributed by the investigations pushed under his auspices beneath the surface of the soil. It was in particular at Pacha-Cámao, the most august and the most mysterious assemblage of Peruvian measurements, that our author's explanations and researches were productive officials. Hundreds of feet below the topmost terrape of those mighty suins the pickaxes of Chinamen, set to work by him and his convenions, brought to light innumerable bedies swatted and the convenions, which fell to pieces on the administration of the convenions.

some cases stuffed with cotton-flock. With several of the female bodies were the rade fringes or belts which formed the limited costume of antiquity. Others had with them coarse figures of human faces in burnt clay or begs of coos leaves covering the skull. High above this vast huses or burying-ground was raised what is known as the Temple of the Sun; though why, asks our author, should we find in a temple for the worship of the sun the niches, recesses, or alcoves, which may be presumed to have formed cells for worship, facing the West, instead of the rising of that luminary? And why should there be niches for idol deities, and evidences of sacrificial fires in the soot marks upon a wall leading to the North? Above all, whose hands carried up the enormous quantities of earth that form the successive terraces out of which stand up the walls of stone, or of adobe, or sun-burnt brick? The whole mass is from two to three hundred feet high, and has a semi-lunar shape beyond half a mile in extent, with its concave side towards the south. The height between each of the terraces varies in general from six to eight feet, but the entire mass is too disintegrated and wrecked for clear delineation. The summit area, which was reached in a roundabout way on horseback, was roughly measured as comprising

ten acres square. The system of terrace-building is scarcely less conspicuous at Ouzco or Quito, and at Moyabamba our author traced the lines of terrace for more than two miles along the mountainside, rising one over the other to the height of more than a hundred feet. On the railway line from San Bartolomé to Surco are seen along the mountain alope the remains of one of these terraced structures, built of enormous stones, their colossal size puzzling the beholder to guess by what mechanical appliances they were placed there. Whether we are to refer to the same age and race the were placed there. Whether we are to refer to the same age and race the huge walls of heavy stones four yards thick, as at Santa Clars, with the marvellous carved and engraved boulder rocks adjoining the Yonan Pass of the river Jejetepéque, or the sloping wall of masonry among the ruins of Chan-Chan, is a further question awaiting solution. Our author does not seem to be enough of a geologist to assign to these boulders their connexion with the great Ice age of the American continent. As an antiquary he is speculative enough at times to take a critic's breath away. Not content with the wild hypotheses which have surung from the content with the wild hypotheses which have sprung from the fancied recurrence upon Peruvian pottery of the "Greek scroll" or of Egyptian symbols or ornaments, he drags in Dr. Schliemann's latest discoveries and most sanguine theories from the about the Ilium. The hewn stones joined without coment in which the learned Doctor recognizes the walls of Priam have in his eyes that in the Inca period of Peru." We ies and most sanguine theories from the mounds of "their corresponding state in the Inca period of Peru." We should have expected him to carry the synchronism even further back. The cross with crotchets or limbs met with at Ilium, which enabled Dr. Schliemann to declare that the Trojans were Aryans "at a time when the people now known as Celts, Germans, Peniana, Pelasgians, Hellenes, Slavonians, were still one nation and spoke one common language," seems to Mr. Hutchinson decisive of a further extension of the family of contemporary nations and languages. "Take the crotchets away, and what can be said of the cross on the silver cylinder found at Chan-Chan?" The drawing of the cylinder given by our author suggests to us doubts as to the propriety of calling the ornament a cross at all. But antiquaries have, it is well known, a peculiar power of seeing things. There are those who see a Buddhist tope in Avebury or Stonehenge, and, if we mistake not his language, Mr. Hutchinson has a vision of Buddhist caves in Peru. He does indeed stumble at a stone said in a New, Granada newspaper to have been found by Don Joaquim de Costa on one of his estates, "erected by a small colony of Phœnicians from Sidonia in the year IX. or X. of Hiram, contemporary of Solomon, about ten centuries before the Christian era." This notable stone—which should make Mr. the Christian era." This notable stone—which should make Air. Schapira or the Berlin savants who have bought his specimens die of envy—is described as having an inscription in eight lines, which, being translated, sets forth the names of the voyagers from Canaan, "who embarked from the port of Azion-gaber (Boy-Akubal), and having sailed for twelve months from the country of Egypt (Africa), carried away by currents, landed at Guayaquil in Peru." We accept with perfect confidence and with sincere gratitude all that our author tells us he has himself seen, while reserving our judgment as to the historical inferences to be while reserving our judgment as to the historical inferences to be drawn therefrom. Nor should we withhold our thanks for the valuable information he has given us touching the present state and future prospects of the Peruvian Republic. His descriptions and illustrations of the flourishing cities desolated by earth shocks—Arica and Arequipa, before and after the earthquake earth shocks—Arks and Arequipa, before and after the earthquake of 1868—the views of Lima, its monuments and people; the bold railway-bridge of Macqui on the Valparaiso and Santiago Railway; the light gossamer-like iron viaduct, 260 feet high, over the Verrugas river; the deep cross cutting of a mountain ridge on the railway track at San Hartolomé—call for special mention as giving force and picturesqueness to a work which is full of life and interest throughout.

THE HEREFORD MAPPA MUNDLA

L'OPt generations, and even conturies, visitors to Hereford Cathedral have been introduced to its medieval Map as a great literary curiosity and one of its most special treasures. After

undergoing many vicinsitudes, being now used as an alter-plece, now suspended and protected by folding doors and clasps in a place by itself, and at another time, according to tradition, secreted with other valuables under a chantry floor during the Civil Wars, this "map of ye world drawn on vellum by a monk" has escaped definement and retained its reputation, not a little, we suspect, on the principle of "omne ignotum pro magnifico," and through the admiration of those who did not understand it. Saving a few scratches over the edifice which represents Paris, perpetrated at some period of anti-Gallican fever, the "Mappa Mundi" is in such a sound condition, especially since its reparation in 1855, that the curious may study and decipher it with less difficulty than most documents of equal antiquity. Not, however, until recently does it appear that its custodians and admirers were influenced in their careful preservation of it by an intelligent interest. The casual notices of antiquaries and topographers have only glanced at it; and though partial descriptions of it occur in Gough's British Topography and Thomas Wright's Antiquarien Reseys, and a fuller account has been given within the last three or four years in the Rev. F. T. Havergal's interesting Finsti Herefordenses, it must be admitted that attention has been chiefly paid to it by foreign geographers, who have been beforehand with us in reproducing the entire map, as well as in giving an adequate description of its contents. At last, however, in a spirit of laudable emulation, it has been taken up by able and willing scholars at home. Means. Bevan and Phillott, whilst known in this country and abroad as scholars who have devoted study and pains to geographical science, are both beneficed within a short distance of Hereford, and the latter holds also the office of Preslector in the Cathedral, so that his share in the work is the result, we may infer, of a special caprit ds corps. It has been reserved for these two, with the assistance of two or three experi

was that it made Jerusalem the centre of the habitable world—that it consequently fixed the form and limits of that world—and that it forced lands and seas into spaces not adapted to their true form and size. The use of parallels and meridians was absolutely incompatible with such a system of map-drawing. Hence the error and confusion which characterize mediaval maps. Hence the distortion of outlines, and the gross misplacement of towns and countries.

To take an instance of this, it was a natural result of the assumption of Jerusalem's central position, and its situation on the western verge of Asia and in the line of the Mediterranean, that Asia should hold one-half of the world; that its length from East to West should equal that of Europe, and that Europe and Africa, divided by the Mediterranean, should in equal portions divide the other. In consequence of the manipulation required to work out this puzzle, Europe is at first sight hardly recognizable on the Hereford Map. Sins both of omission and commission are manifest in the treatment of land and sea. The North Sea is crowded out to give space to the British Isles. The angle now occupied by Holland is unnoticed. The British Isles protrude southward nearly to Spain, and the opposite coast of France is carried down in a parallel line so that the angle formed by Britanny disappears. It is obvious that mediseval compliance with the tradition that the "terrestrial paradise" was set in the extreme East, and the consequent claims of that quarter as the source of time and as a gate of the sun to occupy the head of the map would be another element of difficulty in delineation; and so also would the adoption, unconsciously or independently perhaps, of the Homeric belief that Ocean was an encircling narrow band surrounding the world towards its outermost verge. The southern half of Ocean from the Straits of Gibraltar to the Terrestrial Paradise has a fairly equable breadth, except where the line is broken by the Arabian Sea and its two-forked gulfs, the Red Sea and the Persian Gulf, which on the Hereford Map are coloured red, and look strangely like a pair of drawers of that colour hung out on a clother-line. Whilst we are on the subject of the verge formed by Ocean, it should be said that two outer circles surround the planisphere, one containing the four quarters, the other and inner a table of the winds in a twelvefold division, introduced by Timosthenes and accepted by medisoval as well as classical geographer

Medievel Geography: on Every in illustration of the Hereford Massa. Mundi. By the Rev. W. C. Hevan and the Rev. H. W. Phillott, M.A. London: E. Stanford. 1873.

in with human monstrosities, mythic beasts and birds, famous lakes and wells, and noteworthy plants—many of them suggested by a spurious etymology, and all referable to biblical, classical, legendary, or contemporary sources. One lesson to be learnt from it is the comparative neglect of contemporary data, for which in many instances it is difficult to account.

many instances it is difficult to account.

Before, however, making any remarks on the influence of these fourfold materials on the composition of the Map, we must briefly state what our esseyists have ostablished about its author. It is certain from the Norman-French inscription above-mentioned that he was one Richard de Bello, prebendary of Lafford (Sleaford) and of Holdingham in the diocese of Lincoln, and treasurer of Lincoln Cathedral, dignities which he seems to have been holding circ. 1250-1260 A.D. His connexion with Lincoln appears to have terminated in 1283, and Bishop Swinfield's Household Roll in its entries for November 1289 associates his name with Herefordshire, though it is not till 1305 that he appears as a prebendary of Hereford. From the notices which Mr. Hevan has collected of him, he appears to have been an ecclesiastic of mark, and if he is to be identified with the mounted sportsman attended by a forester and a leash of greyhounds in the opposite corner of the map, he must have been a well-to-do man of good social position. It is fairly surmised that he drew his map during his tenure of the Lincoln prebend, both because he calls himself "de Haldingham et Lafford," and because he expends more elaborate drawing upon his earlier both because he calls himself "de Haldingham et Lafford," and because he expends more elaborate drawing upon his earlier mother church than upon poor Hereford Cathedral. The curious paradox of the Clee Hill, in the latter diocese, being given as the sole specified English mountain, does not really tell one way or the other as to the question of residence at the time of the drawing of the Map. The name may have been filled in later than the rest of the work, and the mountain may have been introduced, as Mr. Bevan observes, on pure cartographical grounds, to fill up the interval between the Severn and the Dee, and mark the boundary between England and Wales. The handwriting is the boundary between England and Wales. The handwriting is pronounced to be of a date prior rather than posterior to 1300 A.D.; and Mr. Bevan gives geographical reasons for pronouncing in favour of a date somewhere near 1275, rather than, as M. d'Avezac, a French geographer, held, forty years later. At any rate there is no small amount of internal evidence from contemporary sources for the approximate date of the Map. Amidst a number of ancient and classical names of towns, islands, and promontories connected with the Mediterranean, we find the modernized form Palerna, i. q. with the Mediterranean, we find the modernized form Palerna, i. q. Palermo, used instead of the ancient Panormus, as a town in Sicily. Higden, in his Polychronicon, written about the middle of the fourteenth century, uses the modern form, whilst with Roger de Hoveden the chronicler, whose annals extend to 1201 A.D., and who was chaplain to Henry II., the name is in five places still given Panormus. It is said that the modern form was introduced into England by the Crusaders; and whilst upon mention of them we may note that on the "Mappa Mundi," Patras, the chief naval station of the French knights in the Crusades, figures alongside of Athens, Corinth, Larissa, and Eleusis. On the Map, though the insular character of Venice is greatly exaggerated, the attribution to her of the seven Liburnian Islands is consistent with contemporary history; and though in the delineation of Spain the kingdom of Aragona, or Arragon, is transferred ation of Spain the kingdom of Aragona, or Arragon, is transferred to the North of the Pyrenees, there is some shadow of truth in the drawing, as at the date of the map Roussillion belonged to Aragon. In Spain Compostu' (h.e. Compostella) appears amongst other and less decipherable manes, because, no doubt, of its contemporary fame as a resort of pilgrims. Our own Glestonia or Glastonbury too finds a place aroung English sittes for the most part bury, too, finds a place among English cities, for the most part episcopal, presumably on account of the interest attaching Edward I.'s visit to view the remains or burial-place of King Arthur in the year 1276, almost the year of the Map. Among the Gascon towns in France, Fronsac, Libourne, and Bourg, all places of note in the Edwardian wars, are given in Latinized form; and when we turn to Scotland, Borwic and Rokesburg apparently come in for mention as important border fortresses of the same period. These and similar instances will serve as a sample of the cartographer's contemporary resources, though, had we space, we might show that there were many points on which, whatever he might have been as an historical student, he was behind his age geographically.

As might be expected, he came out more strongly in the fruits of Biblical study, though here too some of his data might provoke a smile. Old Testament history is abundantly illustrated even to the forlorn figure of "Lot's wife" in salt on the opposite side of the forlorn figure of "Lot's wife" in salt on the opposite side of the river Arnon to Mount Seir; the inscription "Horrea Josephi" on the Pyramids; the crowd of Israelites worshipping the golden calf inscribed Mahomet or "Mahum" beyond the Dead Sea; the Ark on the mountains of Armenia, and ever so much more pictorial geography. Palestine is by comparison very tolerably delineated, only it retains the medieval crotchet of a double source of the Jordan, a "Fons Jor" and a "Fons Dan." The cartographer marks many of the chief places in the Gospels and the Acts, whether in or out of the Holy Land, and one not unamusing mistake arising out of his Biblical studies is where, borrowing from Pliny the dimensions of Gaul, his inscription ascribes the estimate not to Vipsanius Agrippa, but to the only Agrippa he could conceive of, the King Agrippa of the New Testament.

But most of the names on the map are classical, and come at first or second hand from such authors as Orosius, Solinus, and Isidore; and in matters of measurement direct recourse seems to have been had to Pliny. Legendary matter the map-maker drew from William of Malmesbary and the Alexandrian Rossance, with other later

works, and he had manifestly at hand a Bestiarium and Herbertum for his wonderful natural history. It followed from his abundant and variety of materials, especially as in all probability he we very much a "stay-at-home traveller," that he laboured und a plethors of names and data, but found scant room where to bestow them. As we are told in the Introduction, amidst a conscientious parade of the chief classic spots and fables, there is the utmost ignorance and carelessness of arrangement:—

Delphi is confounded with Dalor. There is the result of the confounded with Dalor. There is the result of the confounded with Dalor. There is the result of the confounded with Dalor. There is the result of the confounded with Dalor. The confounded with Dalor.

Delphi is confounded with Delos; Thermopyle is an inland range; Corinth stands wholly away from any symptom of the Isthmus. So again in other quarters—Patmos is transported into the Black Sea; Gades in represented as a large island in the middle of the Straits of Gibraltar; Calpe and Abyla change places, the latter transported to Africa; the Syrtes are apparently placed inland; the Pactolus flows into the Euxine, and so forth.

By the strangest carelessness the name of Greece does not appear on the map, unless indeed Icaya (i.e. Achaia) is intended to serve instead of it, according to mediaval usage which gave to Achaia a wide signification at the same time that it limited Hellad or Hellas to Attica.

Hellas to Attica.

Our space limits us to the barest description of the mythical additions to the Map; but no amount of description can serve instead of ocular inspection of this choice assemblage of monstrosities, classical and legendary. While fortified cities and cathedrals stud the Map in respectable frequency, we find there, there, and everywhere (if there is any preference, it is naturally given to Africa) groups of grotesque malformations, such as the mouthless people near the Ganges; the Sciapodes or Monocoli of Asia and Africa, who make an unbrells of their sole leg and foot; the earless Ambari of Æthiopia; the Nubians, who find shelter from the sun in their protruding lip; the Blemyæ, with mouth and eyes placed in their breasts; the maritime Æthiopians with four eyes apiece, and their near neighbours, "whose heads do grow beneath their shoulders." In the "Fauni-semicaballi homines" we seem to meet with a cross of the classical Centaur, and in the man who meet with a cross of the classical Centaur, and in the man who bestrides the "Cocadilus," in the Isle of Meroe, an anticipator, as Mr. Phillott reminds us, of the exploit of Mr. Waterton. But the master-key to the complete Bestiaring represented on this Map must not be looked for from a reviewer. The curious must buy the feesimile of the "Mapper Murdi" (or reduced copies of it, in the facsimile of the "Mappa Mundi" (or reduced copies of it, in divers sizes and at divers prices, for these are now to be had), and with it Mesers. Bevan and Phillott's able illustrative essay. A careful reading of the latter, with frequent reference to the former, will explain the curious phenomena of the Map, and, enabling us to put ourselves in Richard de Bello's place, will show what amount of method there is in his seeming madness. Of his queer freaks none are odder than his delineation of the British Isles, which is out of all proportion, and has its names filled in with the most utter disregard of distances and facts. In Wales, where only three names besides Snowdon are entered, Conway figures in close proximity to St. David's. A channel connects the Bristol and English Channels in the neighbourhood of Glastonbury. The Norman town of Caen (Cadan) is taken from the southern and pitched down on the northern side of the channel; and that there is no confusion with Calne in Wilts (which might quite consist with the cartographer's ideas of accurate might quite consist with the cartographers ideas of accurate localization) is plain from the fact that De Hoveden always gives "Calne" (sic) in his Latin Annals, but Caen as Cadanus or Cadonus. In their last page our essayists give up the identification of the two islands which figure with the Isle of Man in the sea between Ireland and Scotland. They are named Insula Arium and Insula Arium. The latter, an ingenious friend suggests to us, may have been meant as a monkish conceit for St. Columba's Isle which the articipants or would not been selected." We Isle, which the cartographer would not have called " Ions." are not sure ourselves but that in Insula Arietum may lurk a fanciful reference to the Isle of Arran.

SOLLY'S MEMOIR OF DAVID COX.*

WERE we asked to name the most essentially English of our landscape-painters we should without difficulty fix on Cox, Constable, and Gainsborough. These artists are not only English because they seldom or never sought for a subject beyond our shores, but also because of their simply homish style. A breezy a showery sky, a lock, a mill, and a market-cart speak of unspoilt nature and of unsophisticated life, of an art undresse and undecorated, of pictures which, like rustic peasants, wear a homely garb. In these landscapes not only have the trees been beaten by the storm and the rocks washed by the rain, but even the figures are creatures of the elements; the children of Gainsborough knew nought of city guile, the boys of Cax listened to the skylark as if they needed only nature's music, the clouds of Constable tell of "greatcoat weather," yet they bring no terror to wayfarer or labourer. Indeed one characteristic of these our homeborn painters is that everything seems as it were at home at its ease, resting in quiet content; theirs is an art unmoved by ambition; the peasant has no wish to be a lord, and the little hills do not desire to exalt themselves into mountains. This is an art which, like nature herself, loves repose.

David Cox, like Turner, was of humble origin; both ar the were

^{*} Menoir of the Life of David Con, Member of the Section of Painters in Water-Colours; with Sulptions from his Correspondence and some Account of his Works. By M. Neel Solly. Illustrated with memorous Photographs from Drawings by the Artist's own hand. * London: Company & Hall.

salf-made men. Turner was the son of a London barber, and Cox the son of a Birmingham blacksmith. Young Cox, by what would now seem to have been a piece of good luck, beake his leg, for it was to his consequent disability that he owed his first entrance into art. While his leg was in splints he amused himself by painting hites; the hel afterwards went to a free school, but was not been supplied to the second of the school of the second of the sec peinting kites; the had afterwards went to a free school, but was withdrawn as soon as he could be of use in his father's workshop. However, his attength not being equal to hard manual labour, Dayid forsook the anvil for the paint-pot; he was apprenticed to the toy trado, and decorated snuff-boxes; he, then at the age of fifteen, became bound to a locket and miniature painter. A locket still in the possession of Mr. David Oox, jun., shows that the young apprentice had gained accuracy of form and delicacy of handling. But, the suicide of his master throwing him once more adrift, he sought like Claude employment in crieding colours. Magreedy, father of the tracedian and lessesses. grinding colours. Macready, father of the tragedian, and lesses and manager of the newly-built theatre at Birmingham, spared no and manager of the newly-built theatre at Birmingham, spared no pains in order to put dramas on the strge in good style, and young Cox proved so elever that he raised himself from the station of colour-grinder to the office of stage-painter. In those days it was the custom for a company of provincial players to move from town to town accompanied by the scene-painter. "In this way Cox travelled about with the players to Bristol, Leicester, Sheffield, Manchester, Liverpool." The practice thus gained is said, not without reason, to have conduced to the large generalized manner, the breadth of composition, and knowledge of effect which characterized the painter's mature works. It is interesting to remember that David Roberts and Clarkson Stanfield showed to the very last the the painter's mature works. It is interesting to remember that David Roberts and Clarkson Stanfield showed to the very last the good effects of the same schooling. Yet young Cox, like these his illustrious contemporaries, regarded scene-painting as merely a stepping-stone to something higher; he had, in fact, set his heart on becoming a landscape-painter. The young aspirant when working for the elder Macready was only nimiteen years old. The following anecdote, which we take from this chatty "Memoir," will be read with interest: be read with interest :--

Macready's son, W. C. Macready, who became so celebrated as an actor in after life, was then a child; and Cox, with his usual kindness, painted a complete set of miniature scenery for various dramas, to be used in a toy or puppet theatre which had been made for the little boy, probably by one of the carpenters. These scenes were so much prized and so well taken care of that they were still in existence only a very few years ago. The esteem so early formed for the youthful scene-painter in young Macready's mind lasted until the end of his career, as is proved by a most friendly letter written half a century afterwards by the great actor, when the testimonial portrait was projected, to which Macready sent a subscription of two guiness.

This volume, notwithstanding critical and other deficiencies, is the best record we are likely to have of a painter whom we honour as having lived in and for his art; the man and his works are shown to be one and inseparable. The narrative is in the tone of familiar and affectionate friendship. The photographs and other illustrations are well chosen, though they come out with a blackness little in keeping with the artist's proverbial tenderness. We have to observe on a strange omission in a work which presumes to be exhaustive; no mention is made of the collection of Mr. John Henderson, long known to be among the most important in the country. The author would do well to visit the Burlington Fine Arts Club, where fifty of these drawings, belonging mostly to the artist's middle and best period, are on exhibition.

Diub, where next of these drawings, belonging mostly to the artist's middle and best period, are on exhibition.

The career of David Cox after he came to London was chequered; he began in a small way, he gave lessons, he struggled on as best he could; he sold occasionally a drawing at a low price. An old account book tells us that in the year 1811 he disposed of "one small drawing for 7s., one coloured drawing for 10s. 6d.," and "one dozen sopia drawings for 8s. each." Even up to the age of thirty he was in such low water that he accepted an offer of 10ol. a year to teach drawing in a ladies' school at Hereford; ss we learn that in a single year he found leisure to send no less than twenty-two contributions to the Old Water-Colour Society. David Cox was at all times a hard worker; over a period of half a century he made each year several hundred drawings and sketches, and in all he exhibited in the Society of Painters in Water-Colours close upon eight hundred works. And perhaps, with the single exception of Turner, there has never here been known a deal in miles and the single exception of Turner, there has never here has never been known a rise in prices so astounding; but, as often happens, the artist himself respect only a small part of the rich harvest. The painter who was glad, as we have seen, to sell sepia drawings at eight shillings apiece, might at present prices have realized for his life's labours at least a hundred thousand pounds. The rise in value has been truly fabulous; drawings which some years ago passed through the hands of dealers at fifty pounds now command in auction rooms five hundred. This rage might seem unreasonable were it not that David Cox stands alone; in his peculiar line

he is unapproached.

David Cox makes strong appeal to an Englishman's love of country; he swakens in the mind a thousand associations which gather around fields, hedgerows, and rural lanes. Wide and sweeping are his horizons, wild and windy are his moorlands. To claim for his art imagination or passion would be too much, but it h for his art imagination or passion would be too much, but it has all the persuasiveness of strong conviction; it is penetrated with profound purpose; in motive it is sombre, solemn, and even sad. The strength of the artist lay, as we have said, in his downright and honest English character; other painters have done justice to Italy or to Switzerland, but he found his heart's content in an atmosphere of mist and fog. And he not only painted climate in general, but weather in particular. It has best said in apology for our English seasons that these

is no country in the world in which a person can take so many outdoor walks in the course of the year; it is true that flaids may be wet, the sky shreaded, the sun blotted out, but still a "constitutional" is practicable. Such is the atmospheric condition which David Cox so pute upon paper as to editors space and serial perspective. He is the printer of what may be called "weather"; he simed, we are told, to depict certain house of the day; but he did more; he indicates the state of the harometer; his drawings might be labelled "stormy," change," "fair." He preferred, however, the middle gauge; his storms have promise of sunshine just as his fine weather threatens a shower. His skies are full of rain, his grees is wet with the dew of the morning. Yet Cox seldom, like Turner, threw himself into the complex drama of the elements; and being thus semewhat circumscribed, it became all the more easy to preserve the "unities." Time, place, action were not with him separate outilies; they were all one, the work had an unbroken preserve the "unities." Time, place, action were not with him separate entities; they were all one, the work had an unbroken wholeness. His drawings leave little to desire, because they fulfill all that they promise.

David Cox in the technique of his art ranks among the purest of our water-colour painters. He eschewed opaque pigments. Water-colours were for him emphatically a medium of water; his paper might be said to be afloat; his rain clouds were literally full of water. And then, when the waters were a little subsiding, so that the dry land began to appear, he would divide the heavens from the earth, mark the middle distance, and make the foreground, at least in parts, firm enough to stand on. Indeed his work may be said to lie on the frontier line of creation and chaos. He had a way of letting a drawing take care of itself; he willingly availed way of letting a drawing take care of itself; he willingly availed himself of happy accidents, and allowed the colours to granitate and graduate as they capriciously saw fit. Hence the "blottesque style," which at last degener ted into a confirmed mannerism. His drawings might almost be taken as illustrations of "the philosophy of the unconditioned"; they are without boundary lines or defined limitations, they reach into infinite space and enter the region of the unknown. So bold are they in generalization, so negligent of detail, that to many they may appear as only half finished; but the artist had that rarest of all knowledge—he knew what to leave out and when to leave off. He discovered moreover that the undefined is full of suggestion, that shadow—land has mystery and hidden meaning, that vanishing outlines give a sense of transition and evanescent movement. David Cox is said to have studied Claude and Poussin, but in his works we fail to discover the cloudless sunshine of the one or the sculpturesque form and the balanced symmetry of the other. the sculpturesque form and the balanced symmetry of the other. With more reason has it been stated that his style owed much to the early masters of the English art of water-colour painting—Girtin, Varley, Barrett, and others. Comparisons, too, though forced and somewhat far-fetched, have been made between Turner and Cox; the one may be likened to a full orchestral band, while the other is as the musician who is content to play on a single string. At the time when the sun of Turner was setting in a blaze of red, Cox still held in quiet greys the sky of the morning. On the whole, David Cox in sketchy suggestiveness most nearly approaches that greatest of sketchers, William Müller; he was grand in disorder, masterly in hasty negligence; like nature herself, he evokes harmony out of discord and order from confusion.

COLCNEL DACRE.

WE own to a strong dislike to sentimentalities and affectations, both in books and in real life. Hence for such people as those who vapour and attitudinize through the pages of Colonal Ducre we have neither sympathy nor respect; nor can we commend their author for the lifelike quality of her impersonations or for the interest she has been able to excite. We are pretty well as quainted with the range of feminine light literature, and know by heart the stock of lay figures employed, but we cannot say that the more we see of them the better we like them; and we think that a final carting of them all away to the limbo reserved for the inane and impossible would be the best thing that could happen to them and the world at large. Who indeed does not know the well-worn form of the puppers that do duty for representations of living men and women in this new book by the author of Casto? The grave, tender, elderly hero, a very Sir Galahad for purity, knight and lover, leader of men and squire of dames in one, is of course the central figure; nor does it trouble the author that, with every virtue under heaven, Colonel Dacre wants even the smallest qualifying grain of commonsense, and that his real manliness is no more perceptible than his wisdom. That queer, overmanliness is no more perceptible than his wisdom. That queer, over-strained moral high falutin' which is set forth as the law whereby he lives is not manliness; and we hold his action with regard to Alice as distinctly reprehensible, not, as the author sets it forth, noble and generous. When a man has engaged himself to a young woman, it is his duty to protect her from outside influences rather than the protect her from outside influences rather than the protect her than the set into them. than throw her into them. If by the natural course of events she drifts away from him, and falls in love with somebody else, his course is then manifestly clear, and he must in honour forego the claims which he could not enforce without cruelty. But for an elderly man wilfully to fling his betrothed into the society of a fascinating youth, to disregard her pitcous beseechings to be "taken care of" and to be "kept near him," and to do his best to create the love

Colonel Ducre. By the Author of "Caste," "My Son's Wife," "Fearl," its. 2 vols. London: Hurst & Blackett. 1874

which is to rob him of his own happiness, is a case of virtue carried into the regions of fault and folly. Colonel Dacre, posed as a grave, steadfast, soldierly man, when dissected proves to be as weak as a woman and as gushing as a schoolgirl. As for this last quality, he goes through a vast amount of hugging and kiesing during his history, and seems to be unable to keep his arms or hands to himself. When he first comes home he gives his elderly sister "close and warm kisses," and "lovingly passes his hand over the white hair," as he says to her, "You! you will never be old, Olivia. You are one of the immortals. Naturally, when Alice comes to greet him, he "folds her to him as gently as if she had been indeed a flower," and leans his face "down upon the goldon head." When he introduces Julian to his sister, his hand grasps the young man's shoulder, and there is a general effusiveness wonderfully out of proporto his sister, his hand grasps the young man's shoulder, and there is a general effusiveness wonderfully out of proportion to the occasion. Indeed this gallant manful soldier is always putting his hand on Julian's shoulder, throwing his arm sound Olivia, folding Alice to his broad breast, and the like, in a manner that has at least one merit, inasmuch as it fits in with the cloying, love-sick spirit of the book, and is in fact what the story is in feeling. His good-night to Alice on the evening of the day of her introduction to Julian is a masterpiece of the kissing kind.

He held her against his breast, he kissed her forehead, her mouth, her eyes, and then, when he let her go from his arms, her hands. There was something so different in .this "good night" from their usual good nights, that Alice's wonder grew to trouble. She was flushed and agitated when she got to her own room, and that night it was long before she could sleep; and when she slept, she had strange dreams—of love, and loss, and grief.

and grief.

The lights were burning in Colonel Dacre's room and he was walking to and fro, with head bent down like a man in profound meditation.

This is the beginning of that renunciation in favour of his young friend which Colonel Dacre decides on making in a gratuitous way which was certainly half an insult and a whole wrong. Julian, however, seems to have been marvellously fascinating in his degree. To be sure he has no backbone; but in this he is of a piece with the rest of his invertebrate company. Even Olivia, the white-haired sister, who has almost a monopoly of the minute amount of sense bestowed on the personages in this book, is fascinated. We must give the extract as a sample of our author's style. It is a fair and characteristic example:—

olivia straightway fell in love with young Mr. Farquhar. This whitehaired Olivia was far more susceptible and tender of heart than the darkhaired woman of many years ago had been. It was little Alice who had
changed and softened Olivia. The child's worshipful love for Olivia had
atimulated Olivia to starve her faults and to nourish her virtues, that she
might be something less unlike what "the child" loved her as being. There
was something, Olivia thought, very winning in the appearance, but still
smore in the manner, of this dark loving eyed, broad white browed, gentle,
but deep volced, tall, slight, rather boyish-looking "young Julian;" something, too, which appealed to the motherliness in her, reminding her of what
her Walter had been at the same age—her Walter, whom she had loved for
his dead mother, as well as for herself. And this lad, too (so white-haired
Olivia called him), was fatherless and motherless, as her Walter had been.
Even had he had no charm of face and no fascination of manner, Olivia's
theart would, probably, have warmed to him, and he had both.

Before they had talked together a quarter of an hour, Olivia's captivation
was complete. They talked exclusively of her brother; and the carnest
tones of Julian's voice, and the fire that woke in the slumbrous depths of his
eyes as he spoke, each word of speech being praise, of Colonel Daere, made
Olivia's liking for the speaker rapidly change for love.

At another time, when Julian comes riding over to Heatherstone,

At another time, when Julian comes riding over to Heatherstone, Colonel Dacre discourses of him in this wise to his sister :-

"With what an easy, gallant sort of grace he sits his horse, Olivia! His hand has the lightness of a lady's, and the iron nerve of a knight's. He only needs armour and the more heroic dress, to be just the young knight, spotless and stainless—Sir Galahad, for justance—of an old legend; or the fally make of an old fairn the?" only needs armour and the more nerole cress, to be just the young amon, spotless and stainless—Sir Galahad, for instance—of an old legend; or the fairy-prince of an old fairy-tale."

"At his age you were at least his equal, brother!"

"Even if that were ever so, save in your half-maternal imagination, Olivia, how long since that time is made to feel when one remembers that I might now be, as far as age goes, this fine young fellow's father."

"Hardly, Walter, or only on a scale of computation which would enable me to say I might have been his grandmother."

"Come, dear Grannie, let us down and welcome Prince Julian; and I know that, for my sake, and also for his own, when you are face to face with him, your welcome will be a right loving one."

Oircumstances cause this fascinating young prince to stay at Heatherstone, on which Colonel Dacre insists that the "two children," as he calls them, shall drop the formal courtesy of Miss Fairfax and Mr. Farquhar, and be Alice and Julian to each other. Alice and Julian therefore they are; and this after Julian's enthusiasm has exhaled itself in the confession that to love Alice would be "like loving a moonbeam, a lily, a dewdrop, or a fairy." Then Julian pute his shoulder out of joint or hurts his arm, and Alice is told off as his amanuensis to write from his notes and dictation a certain novel which he is to write from his notes and dictation a certain novel which he is composing. The two young people are shut up together in a pretty luxurious little room, to the increase of Alice's facility for soft little sobs, tears, flushes, intense eyes, and general dewdrop-like behaviour; to Julian's boneless helplessness on the score of falling in love with his friend's betrothed; to Colonel Dacre's soldierly disquiet, but resolute determination to let the children come to terms if they so will it; and to the white-haired Olivia's indignation at her brother's folly, seeing that she has educated "little Alice" all along in the hope of making her his wife; which, however kind, was scarcely natural. We might perhaps take exception to a certain passage of playful badinage between Colonel Dacre and young Mr. Julian about Alice. It is where

Colonel Dacre welcomes Julian to Heatherstone; which he does by the by, in a manner perfectly impossible to an ordinary same linglishman, saying, with his hand "again on Julian's shoulder," and after he has relinquished Alica's hand with "a loving preseure '

"The heartiest of heart-felt welcomes! Take the Spanish compliment as sober, sincere statement, and consider me, my house, and all that is mine at your disposition, young friend."

Wish a mischievous light sparkling in his eyes, Julian replied, out of careless lightness of heart, glancing at Alice as he spoke,

"With one exception! I think, sir."

Alice flushed rosy red, as he had seen her flush once before. Colonel Dacre answered, smilling, avoiding any look at Alice which might add to her embarrassment.

"I think I need make no exception. In such a case, of all or nothing, the act of reservation would imply a doubt, so it seems to me, as to whether one were really in possession of the thing reserved."

One admires the taste that could include the transfer of an engaged woman as among the hospitalities so generously offered. Not less wonderful is the diction these wonderful people employ, where, instead of calling a girl rude or cross, she is said to be "somewhat irritant and sharp-tongued just now"; instead of saying "Mrs. Burmander wants Miss Fairfax to stay with her," Julian's translation is "she petitions that you will spare Miss Fairfax to hor for a few days"; and where Julian, whose "loving-looking eyes were gazing about "an atmosphere of delicious soothing calm," "the very poetry of repose," and the like, instead of the average youth's vernacular, "awfully jolly kind of place."

But if the earlier part of the story is cloying and sentimental, what shall we say of the latter? What of that curious creature Mrs. Winter? of that marvellous chapter headed "Storgo"? of the extraordinary revelations made by the parental, maternal, and filial instinct? which, were they possible, would sometimes be embarrassing. We have seldom read anything funnier in its way than the account of Mrs. Winter, beginning with her holding Julian's head on her lap and finding his face—" just a face for a mother's One admires the taste that could include the transfer of an

than the account of Mrs. Winter, beginning with her holding Julian's head on her lap and finding his face—" just a face for a mother's leving worship"—first of all like Giottino's dead Christ, and then, as it turns out by what follows, like Colonel Dacre's. The old Doctor, on the other hand, sees a likeness between his young patient and "Madame"; and what with shadowy resemblances, natural sentimentality, impossible white heat of feelings, universal high falutin', and storgé, Mrs. Winter "carries on over the invalid in a way irresistibly suggestive of a friendly lunatic asylum. Julian is aslean: time a behave spring evening. tic asylum. Julian is asleep; time, a bahny spring evening; place, an Italian villa; circumstance, storge working to a maddening extent, so that, in spite of the balmy atmosphere, Mrs. Winter is growing colder and colder, the beating of her heart heavier and heavier, "as if it were trying to beat out her feeble life as soon as possible," and her "one over-mastering desire to do the thing also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also had been also as a constant of the string also as a constant of the s the thing she had resolved she must not and would not do" strengthening as all the rest grows weaker. "And this thing was to fall at Julian's feet, to cover them with kisses, and to press them to her breast, while she claimed him as hers—her son, her own, her very own, her all!" Conquering storge so far as to be able to keep her place and leave his feet alone, though she touched his hair, Mrs. Winter then puts Julian through his catechism, and learns that he is practically nameless, having been adopted by a certain Captain Farquhar out of pure human kindness. Mrs. Winter, still possessed by storgé, speaks of his mother—says she must be dead, else she would claim him. "Ah, but if to claim him were to shame him,' cried Julian, and his young voice was stern, and on his smooth young brow came a frown." After a little more tall talk, says Mrs. Winter, with more gush than physiology, "The children of shame do not have such faces as yours." Coming finally to the full belief that storgs was right and that Julian is her son and Colonel Dacre's, a child, not of shame, but of lawful wedlock, Mrs. Winter flies off to Marseilles to get out of Colonel Dacre's way, and deliver up to Sir Everard to get out of Colonel Dacre's way, and denver up to Sir Everard Kennedy a fair but pig-eyed daughter of whom she has taken charge—Sir Everard, by the way, having "Mediterranean blue eyes" that "gleam phosphorescently." Meanwhile, Colonel Dacre flies off to Julian; and then at his request follows Mrs. Winter, sees her, is recognized, but does not as yet recognize in his turn. A last the mystery is unravelled, and the strong arms do a great deal of activities back the related of of conjugal hugging; Sybil, Mrs. Winter, takes back the place of wife which she had abandoned twenty-five years ago because of a fit of passion and pique; the "children" marry, and Alice learns that she has always loved "Lonel," as she calls the Colonel, more as a father than as a lover; and so everything comes round to its exact place, and all the hooks find their fitting eyes.

We protest against such books as Colonel Dacre as being false

in tone, enervating in influence, and sickly in spirit, to say nothing of their bad and affected style. No one acts as these people of their bad and anteried style. No one acts as these people act, and no one talks as they talk; and what with Sir Galahad and storge, animated moonbeams that do nothing but sob and blush and cry, and life at a universal pitch of exaggeration, we lay the book down with a sense of unreality and weariness that renders "the end" the most welcome word of the whole three volumes.

FRENCH LITERATURE.

WHEN the history of French literature during the present century comes to be written, M. Théophile Gautier's Histoire du romantisme will be one of the most valuable sources of infor-

^{*} Histoire du romantisme, suivie de notions, etc. Par Théophie Gautier. Paris : Charpentier.

mation. It is not so very long since the esthetic revolution took place which is identified with the names of Victor Hugo, Mérimée, Skints-Renve, and Théophile Gautier himself; and yet, if we look at the latest results of that movement, it seems as if an abyse separated us from the first appearance of the Odes at balkade, the Théotre de Clare Gand, and the Conscie de la Mort. This is not the place to inquire into the causes of a collapse which is as real as it is deplorable; but there is no doubt that, with very five exceptions, if we open the works of the authors who thirty years ago should in the ranks of the romaniques, we shall wonder what we could find to admire in them. Take, for instance, the novels of M. Petrus Borel, the "lycanthropist," or those of M. Alphonse Royer; we defy the most enthusiastic worshipper of literary eccentricity to read any of them from beginning to end, and the much-abused to read any of them from beginning to end, and the much-abused dourgeois who ventured to hint that even Hernani, like the sun, had its spots, was not so very wrong after all. The volume we are now noticing is the first instalment of a series designed to comprise all M. Theophile Gautier's posthumous writings. It is divided into three distinct sections—I. A sketch of the origin of the romantique movement; 2. Short biographical reminiscences of the principal authors, poets, painters, musicians, who took part in it; 3. A description of the influence it produced on the literature of our own day. This last section is a reprint of the comple-rendu drawn up some years ago by M. Gautier at the suggestion of the Imperial Government

In reviewing a selection of Ronsard's poems, we are still to a certain extent dealing with the subject discussed in the Histoire du romantisme; for the rehabilitation of the Vendômois lyrist was one of the chief attempts made by the innovators who had rallied around M. Victor Hugo, and in 1828 M. Sainte-Beuve, by his Tableau de la poésie française au scizième siècle, appealed with much eloquence and learning against the verdicts of Malherbe and Boileau. There is no doubt that, notwithstanding the radical defect of his starting-point—namely, the Latinizing and Hellenizing of French poetry—Ronsard was a man Latinizing and Hellenizing of French poetry—Ronsard was a man of true genius, and the judicious extracts given by Sainte-Beuve in the volume just referred to would suffice to establish his reputation. M. Becq de Fouquières has reproduced these pieces, together with a number of others carefully selected from a very large collection. Some are given entire: a great his reputation. Al. Beed de l'ouquières has reproduced thesi pieces, together with a number of others carefully selected from a very large collection. Some are given entire; a great many which it would have been impossible to print in catenso have supplied a certain amount of interesting fragments. The learned editor has added copious notes, an index, and Claude Binet's biography of the poet. This sketch, being written by a friend and disciple of Ronsard, gives us details the authenticity of which cannot be questioned

ticity of which cannot be questioned.

Malherbe, like Ronsard, was a literary reformer, and many critics still consider him the father of French classical poetry. succeeded to the brilliant harvest of the Renaissance, and whilst the members of the Pleiad show in their works all the exuberance of youth, together with its corresponding defects, Malherbe and his followers substitute polish instead of vigour, and calm dignity followers substitute polish instead of vigour, and caim aignify in the place of glowing imagery. Those who would become really acquainted with the development of French poetry should study both Malherbe and Ronsard, and in both cases a selection carefully made is amply sufficient. Professed scholars will of course peruse from end to end M. Prosper Blanchemain's ten-volume Ronsard, and M. Ludovic Lalanne's five-volume Malherbe; but we would recommend to the majority of readers M. Becq de Fouquières as an excellent guide.† His selection from the works of Boileau's as an excellent guide.† His selection from the works of Boileau's favourite writer is unexceptionable, and deserves to be wided; circulated as a companion volume to the one we have just noticed; besides a variety of notes, and an index, it gives us the life of Malherbe by Racan, and a commentary which André Chénier composed when he was still very young. This curious production, discovered in 1842 by M. Tenant de Latour on the margins of an old volume, was published for the first time as part of the edition of Malherbe which M. Charpentier issued in his popular series of the French classics. French classics.

Saint-Simon's Memoira have obtained such popularity that we should be glad to know more shout the author, and we want to be told why the MS. documents which he left behind him are still kept away from historical students.‡ M. Armand Baschet, thoroughly experienced in researches of this kind, and already known by several valuable works, explains the whole affair in an elegant octave forming the necessary complement to Mesars. Hachette's edition of the great memoir writer. It is generally supposed that Saint-Simon's papers were and still are locked up at the French Foreign Office for political reasons; but, if such is the case, why did not the Memoirs share the same fate? The fact is that why did not the Memoirs share the same fate? The fact is that when, in 1760, the Duke de Choiseul ordered the seizure of these voluminous MSS. in the King's name, "comme concernant le service du roi et de l'état," he was really interfering at the request of the family; and, as a proof that a hundred years ago the Saint-Simon papers were not looked upon as inaccessible, we may mention the successive permissions granted to the Abbé de Voisenon Duclos, Marmontel, Soulavie, and Lemontey to make extracts from them. Finally, Louis XVIII. ordered that the original MS. of the memoirs should be given back to the General Marquis de

* Poisies choisies de P. de Ronsard, asso notes et index. Par L. Bocq de Fouquières. Paris: Charpentier.

Saint-Simon, second cousin of the author, but at the same time the remaining papers were still retained at the Foreign Office. From the enumeration which M. Baschet gives of them we see that they must be extremely important, and that they would form a valuable commentary on the Memoirs. They include an axtensive correspondence, historical fragments, papers relating to Saint-Simon's embessey in Spain, &c. M. Baschet has explained in detail the circumstances connected with the origin, the nature, and the sequestration of these papers; he has quoted several letters written either by Saint-Simon or by his friends; and he has made out an excellent case for the free use and publication of documents which would help us to a more complete knowledge of the reign of Louis XIV. and the subsequent Regency. The book is sumptuously printed and illustrated, with an etching representing the castle of La Ferté Vidame, formerly the property of the Saint-Simon family.

M. Dantier's "name is already favourably known; we reviewed his history of the Italian Benedictine monasteries some years ago.

his history of the Italian Benedictine monasteries some years ago, and pointed out at the time how satisfactorily the author had taken up the work begun by Mabillon and Montfaucon. The two volumes up the work begun by Mabillon and Montfaucon. The two volumes now before us are further proofs of his indefatigable industry; they comprise a series of monographs based upon researches made during a long residence in Italy, and they take us from the invasions of the Barbarians to the eighteenth century. The preface explains very fully the peculiar characteristics of Italian civilization, and the necessity of studying it, not only, in printed or written documents, but in the evidence supplied by sculpture, architecture, and painting. The first volume is devoted to a narrative of the early invasions. Theodoric, King of the Goths; the Lombards and their relations with Pope Gregory the Great; the Lombard communal system; the Normans; the struggles between the Emperors and the Papacy—such are the various subjects handled by M. Dantier with his well-known erudition. The second volume discusses several episodes in the history of Florence, more especially that of the Medici; it gives besides interesting particulars on the events in which Savonarola, Machiavelli, and Cresar Borgis took a conspicuous part. The treacherous and violent policy of the age of the Borgiss is branded as it deserves. Venice forms the topic of the concluding ease; and, whilst inquiring into the cheracter of its government. and, whilst inquiring into the character of its government, its greatness, and its fall, M. Dantier leads us naturally to our own times.

The literary history of the French theatro has often been discussed, and therefore M. Despois leaves it almost completely saids in his very interesting volume. † The subject he examines is a totally different one, and yet has a close connexion with it; for, whatever may be the power of genius, the ablest and most accomplished writer must take into consideration certain material and moral facts without which no dramatic art is possible. M. Despois, starting with the year 1658, when Molière established M. Despois, starting with the year 1055, when monere established his company in Paris, lays before us the whole management of the theatrical world during the reign of Louis XIV. First of all comes an enumeration of the different companies, with the places where they performed and the various circumstances of their origin; the second book deals with questions of expenditure, administration, police, censorship, &c. In the third our author gives us many curious details respecting the status of literary men two hundred years are and their relations with the author gives us many curious details respecting the status of literary men two hundred years ago, and their relations with the actors at the several theatres; then come the actors themselves, their tribulations, and their social disadvantages. The last two chapters, entitled respectively La comédie à la cour and La comédie à la ville, are of a more literary character than the others, and show what were the intellectual sympathies of the play-going public during the grand siècle. M. Despois has taken the opportunity of refuting one of the most popular legends in the life of Molière as handed down by tradition since the days of Grimarest; Molière as handed down by tradition since the days of Grimarest; we mean the story which represents Louis XIV. inviting Molière to breakfast with him because mes valets de chambre

Originality is not a quality which we commonly expect to find in scientific books, but it must be acknowledged that the author of Les Atlantes 1 is decidedly original. His object in writing this thick octavo is to prove the real existence of the powerful nation described by Plato in the *Timous*. M. Roisel argues his case with a plausibility which may startle sceptics, if it fails to conwith a plausibility which may startle sceptics, if it fails to convince them. The traditions of various nations, such as the Mexicans and the people of Central America, speak of a terrible catastrophe which submerged an immense territory situated between that continent and the coast of Africa; the West India Islands, as they are called, being the only remains of what M. Roisel thinks must have originally been the Atlantis. A similar tradition exists amongst the Amakona in Africa. Starting from these premises, and calling to his assistance the multifarious aids supplied by philology, geography, ethnography, and metallurgy. supplied by philology, geography, ethnography, and metallurgy, our author endeavours to reconstruct the history of a nation which has hitherto been considered as having no more authentic existence than Gullivor's Lilliput or Campanella's City of the Sun.

MM. Vivien de St.-Martin and Figuier still continue the publication of their most useful handbooks. The former writer has in his new volume & devoted a considerable space to Asia, because

the researches and explorations connected with that continued have this year derived their interest quite as much from politics at from science. The publications treating of Asia are both summarious and important, and M. de St.-Martin gives a complete demonstration of them, inswing special notice to the most satisfaig. The hibridge-publical part of his volume is excellent; and the hisographical notices which terminate it include many illustrious seems, show of MM. Agassiz, Pauthier, Stanisha Julien, and Masiry, amongst others. Some of these appear also in the necrological summary appended by M. Louis Figurer to his valuable compilation, the recent instalment of which is distinguished by all the qualities characteristic of the previous ones. characteristic of the previous ones.

M. Arsens Houssaye publishes a new edition of his gossiping volumes on the Regency of the Duke of Orleans.† They have been so often noticed that it is almost superfisors to speak of them again, were it not that it is always useful to caution the public against works of a doubtful tendency, especially when the author is one whose popularity has long been established. Now M. Houssaye sees perfectly well what were the causes which brought about the disasters of the last ten years of Louis XIV.'s regen; but he has not a word of condemnation for the state of reign; but he has not a word of condemnation for the state of things which the subsequent Regency introduced. In his opinion, wit, the spirit of sociability, the talent for conversation, and that courage which is natural to Franchmen, cover a multitude of sins; and he is in his true element when, surrounded by all the memoirs, and represented the subsequence paraphlets and creaters as plantifully illustrated to the subsequence of the subsequence ma, correspondence, pamphlets, and gazettes so plentifully illustrative of the dast century, he draws from them the materials for a portrait of an abbé, an actress, or a philosopher. M. Houssaye finds no blot in the age of Madame do Pompadour, and the catholicity of his disposition enables him to include in the same comprehensive and applications. Machinery of Advisory and Advisory of Advisory and Advisory of the catholicity of the catholicity. admiration: Massillon and Dubois, D'Aguesseau and Adrienne Lecouvreur, Vauvenargues and Madame de Tencin.

Mirabeau forms a kind of transition between the old and the new regime; he had all the vices and corruption of the one, combined with the impetuosity, the generosity, the passion for equity and justice which characterized the other. We do not wonder and justice which characterized the other. We do not wonder at the magic attraction which he has always exercised, and Madame Louise Colet is only one amongst many writers who have yielded to the charm. The book of which she now publishes an improved edition is a quasi-novel intended to describe an important passage in Mirabeau's life, the history of his quarrels with a describe and selfsh father: we may say that this recluyed structure. postice and selfish father; we may say that this prolonged struggle is, or a small scale, a counterpart of the dissensions which were then agitating French society. Madame Colet has portrayed it with much ability, and this new edition of her book is augmented by a considerable number of historical documents.

M. Victor Cherbuliez gives us an interesting account § of the m. Victor Uncromez gives us an interesting account 3 of the revolutions which have recently visited the Spanish peninsula. Spain, he says, is the country in modern Europe where the army has the greatest influence, and the various pronunciamientos which history has had to chronicle within the last fifty years show to what a degree the practorian system has become part and parcel of the national life. The peculiar feature of the case here is that the soldiery, instead of making what M. Cherbuliez calls de la politique de caserne, are altogether in favour of Parliamentary ideas. munciamientes, however, cannot go on for ever without making all regular and settled government impossible, and military license does not change its nature by borrowing the cant of an anarchical Liberaliem.

The brockure of M. Legouvé | is a homage paid to a man who more than any other writer perhaps, except Beranger, has represented what may be called Tesprit français during the nineteenth century. Despite all their genius, the authors of Hernani and of Autony never succeeded in obtaining for their dramatic system the letters of naturalization which they believed they would receive without any difficulty. The enthusiasm they inspired was limited to a coterio, and after the first moment of surprise they saw themselves also adverted by the majority of the public. It is very themselves abandoned by the majority of the public. It is very well to stamp with the epithets bourgeois and perruque those who could not muster up admiration for the horrors of La tour de Neels or of Marion Delorms: but, after all, the bourgeois contribute very materially to fill a house, and they crowded to see the vaude-villes and comedies of M. Scribe, whilst they showed the most com-plete indifference for the eccentricities of romanticism. The truth plots indifference for the eccentricities of romanticism. The truth is that M. Scribe is essentially the dramatist of the French bowgeoise; he has admirably painted its political and patriotic sympathies; his muse has sometimes been derisively balled in muse its pot au fru; but if this designation is meant to imply that the author of the Mariage de rauon is the poet of irreside, we should call it a compliment rather than an affront. M. Legonvé, as he ald coadjutor of M. Schibe, very naturally speaks of him in the tone of panegyric; but at the same time he is chilged to acknowledge that two of the most cascatial qualities of a dramatic writer were wanting in his friend—namely, vigour of a dramatic writer were wanting in his friend—namely, vigour of style and depth in the delineation of character.

The fifth volume of M. du Camp's work on Paris treets of a

Government and the probabilities are stop to the probabilities and the may exchapter treats of adaptivities, and we may excultant excellent remarks on the deployably amount amount and the contract of the co the effectivement superious has such amon the officer sides of the Channel. M. on O two causes, both springing from a discuss for first place, philitics have almost everywhere b er our net o for popularity two causes, both maninging from a desire for populatity. In the first place, pulitics have diment everywhere become enginted upon-literature, and, with the examples of MM. Michelet and Quanet before than, lecturers are naturally tempted to court suscens by appealing to popular passion. It follows that the Government, product to avoid engagerassements, appoints piecesors of second-rate abilities, whom even political discussions could not lift into notoriety. But there is another and less dangerous way of securing popularity—namely, by transforming a lecture into a more string of anecdotes wittily told, and sensational descriptions of current events. Thus it happened that a late profession de littlerature detrangers at the Collège de France crowded his lecture-room by discoursing on the Mormons. discoursing on the Mormons.

M. Ravaisson's interesting Archives de la Bastille are full of documents of the must valuable kind relating to the reign of Louis XIV.; but any historian who makes use of them will do well to be cautious, and to test the evidence they place before him well to be cautious, and to test the evidence they place before mind by the information given by contemporary memoirs. This is particularly necessary in the case of the famous Poisen trials which form the subject of the sixth volume. Le Voisin appears as the heroine, the central figure; and sround her move a number of satellites whose nefarious transactions, fully detailed, make us acquainted with the most loathsome scenes. The worst feature in the whole business is the complicity of persons belonging to the highest classes of French society; thus it is clear that Madamo the highest classes of French society; thus it is clear that Machino de Montespan took an active part in several attempts to administer poison, and her condact throughout the whole affair betays as amount of impudence and perversity which is quite amazing. The revelations of the leading criminals showed that the aristocracy was profoundly corrupt, and although the character of the wretches who gave evidence was not of a nature to inspire much confidence, yet there is a certain amount of truth in their disclosures, as can be accounted to the confidence of the confi easily be ascertained by reference to other sources of information. At the same time we must express our belief that some of the assertions are positively calumnious, and no one will admit on La Voisin's authority that Racine was a thief and a poisoner.

The novels lately published on the other side of the Channel require a great deal of weeding, and even those which we may name as comparatively tolerable could hardly be placed in the hands of young people. The indefatigable M. Paul Févalt, for instance, by assigning the history of the Chevalier de Karamour's adventures to the reign of Louis XV., takes the opportunity of giving us sketches of very doubtful society indeed. Palineation of character is one of M. Féval's strong points; witness M. Lebihan himself, a Breton of the old stamp, who firmly believes that he has sprung from the Armorican kings, maintains his rights to the has sprung from the Armorican kings, maintains his rights to the crown of Brittany, and calls the French "a dirty lot." The Chevalier de Keramour, the hero, is made to go through a series of wonderful adventures, protected by a ring in which are to be found a lock of hair and a bit of a hanged man's rope,

In order to enjoy thoroughly M. Deulin's Contro du roi Gam-brinus 1, one ought to be of Flomish extraction, or at any rate to have lived a long time in Flanders; there is an archaic appearance about these tales which gives them a kind of local colouring, and which reminds us a little of MM. Erckmann-Chatrian's style. Originality, wit, good sense, and humour are, however, cosmo-politan qualities, and therefore we would venture to hope that M. Deulin's charming volume will meet with all the success it deserves; by publishing these delightful novelettes he has con-quered for himself in every library a place next to Perrault, Anderson and Charles Notice

Andersen, and Charles Nodior.

M. Tallichet continues in the Revus suisse § his interesting sketch of the origin and development of the Federalist idea; the March number of this periodical contains likewise several miscellaneous articles of much merit, and amongst others the translation of a Slavonic poem on Switzerland.

THE COMING BUDGET.

THERE can be no doubt that a prudent Chancellor of the Exchequer welcomes the suggestions which are always forthcoming in abundance before the publication of the Budget. In other great departments of State there are perhaps the official mysteries which a year ago furnished Mr. Disking with an excuse for not announcing a policy on the resignation of Mr. Gladstone; but the figures on which financial proposals depend are as well known to the world at large as to the Minister himself. After allowance world at large as to the Minister himself. After allowance has been made for a probable increase in the estimates of expenditure, it is ascertained that the surplus will, according to the receipts and estimates of the past year, exceed four millions. Sir Stafford Northcore will not be disposed to rely on a continued increase in the productiveness of existing taxes. With the collapse of prices and wages in some of the principal departments of industry, even the consumption of beer and spirits will no longer be indefinitely consumption of beer and spirits will no longer be indefinitely clastic. The returns of the Income-tax itself will probably indicate the commencement of commercial depression, and the stocks and shares which become during the year liable to succession duty will have been reduced in value by a considerable percentage. Even if the prosperity of the last three years had not been checked, it would be unsafe to anticipate a large mortality of capitalists and great landowners. Whatever may be the case with other branches of revenue, the Stamps will in all probability show a decline. If Mr. Lowe had not been blamed by some recent writers on finance for estimates of revenue which were afterwards largely exceeded by the actual result, it might have been thought a truism that it is better to err on the safe side, and even of set purpose to drop a few handfuls which may be gleaned by the Commissioners for the Reduction of the National Debt. The conversion of Consols into Terminable Annuities, which has been devised for the purpose of cheating the House of Commons and the country by a pious fraud into almost unconscious payment of debt, is a more claborate and more costly process than the provision of a moderate annual surplus. In present circumstances the Chancellor of the Exchequer may not unreasonably assume for the purposes of his Budget that the receipts will during the custing year be perceptibly diminished. It would not even be an excessive precaution to reduce his estimated surplus by twenty-five per cent., leaving a margin of about three millions,

posed, in deference to any authority less high than that of Mr. Gladstone, both to sacrifice a surplus and to encreach largely on the residue of the national income. The present Charcellor of the Exchequer will not impose now taxes under the name of adjustments; and it may be hoped that he will not be precipitate or profuse in his offers of relief. It would not be an intelerable misfortune if, by the common of all parties, the whole or the greater part of the surplus could be devoted to the redemption of dell. Only are or seven years ago the Ministry and the Opposition profused to think that the best possible application of a small surplus was the creation of Terminable Apputition, which accordingly now augment the annual expenditure. Mr. Gladstone was frequently elequent in praise of the Americans, because they at that time levied oppressive taxes for the purpose of dimenshing their debt. If he had remained in office, and if he had not modified his opinions, he might now have had an opportunity of making an impression on the

As the alternative of reducing taxes will certainly be adopted, the Chancellor of the Excheques will have to compare the conflicting claims of many deputations, and the more disinterested suggestions of many voluntary advisers. There is reason to four that the weakest sufferers will, according to the proverb, go to the wall. Public opinion in matters of taxation too often favours special in-, ustice. The demand of the brewers for the abolition of the licence duty was in the highest degree reasonable, but the hardships of a small and wealthy body attract no popular sympathy. There is no better reason for a tax on brewers than for a tax on bankers, on conlowners, or on cotton-spinners, all of whom would, like the brewers, find themselves unable to distribute half a million in additions to the cost of the commodities in which they deal. The pretext that the licence duty is an equivalent for the hop duty is perfectly idle, although it has some historical foundation. It is true that Mr. CLADSTONE imposed the licence tax when he removed the Excise and Customs duties on hops; but other remissions of duties on commodities, and especially on raw material, were given by Parliament, and not sold. The duty on malt is only defensible as being largely productive; the comparatively small amount levied on hops was a mere anomaly. When the paper duties were repealed, it was not thought necessary to make newspaper the licence duty was in the highest degree reasonable, but repealed, it was not thought necessary to make newspaper proprietors recoup the revenue. On the contrary, they proprietors recoup the revenue.

were about the same time relieved both from the advertisement duty and the stamp duty. It was not thought ment duty and the stamp duty. It was not thought equally worth while to sontiliste the browers, who are nevertheless not wholly without political influence. Rainway shareholders have still less hope than brewers of an impartial audience, although the passenger duty on the matropolitan and suburban lines which compete with intended steamboats and omnibuses is a flagrant, and indefentable abuse. boats and omnibuses is a flagrant, and indefensible abuse. The farmers, though they are more sumerous than browers, and even than railway shareholders, can acareely hope for the repeal of the malt duty. The sugar trade, which has not been directly represented by any secont deputation, may not improbably be preferred to more urgent caudidates for fiscal relief. Mr. Discault may perhaps consent to forget his histy proposition that reduction of indirect taxes is intail cases preferable to repeal. The mischief of interference with production by revenue officers is a fixed districtly, while the receipts from the duty diminish with the persentage of the tax. Those who are best able to take a preferable with the classification of sugar; and the comparative convenience. reduction would accrue to the consumer, although dealers would of course profit by an increase of trades. Mr. Baxten's suggestion of a repeal of the duties on coffee, chicory, fruit, and other articles of minor importance is well worthy of attention. There are no branches of revenue which are collected at a higher proportional cost.

The contributors to the Income-tax have, with the exception of an association of tradesmen, abstained from troubling the CHANCELLOR of the Excusous with memorials or interviews. The requests for relief proceed only from a minority in value of the taxpayers, so that compliance with their demands would operate as a gratuitous boon to owners of property. There is a general current of opinion in favour of a remission of the whole or part of the tax on smaller incomes; and the practical difficulty of exemption may by proper exertion be overcome. It is necessary in the first instance to deduct the tax from rent, interest, and dividends without regard to the circumstances of the owner, who may perhaps possess other sources of income. It might be practicable when exemptions became more numerous to provide additional facilities for the return of overpaid taxes, and there would be some compensatory saving of labour in the collection of duties under Schedule D. A reduction of the present percentage is to be deprecated as an unnecessary sacrifice of revenue, while it would leave untouched the alleged objections to the machinery of the tax. Of all the modes of disposing of the surplus which have been lately discussed, the worst would be a transfer of local burdens to the national Treasury. Mr. DISEALLI has unfortunately intimated his determination to relieve the ratepayers; and his language seemed to point to measures of the current year. It is always a matter of regret when financial arrangements are made to depend on political considerations. Sir Massey Lopes is himself temporarily silenced by office; but his supporters form a considerable section of the Ministerial majority, while a few of them are to be found on the Opposition benches. Mr. DISRAELI himself shares their opinions, and Sir Stafford Northcote will perhaps be unable to resist the pressure of colleagues and of adherents. If he is compelled to make concessions to the ratepayers, it may be hoped that he will find in the transfer of burdens a conclusive reason for retaining the Income-tax at its present rate. There is no other fund from which a donation to owners and occupiers of real property could be drawn with any plausible show of justice. A twofold reduction of direct taxes would be intelerably invidious.

COUNT BEUSTS NOTE.

WHAT was the real nature of the position of Austria towards France when the war of 1870 broke out has been the subject of violent dispute among French politicians. The Duke of Gramont has always alleged that Austria gave France such assurances of support that it cannot truly be said that the Imperial Government rushed into the war without having made sure of a valuable alliance; while M. Thiers and critics of his sort have always alleged that the Imperial Government had ample warning that France could not reckon on Austria doing anything for her. The discussion of this point was interesting to French politicians who were trying to fix blame on each other and each other's parties, but it was extremely inconvenient to Austria, and did not much admire a process by which her diplomatic secrets were being raked up, and probably, hing now on good terms with Prussia, did not fixe to have it known how very warmly she had esponsed the cause of Prussia's enemies. Enough was published to show that Austria was restrained by prudence only from helping France, and the Prussian Court, which was perfectly aware of this, noither felt nor expressed any resentment. Prussia had, in fact, converted the forager ally of France into an unhesitating ally of her own, and this was a triumph sufficiently great to throw all past causes of unpleasantness into the shade. But the controversy was not terminated in France, and the Duke of Gramont persisted in saying that there had been a spatch received at the moment when the war broke out, which course of France as her own. At last the loant seed the cause of France as her own. At last the loant seed the cause of France as her own. At last the loant and has permitted the despatch to be a last the loant and has permitted the despatch to be a last the loant and has permitted the despatch to be a last the loant and has permitted the despatch to be a last the last

sidering the circumstances under which it was written. scems to have been a very sensible and creditable despat scems to nave been a very sensible and creditable despatch for Count Brust to have penned. It is quite true that it is stated in this despatch that Austria considered the sause of France as her own, but it is also true that it is problem out in language of unexceptionable clearness that Austria was not prepared to give France any active aid. It must be remembered that Count Brust was writing long before the Counter and when the counter and when the counter and when the counter are successed and when the Germans had gained any successes, and when France was preparing to carry the war into Germany, and fully believed in her power to get the start of her adversary.
When, therefore, Count Beust explained why it was that Austria could not help France, we may be sure that he was in carnest when he wrote that neutrality, a word he uttered with regret, was imposed on Austria by imperious necessity. It was to the permanent interests and permanent difficulties of Austria that he was obliged to look; and an examination of the reasons he gave for Austria adopting a course which it caused him sincere pain to own that she was obliged to adopt throws great light, not only on the temporary question why Austria did not take the field against Prussia, but on the general policy of Austria since the war of 1870.

The primary reason that induced Austria to remain neutral was the fear of Russia. Count Brust had ascer-tained beyond the possibility of doubt that, if Austria took the side of France, Russia would at once, without hesita-tion, take the side of Prussia. What good would an Austrian alliance do to France in such a case? Austria Austrian alliance do to France in such a case? would have been immediately threatened in Galicia and on the Pruth and the Lower Danube. She would have had to fight for her own life, and would have been utterly unable to assist France. It must always be borne in mind that it was the close alliance of Russin and Germany that enabled Germany to improve her first victories, and to pursue her career of conquest unchecked by outsiders. As a recompense for the assistance thus rendered, Russia got, at the expense of the honour, if not the interests, of England, the coveted prize of the free use of the Black Sea. the French war was over, Prince BISMARCK set to work to use the Russian alliance to a new purpose. He so managed matters that he was able to offer a Russian alliance to matters that he was able to offer a Russian amance to Austria, with Germany as the mediator between them, and the friend of both. Austria, after due consideration, accepted the offer, and the consequence has been the introduction of a completely new phase of European politics. Formerly Austria was the secret or scarcely concealed enemy of Prussia and Russia, dreading both, but trying to hold her own against each in turn by every device that patience and courage could suggest. She had to fight Prussia in 1866 and was severely beaton; and subsequently by constant intrigues with her discontented subjects Russia did much to annoy and embarrass her. Still, when the French war broke out, Count Brust could write that the cause of France was the cause of Austria, and that it was only fear of the consequences that restrained Austria from challenging Russia to take part in the war. Now Austria has seen reason to adopt a totally different policy. She makes her calculations on the basis that Russia will be sincerely friendly, and not only has much of the factitious discontent in her outlying provinces died away with the cessation of the stimulus given by Russian agitation, but she has ventured on letting Turkey know, especially in the Bosnian affair, that she will insist on having proper respect shown her, and the Porte has been obliged to reply in very civil and conciliatory language. But this might have happened if for any reason Austria and Russia had seen fit to make friends and give each other the benefit of a temporary alliance. What is new is that the present alliance is under the guarantee and guardianship of Germany, to whom its existence is in fact due. Austria leans upon Germany as a protector able and willing to see that no unjust advantage is taken of her, while Russia in its turn is satisfied that Germany will take care that the eternal Eastern question is not permitted to take any new and awkward shape at a moment when Russia may prefer rest or needs her energies for the proseoution of her nims in Asia.

But there was another reason which weighed with Count spatch received at the moment when the war broke out, spatch received at the moment when the war broke out, spatch received at the moment when the war broke out, spatch Count seems had positively stated that Austria and that was that Austria could not really count on her own subjects. The Germans belonging Austria could not be trusted to fight against Germany; and the Hungarians, although perfectly ready to defend themselves against the property and has permitted the despatch to the property ready to defend themselves against the which the Duke of Granow relied. Con-

Austria might gain strength in Germany, and thus upact the balance of internal power on which the new system of dual government reposed. Mor was it really a hesitation as to what Austrian Germans and Hungarians would do that alone filled Count Bauer with disquistude. The distrian army, in consequence of the change in the whole system of Government introduced after the war with Prussia, and also in consequence of the experience which that war had furnished, was totally recroamized in 1868, and war had furnished, was totally reorganised in 1868, and it was agreed between Austria and Hungary that the system then introduced should be tried for a fixed period of ten years. In 1870 the Austrian army, orippled by the difficulties attendant on every new scheme of army reorganization, was not at all fit to take the field. A large part of the troops was mobilized in order that Austria, if attacked, might not be taken utterly unprepared, and it was soon seen that the new system was only in its infancy, and that a campaign would probably he attended with immense disasters. By prudently keeping out of the way of danger Austria gained time so as to let her new military system come into full operation. It is even now reported to be far from what it was intended to be, and here again the advantage of a fresh period of repose which Germany offered her through the Triple Alliance was obvious. Unfortunately Austria cannot afford, or can only afford with the utmost difficulty, the army she desires. She wants to have 800,000 men when the army is on the war footing, and to have these men thoroughly trained by a compulsory service of three years. It was calculated until lately that Austria by economy and very good management might get an army such as she desired for about sevon millions storling. But latterly it has been seen that this, under present circumstances, is impossible. The officers are starved, the cavalry is week, the artillery is insufficient, the fortresses are not secure under the new conditions of modern warfare. A million and a half more is therefore wanted this year boyond the seven millions which it used to be thought was enough. But a million and a half sterling is a very large sum for a State always so near bankruptcy as Austria has been for years; and if the money is to be found, it can only be found by complete reliance being placed on the pacific intentions of Austria. In one respect Austria is better off than she used to be, for she is on cordial terms with Italy, and has no longer an enemy to fear on that side. But then her alliance with Italy and with Germany, and the progress of the ideas on which that alliance is based, are exposing her to a new source of internal trouble. Count Beger in his despatch speaks of the task which Austria had been requested by France to undertake at Florence, and of the hopes which the French Court entertained that a useful alliance between France and Italy might thus be established. Count Beust promises to do his best; but urges that, if anything is to be done in this way, the Italians must be allowed to occupy Rome. Count BEUST implores the Government of the Emperor Napoleon to perform this act of Liberalism, and so to outstrip Germany, and prevent it being thought that the Italians award Rome to the spread being thought that the Italians owed Rome to the spread and triumph of Teutonic ideas, which might, as Count Brust pointed out, easily prove contagious in Austria. Here we have the beginning of that separation of the Austrian Government from the Ultramontanes which has lately assumed such considerable dimensions, and which cannot fail to lead to the most important results, as it raises in a peculiar form the great question of the relations of the Church and the State which is now agitating almost every European country.

THE AGRICULTURAL LOCK-OUT.

THE struggle now going on between the labourers and their employers in the Eastern countries is as yet too young for either side to be near owning itself conquered. It is, however, assuming larger dimensions, and the number of men locked out is continually increasing. The main reason of this increase is that the quarrel is not primarily a quarrel about wages. It began with a demand on the part of the labourers at Exning for a shilling a week more, and the employers were not unwilling to accede to it if, en consideration, they could make up their minds that they could afford told to what was asked. But, while they were considering, the men allowed it to be known that they believed themselves to have might as well as right on their side, and that they had the Union to book in if the masters

would not give them the extra shilling. immediately treated this as giving a test tries had some time previously formed an Association of their own to combat the Union, and to this Ass ciation the Exning case was referred. It was resolved that the time had come to stump the Union out in the neighbourhood, and all the members of the Association pledged themselves to get rid of every labourer who was a member of the Union. This is the origin of the lock-ont. The men were thrown out of suployment not because they, or some of them, wanted a shilling a day more, but because they belonged to the Union. And it is this that has made the lock-out spread so rapidly. The more men locked out the better for the farmers, for the greater is the charge on the funds of the Union, and the stronger the hope that the labourers may be beaton by having nothing to eat. The labourers are meanwhile getting their nine shillings a week so long as the Union funds last; they are anxiously inquiring whether they cannot get work elsewhere in England; and they are eagerly listening to schemes of emigration. Perfect order and even a certain amount of neighbourly good feeling appear to prevail in the district, and the exaggerated apprehensions of the Bishop of MANCHESTER appear as yet to be entirely without foundation. A few agitators from a distance have stirred up a little bitterness, and have printed abusive remarks on the farmers in their usual strain of insolent ignorance. But the men themselves do not appear to bear any malice against the farmers, or to be inclined to use anything like illegal coercion towards those who do not choose to join the Union, and so still go on working. The question is treated as one between one social order and another. The pride of as one between one social order and another. In a price of the men is touched. They are commanded not to do a per-fectly legal thing, and they resent this. The farmers have of course an equally perfect legal right not to employ a labourer who joins the Union, just as they have a perfect legal right not to employ a Roman Catholic or a man with red hair. But the labourers as a body are indignant at this treatment, and carnestly appeal to those who are inclined to go on working not to desert their order. And yet the farmers are not establishing the lock-out from any mere caprice. It is very inconvenient to them, to say the least, and if they did not think themselves sure of winning, they might own that it must subject them to a serious pecuniary loss; but they are determined, if they can, to retain the power of treating directly with their men on questions of wages, instead of having an outside body interfering in the bargain. The labourers reply that to the best of their belief the Union has done much good, if not to them, yet to the general body of English labourers, that they wish to encourage it, that they are only doing what the law allows them to do, and that to leave the Union simply because their master bids them would be to forfeit whatever sense of dignity and independence they may have in them. Such a quarrel is, it is obvious, a far more serious one than if it were merely a dispute as to whether a farmer with produce at particular prices and a fixed rent to pay can afford to add a shilling a week to the wages of his labourers.

That the farmers should look with an evil eye on the Union is not unnatural. The history of Trade Unions is not an attractive one to those who have hitherto stood outside of the area they occupy; and the farmers, besides the wish to manage their own affairs, which they share with most other mon, are not unreasonably irritated at the thought that they are represented by Union agitators as the oppressors of the poor. They do not feel as if they had oppressor of the poor around them, many of whom they have known since they were all boys together. They say, with some show of justice, that they give the labourer more than the current rate of wages would indicate, and that they cannot carry on farming if they are to pay, not what is the market price of labour, but what a Bishop calls an equitable wage. Some of the landlords have so far helped the farmers that they have given notice to those labourers whe hold cottages direct from them that they must leave. But it is not extract him them that they must leave. But it is not extract him which the farmers were to be considered entitled the farmers were to be considered entitled.

But the other side of the question deserves consideration. Although it may be true that the rate of wages is not much affected by Unions, if the calculation is made with sufficiently large limits of time and space, it is also true that there are districts in which, directly it was found that the laborators could combine it. it was found that the labourers could combine, it was also discovered that the farmers could afford to make all of a sudden what is to a poor man so enormous an addition to his wages as three shillings a week. The Union has, as a matter of fact, raised agricultural wages very rapidly in some localities, and poor men in other localities are not likely to think badly of an institution which has done so much for their brethren. Nor is it a small gain to the labourer that he should be stimulated into some activity and independence of mind by having what he believes to be a great cause of his own, and by having to go through some severe personal privations that he may stand by his order. The Union, too, gives guidance and help in certain indirect ways which the men really want. When the farmer is asked by benevolent bishops to give an equitable wage, he replies that he, like every one else, gives what will command the article he wants and no more. He gives twelve shillings a week instead of thirteen because he can get men who will take twelve shillings. But if labourers cannot, as we will assume, live on twelve shillings in decent comfort, this shows that there are, in some districts at least, too many labourers. To leave the place where they are not wanted, and to go where they are wanted, is the advice that sound economists would give them. But how is a poor man to do this? How is he to know when to go, how to go, where to go? The Union has come to the assistance of the ignorant, perplexed labourer. It or its assistance of the ignorant, perplexed labourer. It or its best leaders try to ascertain where the work of such men as agricultural labourers is really wanted, what mistakes must be avoided, what help will be needed, which men are fittest to go. For the first time in his life the labourer who has a dim consciousness that the labour market is over-stocked, and that it would be better for him to leave the place of his birth, finds direction, organization, and selection carried on for his enlightenment and benefit.

Possibly, in any one instance like that of the Newmarket district, the farmers may win, and Unionism will be stamped out for a season; but it is next to impossible that even they should win for more than a very short time: and that the Labourers' Union should be trampled out all over England is, it may be fairly said, quite out of the question. The Consus of 1871 shows that the number of agricultural labourers decreased by 300,000 in the ten previous years. There were then only six labourers where in 1861 there had been seven. The scheme of emigration which the Union is beginning to set in motion will probably carry off the pick of the diminished number shown in the 1871 Census, and if it is true that even at present the Union includes one-third of the whole body, it has attained pro-tions which will give it a strength that must continually increase. Whether the farmers like it or not, the general system of English agriculture must undergo great changes before long, and the Cambridgeshire farmers are reported to see this, only they cannot bear to acknowledge that the Union is to be the instrument of these changes in the districts to which they belong. Whether rents will sink is extremely doubtful, but the landlord will have to provide decent cottages just as he provides decent farm-buildings, or the farmer will not be able to keep his labourers. The cottage will have, as a more matter of business, the same care bestowed on its sufficiency for its purpose as the stable or the barn. The labourer will be paid in money all he earns. When he works extra hours he will be paid for extra hours. If he takes any payment in kind its quantity and money value will be ascertained beforehand. Piecework will be introduced as much as possible, and some of the Cambridgeshire farmers have already vowed that when they have conquered, and the labourer forswearing the Union shall return to his work, they will get rid of these eternal quarrels about wages by throwing every farming operation that admits of it into the form of a job contracted for at a price. On the other hand, the farmer will do all he can to make himself comfortable with as few labourers as possible. It is idle to talk of laying down all England in grass, for there is much land aying down an engiand in grass, for there is much land that must always give a better return when ploughed than it could do if the plough gave way to the cow or the sheep; but there is much land which, with the enormous increase in the town population and in the facilities of locomotion,

might be laid down in grass to a profit, and that it will be so laid down if labour becomes scarce and labourers hard: to deal with is a matter of certainty. The farmers too will take more and more to the use of every kind of machinery that supersedes labour, and this will quickly their intelligence and raise the style of their farming, while it will also stimulate and form the minds of those who are employed to keep the machinery going. No one can believe that at the end of this century a Cambridgeshire farm will be worked on the same system or with the same sort of farmer over it as at present, although the farming of that day may probably not equal the farming of the present day in some qualities that make a country life attractive. Nor will there be the same sort of labourer to do the rough work. Probably most of those accustomed to farms now who are living then will acknowledge that the position of the labourer has improved on the whole; but no transitions are made without suffering, and not a few perhaps of those labourers who are now passing a life far from happy or comfortable, but still protected against some dangers and attended with some alleviations of care, will be found to have fared ill in changing times, and to have sunk and died like beaten wayfarers in the path of progress.

ADEN AND LAHEJ.

THE general nature and the results of the discussion with the Porte on the affairs of the Southern provinces of Yemen were already known; but the Correspondence which is now published is both instructive and amusing. Turkish Pashas understand as well as Chinese Mandarins the art of affecting ignorance of concessions which the central authorities may have been compelled to make. If they can baffle the exacting foreigner by withholding obedience to the commands of their own superiors, they well know that they have neither censure nor punishment to fear. The worst that can happen is that their proceedings will be disavowed, while they will have exhibited their own zeal for the interests of the Sultan. In the autumn of 1872 a petty chief in the neighbourhood of Aden, calling himself Sultan of Lahej, informed the Resi-DENT that he had been summoned by the Pasha of YEMEN to render submission to the Porto. Some of the neighbouring chiefs had received similar overtures; and it was evident that the Turks intended to assert their sovereignty over the whole of the low-land tribes. The letter of the Governor of Yemen was compared in the Orientel style which is familiar to readers of posed in the Oriental stylo which is familiar to readers of the Arabian Nights. It seems that "our Lord the Sultan " of Al-Islam, the devout follower of the religion of the "two Holy Cities, the Monarch of the Kingdom of the "East and the West," having determined "to resuscitate "the kingdom which his ancestors the Sultans founded" in the land of Yemen, has accomplished his design "without causing us any trouble, nor has any trouble "whatever befallen the people of the country." The Pasha is consequently astonished that his correspondent of Labej should be afraid, especially as a neighbouring Sheikh could have informed him of "our character and "our model of dealing with the people, our clemency and "insting." He will do well to return with the Pasha's "justice." He will do well to return with the PASHA'S messenger to receive "the good things and the high honour "he deserves." The RESIDENT advised the Chief of Lahej to reply that he had asked advice from the English Government, and that he declined to act until he had received instructions. It is possible that the English Foreign Office might have paid comparatively little attention to a conflict of jurisdiction in Arabia, but for the fortunate circumstance that Aden is a dependency of India. The pretensions of the SULTAN of Al-Islam to the sovereignty of Arabia might or might not be well founded; but it was ont of the question to allow any foreign Power to control the districts from which the fortress obtains necessary supplies. As the Resident, Brigadier-General SCHERGER, observed, "The great trade that is carried on between the neighbouring States in the interior of Aden might by pro-"hibitive transit duties be diverted to other ports in the "Red Sea."

In the first instance Lord Granville's representations to the Porte merely produced the nugatory assurages that in any operations which might be undertaken in Labia the most scrupulous regard would be shown to British territory. Lord Granville explained to Sir H. Hillor, who seems not to have appreciated the object of the original remon-

strance that the English Government would be sails to provide for the security of its own territory, against which no aggression had been apprehended. The Turkish authori-ties were required to abstain, not from an attack on Aden, but from any interference with Lahej and with the cally neighbouring districts. After some hesitation the Evenue which were demanded; and the Governor of Yemen was formally directed to abstain from interfering in any way with the ruler of Lahej. In April 1873 the Vecsior in Council informed the Secretary of State of the reasons which justified the demands already preferred. As a matter of fact, the Porte had not interfered with the protected chiefs for two hundred years, and the Indian Government had allowed stipends to some of the chiefs, had settled their local quarrels, and generally considered itself at liberty to impose upon them any measures which it might consider essential for the safety of Aden and its territory. To the despatch was appended a list its territory. To the despatch was appended a solution of the tribes which were to be exempt from Turkish interference. The Turkish Government again, under pressure, ordered the Governor of Yemen to withdraw from the protected districts; but perhaps the negotiation might have lingered on to the present time if the RESIDENT had not, under the orders of the Indian Government, made a timely display of force. The Pasha of YEMEN quartered a small body of troops in the house of the Howshobee Sultan, who was one of the protected chiefs, and he even provided a mutinous brother of the Sheikh of LAHEJ with a garrison for his private residence, on the pretext that he had voluntarily become a Turkish subject. The RESIDENT took the trouble to explain, through one of his assistants, the absurdity of the position that the Turkish authorities might protect outside of their own dominions any rebel who thought fit to profess allegiance to the Ottoman Government. The argument was soon after repeated in a form more intelligible to those to whom it was addressed. Even at Constantinople a strong impression was produced by the despatch of an English force from Aden to the assistance of the Chief of Lahej.

At the beginning of December 1873, in obedience to instructions from the Indian Government, five hundred men were sent from Aden to Lahej, and they were followed by the RESIDENT in person. Orders were given not to engage in hostilities, and the Turkish troops were soon afterwards with-Orders were given not to engage in drawn. ABDOOLA, for whose protection they had been nominally sent, was required with other malcontent members of his family to wait on the RESIDENT, who explained to him that he was guilty of the offence of rebellion, and that he must on the same day surrender himself and his fortified houses to the English authorities. ABDOOLA judiciously accepted the terms which were imposed by irresistible force; and the fortresses, which were of considerable strength, were completely demolished. Abdools and his associates were taken as prisoners to Aden, which may perhaps for the moment prove a safer residence than their own native town. It would have been highly inconvenient that any collision should take place between English and Turkish troops; but it is not to be regretted that this transaction should have been ultimately settled with the aid of a military detachment. Future Governors of Yemen would not have hesitated to profess entire ignorance of any verbal negotiations, and of the express orders of the Government of Constantinople; nor would the Arab chiefs have had the means of understanding the true relations between England and the Porte. Diplomacy is seldom effective without force in the background, and the conventional fictions by which civilized States disguise the grounds of their demands and the motives of their concessions are of their demands and the motives of their concessions are not perhaps well adapted to the apprehension of Turks and Arabs. The Indian Government has by long experience acquired great aptitude in dealing with encroaching neighbours. If on one side the Porte has of late years become a regular European Power, distant Pashas still require from time to time to be reminded that their aggressions may be the controlled and the controlled are the controlled. checked on the spot if their own Government fails to control their operations.

A It is not material to inquire whether the backwardness and apparent insincerity of the Ministers at Constantinople indicated a decline of English influence. In his later despetches Lord Granville expresses just displeasure at the failure of the Government to enforce its own orders, and at the numerous attempts to reopen a controversy which had been definitely terminated. It was sufficiently clear that the France of Yerier believed that his superiors were anxious

that they would have sanctioned his interference with the chiefs of the lowland tribes if the English Government had vacillated in its policy. It is perhaps on the whole reasonable to attribute the delays which occurred merely to a not unuatural desire to profit by the chances which might arise from procreatination. The title of the Sultan to the sovereignty of different parts of Arabia rests on the same foundation; and it might be plausibly argued by disaffected chiefs that, if the Turkish troops were compelled to evacuate Lahej, their compation of other districts was also an act of usurpation. It is not pleasant to withdraw under menace pretensions which have been estentatiously asserted. The management of the whole business is creditable to the Foreign Office, to the Indian Government, and to the Resident at Aden. Without unnecessary violence, a danger which might ultimately have become serious has been averted; and the chiefs of districts round Aden will no longer have any doubt as to the rightful claimant of their allegiance. To a petty Arab Sheikh the power of Turkey probably appears formidable, but obedience to English commands is clearly indispensable.

τὸ τέταρτου, οὖ ἐπλήγη ἡ κεφαλή καὶ πάλιυ ἰθεραπεύθη,

MR. GOLDWIN SMITH, whose opinion on political questions is always entitled to consideration, has addressed to the Daily News a letter on Irish Home Rule written in the lucid style and with the vigorous animosity which characterize all his writings. It is perhaps true that the wrongs of Ireland "have not made a worse impression "than the want of courtesy with which a large section of "English writers and speakers have habitually treated the "complaints and aspirations of the Irish people." The English nation also has the weakness of disliking, and even of resenting, contemptuous and unqualified vituperation. Mr. Goldwin Smith's earnest and patriotic exhortations would have been more patiently received if he could sometimes have suspended his indignation against the aristocracy, the clergy, the supporters of existing institutions, the landowners, and, in the present instance, the new members who form a third part of the present House of Commons. It is difficult to determine whether Mr. Goldwin Smith's qualified apology for the Home Rule party is suggested by a feeling of candour or by a love of antithesis. "Home Rule, however "undesirable in English eyes, is at least a public "object. . . It is better than corruption, servility, "or mere wealth-worship. It is at least as good "as 'our national beverage and our national religious." Even the most passionate of satirists might recognize the fallacy of contrasting the formal professions of one party with the absurdities which are humorously imputed by a hostile epigrammatist to the other. It was not by the publicans nor by the more pious Conservatives that the cause of the Bible was estentatiously identified with the interests of beer. The combination of a superior or aristocratic intellect with devotion to extreme democratic doctrines fully accounts for consummate scorn of a popular verdict given at a general election. Again and again Mr. Goldwin Smith assumes that the Conservative majority was produced by beer, though it might be doubtful whether the deleterious liquor is denounced because it was sold by publicans or rather as having been consumed by voters. As the new members whom Mr. Goldwin Smith so utterly despises professed principles unconnected with beer, it is perhaps irrelevant to assert that Home Rule is a more public matter of concern than "our national beverage."
The majority in the new Parliament may perhaps be as sincere in his dislike of perpetual changes as the Irish members in their devotion to Home Rule. Many of the Irish members are appropriately accounted to the proposed and members are converts whose convictions are not six months old; and some of the rest openly avow their desire for entire separation. A Fenian agitator has lately repudiated the right of Mr. Burr to represent Irish opinion on Home Rule or on any other question; but after all Mr. GOLDWIN SMITH is right in recommending the practice of courtesy in political disputes.

No opponent of Home Rule has exposed more forcibly than Mr. Goldwin Smith the conclusive objections to the institution of two Parliaments under one Orown. When an Irish Parliament had in the last century exercised for a few years an independence only tempered with corruption, "a hideous war of races and religious closed the auspicious

"annals of the Parliament of Ireland. No statesman, " hardly any same man, could deliberately propose to repeat
" an experiment so terribly decisive." Whatever may be the judgment of a purely ethical theorist, politicians may perhaps be excused for thinking that demands which can be countenanced neither by statesmen nor by sane men are more inadmissible and less entitled to favourable notice than even the supposed claims of beer. The judgment on Home Rule which Mr. Goldwin Smith pronounces is the same which has been expressed by all the opponents of the scheme, with the exception of Mr. Gladstone, who has not yet succeeded in understanding the meaning of the Irish agitation. All serious commentators on public affairs in Parliment and in the press have both abstained from offering unnecessary offence to Irish susceptibility and plainly declared that no argument can reconcile them to a measure which would inevitably result in the disruption of the United Kingdom. The only candidates who at the last election condescended to purchase Irish votes by distinct professions of sympathy with secession belonged to the party which, if it caunot count Mr. Goldwin Smith as a member, yet enjoys an exceptional immunity from his dislike and contempt. There are some indications of a disposition on the part of the present Ministry to imitate the feeble policy suggested by their predecessors, of illusory concessions which would give Irish demagogues a new standing ground, without satisfying either their professed demands or their genuine aspirations. Mr. Goldwin Smith favours the establishment of local Legislatures both in Great Britain and in Ireland. His opinion, formed long ago, has been confirmed by his experience in the United States, although the composition and character of the Legislatures of Albany and other State capitals can scarcely command his respect and confidence. It is certain that any powers which might be conferred on a local Legislature for Tipperary or for Munster would be at present exclusively employed for the purpose of resisting the Imperial Govern-

In England and Scotland the proposed local Legislatures would either becorporations under a new name and with somewhat onlarged powers, or they would introduce a variety of legislation which has not hitherto commended itself to the judgment of prudent politicians. Mr. Goldwin Smith selects as specimens of questions which might be referred to local decision "the liquor question and that of public "education." Local control over the sale of liquor is merely the Permissive Bill under another name, except that the controversy would be conducted at the provincial elections, and not at meetings of ratepayers. It is or it is not right not at meetings of ratepayers. It is or it is not right that consumers of beer should have the opportunity of satisfying their wants whother their neighbours happen to approve or to disapprove of their tastes. In this and in many other matters the national Parliament is the protector of the libertles of the subject; and there is much reason to believe that through timidity and carelessness it has of late years leaned too much to permissive, or, in other words, to local logislation. The administration of roads is in many parts of the kingdom highly unsatisfactory because the adoption of the Highway Act and the constitution of highway districts have been remitted to the caprice of local legislators. Public education is in all its details already administered by local School Boards; and the ratepayers of every parish or district can appoint a School Board at their pleasure. They may also, if they think fit, procure the organization of their districts under local Boards of Health; but it is true that the county administration is still not elective. There can be no doubt that in a short time elective county Boards will supersede the Justices, who in the mean time exercise their functions with a regard both to efficiency and to economy which is acknowledged even by those who wish to abolish their powers.

"If a rational measure of self-government would satisfy

"If a rational measure of self-government would satisfy "and attach to the Union a large section of the Home "Rulers, this seems an additional consideration of no small "moment." No single Home Ruler has hitherto professed a disposition to be satisfied with any measure of the kind, although it is true that the priests might probably be conciliated by the concession of facilities for prohibiting all Protestant education. "The subject," Mr. Goldwin Smith proceeds to say, "is one especially congenial to the Liberal Protest, which appears destined hereafter to set as the interdian of stondy and califfrened progress against an interdian of stondy and califfrened progress against an interdian of stondy and other constally revolutionary and other constally revolutionary after a popular suffrage was attachined, its

opponents predicted the dangers which might wise from popular ignorance. They were naturally denounced as an ofigarchy, and it was true that they maintained the not untenable theory of the intrinsic right the intelligent minority to govern. Their remonstrates were overruled when household suffrage was introduced; and now the freely chosen representatives of the many are again denounced as the oligarchy or tyrannical few. In aucient times indignation vented itself in the verse of Persus and Juvenal. It now produces equally vigorous and not less one-sided prose. To ask the suffrages of the dominant multitude is, it seems, an "essentially revolutionary" proceeding. Mr. Goldwin Smrs perhaps thinks that he confines himself within the limits of the Constitution when he proposes that there should be only one House of Parliament, elected, not by the constituencies, but by the local Legisla-tures which are to be previously invented. It would be casy to point out defects in such a project if it became a practical subject of discussion. As Mr. Goldwin Smith's enthusiasm seldom assumes a positive or affirmative form, he may perhaps not be deeply impressed with admiration for the Metropolitan Board of Works, which is elected by the Vestries on the exact model of his ideal Parlia-It is wonderful that he should attribute to the municipal magnates whom he so scornfully denounces a capacity and a disposition to select representatives superior to the present members of the House of Commons. It is too true that, far from abolishing "a House of Commons which is founded on direct election," a benighted nation has not "even mustered courage to follow the example of all other nations by reforming her Upper "Chamber." The other nations, none of which possessed an ancient House of Lords are not specifically enumerated. an ancient House of Lords, are not specifically enumerated. There is no Upper Chamber in Spain. In France an able and thoughtful statesman is at this moment ongaged in the difficult task of constructing an Upper Chamber, which may probably, if it is adopted, be as powerless as the House of Peers in the days of Louis Philippe, or as the Sonate under the two Napoleons. It would be interesting to learn Mr. Goldwin Smith's opinion of the American Senate and Congress. Whether General Butler is an whather the Republican party maintains itself in power by revolutionary means, are questions to be considered by the implacable enemies of all English institutions.

WOMEN.

THE progress of the Woman's Suffrage movement is a curious example of the way in which certain fantastic questions occasionally obtain spurious political support and artificial importance. When they are first brought out they are regarded as mere fads, too fanciful and visionary for serious consideration, and the enthusiasts who advocate them are answered with the sort of good-humoured smile which would be bestowed on anybody who proposed a rail-way to the moon. Nobody imagines that the proposal has the slightest chance of being carried, or even that the promoters are themselves in earnest, and consequently nobody thinks it worth while to demolish the absurdity. agitation, however, is persistently kept up, insinuates itself in all directions, and becomes familiar, and therefore, with very weak-minded people, half assented to. The agitators are keen and unscrupulous in their pertinacity, and are no sooner pushed aside than, with monotonous drone, they return to the attack. A bluebottle is a formidable antagonist. It looks so ridiculous to be angry with it, and to fight it seriously. So it is only flicked off from time to time as it comes too near. Its importunity is thus encouraged, and next day the tainted larder shows that the troublesome insect has not neglected its opportunities. During the lest year or two the House of Commons has been suffering from an insidious nuisance of a similar kind. In public and in private, at elections and meetings, in the drawing-room, at the dinner-table, in the streets, members of Parliament have been exposed to the merciless and incessant solicitations of the Women's Rights people. To argue was hope-To bint a doubt of the fitness of women for the franchise was rescuted as an outrage on the sex and a personal insult; and most men use tender on such points. it seemed so much curier and pleasurer to pier a few immeaning civilities and evert the storm. Unformately the women were in cornect though mondain were not; and the monitors are now called upon in hill their smiling spleades. It is, in fact, the common history of breach of spledges. It is, in fact, the comm

Promise. It is probable that the promoters of the Women's Bullinge Bill have formed too canguine an estimate of the number of votes upon which they can recken in the House of Commons; but there can be no doubt that a great many members have been rash enough to compromise themselves, and now find it difficult to explain away weak or careless undertakings. The truth is that many of them said Yes simply because they trusted to others saying No; and they are naturally dismayed to find how many others have been as insincere and pusillanimous as themselves. The question now is whether they will brazen out their folly or recant-like men, and put an end at once to an absurd and vexatious agitation which, if it is allowed to continue, will worry all pleasure out of life.

There are two things which it is especially important to bear in mind in connexion with this movement, and which seem to us decisive. The first is that, whether for good or for evil, the extension of the suffrage to women would be a revolution of the gravest kind; and the other is that the pro-posed change is not demanded by the great body of women, who are content to be women and to discharge the special duties for which women were created, but is to be imposed upon them against their will, and very much to their injury, merely in order to please a small band of silly unmarried women and married women without children, who for various reasons, but all traceable to the same root, are very much dissatisfied that they are women. This agitation has now reached a stage at which it is as well to speak plainly. It is notorious that it is mainly and almost exclusively supported by women of the classes we have mentioned; and these women, however deserving they may be of sympathy, do not happen to be all the women in the world, nor even by any means the most important part of womankind. It is unnecessary to inquire whether women are mentally on an equality with men. There must be a great many women who are at least as fit to form a judgment on political questions as a large proportion of the ment on political questions as a large proportion of the actual male voters; and, in fact, it can hardly be doubted that many would be much more fit. In any case, however, to talk of the superiority or inferiority of men or women is irrational. A vine is not inferior to an oak; it is only another sort of tree. Each for its own purposes is superior to the other. There can be no doubt whatever that, in point of fact, the greatest triumphs of intellect have been accomplished by men, and that the intellectual feats of women have been, as far as the world has yet gone, rare and exceptional. But this does not necessarily imply intellectual inferiority on the part of women. It may be more simply explained by the fact that hitherto women have been otherwise engaged—and, we might add, much better engaged—and that it is improvible for physical and other recovery to combine possible, for physical and other reasons, to combine different functions. The contribution of a healthy, right-minded, intelligent child to the human species is worth infinitely more to the world than all the books ever written or ever likely to be written by women.

Dr. MAUDSLEY has drawn attention to the alarm which is felt by American physicians at the apparent physical exhaustion and debasement of women in that country in conscquence of over-doing the labour of the brain. Too much is probably made of this sort of exertion, and other causes may be found for the melancholy facts which are reported. The whole life of American women is, as a rule, exceedingly unwholesome; the climate also tolls against them, but worst of all is the feverish excitement of unnatural public Mrs. Somerville was a remarkable example of pure intellectual effort on the part of the mother of a family. She was an attentive and competent mother, and her children were as creditable to her as her books. But then she was content to lead a life which was equally compatible with calm and serious study and with the duties of a matron. No doubt there are few women who possess such powers of abstraction as Mrs. Somewhere; but married women need not be afraid of injury to themselves or their children from exercising their minds in a reasonable and sober way. For certain kinds of severe and sustained study women are physically disqualified, just as they are disqualified for violent muscular exertion; but there is no reason why a highly educated and accomplished woman should not be in highly educated and accomplished woman should not be in all respects an excellent mother. It should also be remem-bered that the bringing up of a child in itself, if rightly and of the transport of a child in itself, if rightly and of the control of the contro 8.

clamour from availing themselves of the higher education which is now opening to them. The danger lies in attempting to compete with men in the strain of public life. Nothing can be more certain than that, as Dr. MAUDSLEY says, women cannot dispense with the physiological functions of their nature, however much they may wish it, or disregard them with impunity in the labour of life. A man's work lies in the bustle and violent struggle of life; a woman's in the quietude and sanctity of home. There are pleuty of men already in the world, and the addition to their ranks of a few weak faminic imitations would be a poor compensation for the loss of genuine women. The plain truth, which everybody can see who does not wilfully shut his eyes to it, is simply that men are men and women are women, that they cannot by any means—not even by an Act of Parliament—change characters, though they may change clothes; and that it is physically as well as morally impossible for women to do their duty to their children if they are to go rushing about as doctors, lawyers, or political agitators.

The reason, then, why it is not desirable that women should be invited or compelled to exert themselves in public life is not that they are intellectually inferior to men, but that they have other functions to perform which they would not perform satisfactorily if they added this other burden to their lives. Dr. Livingstons remarked in the last letter he wrote that, though some women might fancy it was very nice to vote, if they were only once laid hold of and compelled to vote they would soon be sick of it. We suspect this is already the experience of many women who are pestered and persecuted at School Board elections: and it is impossible to exaggerate the amount of exquisite torture to which a modest and sensitive woman may be subjected through the entreaties or menaces of riva canvassers. The vestry elections are quietly conducted by voting-papers; but the school elections require personal at tendance, and voting-papers are obviously incompatible with the Ballot. The chief objection to calling upon women to vot is that it would be a ornel and superfluous disturbance o the repose which is essential to them. The present system is not oppression, but protection; and for the sake both o women and of society the protection ought to be continued Besides this there can be no doubt that women voters, if only because of their inexperience and want of political training would not be an addition to the strongest part of the counti tuoncies. There is notoriously a vast number of persons who now vote who are utterly unfit to be voters, and whose right to the franchise can only be defended by Mr. GLAD-STONE'S comprehensive plea of "flesh and blood"; but that is all the more reason why, if good government is worth thinking of at all, the already too small element of political intelligence should not be further diluted. It is also necessary to bear in mind what is the ultimate object of this agitation. A very sensible lady informed Mr. Jacon BRIGHT that she thought it would be time enough to think of her rights when she had discovered her wrongs but the scarcely disguised design of the Women's Suffrag people is to use their political power in order to persuad all women that they are deeply injured, and that the will never be free or happy until they have emancipate themselves from the degrading yoke of legal marringe. The plan is to convert husband and wife into a sort a limited liability company, with separate shares in the business, and perfect liberty to broak up the concern at an moment and try their luck in some more hopeful partner ship. In effect, therefore, the proposal is to alter the Constitution in order to sholish the restraints of marriage fo the convenience of women who are on lad terms with their husbands. Perhaps the most extraordinary part of the scheme is that this object is to be accomplished by mon voluntarily placing themselves under an artificial pressure, which is to compel them to do something which at present they are supposed to be very much disinclined to do. Conservative principles have at different times received some amuzing interpretations, but that a Conservative Ministry should be found to give countenance to such a project as this is surely incredible.

THE BISHOP OF ORLEANS ON PROPHECY-MONGERS IN R. ARNOLD has lately said that the old popular religion of Christendom is so vast that "in repertory of its history you may find almost a good for every had, the condemnation of every which it has itself committed."

usually know only the faults of Catholicism, and think books which aim at showing that it is not entirely made up of faults either dull or dangerous. "The Catholic's attachment to his religion is bred of all the mildness and " wisdom which are there also, though we do not see them, "and a successful management of him can nover be "dictated by Protestant antipathy which will know nothing of them." A Roman Catholic might fairly quote the letter upon prophecies which the Bishop of Obleans has addressed to the clergy of his diocese as an instance of the hard measure which Protestants habitually deal out to his creed. The Roman Catholic Church is commonly represented as a dealer in lying wonders of all kinds. Pretended miracles and pretended prophecies are her regular stock-intrade. Truth, honesty, and common sense are exclusively Protestant virtues. Even the few Roman Catholics who would like to practise them if they dared are afraid of provoking their spiritual superiors by the display of characteristics so opposed to all that is in favour in high places. The controversialist who maintains that Roman Catholicism has produced a great number of manufactured prophecies will have no difficulty in proving his case. There is no need for him to ransack the past for a supply of instances; he may find them in abundance all around him. In France at this moment the Bishop of ORLEANS declares that they constitute the daily reading of many pious souls. Fresh predictions are constantly being issued, and before one is discredited or forgotten another is ready to take its place. It is not easy to speak too strongly in condemnation of this sort of literature. Its offences against taste and against charity are equally conspicuous. Indeed it is hard to determine whether the folly which can believe that a certain French lady has really seen ANTICHRIST in the shape of a handsome boy of ten or eleven years of age, and that the sign by which she was to recognize the revelation was his being taken with a violent pain in the stomach at the sight of her, or the bigotry which can identify with Anti-CHRIST the theological or political opponents of the pro-phecy-monger for the time being, is most alien from the Christian temper. But in neither of these respects has Protestantism—at all events, English Protestantism—many stones to throw at Catholicism.

It would be easy to cap every absurdity that can be extracted from a French colporteur's wallet by an equally extravagant quotation from Dr. Cumming. The belief that the ALMIGHTY has specially revealed the future to some anonymous Fronchman is not a whit more absard than the belief that the true interpretation of the Apocalypse can only be learned by application at Crown Court. And in the matter of charity the French examples would probably have the advantage. The Catholic who identifies Antichrist with the Commune can at least point to the murder of the hostages by way of illustration of the fate which he has to expect if his enemies get the upper hand. Genuine and not groundless alarm goes some way to palliate violent language. But Dr. Cumming cannot even plead that he is afraid of the Pors. On his own showing the reign of Roman Catholicism is drawing near its close, and, now that it has lost its power of hurting its enemies, they have the less excuse for omitting to consider whether after all it is quite so black as they have been accustomed to paint it. Since the publication of the Bishop of ORLEANS's letter a Roman Catholic may claim that his Church has the superiority in another respect. Dr. Cumming has been vending his own prophecies, or puffing other people's, for years, and doing his best all that time to set his countrymen by the cars. His blunders and his presumption have been exposed often enough; but we do not remember that an Anglican bishop has ever thought it worth while to warn his clergy against writings which, contemptible as they are, are yet sufficiently popular with certain foolish clergymen to be capable of doing a good deal of mischief. In my Church, the Roman Catholic may say, many foolish things are permitted so long as they do not do any conspicuous harm; but when they threaten to become a nuisance, some one in authority is found to tell Catholics what they are really worth, and to warn them against the evils of credulity. Do Protestant ecclesiastics show equal watchfulness when prophecy is made to minister to all the worst passions which fanatics can stir up? It is se well that the question is an imaginary one, for we fear that it must be answered negatively.

The popularity of prophecy-mongers in France is at come a symptom of an unhappy state of society and is one of the causes by which that state of society is pro-

unsettled men's minds are; it shows, in the next place, why it is that they are so unsettled. The Bishop of OBLEANS tells us that 50,000 copies of one single prophecy have been sold, and had not the author, by sking the date at which it was to be fulfilled as early as the 17th of February, 1874, necessarily put a limit to its success, it might have been in circulation still. Men are sometimes eager to read the future for themselves, but they are rarely eager to read it for their country unless their fears or their passions are very strongly excited. In this case they must have persuaded themselves that the condition of France is such that only some special interposition of Providence can save her from destruction. If they were Turks, they would resign themselves to despair. they are Frenchmen, they prefer to believe that there is a miracle in store for them, and that the darker the prospect grows the nearer is the hour of deliverance. Political action has no charm for minds thus deluded. They have ceased to reduce their hopes within the ordinary bounds of possibility. The objects they keep in view are not such as may be attained by labour and energy and steadfast resistance to discouragement; they are such as an imagination influenced by religious excitement succeeds in painting. It is no wonder, therefore, that so much political apathy is still to be found in France. Part at least of the description which the Bishop of ORLEANS gives of the believers of sham prophecies is true in its degree of the believers in sham remedies of all kinds, from the Duke of Broglie downwards. There are some, he says, who, instead of fighting like men, fold their arms and expect a miracle to be worked in their behalf. There are others who go on adding fault to fault, and tranquilly cast themselves down from the roof of the temple as though they had an angel ready to receive them in his arms. There are others again who pro-fess themselves intimately acquainted with the purposes of Providence for the Church and for France, and alternately announce victory or ruin, and sometimes victory or ruin by this or that man, by this or that means, and by this or that day. The present Government may be acquitted of any desire to fold its arms. Of that mistake, at all events, the Duke of Brodlie has not been guilty. But the tranquil adding of fault to fault precisely describes the course of the Administration since the 24th of May, and the Second Chamber, which seems the best apology for an angel that it can command, is not likely to do much to break the force of its fall. If the Right are not all believers in prophecies, they are at any rate as determined as the most credulous country girl to place all their hopes upon the advent of a particular Sovereign and a particular livereign and a particular sovereign and a par ticular policy. This very vacation has been devoted to fresh schemes for the restoration of HENRY V., and all the proofs which have been given to them of the hopeless unpopularity into which Legitimist Royalty has fallen in the country seem to have done nothing towards opening their eyes. Probably the Bishop of ORLEANS did not intend his counsels to apply to politicians; but to those who look at French affairs more impartially than is possible perhaps for a French ecclesiastic, they seem exactly suited to the extreme Conservatives. is not our business, he says, to prescribe to God by what means He shall save us. Our business is to employ all our energy and all our prudence in saving ourselves. True prophecy consists in resigning ourselves to the will of Gon and in doing the best we can. It is this art of making the best of things that is so wanting to the Conservatives of the French Assembly. Each has his private panacea for the miseries of France, and, rather than see those miseries healed by any other medicine, he prefers to see the patient go on suffering. The Legitimist insists upon the restora-tion of the Count of CHAMBORD with a charter vouchsafed by the King. The Orleanist insists upon the restoration of the Count of CHAMBORD with a charter imposed by the Legislature. The Ministry insist upon the maintenance of the Septennate. Not one of them will admit that what the country demands is something different from all three, and that in taking what the country demands into consideration lics the sole hope of setting up a stable Government. dreamers whom the Bishop of ORLEANS denounces are hardly more irrational than the politicians who now control the fortunes of France.

PARLIAMENT AND THE HOUSES OF THE POOR.

THE Memorial from the College of Physicians has at all ovents given rise to discussion. Mr. Bosanquer has again gone over the ground which was so carefully worked by the Charity Organization Committee last year. Sir.

Sydner Waterlow has given the experience of actual builders of a better class of houses in London. Mr. Surreow has narrated what has already been effected in the same direction in Glasgow. If there is nothing new in the facts and proclusions thus established, there is much that is as good as new. So long as the flagrant evils of the present state of things are allowed to continue, and in many cases to increase and multiply, the public must put up with the annoyance of hearing the same thing over and over again. Until a remedy has been actually taken the doctor must go

on prescribing it. Mr. Bosanquer's letter shows very clearly the difficul-ties of dealing with the subject by private enterprise acting alone. The sites on which it is most necessary that proper houses should be built are already covered with rent-producing buildings, and they are consequently expensive to buy. A Railway Company is not troubled by this circumstance, because it looks to recouping itself for the necessary outlay out of the increased truffic which is expected to accrue from a new line or an improved station. Persons interested in the construction of a new street, which is to be lined on both sides by spacious shops or lofty warehouses, are not deterred by it, because they know that vast rents will be paid for the accommodation thus provided. But the builder who proposes to build houses for the working classes is in a different position. If he buys the land dear he must charge proportionably high rents, and he has no guarantee that the class to which he looks for tenants will be willing to pay these rents. If he disregards this uncertainty, it is quite possible that the immediate result of his enterprise may be to make the overcrowding in the immediate neighbourhood worse than before. The tenants displaced by the new buildings will have packed themselves closer than ever, while the new buildings themselves stand empty because no one can or will afford to occupy them. Even if the intending builder is not frightened by the cost, and intends to content himself with smaller profits rather than fix his rents above the level which rules in the district, other difficulties remain. He will " probably "find that the property is in several hands, and that the "several possessors again have only short leases or other "limited interests, while one may be a minor or trustee and therefore unable to sell." This is a state of things which would defeat even a Railway Company if it had to contend against it without the aid of Parliament. But a Railway Company never finds itself in this condition. It has no difficulty in obtaining Parliamentary powers to facilitate purchase. The enterprise which proposes to turn out the tenants and do no more has the Legislature at its back; the enterprise which proposes to turn out the tenants and house them after a more decent fashion has not the Legislature at its back. This one fact goes far to account for the increasing overcrowding in London. Sir Sydney Waterlow tells precisely the same story. There is no difficulty in finding money for as many new buildings as are wanted. "But we are "working," he says, "with our hands tied; we cannot "obtain possession of the fever dens in our narrow courts "and alleys, and are practically unable to secure suitable is sites in the required localities."

The result of all this is that the existing houses remain, because the cost and difficulty of obtaining the ground on which they stand keeps off those who would like to replace them by others better fitted for human habitation. The next thing to consider is whether anything can be done to mend these existing houses. Upon this point, as regards London, there are three things to be said. First, the sanitary law as it stands provides no adequate powers of dealing with unwholesome houses. Under certain circumstances houses can be condemned and pulled down; but, as Mr. Bosanquer says, public opinion will hardly allow private property to be destroyed without compensation, "unless there has been very gross neglect on the part of the owner." Now where the sanitary average is very low it is not easy to establish a case of gross neglect. Secondly, there is no adequate authority to exercise such powers as are provided. A letter from Whitechapel in Thursday's Times supplies an instance of this. In a certain court the houses are built on each side of a footway ten feet wide. They are four stories high, with one room from ten top we've feet square and eight feet high on each floor. In one of these houses "the rooms are thus occupied. On the ground floor live a man, his wife, and three children; in the first floor room a man, his

"wife, a son and daughter over fourteen years of age, and "four children; in the second floor a man, his wife, and "two grown-up nephews; in the top attic two old women."
After this it is not surprising to learn that four ratepayers have petitioned, and that the medical officer bas condemned the houses. But it is surprising to be told further that no action has been or is likely to be taken in the matter. Or rather it would be surprising to hear this if we did not know how London is governed. The sanitary authority upon whom devolves the exercise of the powers for dealing with this class of cases is unfortunately the Whitechapel Vestry. It is quite possible that the owner of these houses is himself a member of the Vestry, or if he is not, he may have friends in it. Even if he has not, his interests are certain not to be neglected, for a majority of the members are probably owners of houses not very much better than his, and they are naturally afraid to start a precedent which may some day be used against themselves. In the districts where the need for improvement is greatest, the aristocracy so to say of the ratepayers will usually be owners of house property, and the class against which the Vestry is called property, and the class against which the vestry is called upon to act is consequently the very class by which it is mainly elected, and of which it is mainly composed. Thirdly, the existing houses are in many cases beyond the reach of improvement. They were built at a time when there was scarcely any sanitary legislation, and when a back-yard at all more spacious than ordinary was constituted in the state of the stat sidered a very suitable site for a new pile of houses. They cannot be made light, they cannot be made airy, they cannot be made wholesome. There is nothing to be done with them except to pull them down, and replace them by better houses, and this one cure is, as has been seen, a cure which it is impossible to apply.

In Glasgow and Edinburgh something has already been done towards introducing a better state of things. Under the Glasgow Improvement Act of 1866 the authorities are empowered to take possession of any property they may require, upon paying to the owner an amount decided by arbitration. The knowledge that this power exists in the background has disposed owners of house property to offer their lands on reasonable terms, and Mr. Simpson says that the greater portion of the property taken has been acquired by private bargain. In Glasgow, owing to the height of the houses, the population is very much denser than in London, so that it has rarely been possible to house all the dispossessed tonants on the original site. The authorities have therefore bought land in the suburbs and resold it to persons willing to build suitable houses on it. In London many more tenants than are dispossessed could usually be housed on the original site. The Metropolitan Association for Improving Dwellings state, according to Mr. Bosanquer, that "while "the population in Westminster, the most densely popu-"lated part of the metropolis, is only 235 persons to the acre," they can house 1,000 persons to the acre, "includ-"ing in the area the large courtyards and gardens attached" to their blocks. Thus the necessary displacement in London would be much less than in Glasgow, a consideration of great importance when the immense size of London, and the consequent distance of one part from another, are taken into account. We are tempted to say that the first condition of improvement in the houses of the poor, as it is of so many other improvements in London, is the creation of a more vicesone authority. So long as London is sulfit. of a more vigorous authority. So long as London is split up into parishes, each governed by an independent Vestry, there can be no united action, and no escape from narrow local interests. In the interval before this blessing is vouchsafed to Londoners the City Corporation and the Metropolitan Board of Works are the persons to whom the necessary powers can best be entrusted. But it should be made clear at starting that they hold these powers only provisionally, and whenever they make way for an efficient sanitary board, the powers relating to houses will naturally be transferred to the power authority. houses will naturally be transferred to the new authority. The experience of the great Scotch cities ought to make the drafting of such an Act of Parliament not a very difficult process. Whether this change standing alone would meet all the necessities of the case is another question. In our judgment it would not do so. It is a great gain no doubt to get unwholesome houses destroyed, and free room left for private enterprise to build better ones. But there would remain many houses which for ones reason or another it would not be expedient to pull

down, and many others which, although newly built, would, either in the first instance or after a very short interval, be little better as regards sanitary arrangements than those which had been got rid of. The only means by which this difficulty can be met is that legislative recognition of an obligation on the part of the owner not to vend an unwholesome dwelling on which we insisted last week,

THE DIFFICULTIES OF THE FAMINE.

THE DIFFICULTIES OF THE FAMINE.

SHOULD no fresh or unforescen reverses occur, there is reason to hope that the area of the famine may be limited to not more than four large districts. By the aid of Parliamentary papers and by weekly reports of Special Correspondents, the British public is already familiarized with their situation, character, and climate, and with some of their principal marts and towns. Durbhunga, Motihari, and Scopole bid fair to become as widely known as Amoaful and Coomassie. The Gunduk and the Kosai rivers have already taken precedence of the Prah. It appears to us, then, that the time has arrived for a survey of the questions which Indian administrators will have to grapple with during which Indian administrators will have to grapple with during the next six months, and for an estimate of the impending difficulties which it will tax all their vigilance, energy, fecundity,

of resource, and knowledge of the people, to stem or surmount.

The fumine tract is a huge, fruitful, and populous plain, bounded on the north by Nepaul, the Himalayas, and the Morung; on the west by two districts of the North-West provinces; and on the south by the river Ganges. On the east it runs into the Bengal districts of Purneah and Dinagepore, where the vernacular of the people changes from Urdu to Bongali, and where, as elsewhere at these is ground for this light the calculation and he people changes from Ordu to Bongali, and where, as claewhere at present, there is ground for thinking that the calamity may be kept within the limits of high prices and scanty fare. A big volume of more than four hundred pages, recently published on the Indian Census taken in 1871, gives ample details as to the number, habits, and castes of the population of Bengal, of Behar, and Orissa. No very great addition to these numbers can since have been made. We may assume that the total registered by have been made. We may assume that the total registered by the enumerators three years ago corresponds practically to those for whose supply and comfort the Government is responsible between the present date and September.—To understand this crisis, let us look at the figures. The whole population of Tirhoot is 4,384,000 in Mamparun it is 1,440,800; in Sarun or Chuprah, 2,060,500; and in Bhagulpore, 1,826,000. We might add two adjutent districts, Purneah and Monghyr, the former with 1,700,000 and the latter with 1,800,000 souls. But, taking the first four only, we may fairly say that nearly ten millions of human beings are in some way or other affected by high prices, or by the sufficings of others which react on themselves, or by some one kind of privation extending from curtailment of petty comforts down to positive destitution. We are thus dealing with numbers two millions in excess of the population of Ireland and Scotland combined. The statistics of the Census, full as they are of interesting and minute particulars, are too detailed to be analysed here. But we get here from them that Hindus, entirely dependent for ing and minute particulars, are too detailed to be analysed here. But we gather from them that Hindus, entirely dependent for subsistence on agriculture, pasture, or labour, number more than one and a half million in Tirhoot alone. In the other three districts the proportions to the same totals do not vary very much. And this enumeration takes no account of Mahommedans, many of whom are attached to the land just as much as Hindus. In Tirhoot the Mussulmans exceed half a million. Then we have large guilds of artisans and weavers, thousands of boatmen plying on the great rivers, vacabonds and beggars, men who supply cooked food, petty traders, and Hindus of high caste but of limited means. To animate, direct, and look after these masses we find a number To animate, direct, and look after these masses we find a number of persons of European or Eurasian birth and parentage, which, in these same four districts, does not reach to six hundred. Now we have heard a good deal about Tirhoot and Sarun being "studded " and one well-informed journal has gravely compared the first district to Hampshire, for the number of its English villas and houses. The above returns include all Englishmen, officials and unofficials, and, in this one point, are absolutely unimpeachable. We are at liberty to assume that the deputation of overseers and assistant "famine commissioners" may have swelled the proportion of the European to the native element. But a calculation would be excessive which would set down the total of white faces in Tirhoot, Sarun, and Chumparun at one thousand. Even then there would be something like one hundred and lifty men of active habits, indomitable energy, and unassailable integrity to guide and control each million of people. Readers should be cautious how they henceforth put trust in reckless and ridiculous wordpainting, which would lead a traveller to expect a thatched bungalow with green venetians or a two-storied house in every large cluster of villages or at overy third or fourth mile. The famine is, in fact the Leibung muture is earther form. cluster of villages or at every third or fourth mile. The famine is, in fact, the Indian mutiny in another form. Close to swarms of natives, pinched by scarcity and blank with deferred hope, we have a few scores of Englishmen to do the whole work of conception, encouragement, execution, and check. Only a great crisis of peace or war brings home to the English mind the extravagant disparity between means and ends; between the vast plains where a century of peace and prosperity has given its man to every rood of ground, and the eighty or hundred "concerns," "factories," or nutcherries," at each of which a man with a pith hat, an alpaca call, and a hunting-spear is the representative of a capacity for

rule which no native at this moment is likely to challenge. It is very easy to talk of drafting young subalterns, more oversears, and extra civilians for the work. They are not to be had. Anglo-Indians may more than ever quote what an acute native ones aid to an Englishman of high rank:—"If each of my countrymen would only threw a clod at you, the white faces would very soon be buried, out of sight, under a mound of earth."

To the difficulty of adequate supervision we must add the peculiar way in which the native population is distributed. If an Indian district were like a part of Ireland or Scotland, where extensive tracts are sparsely populated and masses are hived in marts and towns, the task would be easier. But, with the exception of the tract bordering on Nepaul, Sarun and Tirhoot present two features; plains from half-a-mile to three or four in width lined by villagues where the people but themselves sensrately in orchards by villages where the people but themselves separately in orchards and breadths of foliage. Here and there are continuous lines of houses making up a "bazaar." But Thrhoot has no town with 50,000 souls, and only six with more than 5,000. Chuprah or Sarun has three, Chumparun and Purneah have two, and Monghyr seven, which exceed that standard so cherished by electoral reformers. Then Tirhoot has 2,000 villages, each with less than 200 persons, 2.485 with between 200 and 500, 1.688 with between reformers. Then Tirhoot has 2,000 villages, each with less than 200 persons, 2,485 with between 200 and 500, 1,688 with between 500 and 1,000, and 883 with between 1,000 and 2,000. We might analyse other districts with like results. Let readers reflect what it must be to deal with a calamity affecting hundreds of thousands, and even millions, so spread over the land. The 4,000,000 of Tirhoot cover more than 6,000 square miles; its villages and townships are 7,337; the number of its houses 642,000; and the average of the houses to the square mile is nearly

600, and of persons nearly 700.

The transit operations have been graphically described, and all we need say is that the roads are fair-weather roads, without ups we need say is that the roads are fair-weather roads, without ups and downs, and that the few streams and rivers, where unbridged, must be some source of delay. It is also tolerably clear that the Government, in spite of all the lavish expenditure on food grains, was behindhand in forwarding its purchases to their destination. The famine came on with the bound of a tiger, or, as it has been aptly said, the rush of the tidal wave in the Severn or the Hooghly. said, the rush of the tidal wave in the Severn or the Hooghly. But Government cannot, in a few weeks or months, convert what Indian officers term kutcha or unmetalled tracks into pucka or macadamized roads. In Bengal proper bricks must be burnt out of clay to make roads that will stand any wear and tear at Head Stations, subdivisions, or for railway feeders. In Behar there are found thin veins of nodular gravel termed kunkur. Granite is only to be had near the hills. The inland exports and imports have hitherto easily traversed these earthen roads by carts numbering scores and hundreds. It is no wonder that there may be delay and hindrance where the convovs swall to that there may be delay and hindrance where the convoys swell to thousands and ten of thousands. But we cannot have roads everywhere in India without additional taxation, and we know now

what this means.

Let us, however, assume that more grain than the public knows of has been brought up; that contracters have not failed; and that the Government granaries are full to overflowing. There will still remain the duties of safe keeping and regular distribution. Even the mere custody of such masses is no light task. We may discard all notion of filling pits with rice in a climate like Tirhoot, only less damp than Bengul, and with the rains in prospect. Stores must be guarded against open robbery and secret malversation, against mildew and damp, against armies of weevils and destructive insects, and against risks of fire. Blazing telegrams have already warned us of this new havee; civil magistrates of all grades well know how their court-houses are emptied by an amounce-ment that the "Sudder Bazaar" has caught fire, or that a big mart, famed for salt and sugar, is blazing like the Pantechnicon. Under the fierce sun of March, April, and May, the thatched or untiled roofs become tinder-boxes. Natives are reckless and perverse in their domestic arrangements. At one place an old woman empties the hot ashes of her pipe on a pile of loose straw. At another, a wayworn traveller has extemporized a cooking-place on the spot best calculated for a roaring hot wind to scatter the sparks on the houses to keeward. At a third, arson is popularly ascribed to a class of men who live by running up houses of rushes and matting when required, and who in idle times resort to this and matting when required, and who in idle times resort to this simple expedient for creating a market for their labour. But in times of plenty it is a matter of comparatively small moment for a magistrate to report to his Commissioner that, on a May morning, one half of Ramnuggur, or the whole of Ramonhaut, was burnt to the ground. He learns that no lives were lost, and he is aware that the houses will all be rebuilt with the rapidity of Chicago. But let us conceive, at present, the dismay of a hardworked official at an announcement that Lalgunge, Durbhungs, or Madhobani, had been reduced to ashes with all their precious stores. Whenever the likelihood of fires may be diminished by the rains, trials of another kind will come on. After the second week stores. Whenever the likelihood of fires may be diminished by the rains, trials of another kind will come on. After the second week in June, the indigenous bullock-cart, which now does its twelve miles a day, will not do four, or may stick altogether. The Gangas will rise, and the dry watercourses will run level with their banks; and, so far, the storage at centres and subdivisions will be inclitated. But the difficulty of going round to the amaller circles will be intensified. If it is now hard to get tonefrom Patna on the river-bank to Northern Chumparus, it will the the larder to send a few bags from one village tensated by exclusive Brahmins and lazy Rajpoots to another three miles off which is a refuge for low caste Chamars, Doms, and Dosedha. The trials of the "famine walla" will begin just where those of the transporting officer end,

Large warehouses of masonry being almost unknown, provisions must be stored in temporary structures, inflammable, penetrable by wet and damp, and easily entered by prowlers and thieves. If the store oscapes fire, and if it has been well guarded against plunderers, it may soon have to be carried into hundreds and thousands of villages, accessible only by miry paths two feet broad, or over plains inches deep in water, but not flooded enough even for a

light skiff to navigate.

But the climate, with its alternations of furnace heat and steamy exhalation, and the physical aspect of the country, create obstacles that might be got over if we could extemporize probity like a tramway, or if we could arouse a national feeling. In England we scarcely require to be told that the presence of a great calamity levels all distinctions. Political and religious differences would be at an and if half London had been burnt down, if a pestilence swept the country north of the Humber, if a foreign fleet were cruising in the Channel, if an invader were about to descend on the North Foreland. We do not mean to say that native gentlemen like the Maharajas of Burdwan and Bettia, that some landholders much below them in rank and wealth, that substantial middlemen, that prosperous traders and bankers, will never set a good example of public spirit and generosity. Some will join relief committees and help with money and suggestions; others will open private cooking shops, where Brahmins, whose manipulation makes cdibles pure, will serve out meals for which sturdy beggars will compete against the aged and helpless. But, as a rule, the exclusiveness of caste will be more sharply defined than ever. The instinct of self-preservation, the strong love of family and kin, the con-temptuous indifference to others in which each caste shrouds itself, the reckless pursuit of small gains, the lofty disregard of vicarious suffering, will exasperate Englishmen bent on saving lives. Would any Indian official of a couple of years' experience trust a Lalla without supervision to distribute rations to a lot of starving I alls without supervision to distribute rations to a lot of starving Repaul Paharries, or depute a sleek Bunniah to report on the village blacksmith and carpenter, or even depend on Mussulmans of pure Moghul descent for looking after those sections of their race and creed known as Sheikhs and Sayyuds, not to speak of others lower still who perform the rites of circumcision and the duties of midwifery? Prejudices and feelings engraven on the very heart of native society are not likely to disappear when the first precept in the Hindu catechism—the care of family and poor relations—has every additional sanction to enforce it. Then to the selfishness whether of the caste or of the household must be added the ineradicable love of lucre. No consideration will prevent a Hindu from turning the calemities of a whole country to his own profit. Already we have learnt that private trade has been ans own profit. Already we have learnt that privide trade has been turned into a new channel by public benevolence. Government invited dealers to import grain by rail into the distressed districts at half-rates, the other half being paid to the Railway Company from the Exchequer. The up-country traders lately took advantage of this provise to bring down produce into Tirhoot on easy terms, and were then detected exporting it as fast as possible to marts where there was no distress, but higher prices. Where there is no public opinion there can be no public indignation, and no shame to follow on exposure or detection. Indeed it will be very odd if the Behar famine does not familiarize Englishmen with some of the ingenious devices by which the best intentions of Indian legislators and statesmen are perpetually bailled and thwarted. In ordinary times, the worst results of native apathy, untrustworthiness, and greed are local or departmental. A good law is set at naught. A measure intended to reform and purify generates a new species of corruption. Social indifference evades a just tax or neglects an imperative duty. Considerable sums of money stick to the palms of those who collect it. Respectable men bring all their acute invention to the task of throwing a judicial investigation on the wrong scent. An active police officer, engaged in tracking the perpetrator of some revolting crime, receives about as much aid from his countrymen revolting crime, receives about as much and from his countrymen as an attorney with a writ would do in the wilds of Connennan. A house catches fire, or a boat is upset on the Ganges, and hundreds of spectators look on imperturbably, without moving a limb to save. National character, quiescent where it ought to be active, and energetic in the wrong place, has often ere now aroused the honest indignation of many an English philanthropist. And even Special Correspondents, with two months' experience of the natives, have begun to discern that what in other seasons would member by a chatrustion to a department, or took expression to laws. merely be obstruction to a department, or facit opposition to laws and taxes, now may mean death.

Nothing is further from our intention than to avert sympathy Nothing is further from our intention than to avert sympathy from the native sufferers, or criticism from the Englishmen who are charged with upholding the high character of their Government. We have still six dreary months during which we shall be fortunate if matters are not seriously worse. Fresh difficulties must start up, and one cannot be far off. With the periodical rains, come they early or late, the necessity for active agricultural operations will be imperative. We will not speculate on the awful consequences if Behar, for a second year in succession, were deprived of its fertilizing deluge. The rainy season, or the important part of it, could not be again out out of the year without bringing about a state of things unknown to history and beyond portant part of it, could not be again out out of the year without bringing about a state of things unknown to history and beyond the power of any Government. Neither the despotian of Russia, nor the central kilon of France, nor the henevolence of England, could cope with it. But, granting that the due rotation of the mesons is not again interrupted, the work of ploughing, of sowing, of harrowing, of weeding, of banking up the water where it is needed, and of letting it run off where it is not,

will have to be got over. Many, if not all, of those who crowd to the relief works must furnish snews and hands for the task. We need hardly say that a worst, weak, and disheartened pessantry cannot be dispersed over thousands of acres to prepare analy learn or stiff clay for the crops, without much misgiving as to the result. Doubtless the agricultural implements are simple, and the labour is often intermitted. The Gangotic plough can be carried over the shoulder, and the harrow is a many-prenged rake, or a small ladder, which is drawn by two bullocks to smooth or pulverize the clods. A Norfolk labourer would smile at the series of scratches which in the East do duty for furrows. But the ground has to be gone over half-For the labourer would smile at the series of scretches which it has to be gone over half-a-dozen times; the results are surprising; the crops luxuriant and magnificent. If we are again to have abundance, the tenant-proprietors and the labouring castes must not merely be kept alive. They must be fed up to the standard of rural activity.

We have said nothing about the risk of epidemics. Wherever numbers of Hindus congregate, at the great fair of Hundwar, at the shrines of Gya, round the car of Jagannath on the sands of Pooree, there is always a fear of cholers. A low state of body predisposes to fever, and bowel complaints would be more frequent if the seasity cereal resources of the country were sugmented by an abundant crop of mangoes and other fruits. But we have only a choice of evils. If we mass the population together, we can at least send medical skill to control an outburst of sickness. If we dismiss them to their villages, there is an end of minute regular inspection and supervised relief. Moreover, the indigent and suffering can be housed and fed at large Bazaars, Hests, and Gunges, and at such places it is far easier to arrange for hospitals, poor-houses, big kitchens, orphan refuges, and other palliatives. Nor must we forget that English agents are few, and, however willing they may be to brave hot winds and tropical rains, they must direct operations from some head-quartors of their own.

The public has very quickly taken in one plain and simple fact about this Bohar famine. Our dark-coloured follow-subjects must be kept alive, if possible, by any expenditure of money, labour, forethought, and sagacity. This is a feeling noble and admirable be kept alive, if possible, by any expenditure of money, labour, forethought, and sagacity. This is a feeling noble and admirable in itself, on the part of a community in which nine out of ten persons might be puzzled to say who abolished Suttes, what the Perpetual Settlement means, and whether the Terai is a potentate, a custom, or a place. But it is not equally easy to apprehend all the inherent obstacles to success in a death-grapple with this new invader. A short time ago the leading journal was pleused to denounce as "impertinent" any comparison with the circumstances of the Irish famine of 1847. No doubt it would be very wrong for Lord Northbrook, his Council and Lieutenants, quietly to sit down and plead the deaths of Irishmen a quarter of a century ago as an excuse for doing little, or for not doing enough, to save the inhabitants of Tirhoot. But if the prejudices, the failings, the superstitions of Celts reappear in Hindus and Aryans with every monstrous exaggeration; if there is some slight analogy between a small island dependent on the potato and a large kingdom dependent on rice; if in 1847 bakers' shops were plundered, horses were shot, and roads were broken up in order to prevent the removal of provisions; if these things were perpetrated prevent the removal of provisions; if these things were perpetrated in spite of English vigilance and honesty; if, besides deaths at the relief works, no less than nine thousand Irish emigrants to Canada died on their passage, in quarantine, or in the Merine Hospital; if everything in India is on a more gigantic scale than in Ireland, the areas larger, the communications more imperfect, the climate more pernicious, the people more numerous, more help-less, and more impracticable—then it is surely neither "impertment" less, and more impracticable—then it is surely neither "importment" nor unfair to take these facts into consideration when arraigning the administration or pronouncing a national verdict on the conduct of the Viceroy of India. By all means let the famine be uppermost in our minds, and let it fill the void created in conversation by the loss of the Claimant. Let every official in the afflicted districts know that what he does or does not may be telegraphed bluntly to the Times in twenty-four hours, and that his letters and his instructions his received and into the contractions had a morning and that his letters and his instructions, his morning and evening drives, his casual remarks, and the apparent nonchdance of his wife or sister, will all supply matter for a despatch which he cannot see sister, will all supply matter for a despatch which he cannot see for six weeks. Let censure fall on all who deserve it, from the statesman at the head of the Empire if he spares his Exchequer when lives are at stake, down to the helpless deputy magistrate whom even Sir Richard Temple's miraculous activity cannot galvanize into a spasmodic use of his faculties of body and mind. In this paper we have endeavoured to show that it is not equitable to pronounce a judgment on one great fact, without making due allowance for at least a dozen others. The difficulties which we have merely sketched arising from climate, country, character, some of which. sketched, arising from climate, country, character, some of which like the trees Macaulay wrote about, are older than the Mogul Empire, are well known to all administrators, and must be sternly met. They would equally exist is India if every relief committee were composed of Special Correspondents, with a Bishop or the President of a Scotch Chamber of Commerce for their chairman.

And they must not be kept out of sight here by writers who
do not suffer much inconvenience from facts, who at intervals deviate into candour, and who deliberately set themselves to write down the Government and to write up the Famine.

THE TABARD.

THE TABARD.

THE latest historical event mentioned in the Conterbury Tales is the death of Bernabo Visconti, Duke of Milan, which happened in the year 1385. It may, therefore, be supposed that Chaucer sent forth his pilgrims from the Tabard in Southwark about the year 1387. Between that time and the present, though the name of the inn was changed midway, it has stood on the old foundation, perhaps with some remains of the old walls, and the same general aspect, until our own days. Whatever changes the modern spirit of destruction may effect, its old name will not be forgotten, and when every semblance of the old place is gone, there will always be some, whether from New England or New Zealand, looking for the site. That exact site, and the identity of the Tabard with the Talbot, cannot be doubted. In the glossary to his second edition of Chaucer's works, printed in 1602, Specht tells us that Chaucer's Tabard had been then newly repaired and increased with convenient rooms by Master J. Preston. In the last editions, published in the year 1687, long after his death—the same note is copied in the past tense, with these words added:—"It is now the sign of the Talbot." As early as 1637 it had been known by either name. Taylor, the Water Poet, says in his Curriers' Cosmographie, printed in that year, "The Carriers from Cranbrook and Bevenden in Kent, and from Lewes Petworth Uckfield and Cuckfield in Sussex, lodge at the Tabard or Talbot in Southwark." In the year 1670, as appears from Bedloe's Narrative of the Popish Ptot, the old name was forgotten. The change in the sign argues ignorance of the poet, or at least indifference about him; and there are, in fact, certain evidences that between the years 1602 and 1687 Chaucer was held in less esteem than at any other time since his death. Within that term of eighty-five years not one edition of his works was published, nor any single work, excepting Sir Francis Kynaston's elever translation (1625) into Latin rhyme of the first and second of the five books of Troilus and it was not likely that Chaucer would meet with general acceptance among the Puritans; he was too homely for courtiers nurtured in France; and his old-fashioned poetry, to use Isaak Walton's phrase, did not commend itself to the followers of the metaphysical poets. The selection of the three tales that were published does not indicate any sense of his rare endowments. The Yeoman's Tale was a warning against empirics, while the Miller's Tale and the Wife of Bath's prologue might find favour in the Court of Charles II. for qualities not honourable to the poet. Afterwards he was more widely known by the imitations of Dryden and Pope, and, later still, by Tyrwhitt's edition of the Canterbury

Towards the end of the seventeenth century something of the history of the old inn is to be gathered, where it might have been little expected, from the narratives of Dr. Titus Oates and Captain William Bedloe, published in the year 1679. Oates had sworn in the 34th Article of his Information that Richard Strange, the in the 34th Article of his Information that Richard Strange, the last Provincial of the Jesuits, with some others of the Order, a Dominican friar and fifty or sixty Irishmen, had burned down London in the year 1666, and during the fire the Jesuits had got one hundred and forty thousand pounds by plunder. In Article 49 he swore that ten years after the fire of London, John Groves, with three Irishmen provided by a Dr. Fogarthy, had burned down a great part of Southwark, having received for the work a thousand pounds from the Jesuits, who gained by plunder at least double that sum. There had, in truth, been not one only, but two, first in Southwark since the Fire of London. Bedloe took the 34th and 49th Articles of Oates's Information for the text of his narrative. As the Doctor had appropriated the fable of a design against the King's life, the Captain unfolded a plot to destroy narrative. As the Doctor had appropriated the fable of a design against the King's life, the Captain unfolded a plot to destroy London and Westminster by fire, protesting in his title-page that he was "one of the Popish Committee engaged in that horrid design." A few truths mixed with falsehood may be gathered from a wilderness of downright lies. In 1670, the name of the Tabard, supplanted by the new sign the Talbot, was forgotten. On the 25th of July in that year, Mrs. Atkins, the daughter of a gentlewoman who kept the inn, saw a Popish priest or proselyte lurking about the door. In the same night three dwelling-houses and a washhouse, part of the Talbot, were hurned down; three persons perished, and six or seven were hurt in the fire. Six years afterwards, on the 26th of May, 1676, and, according to Bedloe's legend, by the contrivance of John Groves and Ir. Fogarthy's three Irishmen, a fire broke out in the house of Mr. Welsh, an oilman, between the George and the Talbot inus, and consumed more than five hundred houses and nuny stately inus of the value of between eighty and a hundred thousand pounds. inus, and consumed more than five hundred houses and many stately inus of the value of between eighty and a hundred thousand pounds. It does not appear from Bedloe, nor does it seem absolutely certain from a paper by Mr. Corner on the Ancient Inus of Southwark, in the Collections of the Surrey Archeological Society, that the Talbot was one of the inus burned down. The fact might probably be ascertained from the Records preserved in the Guildhall of Tondon, of the Proceedings as the inustance of the content to determine differences between landlords and tenants of the Ancient differences between landlords and tenants of the houses destroyed.

As the im has changed its sign, so also the meaning of the old name has been changed. We learn from Chancer, and Froissart, and the authors of the Plowman's Tale and the Assembly of Ladies, and Skelton, and Du Cange, and Junius and Hearne, and Wood, that the tabard was a cloak or overcost common to men of all conditions, nobles and knights, clergy, poor scholars, and ploughmen. Holinshed says that Cæsar's motive for invading England was that he might gather pearls to ornament a tabard consecrated to Venus at Rome. It was a man's garment. In the Assembly of Ladies, a poem attributed to Chaucer, but not his, the Lady Attemperaunce wears a gown of cloth of gold, "in taberde wyse the sleves hanging adoun"; that is, she wore her gown without putting her arms into the sleeves, is, she wore her gown without putting her arms into the sleeves, as a hussar wears one-half of his jacket in the fashion of a tabard, which was a cloak without sleeves. Verstegan, who wrote tabard, which was a cloak without sleeves. Verstegan, who wrote in the early part of the seventeenth century, says that the tabert was saciently a short gown that reached no further than the midleg, and that in his time it was still the name for a gown in Germany and in the Netherlands. He could hardly have been mistaken as to the use of the word in the Netherlands, since his literary life was passed at Antwerp; but it seems to have become obsolete. In German dictionaries the English word tabard is translated Harolds-rock—a Herslds coat, and Waffen-rock—a long coat worn by military officers in full dress. The tabard as a clouk of was was shorter than the clock of reace: it screened tha closk of war was shorter than the closk of peace; it screened the knight's armour from the sun, and was emblazoned with the coat of arms, by which, hidden in his panoply, he was known in battle. On the eve of the battle of Mansourah, when the Countess of On the eve of the battle of Mansourah, when the Countess of Salisbury saw in a vision the heavens open to receive an armed knight, she knew her son only by the coat of arms on his shield. In the year 1370 Sir John Chandos was slain as he fought at Lussac through stumbling upon his tabard, which was too long. He had armed himself in haste at Chauvigny, and must have put on his robe of peace. In Johnes' Froissart there is an engraving of this petty skirmish, in which the tabard of Chandos is represented as a gaberdine without sleeves, open at the sides below the girdle, and boaring a coat of arms upon the broast. The war the girdle, and bearing a coat of arms upon the breast. The war cloak of their lords was adopted by the heralds, and retained by them after it had been disused in warfare. They have also retained the old word which was exclusively their own as early as the year 1598. In the glossary to Speght's first edition, published in that year, we find "Tabard, an herald's coat." Before he published in the coather of the the coath in that year, we find "Tabard, an herald's coat." Before he published his second edition, in 1602, he had learned from John Stow, among other things, something more of the tabard, and tells it as follows:—"(borrowed from the Dutch) a jaquet or slevelesse coate, worne in times past by noblemen in the warres, but now onely by Heraults, and is called theire coate of arms in servise." Thus it happened that Chaucer's Tabard has been supposed to signify the peculiar garment of a herald. It had no such meaning in his time. He tells of heralds pricking up and down, but nothing of their tabards; of his Ploughman he says:-

In a taberd he rode upon a mere.

The Tabard may have been a common sign. It appears from the Rolls of Parliament that in 1381, John Brewerman, one of the leaders in Wat Tyler's insurrection, and excepted from the the leaders in wat Tyler's insurrection, and excepted from the general pardon, was lodging at the Tabard in London, probably the same which the Water Poet, who was doubtful whether the pilgrims' inn at Southwark should be called the Tabard or the Talbot, mentions as "the signe of the Tabbard in Gracious Street," where "the carriers of Braintree and Bocking in Essex doe lodge."

The host of the Tabard, Harry Bailly, had as real existence as his sign and his hostelrie, and is well worthy a record. He was as fair a burgess as could be found in Chepe, a seemly man to have been a marshal in a hall; well taught, merry and wise, manly, and bold of speech, yet, when he spake to the gentle Lady Prioress, as courteous as a maid. With his wide chambers, and stables, and sumptuous fare, he was of a race which, having lasted in England, with a difference, more than four hundred years after Chaucer, has been extirpated to make way for railway hotels and their managers. Crabbe had Chaucer's host in mind when he drew his landlord of the Rampant Lion; but the empire of the Lion was divided between the master and the mistress, while the host of the Tabard ruled single in his domain; and there was a cause—the wife, though her name, as it appears on the Subsidy Roll of 1380, was Christian, had more vices than her husband could reckon.

Pilgrimes were they allo
That toward Canterbury wolden ride.
The chambres and the stables weren wide,
And wel we weren esed atte beste.

Assembled was this compagnie
In Southwork, at this gentil hostelrie
That highte the Tabard faste by the Belle.
Gret chere made our hoste us everich on,
And to the souper sette he us anon:
And served us with vitaille of the best.
Strong was the win; and well to drinke us leste.
A sency man our hoste was with alle
For to han ben a marshal in an halle,
A large man he was with eyen stepe,
A fairer burgeis is ther nen in Chepe;
Bold of histopoche, and wise and will yrang.
And of manhood him lested Tights namely.
The therio was he right is many main.
He light (qued he) my mainter and my hard.
New descents make, for that is mist interest.

Cometh nere (quod he) my hely prioresse And ye, sire clerk, let be your shamedistine He stadieth nought; lay hand to, every me

IT375.

As curtobly as it had ben a maid, My Lady Prioresse, by your levz, So that I wist I shuld you not agrees, I wolde demen, but ye tellen shold A tale next, if so were that ye wold, Now wol ye vouchesauf, my lady dere?

The character of the host is carefully maintained throughout. Eighteen times during the journey he puts forth his authority and gives vent to his mirth. He suffers but one of the company only to interfere with his office, checking with bold speech, lordly

only to interfere with his office, checking with bold speech, lordly as a king, every intermeddler, except the very perfect gentle Knight, whom Chaucer drew having before him a picture, taken from the life, by Guillaume de Machaut, of the blind hero of Crocy, the valiant and gentle John of Luxembourg, King of Bohemia.

In a paper which has been before mentioned, Mr. Corner pointed out that in the Subsidy Roll of 1380, two shillings for himself and Christian his wife were charged upon Henry Bailly, hosteller of Southwark, and that the same Henry Bailly represented that borough in the Parliaments of 1376 and 1378 at Westminster and Chaucester. The subsidy was the second poll-tax, to which the poorest was to contribute not less than a groat, if a husband, for himself and his wife, and the richest not more than sixty groats. The Parliamentry writs and returns show that Henry Baylly, a burpess of Southwark, represented that borough in the Parliament at Westminster in 1376 is not so clear. However, it seems that Henry Bailly, the host of the Tabard, did sit at least in one Parliament, and it was not unlikely that an innkeeper should be among the knights, citizens, and burgesses chosen to represent the comthe knights, citizens, and burgesses chosen to represent the commons of England. Some of the aldermen of London condescended to keep taverns, and they were not lightly esteemed. In the grant of the first poll-tax in 1379, the mayor was assessed as an oarl, the aldermen as barons, and great merchants as knights. Like the merchant princes of Genoa and Venice, and our own dethroned sovereigns of Leadenhall Street, the leaders of the City in the fourteenth century were statesmen and warriors as well as traders.

Having ventured to affirm that the hero from whom our firstborn princes take their plume and motto was the original of Chaucer's Knight, it may not be superfluous to offer the proof, gathered and brought together from Le Confort d'ami of Guillaume de Machaut, adding that the French poet in his Life of Pierre de Lusignan, King of Cyprus, mentions the taking of Alexandria, Satalia, and Layas:

Pren garde au bon roi de Beheigne. En Poulcine, en Russe, en Cracoc, En Masovie, en Prusse, en Lectoe. Puis fus il par deux fois en Prusse, A moult grand honneur & en Russe. Ala pris & honneur conquerre. rien ne retenoit Fors l'onneur ad ce se tenoit, Riens qu'onneur se desieroit.

S'll avoit une cotte grise
De drap de l'ouleinne ou de Frise,
Et un cheval tant sculement
Il le souffisoit hautement.
Son lit, eins prenoit à l'ostel
Ce qu'il trouvoit.

Oneques n'ot tel En monde ne si patient,
De riens n'estoit impatient,
N'estoit pas de ses gens hais
Car chescun l'amoit et servoit.

Chaucer says of his Knight :-

A knight ther was, and that a worthy man, At Alisandre he was when it was wonne, Ful oftentime he hadde the bord begonne Aboven alle nations in Pruce.

In Lettowe had he reysed and in Ruce.

At Leyes was he and at Satalie

Whan they were wonne.

he loved chevalrie

Trouthe and honour, fredom and curtesie, And evermore he hadde a sovereine pris.

But for to tellen you of his araic, His hors was good, but he ne was not gaie. Of fustian he wered a gipon. A yemen hadde he, and servantes no mo At that time, for him luste to ride so.

And of his port as meke as is a mayde He never yet ne vilanie ne sayde In alle his lif unto no manere wight, He was a versy parfit gentil knight.

Tyrwhitt thought it hard to guess why Chaucer should have made an English knight bring his laurels from Alexandria and Lettowe, rather than from Orecy and Poltiers. If John of Luxembourg was his model, the riddle is solved. He borrowed freely, in other places, from Guillaume de Machaut, and probably translated his Dit du Lion.

DR. SCHLIEMANN'S DISCOVERIES IN THE TROAD.

SINCE we noticed Dr. Schliemann's work in our number of March 21 we have learnt with great satisfaction that he has begun the exploration of Mycene, and that, by a new arrangement with the Porte, he will probably be able before long to resume his excavations at Hissarlik, which, whether it be the site of Troy or not, is certainly the site of Ilium Novum. It will, we think, be generally admitted by those who have read M. Lenormant's interesting letters in recent numbers of the Academy that before any teresting letters in recent numbers of the Academy that before any authoritative judgment can be pronounced as to the age of the Hisaarlik antiquities and the race from whom they are derived, various facts will have to be carefully sifted and much new ground explored.

At present one great obstacle to a scientific inquiry is that Dr. Schliemann's antiquities are at Athens, and the photographs in his work are quite inadequate to convey a correct notion of them except to those who have examined the originals. On the them except to those who have examined the originals. On the other hand, the antiquities from Santorin, Cyprus, and elsewhere, in which such remarkable resemblance to the Hissarlik antiquities has been recognized, are scattered about Europe in various museums. Without the actual juxtaposition of the objects compared, comparisons lose their convincing force. Most of the archeologists who have written on Dr. Schliemann's discoveries have assumed the Hissarlik antiquities to be pres-Hellenic; indeed it seems impossible otherwise to explain their position in regular layers at so great a depth under the Greek city of Illum Novum, undoubted remains of which city were found by Dr. Schliemann in the upper soil of Hissarlik. Assuming then that the Hissarlik antiquities are præ-Hellenic, to what people and to what age can they be attributed? M. Lenormant contends that they can hardly be later than the nineteenth or twentieth century n.c. Thus, the received date of the Homeric siege of Troy being 1200 to 1100 n.c., received date of the Homeric siege of Troy being 1200 to 1100 B.C., Dr. Schliemann's antiquities would be from five hundred to six hundred years earlier than Priam. This somewhat startling theory is supported by an elaborate argument of which the following are the principal points: —

1. The extreme rudeness of the Hissarlik antiquities, especially

in the attempt to represent the human figure, the absence of painted pottery and of glass, and the use of pure copper instead of bronze in the numerous weapons and implements, give these antiquities an a priori claim to be considered pre-kiellenic and pre-

historic.

2. On comparing these presumed prohistoric sutiquities with what has been recently found under the tufa in the volcanic island of Santorin (Thera) curious resemblances will be found, especially in the pottery. Now Santorin was once a volcano with a crater occupying the place of the present harbour; which crater at some time before historical record sank down into the sea. at some time before historical record sank down into the sea. M. Fouqué, whose memoir on the subject is to be found in the French Archives des Missions for 1807, calculates from certain geological data that this catastrophe took place between 2000 and 1800 B.C. In excavations at Santorin made by French archaeologists some years ago, of which an account appeared in the Revue des Deux Mondes, remains of houses and antiquities of a very primitive kind were found under a thick layer of tafa, and it is assumed by M. Lenormant and other French archaeologists that this tafa was thrown out as a last effort of the volcane before that this tufa was thrown out as a last effort of the volcano before its crater went down into the sea. Supposing this geological theory to be established, we have in the remains found at Santorin theory to be established, we have in the remains found at Santorin a kind of prichistoric Pompeii. Now it is curious that in these Santorin antiquities a large proportion of the vases are, like those from Hissarlik, of a rude shape and fabric, the surface not painted but polished by the hand. The implements are mostly of stone, such few ornaments as they present being incised; but the metal used for implements is, as at Hissarlik, pure copper, not bronze. The conclusion arrived at by the French archeologists from the study of these remains is that they are antecedent to the Phonician colony which occupied There some time after the sinking of the colony which occupied Thera some time after the sinking of the crater, and whose descendants the Greeks are said to have found in the island, when, according to legend, they planted a colony there, one hundred and ten years after the Trojan war. When we turn from Santorin to Ithodes and Cyprus, two of the most ancient settlements of the Phonicians, we find fictile art in a stage considerably in advance of the rude pottery of Thera. The vases which M. Lenormant ascribes, we think justly, to the Phonician which six kenormant ascrices, we think justly, to the Phonician period are of much thinner and finer substance than the Santoriu pottery, and the simple geometrical patterns with which they are ornamented are painted in brown on a drab ground, instead of being incised as in the ruder and earlier pottery. These Phonician vases have been found in the excavations at Nimrud in Palestine, and occasionally bear Phonician inscriptions. moments of the same pottery were found by Mr. Dennis in a hydian tunulus near Sardos, and many specimens have been obtained from Cyprus, Rhodes, Athens, Mycenso, and Tiryns. Not a trace of this later Phoenician pottery was met with by Dr. Schliemann in the lower strata of his excevations, but at Santorin s few specimens occurred, intermixed with the ruder native pottery. These later specimens occurred, intermixed with the ruder having pottery. These later specimens may have been imported by the Phænicians at a period long previous to their permanent settlement at Thera. Among the ornaments painted on these vases, figures and animals occasionally occur, but these attempts to represent organic form are very rudely drawn. M. Lenormant notes certain little figures sculptured in marble and modelled in clay, which probably belong to the same period as these painted vases. Next in order of time somes the class of painted vases sometimes called Corinthian, in

which zones of animals are painted in brown, black, and crimson, on a ground scene with flowers, the human figure or monstrous winged combinations being occasionally introduced. It is now very generally admitted that the ornaments and subjects of these so-called Corinthian vases are derived from Assyrian sources. With those are found the little bottles of variegated glass of which the tombs of Camirus yielded so large a quantity, and which are also found in Egyptian tombs as early as the time of Thothmes III.; a variety of objects in blue porcolain, some of which were no doubt manufactured in Egypt, others being an imitation of the Egyptian fabric; terra-cotta figures painted and modelled with considerable art; figures and implements cast in bronze; and convince in juvery and large. Greak inscriptions in a pour or and an analysis. considerable art; figures and implements cast in bronze; and carvings in ivory and bone. Greek inscriptions in a very archaic form occur on a few of these objects, and it will be convenient in the present state of our knowledge to class this later pottery and all the glass, porcelain, terra-cottas, &c., associated with it in tombs, as Greec-Phenician antiquities.

We have now traced out three distinct strata of ancient remains, which according to the hypothesis here stated succeeded each other in order of time—namely, the Præhistoric antiquities of Hissarlik and Santorin; the Phoenician antiquities of the Greek islands and of certain sites in Groece and Asia; and the Greece-Phoenician antiquities of Greece proper and the Archipelago, and also of Italy. Now, if we assume that these three strata succeeded to each other chronologically, we find that in the Hissarlik antiquities there is no trace of Phonician, Egyptian, or Assyrian influence; whilst at the same time there is, in the attempts to represent animal forms and in the ornaments, a curious resemblance to those remains from the Greek islands and other parts of the ancient world which, from their extreme rudeness and from other circumstances, have primed facie a claim to very remote antiquity. One of the most numerous class of antiquities in Dr. Schliemann's collection are the pierced disks in terra-cotta and stone, which he calls spindle-whorls. On these disks are graffiti, most of which such simple geometrical ornaments as are found on the earliest painted vases, with occasionally an attempt to represent mon or cattle by outlines as rude as a child's first attempt to copy a heraldic lion. There is, as M. Lenormant justly remarks, a certain analogy between these graffiti and certain gems found in the Greek islands, in which the intaglie is rudely incised on a pobble, which retains its original form, a lentil irregularly flattened. a pebble, which retains its original form, a lentil irregularly flattened. Now if these Hissarlik antiquities were, as Dr. Schliemann maintains, of the date of Friam's Troy, a city destroyed in the twelfth century n.c., we should expect to find in them traces of that Assyrian influence which we know from the prism of Tighthpileser to have been then paramount in Asia Minor. If, indeed, we assume for the Hissarlik antiquities a date as late as the seventeenth century n.c. or later, then, argues M. Lenormant, it is inconceivable that they should exhibit no trace of Egyptian influence; for we know from the evidence both of hieroglyphic texts and Greek tombs that Thothmes III. and his successors from the seventmenth century onwards were constantly brought in contact seventeenth century onwards were constantly brought in contact with the inhabitants of the Eastern Mediterranean, both in war and peace. It follows therefore that the Hissarlik antiquities are

carlier than the date of Thothmes III., and thus M. Lenormant

throws them back to the nineteenth or twentieth century—the date which, relying on M. Fouque's geology, he assigns to the prehistoric remains at Santorin. The theory here stated has, it must be confessed, this merit, that it gives ample room for the successive formation and development of the three classes of antiquities which we ventured to distinguish as the Prachistoric, the Phomician, and the Gracoto distinguish as the Prachistoric, the Phoenician, and the Graco-Phoenician, in the 1500 years between n.c. 2000 and n.c. 500; and we may, we think, fairly assume that during all this period a development of some kind was going on among those ruces whom the Hellene ultimately absorbed or supplanted in the Eastern Mediterranean. But before accepting M. Lenormant's reasoning, some of which appears to us somewhat too fine drawn, much will have to be sifted. How far, for instance, do geologists generally admit M. Fouque's views about the volcanic changes at Santorin? Even if we grant that the Dardana of hieroglyphic texts are probably the Trojans of Hium, is the identification of the Tokkra as Trojans as certain as M. Lenormant assumes it to be? Tokkra as Trojans as certain as M. Lenormant assumes it to be? It is a far cry from Troy to Egypt, and it seems at first sight improbable that a city so remote should in such very early times have had relations with Egypt sufficiently marked to exercise any appreciable influence on Trojan art. Yet, unless we admit in its full force the negative argument which M. Lenormant derives from this absence of Egyptlan influence at Hissarlik, one main ground for his conclusion is weakened. We must, therefore, whilst acknowledging the great ingenuity and learning shown by M. Lenormant, say of his conclusions generally that they are possible that they are possible to the conclusions generally th Lenormant, say of his conclusions generally that they are possible but not proven. If, on the other hand, it should ultimately be established by further evidence that Dr. Schliemann has really found Priam's Troy, then we must not feel surprised or disappointed if these remains show a state of art so far below the general standard of civilization described by Homer. Who can doubt that the state of society portrayed with such vivid and graphic details in the Ilind was in its main features a poetical reproduction of the age in which the poet himself lived and moved? To suppose that he tried, like Walter Scott, to reproduce the manners and customs of races from which haves separated by an interval of three or four centuri is to suppose a combination of poetry and archeology irrecombined by the spirit of the Homeric age. THE INTERNATIONAL EXHIBITION.

THE exhibition of wines was not ready last Monday, and we fear that when open it will be found seriously incomplete. It is not only the growers, shippers, and importers, but the makers, of wine who are entreated to reveal themselves. Ordinary sherr may be truly called an "international" production, since Spain gives the name and we find the materials. If the managers of this Exthe name and we find the materials. If the managers of this Exhibition could and would arrange for a course of lectures with coular demonstration of the processes by which the liquors called wines are manufactured, we believe that they would render public service by promoting health, temperance, and economy. Those who are in the trade will not betray its secrets, but a chemist can guess with sufficient accuracy at the composition of the curious articles which are largely sold as "sherry" and "champagne." A model of the estate on which Hamburg Sherry is grown would be an interesting feature of the Exhibition, and perhaps it would appear that the vines are so productive as not to require a larger area than is covered by a factory for gin-spinning. An official announcement states that "exhibitors are permitted to sell or give away glasses of wine or samples in bottle," and an official scribe calls this "placing this class (of wines) before the public in a practical manner." It will be strange if with this encouragement the vaults of the Albert Hall do not become a gigantic tippling-shop. Fairness would seem to require that which might perhaps be productive of fun—namely, an exhibition in another part of the building of the processes for getting up a teetotal agitation. Here you might learn how to make wine; there you might learn how to make wine; there you might learn how to make apeeches. Both products are often equally artificial, there and might perhaps and both manufactures occurry as large. hibition could and would arrange for a course of lectures with how to make speeches. Both products are often equally artificial, flery, and mischievous, and both manufactures occupy so large a place in modern life as to deserve their turn in the Exhibition. If, indeed, visitors to these vaults could learn there to distinguish between good wine and bad imitations of it, we should begin to think that these Exhibitions are something more than bazaars.

They might be useful in teaching to all classes something of what may be called the science of common life. If we were not totally ignorant of chemistry, we should not be at the mercy of audacious impostors who can thrust down our throats any vile mixture to which they choose to give the name of wine.

mixture to which they choose to give the name of wine.

The exhibition of sanitary apparatus would be rendered far more valuable by an exposition in popular language of the principles upon which depends the preservation of health in crowded neighbourhoods. We observe that in New York lectures are given to ladies upon physiology and hygiene, "in response to a call from a number of leading ladies of that city." We should think that a lecture upon Respiration, "illustrated by highly-finished coloured views," would be almost as interesting as that which used to given upon a drop of foul water at the Polytechnic. There was not much lecture in the sense of talking, but the room was darkened, and much lecture in the sense of talking, but the room was darkened, and upon a white wall were shown spectres of monsters several feet long moving with great rapidity and extending in all directions formidable claws. One came away with the conviction of having had a comfortable shilling's-worth of horror. In the American lecture something equally impressive is provided by way of accessory to the talk. By help of a stereopticon "highly-finished coloured views" are thrown upon a screen thirty feet square, displaying the colossal size of the heart, with its valves, arteries, and veins, also the circulation of the blood to the lungs and neighbouring organs, blood corpuscles greatly enlarged, showing the healthy and the diseased condition, demonstrating the presence of cancer, salt rheum, &c. We cannot help thinking that this kind of thing would pay in England. Blood corpuscles greatly enlarged must have an adequately horrible appearance, and it must be possible to inspire every lady in the audience with an apprehension that she has incipient cancer in her system. This alone would be worth all the money. It is delightful to believe—not of course all the money. It is delightful to beneve—not of course too confidently—that one is doomed, and to be able to exact a husband's sympathy, while avoiding as long as possible the unfeeling assurance of the family doctor that there is nothing at all the matter with one. The imagination might dwell with unrestrained pleasure on the morbidity of corpuscles, "how cancers are formed from the diseased blood, and how the brain is affected when the blood is impure." We can hardly conceive a more thrilling subject for a lecture. "Nine-tenths of all suicides are consulted from poisonous blood, which affects the brain, for bad committed from poisonous blood, which affects the brain, for bad blood can never reason." Here we seem to be approaching a highly consolatory theory that suicide, and of course murder, is to be ascribed to neglect of physiological and hygienic rules.

"Crime," said the lecturer, "would never cease until the capitalist
would build small houses for the poor." We wish we could believe that it would cease then: "Pent-up air gives bad blood," and hence all the evils that afflict humanity. These hygienists are better informed and less tedious than another sot of enthusiasts, These hygienists are better informed and less tedious than another set of enthusiasts, the teetotalers. But it is amusing to observe how confident each set are that they could regenerate the world if only they might be allowed to try. The worst, however, that could be said against the hygienists is that they are inclined to spend our money rather freely. But it takes a good deal of talking to talk money out of a man's pocket, and therefore we think the hygienists might usefully lecture on their favourite subjects. They would be at no less for illustrations, as there is a large collection of sanitary appliances in the Exhibition. Another subject on which the popular mind sadly needs instruction is economy of fuel. There are plenty of stoves in the Exhibition, but who is to try them? It may be doubted whether the

Committee of the Class have time or means to make such trial as a housekeeper makes when he has a store put up, and depends on it for the comfort of his family. The Committee will probably make a Report upon the Class, which will be well written, and suitable to persuade those who do not need it. The difficulty is to convince the ordinary householder that more economical arrangements as to field might be and ought to be adopted in his house. This is not only difficult, but almost impossible, as the average Englishman is as much devoted to his open fireplace as to his joint of roast beef. Nor is his suspicion of new langled contrivances by any means unreasonable Many experiments in warming and ventilating public buildings have been made at his cost as a taxuayer, and have ended disastrously. Besides, he is at any rate well founded in distrust of his own ability to manage new contrivances. Still the general ignorance and helplessness on this subject is deplorable, and as we are to have these Exhibitions, they may perhaps be made useful in are to have these Exhibitions, they may perhaps be made useful in conveying more correct ideas. There is less reason for a display of saddlery and harness, which could, we think, be sufficiently well addlery and harness, which could, we think, be sufficiently well made in existing shops. If it pays tradesmen to do their business in this way, they will do it. You cannot go into an ordinary shop and ask many questions as to price and quality without being expected to buy something, and if you are a weak-minded person you probably comply with this expectation. But you can walk up and down the galleries of this Exhibition and ask questions at stalls where there are attendants, and all without expending more than the shilling for your admission. Thus a large part of the amusement which ladies call shopping may be enjoyed without expense, and in this point of view the Exhibition deserves to be supported not only by ladies but by their husbands. We do not know whether much good was done last year by lectures on cooking; know whether much good was done last year by lectures on cooking; but at least no harm could be done. The saying that a little knowledge is a dangerous thing could hardly apply here.

The Catalogue of the Exhibition is, as compared with the catalogues of former years, a modest composition. There is no putling that the catalogues of former years, a modest composition.

by the Commissioners, and only a limited amount of puffing by the exhibitors. The proprietor of Bond's Marking Ink is, we suppose, also the proprietor of a contrivance called the Odonto Toat, used, as we conjecture, for feeding babies, and this is probably the reason why the praises of these two articles are celebrated by the same advertisement. It would be rather awkward if a baby were to get hold of the ink-bottle instead of the teat. The "Certificate of merit signed 'Albert Edward Prince of Wales." "Certificate of merit signed 'Albert Edward Prince of Wales'" applies, as we understand, to the ink and not to the teat or the babies. An article called Maizena was pronounced by a Jurors' Report of 1862 to be "exceedingly excellent food," and it has probably been felt by jurors of later time that the language of praise had been exhausted. Dr. Lankester, however, has found opportunity for further laudation of this article. The word Maizena was intended to designate farina of maize, and Dr. Lankester is able to say that it is what it pretends to be. "I attribute its excellence," says he, "to the fact of its being exclusively prepared from maize grown in America." Here is a stupendous fact. "This," says he, "is maize. It calls itself maize, and it is maize, and no mistake at all about it." We have got pretty well used to every kind of adulteration, but still it is got pretty well used to every kind of adulteration, but still it is rather startling to find an article commended on the simple ground that it is genuine. Why should not English invalids and children be supplied with maize grown in America? The native pigs be supplied with matte grown in America? The native pigs get as much as they want, and can surely spare a little. Thormay of course be special skill in the preparation of this article, but Dr. Lankester does not go upon that. It is as if he were to say, "Here is a loaf of bread made from wheat," which indeed he could hardly say with truth of all the loaves that are sold in London. But certainly commercial morality must be at a low ebb when it is made a ground of coursell project that flow is flow. We shall be told before long in special praise that flour is flour. We shall be told before long in the same style that a tin of Australian mutton has been examined and found to contain no dog. The importers of Maizena must not be too much elated at the discovery of their own honesty. Doubtess there was in the country where it grew plenty of dirt which they might have put into it, but they did not. Let us hope at any a that this form of virtue will some day become more common.

THE ANCIENT MONUMENTS BILL.

What and there is again a chance of England being for the liver a byword among nations as far as regards respect the men wasmorials of our own history and of the history of this present re before us in our island. As we are told that Session, without of Parliament is to be a quiet, humdrum be that it will w blazing questions or heroic remedies, it may be that it will whazing questions or heroic remedies, it may moments to the fer this year than it was last to give a few of the land are not a whether the ancient historic monuments hands of the nation worthy of care and preservation at the of our own rank in the worthy of care and preservation at the of our own rank in the west and almost alone among nations of our country to be the leaving the monumental history hopeless mutilating the way bit by bit by the destruction or Lubbock spain ring forwals in which it is written. Sir John to nothing last and he is a Bill which so unluckily came to nothing last and he is Bill which so unluckily came to nothing last and he is a Bill which so unluckily came have seen and he is a black of we do not commonly together in such of we do not commonly company, and, as they

cannot be reasonably suspected of conspiring together for any wicked purpose, it is to be hoped that each may draw suspected to the Bill from his own special corner of the Bourstour own course with regard to the Bill is so easy as to become hard. We have really very little to say about it except what we said more than a year ago. The Bill is essentially the same as it was then—so nearly the same that we might make over again all the criticians which we made then. The chief change is that besides the Enclosure Commissioners and the official persons manufactured in the former Bill there are to be seven Commissioners. besides the Enclosure Commissioners and the official persons mentioned in the former Bill, there are to be seven Commissioners named in the Act whose successors are to be appointed by the Crown. The list is a strong one, and takes in such well-known names as Lord Talbot de Malahide and Mr. John Evans, with Mr. John Stuart for Scotland and Sir William Wilde as a second and most worthy representative of Ireland. We may suppose that it is these nominated Commissioners who will really do the work, and it is again provided, as is a clear matter of necessity in such a case, that the Commissioners may act by writing without meeting in person. The addition of these nominated Commissioners is a distinct improvement on the former Bill; indeed, were not that the presence of the Enclosure Commissioners may be deemed needful by prudent people to protect the rights of property against the inroads of enthusiastic antiquaries, and were there not a certain propriety in connecting the matter in hand with there not a certain propriety in connecting the matter in hand with certain public institutions, we might ask whether a well-chosen body of nominated Commissioners would not got on better without the help of any official Commissioners at all. Another change is that the Act is not in any way to be applied to monuments on land held in right of the Duchy of Cornwall without the consent of the Duke of Cornwall for the time being. We suppose that there is some reason for this provision, though it is not very obvious at first sight, and the result of it seems to be that, in the schedule of monuments to which the Act is to be immediately applied, instead of, as we had hoped, more Cornish monu-ments appearing, Cornish monuments, and with them Dovonshiro monuments, vanish altogether. In other respects the Act is much the same as it was; the powers of the Commissioners are the same; there is the same curious phraseology about "injuring" monu-ments, and the three classes of monuments remain as before. There is still the first class, consisting of monuments named in the schedule, which are to be at once placed under the care of the Commissioners; there is the same power ledged in the Commissioners. sioners to apply the Act, subject to an appeal, to other monuments of the same class; and there is the same power as before of extending it, under certain circumstances and with the consent of certain persons concerned, to monuments of any other kind. If all this can become law, the gain will be very great; a great deal of wanton destruction will certainly be stopped; and, though we should our selves like to see the same principle carried out still further, we are, as we were a year ago, thoroughly thankful to get anything at all, and we do not forget that by trying to get too much we might perhaps lose everything. In short, when the monumental history of the land has been for so many ages deficed at pleasure by the caprice or carelessness of any ignorant landowner or occupier, it will be a great thing to have it in any shape recognized by law that national monuments are really monuments of national concern.

At the same time, if there was to be a schedule of monuments named in the Act, we again cannot help expressing our wonder at the smallness of the number of monuments contained in it. We have already said that Cornwall and Devombire, two counties which are among the richest in prinneval monuments, are cut out altogether. Coming castward, there is now nothing in lorast, though in the former schedule there were three monuments in that shire, Maiden Castle, the Dorchester Amphitheatre, and Badbury Yet surely there are few monuments better worth preser vation than Maiden Castle; and Briton and Englishman may unite to respect the spot which is the memorial at once of Arthur and of Cerdic. The omission of the amphitheatre may be a sign of a fixed purpose to shut out all Roman remains from the schedule, though we cannot guess why they should be shut out, especially as Itoman remains are expressly mentioned among the objects to which the second process of the Act may be applied. Passing into Somerset, we again ask, Where is Worlebury? Why is one of the greatest and most living monuments of English victory, on one of the noblest of sites, the great hill-fort looking tenth with the manner with its intended and forth on the narrow sea, with its islands and promontories, and the mountains of the once foreign and hestile land beyond—a monument threatened, perhaps beyond any other of its kind, sometimes with utter destruction, always with daily wearing mutilation—to be thought unworthy of preservation, if ancient monuments are preserved at all? Again, there is nothing in Penbrokeshire, nothing in Monmouthshire, and Chamorganshire still supplies nothing but Arthur's Quoit. We confess that we do not understand the principle on which the schedule is drawn up. We can quite understand the propriety of making such a schedule, and at the same time adding a clause giving the Commissioners power to extend the Act to other monuments besides those men-tioned in the schedule. In this case, the further powers would be powers to meet cases either of omissions in the schedule, or of fresh discoveries. But of course it is a gain to have as many objects as possible put in the schedule, because to them the Act will be applied at once without any further asking of leave of any-body. We therefore do not understand why, out of a number of objects of the same class, some should be taken and others left. If

[.] See Saturday Review, March 15, 1873.

Kit's Coty House and Arthur's Quoit are to be put at once under the protection of the law, we do not see why the cromlech at Dyffryn, and other cromlecha in other places, which are just as well known and just as worthy of being preserved, should be left exposed till a further process has been gone through. So again, with regard to the classes of objects mentioned in the empowering clause, we do not profess to define "British," "Celtic," and "Saxon" remains, or to know the exact difference between British and Caltie. But and the control of and Celtic. But we do know what Roman remains are, and we do not understand why, when the clause points out Roman remains as proper objects to be put under the care of the Commissioners, not a single Roman monument is at once put under their care by being set down in the schedule. We have already noticed that in being set down in the schedule. the schedule in the former Bill the Dorchester Amphitheatre was named, though it is no longer named in the present schedule. The groat case of the dykes at the other Dorchester shows that there is no class of remains which stands in greater danger, and if the Commissioners are to be allowed by a certain process to extend their care to remains of this kind, why is It that not a single monument of the kind—not Wroxeter, not Silchester, not Anderida, not the Great Wall itself—is at once made safe by being put down in the schedule? Silchester is safe, and more than safe, during the lifetime of the present Duke and the present rector, but we cannot answer for all future Dukes and all future rectors; and surely, if there are any monuments in the whole country which deserved to be made objects of national care, none can surpass the Great Wall, none can surpass Anderida, the monument of the two great turning points in the history of Britain Britain. As for mediaval monuments, the Bill, as concerns them, remains

much as it stood in its former shape. None of them are named in the schedule; the Commissioners cannot take the first steps towards their preservation, but, as we understand the Bill, it is open to any owner of such monuments himself to put them under the care of the Commissioners. We should ourselves have liked something more than this; still, as things are, it is a great matter to get this or anything else, and of course owners may be expected to feel a much keener sense of property in their castles and abbeys than they do in their cromlech and standing castles and abbeys than they do in their cromlech and standing stones. The case of that class of antiquities which is in most danger of all, the class which perishes daily, is, we are afraid, follopeless. Of all tasks the hardest is to make people feel any a pobble, which remark for a realizable buildings of past times, and Now if these Hissarlik antiquities were, is for a lower of dealing tains, of the date of Priam's Troy, a city destroyed in contury a.c., we should expect to find in them traces of their respect for the smaller don't are a man's for the smaller don't be a man's for the church, than to set bounds to his power of doing as he pleases with a building which is perhaps still inhabited by himself or his tenant, by his own horses and cows, or by his tenant's horses and cows. At all events, one class of our antiquities, a class which, if cows. At all events, one class of our antiquities, a class which, if not the most striking, is by no means the least instructive, is not the most striking, is by no means the least instructive, is tried knows how hard it is to persuade the popular mind that a tried knows how hard it is to persuade the popular mind that a tried knows how hard it is to persuade the popular mind that a tried knows how hard it is to persuade the popular mind that a tried knows how hard it is to persuade the popular mind that a tried knows how hard it is to persuade the popular mind that a tried knows how hard it is a very pleasing class of our gone, we shall not only have lost a very pleasing class of our gone, we shall not only have lost a very pleasing class of our gone, we shall not only have lost a very pleasing class of our gone, we shall not only have lost a very pleasing class of our gone, we shall not only have lost a very pleasing class of our gone, we shall not only have lost a very pleasing class of our gone, we shall not only have lost a very pleasing were to the ancient monuments, but further strength will be given to the ancient monuments, but further strength will be given to the ancient monuments abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who lived in castles, monks who lived in abbeys, and perhaps serfs who live

that Sir John Lubbook may earn the blessings of antiquaries as fully as he has already earned the blessings of bankers and their clarks.

LAWYERS ON THE STAGE.

THE lawyer is a favourite and familiar figure in the novel and on the stare, yet it is wonderful how little Let on the stage, yet it is wonderful how little novelists and dramatists have been able to make of him. Almost every eminent the same subject has often been attempted on the stage; but in most the same subject has often been attempted on the stage; but in most cases the experiment has failed. This is the more extraordinary cases there is really no subject which is in itself so dramatic in because there is really no subject which is in itself so dramatic in the reports of law cases when they are fully reported, and this is the newspaper which is so eagerly read by all classes as no part of the newspaper which is so eagerly read by all classes as the reports of law cases when they are fully reported, and this is the newspaper which is so eagerly read by all classes as the nearly of criminal cases, which may be supposed to appeal two norbid appetites, but of civil cases too. No doubt the ordinary daw reports are never read except by professional men or by a persons who happen to have a special interest in a case, but the persons who happen to have a special interest in a case, but the persons of this is that all the life is taken out of them by the persons of this is that all the life is taken out of them by the persons who happen to have a special interest in a case, but the persons who happen to have a special interest in a case, but the persons who happen to have a special interest in a case, but the persons who happen to have a special interest in a case, but the persons who happen to have a special interest in a case, but the ordinary daw reports are never read except by professional men or by the persons who happen to have a special interest in a case, but the ordinary daw reports are never read except by the compression of the whole story into the compression of the whole story into the conventional pretensions of the persons who have the conventional pretensions of the persons who cannot should form the daw of the person of the person of the person who have the person of the person of the person of the pe on the stage, yet it is wonderful how little novelists and dramatists have been able to make of him. Almost every eminent novelist has tried his hand at the description of a great trial, and the same subject has often been attempted on the stage; but in most the arms at the arms and the arms and the arms are the arms and the arms are the arms and the arms are the arms are the arms and the arms are the arm cases the experiment has failed. This is the more extraordinary because there is really no subject which is in itself so dramatic in because there is really no subject which is in itself so dramatic in form and contains so many dramatic elements as a trial. There is no part of the newspaper which is so eagerly read by all classes as the reports of law cases when they are fully reported, and this is the reports of law cases when they are fully reported, and this is the reports of criminal cases, which may be supposed to appeal to morbid appetites, but of civil cases too. No doubt the ordinary law reports are never read except by professional man or be-

becomes quite faccinating when presented in this form. Nothing could possibly be more dramatic all through than the Tichborne case and there was really room for a subtle intellectual pleasure in follow and its evolutions, its shifting phases, now one side up, then down, and its varied and startling incidents. The number of different persons engaged in the trial, the diversity of characters illustrated, from the judges on the Bench to the mixed crowd in the back seats of the Court, and the constant movement and, as actors say, "business" of the scene, all contributed to make it an irresistible theatrical success. If the Queen's Bench had been a theatre, the piece would probably have been running still. Yet, as we said, it is very seldom that a trial is successfully represented. on the stage. One reason is, perhaps, that the accumulation of de-tails and the panoramic unfolding of the story which are so impres-sive in a lawsuit have to be sacrificed on the stage, and also in a sive in a lawsuit have to be sacrificed on the stage, and also in a novel, and that rapid situations have to be substituted for the sake of prompt effect. No audience could be expected to sit one hundred and eighty-eight days in a theatre any more than the most insanely devoted of Mudie's readers could be expected to go through all the volumes of the Tichborne evidence and speeches, if they had been published in a lump. It is the gradual opening out of the story which makes it so interesting; and the impressiveness of anything that is real must also be taken into account. Truth is stranger than fiction, because it is something that has actually happened, and not the artificial contrivance of an ingenious person sitting quietly at his desk and at liberty to invent anything he likes.

happened, and not the artificial contrivance of an ingenious person sitting quietly at his desk and at liberty to invent anything he likes. Another reason why the lawyer of the stage and the novel is not very popular is that he is so monotonous. There is an old farce of which a village attorney is the hero. He is always setting everybody by the ears; and this has long been the common type of lawyer—a malicious, tricky, unscrupulous person, perpetually doing mischief—when exhibited for public amusement. Mr. Trollope in his later novels has, indeed, shown a disposition to devote himself to studies of lawyers, as he once devoted himself to studies of bishops. Mr. Trollope displays the lawyer, not as a mere forensic instrument, but as a useful and not ungenial agent in delicately disentangling the knotted affairs of private life, and doing a great deal more for his clients than merely putting on agent in delicately disentingling the knotted affairs of private life, and doing a great deal more for his clients than merely putting on his wig and speaking for them in court or writing an opinion. The quiet, gentlemanly old lawyer in *Orley Farm* is of this class, and so is the Queen's Counsel in *Lady Anna*. Mr. Chaffanbrass has some of the conventional traits, but the conditions under which such a man must do his work—he remarks of a proposed interview with Phineas, "If he says he did not kill the man, I must take that as of course; if he says he did, what am I to the conventional traits, but the conditions are not travely and the course in the says he did, what am I to the conventional traits in the convention of the course is the says he did, what am I to the convention of the course is the course of the cours I must take that as of course; if he says he did, what am I to ladic the are portrayed with much insight and graphic force, and a number of leastlities of the lawyer are not neglected. Thackeray do reason Respirate brought out some of the humorous aspects the higher qualifications as and it is surprising that this mine and Dickens have also be a surprising that this mine of life in Temple Chambers, the surprising that this mine should have been so little worked. The same way and gown dramatic in the sort of double life with which the wig and gown dramatic in the sort of double life with which they have invest the barrister. No doubt there are some men who, if they have invest the barrister. No doubt there are some men who, if they have heen accustomed to this wonderful costume for a certain time, been accustomed to this wonderful costume for a certain time, been accustomed to this wonderful costume for a certain time, been accustomed to this wonderful costume for a certain time, been accustomed to this wonderful costume for a certain time, been accustomed to this wonderful costume for a certain time, been accustomed to this wonderful costume for a certain time, been accustomed to the wonderful costume for a certain time, been accustomed to the wonderful costume for a certain time, been accustomed to the wonderful costume for a certain time, been accustomed to the wonderful costume for a certain time, been accustomed to the wonderful costume for a certain time, and the w peen accustomed to this wonderful costume for a certain time, and have been prosperous in the use of it, get assimilated to it, and are as grave in their own hair as in a wig. As a rule, however, a barrister is one man in his robes and another in his cutaway ever, a barrister is one man in his robes and another in his cutaway coat and hat; and the contrasts and contradictions thus produced are sometimes droll, sometimes pathetic, and occasionally both mingled. The fancy is tickled by comparing the solemn person in mingled. The fancy is tickled by comparing the solemn person in white wig, black gown, and clerical-looking bands, with the dashwhite wig, black gown, and clerical-looking bands, with the dashwhite wig, black gown, and clerical-looking bands, with the dashwhite wig, black gown, and clerical-looking bands, with the dashwhite special in its way than the position of a poor and brief-be more tragical in its way than the position of a poor and brief-be more tragical in its way than the position of a poor and brief-be more tragical in its way than the position of a poor and brief-be more tragical in its way than the position of a poor and brief-be more tragical in its way than the white-aproned ticket-the conventions of his position, while the white-aproned ticket-be porter in the lane is really making a more substantial income porter in the lane is really making a more substantial income porter in the lane is really making a more substantial income porter in the lane is really making a more substantial income waited, like himself, till all of a sudden the tide filled and swey waited, like himself, till all of a sudden the tide filled and swey waited, like himself, of a Chief Justice who in despair was myss got his second brief, of a Chief Justice who in despair was myss got his second brief, of a Chief Justice who in despair was myss got his second brief, of a Chief Justice who in despair was myss got his second brief, of a Chief Justice who in despair was myss myss got his second brief, of a Chief Justice who in despair was myss got his second brief, of a Chief Justice who in despair was myss got his second brief, of a Chief Justice who in despair was myss got his second brief, of a Chief Justice who in despair was myss got his second brief, of a Chief Justic coat and hat; and the contrasts and contradictions thus produced

and his incapacity is quickly discovered. He never can understand his cases, and always gets verdicts for the other side. With the attorneys he is a doomed man, and he has not had a brief for three attorneys he is a doomed man, and he has not had a brief for three years. He has given up going into court, and confines himself, he he saye, to chamber practice. He is, in fact, the drudge of his household, and has nothing to do except run messages for his wife and do the miscellaneous marketing. The only use of his hims has is to carry home purchases of shrimps, bread, blacking, and such things; and his gown has been doomed by his wife, who is a connexion of a baronet's family, and has a small annuity on which she keeps her husband, to be cut up into a ju let for the little boy. Still Coote has hope. When his wife upbraids him with keeping up an office in the Tennis which brings in which she keeps her husband, to be cut up into a ju vet for the little boy. Still Coote has hope. When his wife upbraids him with keeping up an office in the Temple which brings in nothing, he meekly replies that after all it is only one room and there are four of them in it, that the small boy who is clirk goes by the name of "Decimal Two Five," as representing his fractional relation to his various employers, and that each share of the expenses of the establishment does not exceed halfsacrown a week, which, he adds triumphantly, is as cheap as anybody can do it. Coote's cheerfulness is equal to everything, and though his heart is breaking as the seissors are about to and though his heart is breaking as the scissors are about to descend upon his gown, he offers to sacrifice his wig too, in the hope that it might bull down into something nutritious for buby. Just then there is a knock at the door, the clerk rushes in with a miraculous brief and a fifty-pound cheque, and the wig and gown are spared. The case for which Coote is ongaged is, as usual on are spared. The case for which Coote is engaged is, as usual on the stage, highly mysterious, and it will be safer not to attempt to describe it too precisely. It arises out of a claim to the kinrenter title and estates by a man who, as the audience know, is an impostor and adventurer, aided by a villanous friend of the late lord. Everything is genuine in their case except the claimant. Their papers are genuine and attest that Lord Kinroutie before his death contracted a clandestino marriage, and left a child. Siel, the villain, took charge of this child on his mother's death, and now vouches for Strickett the impostor. They fear, however, that under close examination their story would break down, and hit upon the expedient of getting Coote, who is utterly inunder close evamination their story would break down, and hit upon the expedient of getting Coote, who is utterly incompetent, forsted on the other side as council. The scene in court is of course pure bittle que, but it is extremely funny, and there are touches of irresistible carreature in Coote s confusion and bewilderment. He has been brought to worry the witnesses, and complains that they were him. He is told to come down on them like a thunder-clap, and they anticipate the constitution before he wate his severe together by compared on a conoperation before he gets his senses together by coming down on him. His brief is always upside down, and his papers fly about like a snow-storm. He assumes the case presented by his opponents, argues down his own side, and makes admissions against his client. In his confusion he sharply cross-examines the empty witness-box, and becomes an object of contemptuous pity to the judge, and merriment to the public in court. At last Siel comes into the box and tells a plausible story, but a reference to the grave of the mother of the child whose identity is in question suddenly awakens a train of recollections in Cootes mind, and it dawns upon him that he himself must be in reality the missing her. His scattered thoughts are then concentrated, his questions become a succession of homethrusts, and the witness, helpless in his grasp, falls into a significant swoon when the counsel produces an old pocket-book and portrait which are supposed to be conclusive evidence of his claim. The briefless barrister thus becomes a nich lord, and presumably gives briefless barrister thus becomes a nich lord, and presumably gives up his share of the chambers in the Temple and of "Decimal Two Five." It will be seen that this piece is rather farce than comedy, and that it has no precentions to be accepted as a picture of actual life. It is not a piece to reason about, but to laugh at, and the laughter is abindant and unceasing. The burden of it naturally falls upon Mr Toole, who aimed his drolleries displays those qualities of genuine humour and artistic perception which have made him the most popular of comedians. In another play just produced at the Holborn Theatre Mr. J. S. Olarke plays an intriguing attorney with characteristic facial grotesqueness. intriguing attorney with characteristic facial grotesqueness

DR. DOLLINGER ON THE LATE KING OF SAXONY.

THE Funeral Oration on the late King John of Saxony pronounced by Dr. Dollinger on March 28, before the Scientific Academy at Munich, has just been published. The connexion between the Royal House of Saxony and Bavaria, and the fact of the late King being binaself a member of the Bavarian Academy of Sciences, was naturally referred to at the opening of the address as special reasons for paying honour to his memory at Munich. But the characters both of the speaker and the subject of the discourse give it a more than merely local interest. King John did not play an important part in European history, and hence his name is less known than it discrives to be beyond the limits of Germany. Dr. Deslinger has shown that he discharged his royal duties with excellent judgment and particular; but his speciality was literature, and in this department he takes very high rank. His early training was in many ways remarkable, and the "dark shadow which clouded his beyond," of which the lecturer speaks, may perhaps have first given to his fine intellectual features that strious and linest and expression which can hardly have failed in his later which the discress of Constitute, effected as many religious referral of the discress of Constitute, effected as many religious referral of the discress of Constitute, effected as many religious referral.

what would now be called the thic Catholic direction, and whose election by the Chapter in 1817, as successor to Riskop Balberg, Pius VII. therefore refused to sanction. The see of Constants was in fact eventually suppressed by a fresh Consordat, in 1827, in order to evade the difficulty. The circumstance of his not being criginally heir to the throne, to which he only succeeded in his fifty-third year on his brother's unexpected death, left the young prince more free to follow his natural bent in the matter of learning. But he had the teaching of adversity as well as of books. He was still a boy when the defeat of Jens reduced the King his uncile to tassulage, and Saxony was afterwards cut down to half its former dimensions. But these trials only served to strengthen his character, and for a country like Saxony, whose influence and rank depend so much on its intellectual position, there was a peculiar thress in a sovereign so many-sided in mind and of so extensive a range of knowledge, who even as a private person would have held an exceptionally high place in the republic of letters. It is not wenderful that under his rule the University of Leipsic should have attained the first place and the largest number of students among Geniani Universities. Prince John had also made criminal law has particular study, and his Report on this subject, presented to the Upper Chamber in 1838, is still cited as a valuable document. On coming to the throne his intellectual and moral qualities gamed him the imngled respect and affection of his subjects. "He knew how to command, but his authority was always tempered by forbearance and scrupulous consideration for others. What he required of them, he was himself in his unwarried dilipence ready to fulfil. His determination to see everything with his own eyes led him to make frequent journeys to cutlying regions of the country which none of his predecessors had visited. He maintained a free and genial intercourse with all classes of his people, and both trusted them and was loved

But after all it was classity, as was intimated before, in his literary capacity—not as King of Saxony, but as "Philalethes," to use the name he gave himself—that the royal translator of Dante into German will be generally and permanently remembered. And this is so rare a distinction among crowned heads that the lecturer not unnaturally turns aside to glance at such few parallel mistances as ofter thems levs—On such a point peculiar weight must attach to the comments of a man like Dr. Dollinger, whose litelong devotion to incessant literary labour has raised him to the first rank among Furopean acholars, while yet he has never altenated himself from the interests and duties of active his from 1845 to 1847 he represented his University in the Bavarian Chambers, and in 1848 was elected to the national Parliament of Frankfort, and took an active part in its proceedings. He reminds us that if we look through the centuries there are very few, even in the most cultivated nations, who have decked the crown of sovereignty with the wreath of authorship. Neither the education nor the ordinary surroundings of royal households tend to develop such a taste, and the more urgent motives which impel so many to seize the pin are of course wanting. Nor is it common to find among even the best of princes that ripe practical sense and perfect self-mastery which would dispose them "to plunge into the sea of science and literature as a refreshing bath," in the pauses of active business. "That is a divine gift which Providence has only bestowed at long intervals on a few chosen ones." Frederick 11, possessed it in an eminent degree; Louis I. of Bavaria and Napoleon III. knew something of it. But John of Saxony is a pre-eminent example of this happy combination of the two kinds of activity. And the explanation may partly be sought in a peculiarity already noticed which he shares with most of the royal authorship to their own learning into the scale. But James is solitary example of the pride of authorship actually eclipsing the sense

Valhalla near Ratisbon. The Memoirs of the Emiress Catharine and some historical writings of Frederick II, have a similar origin. Still more obviously was Louis Napoleon's Casar an historical apology for the coup attact of December and the system of government based upon it. On the contrary, the Meditations of Marcus Aurelius are the simple outpourings of a lofty but unhappy spirit, weighed down under the burden of Impurial responsibility and the profound conviction of the nothingness of all human things. But the noblest specimens of royal authorship are those inspired by a pure desire of the sovereign to raise the intellectual standard of his subjects. Of this we have two bright examples in mediaval history supplied by the English Alfred and Alfonso X. of Castile. The former strove, by translating Latin works, to rekindle the love of study in a people demoralized by long wars; Alfonso, who was unfortunate as a ruler and general, is an almost singular phenomenon in literature. Amid the manifold trials of a long and unprosperous life, he contrived pretty well to surpass all his contemporaries in cultivation and knowledge; he was at once poet, historian, mathematician, astronomer, legislator, and a master of style, the creator of Castilian prose. He collected books from all quarters, and made them accessible to his people through translations, while, by the writings he composed, or encouraged others to compose, he provided them with the beginnings of a native literature. Not less exceptional, but in a very different sense, is the position of Frederick II. of Prussia, the most copious of royal authors, whose works fill thirty volumes. But to him composition was the practice, not the business, of life, and, unlike Alfonso, he did not write for the benefit of his subjects, he never wrote in their language, and Valhalla near Ratisbon. The Memoirs of the Entiress Catharine works fill thirty volumes. But to him composition was the practice, not the business, of life, and, unlike Alfonso, he did not write for the benefit of his subjects, he never wrote in their language, and generally with no view of publication. He wrote partly to make up for the want of any family life, partly to satisfy the cravings of a restless and indomitable energy, but also, as he himself tells us, "pour se corriger hui-même." And thus, if we except his historical writings and his letters, most of his works have fallen into a not imposited children. unmerited oblivion.

unmerited oblivion.

In this princely fellowship of scholars John of Saxony has no equal, at least in the variety and completoness of his learning. Frederick II. could not even read Latin, but John was familiar from an early age with the best classical authors, Greek and Latin, as well as Fathers and Schoolmen, and afterwards mastered Sanscrit. A youthful tour in Italy first woke in his mind the taste for Italian literature, and especially for Dante, to which he remained faithful through life. And hence, with all his powers and opportunities for original composition, he devoted years of patient toil to the humbler but most praiseworthy and serviceable task of a translator and expositor of the Divina Commedia. Yet he knew well that Dante could never become and serviceable task of a translator and expositor of the Divina Commedia. Yet he knew well that Dante could never become popular, in the sense that Shakspeare is popular, in Germany; for five hundred years he has remained almost unknown there, ignored even by Herder and Schiller, and coldly looked on by Goothe. But the King did not think his labour of love would be wasted if he could do something to enlarge and enlighten the little circle of Danto's worshippers in Germany, who thirty years ago could almost be counted on the fingers. For it is the singular characteristic of the great Florenting to excite in all who approach him a nersonal of the great Florentine to excite in all who approach him a personal sentiment of attraction or repulsion, which deepens in proportion to their familiarity with his works. None can remain indifferent to sontiment of attraction or reputsion, which deepens in proportion to their familiarity with his works. None can remain indifferent to him, but they are either repelled by what Goethe calls his "adverse and often horrible greatness," or they learn to reverence him as a master, guide, and friend. For Dante was indeed at once humble and proud. He has become his own accuser, and has done public pensace before his contemporaries and posterity, while he yet recognized his high dignity as a teacher and prophet sent by God to prepare the way for a general reformation and regeneration of peoples and States, and of the Church. The lecturer goes on to point out how the adverse circumstances of his life, and the very illusions of the great poet, contributed to the perfection of that master-work which stands alone without a rival before or after. "It was the boldest thought that ever filled man's mind, to create a poetical microcosm, to represent, as it were, to the eyes of the Creator His world, both visible and invisible, and to make this world-poem at once a theodice and a mirror of the history of all time. . . . The poem is to those who can panetrate its depths a mirror of the world's history, so true, so clear, so full of suggestiveness, that there is nothing like it of ancient or of modern date." Danto has made himself the centre round which the forms of things heavenly, earthly, and under the round which the forms of things heavenly, earthly, and under the earth revolve; in his own person he traces the progress of the soul from sin to conversion and illumination, from bondage to that from sin to conversion and illumination, from bondage to that state of freedom and complete independence where it is its own long and pope, and looks down as from the glory of Paradise, and yet with a glowing sympathy, on the course of the world beneath its feet. If it be read ten times the poem constantly reveals new and inexhaustible depths of meaning. No one can understand the middle ages without studying Dante; but immense halp for the understanding of the life and thought of the thirteenth and fourteenth centuries may be derived from King John's Commentary; and the student cannot fail to marrel as well at the wide range of his knowledge as at his easy mastery of it, and his expense of sending goods home, and they spend no money are deserved our gratitude for guarding us against the errors of critics. For dose haless into a mysterious adherent of secret herotical sects, or a mysterious adherent of secret herotical sects, or any more than in an outlinery shop; but the expense are presented in the memory of the German nation as one of really wanted. Any one who observes the suicidal multiplication of really wanted. Any one who observes the suicidal multiplication of

the best of its princes; he will live also in the world of science and literature, and in the blessings of which he has been the source in his person and in his works, which will survive when his outward form has faded from popular remembrance.

Those who have read the powerful and pointed address delivered by Dr. Döllinger ten years ago before this same Academy on the death of King Maximilian will not need to be told that he is as felicitous in these occasional monographs as in his larger and more laborious works. No two Sovereigns could well be more unlike in their character and career than Maximilian II. of Bayaria and John of Saxony. But in either case the lecturer has not only seized the salient points of his subject, but has turned it to account in unexpected ways from the rich resources of his active and well-stored mind. We trust that the more extensive historical and doctrinal works on which he is understood to have been engaged since the works on which he is understood to have been engaged since the Vatican Council may in due time see the light. It is surely a strange irony of fate that the greatest living divine and champion of the Roman Catholic Church should have been one of the first selected, after a long interval, for the almost obsolete distinction of a p monal excommunication.

THE CO-OPERATIVE "HEY, PRESTOL"

THE ecstacies into which some of the members of the Coperative Congress have been thrown on the subject of co-operation remind one very much of the delight of Molière's shopkeeper when he suddenly discovered that he could talk prose. The Frenchman, however, followed up this discovery by another, which was that he had been talking prose all his life without knowing it. It would appear that the co-operative enthusiasts are only in the first stage of enlightenment. They are not yet are only in the first stage of enlightenment. They are not yet fully aware that they have been co-operating ever since they were bern, and that, in fact, co-operation has been going on from the beginning of the world. Co-operation is simply the first principle of human society. Even savages of the most primitive type perfectly understand that a single person can do very little by himself, and that they must work together. The co-operation about which the delegates at Halifax have been making such a fuss is only a very old story under a new name. When an old woman huma perfectled for a table of shop, the sud the baker are corrected. is only a very old story under a new name. When an old woman buys a penny loaf at a baker's shop, she and the baker are carrying on a co-operative society. When a workman accepts a job, or when an employer hires a workman, there is co-operation again. The co-operative societies of the present day are no doubt in a certain sense not precisely akin to these simple transactions; but the difference is little more than a matter of form. When a certain When a certain number of persons agree to set up a common store under a manager of their own appointment, who is to buy goods on their behalf and retail them at what they think fair prices, they are only doing what other persons do who deal with a particular shopkeeper who treats them to their satisfaction. In each case the customers treats them to their satisfaction. In each case the customers choose and pay the purveyer; the only difference is that in one case they pay him a fixed salary, and in the other they let him make what he can out of the business. No amount of ingenuity can get rid of the shopkeeper, or secure his services without remuneration. And it is the same with productive co-operation. Every factory must have a manager, and whether the manager employs the men, or is employed by them, is only a detail. In either case he has to be paid for.

There can be nothing more ridiculous than to imagine that there is any magic in co-operation which alters the hard practical con-

There can be nothing more ridiculous than to imagine that there is any magic in co-operation which alters the hard practical conditions of commercial production or distribution. Mr. Goldwin Smith, who presents a strange combination of shrewd common sonse with a sour detestation of a particular class of the community which sometimes bewilders his judgment, and has led him to the conclusion that inherited property, and especially landed property is the origin of all evil, made some very just remarks on this point at Huliax. He pointed out that the reason why the retail shops had suffered from competition with the co-operative stores lay in the false conditions under which the former are carried on. Any-holy who considers the matter will see that this is really so. the false conditions under which the former are carried on. Any-body who considers the matter will see that this is really so. There is, first, the great waste of human labour in retail shops, because there are infinitely too many shopkeepers, and each shop-keeper is idling half his time and wasting money on a separate shop and separate staff which might be saved if half a dozen shops were knocked into one. Then there are the excessive charges to which the retailers are driven in consequence of the smallness of their trade; and, thirdly, there is the feeling order

grocers' shops—often a dozen or more within a quarter of a mile-cen seatly understand why grocers are diseatisfied. It is not the co-operative stores that are cutting their threats; they are cutting their own threats. The fact is that every shepboy wants to be a master and have a shop of his own. This is a very silly pride, and there is no reason why customers should pay for its indulgence. Live and let live is all very well, but it must be carried out fairly all round. If a largister or doctor, for example, is to be required to keep a grocer on a grocer's own terms, the is to be required to keep a grocer on a grocer's own terms, the grocer should be equally bound to do the same for the barrister or doctor. There are probably too many barristers and doctors: barrister who cannot get briefs, or a doctor who is shunned by patients, must either find some other occupation or starve. Grocers must do the same. Nothing can be more permicious or insane than the idea which is entertained by most artisaus and by many shopkeepers that because they have chosen to go into a particular line of business they ought to be supported in that business by the public. If a man cannot get a living in one way,

he must try another or go to the workhouse. The great danger of co-operative societies would appear to be in the fantastic and extravagant results which are expected from them. One speaker at Halifax said they would elevate humanity. Another said that they would substitute co-operation for competi-tion. All this is, of course, sheer nonsense. The test of a successful co-operative store is simply whether it procures for the members articles of good quality at a cheap price. If it does that, the members will be so much better off than they would otherwise be; but their humanity will be just at its old level, if indeed it is not corrupted, as Mr. Goldwin Smith would fear, by savings not corrupted, as Mr. Goldwin Smith would fear, by savings invested in property. Again, co-operation can no more put stop to competition than it can turn the world upside down. Competition will go on exactly as before. One store will compete with another, and with the shopkeepers. The manager of the store will try to get as big a salary as possible, just as the shopkeeper tries to get the largest profits. These remarks apply equally to co-operative production. Wages are wages whether they are called by that name or by the name of dividends, and nothing can be more children than to suppose that there is anything degradate in both a world by an amplifier, or there is anything degrading in being paid by an amployer, or that a man is raised in the mond scale because his curvings are called a share of the profits. The great ment of the co-operative system was pointed out in Mr. Brassov's wise and moderate address. It is this—that it supplies a practical test of what is a fair division of profits between labour and capital. The workman is interested in both capacities. He is not likely to form too low an estimate of the relative of his complete capital. the value of his own labour, and, on the other hand, he has also to determine what is a reasonable return for his capital. As Mr. Brassey said, if ever co-operative production is established on a sufficiently extensive scale we shall have a universal gauge of the workmen's rightful claims. Workmen who are members of co-operative societies will have no right to complain of a rate of wages fixed by themselves; and, at the same time, workmen who are employed in the ordinary way can be referred by their employers to the rate of wages which has been fixed in co-operative establishment by other workmen. There can be no doubt that, if men were wise and co-operation practicable, co-operation would be substituted for strike. If workmen were dissatisfied with their wages, they would turn to their employer and say, "You keep too large a share of the profits to yourself; if you do not pive us more, we shall set up a rival factory, and emage a manager of our own, who will do your part of the and engage a manager of our own, who will do your part of the work at a lower figure." On the other hand, the employer would reply, "Well, I don't choose to carry on any business for less than I get, and if you go, I must look out for other workmen." men could get a manager who would supervise the business and make contracts for them as well as their employer for a salary which left them a larger margin of income for division among themselves than they obt med under an employer, they would be in the right. If the employer could get workmen on his own terms, he would be in the right; and neither party would have any ground for abusing the other. What workmen usually forget is that it is much easier as a rule for a master to find workmen with hands for mechanical work than for workmen to find a man who has head enough to carry on a prosperous trade. If they once understood that they must either submit to their employer's conditions, or find another employer who would give them what they want, or try going into business on their own account, there would be an end of striker.

It is impossible to exaggerate the advantages of co-operation as a means of cettling trade disputes and producing a kindly harmony between managers and men. The only question is how far it is really practicable. The fact that there are at present a considerable number of co-operative producing societies in actual work shows that the experiment is being tried, and by and by we shall may with what results. It may be doubted whether the real shows that the experiment is being tried, and by and by we shall see with what results. It may be doubted whether the real difficulty does not lie in human mature. If the Co-operative Congress could contrive any means of going back for a few generations and making men over again in a new way, we should be more hopaful as to the work ng of co-operative enterprise. It can hardly be dealed that there are a great many more men who are capable of doing all that is required from mere handicraftemen than there are men fit for the duty of managing a large business, selecting a good staff, keeping it up to its work, watching the markets, knowing when to push production, when to panse and lie by, where to get materials cheapest, where to find safe and solvent customers.

If the worksten are capable of doing this sort of work the they must be great sools to do mechanical work at machanical ware at machanical wages. If they are incapable of doing it, they must get according wages. If they are incapable of doing it, they must get assemblely to do it for them; and, whether the passen who does their called employer or manager, be is certain to ask and to command his price. The question, however, is not merely one of money. In it likely that a competent manager, who is presumably in education, intelligence, and general shifty greatly superior to common workman, and who has, moreover, to bear the burden of an enormous responsibility, will submit to be the servant of, and to be ruled by, his subordinates? Every body is liable to make mistakes, and when a paid manager made a mistake it would be pretty certain that the workmen would make a row about it; he would probably either resign or he dismissed; and no great business could be successfully carried on with a frequent change of managers. When an employer makes a mistake the consequences fall upon himself. Then there is the difficulty of capital. Working-men do not possess the command of a large capital. If they have to borrow capital they merely find themselves in the hands of an employer under another name. Again, supposing they have enough capital of their even name. Again, supposing they have enough capital of their ewn to start with, how is it to be retained in the same hands? Either each working member must make himself a life-long slave to the society, or he must have the option of selling his interest in it when he chooses. If shares are sold, then here again the ordinary capitalist comes in, and workman and capitalist are separated. At the Hahfax Congress it was stated in a draft Report that a great de il of gambling went on in the shares of co-operative societies, and this was very much resented by a section of the delegates. It was finally agreed to call the gambling, since the fact could not be denied, "over-speculation." But this does not get rid of the fact. There are reverses in all branches of commerce, and there is no reason to suppose that co-operative societies are specially insured against bankruptcy. A collethis kind, or even a momentary decline in profits, would be a crushing blow to poor workinen. An amployer, with a large enjited at his back, can afford to tide over a dull season, to early on bismoss even at a loss, and to balance prosperity at one period a ainst misfortune at another. With working-men, on the contrary, every fluctuation of trade would be likely to tell severally. On the whole, with every desire to see co-operation succeed, we cannot pretend to be very sangeine about it. Hitherto the world has walked on its feet, and it will perhaps to well to wait till the experiment of walking on the head with the legs in the air has been more fully tested before recommending it for general adoption.

EASTRI AMUSEMENTS.

If Brighton is too far for a Volunteer Review on Easter Monday, Wimbledon is decidedly too near. It is not desirable to repeat the performance of last Monday; and unless a furce as large as that under review be employed to keep the ground, it does not seem possible to exclude the immunorable multitude of people that turns out of London on a line day. It begins to look, indeed, as it the general holiday had been made too general, for the criwds who are beat more criments at these because a bit that a proposition of the criwde. who are bent upon enjoying it have become so big that everybody is in the way of everybody else. It certainly is hard upon the Volunteers. The universe can no longer carry them to the Volunteers. The initways can no longer carry them to the coast; and if they attempt to get a day's manusuring within marching distance of London, they are overwhelmed by a rast unmanageable mob. It is a pity that this should be so, because there are only two or three days in the year on which a large muster can be expected, and it is to be found that on these days no useful training is likely to be get. If it be possible to have too much of a good thing, we should say that this is an example. No person who can postpone a journey now makes it on Easter Monday. There are the Londoners rushing into the country, and the country people rushing up to London. It may perhaps appear surprising that people should go to the British Museum on a fine day, but they do. It is a serious drawback to that testitutes considered as a place of assurance and that there do that institution, considered as a place of annuaement, that there is no adequate convenience for picnicking among the statues. The majority of holiday-makers like to take a basket with them, and spread its contents upon a bit of turf or a bench, having a free flow of her in the vicinity. If the publicans were not, with good reason, shy of giving statistics of their trade, we should like to know some particulars of the business done by them on Easter Monday at good suburban sites. It must have been enormous.

Monday at good suburban sites. It must have been enormous. The newspapers describe a place of sumsement called the People's Garden, situate at Old Oak Common, Willesden. It belongs to a Co-operative Company, and was visited by members and their frands to the number of 3,000. There are extensive croquet grounds, a cricket ground of eight acres, a running ground, bowling alleys, gymnastic appliances, and a dancing platform, "the largest in the World," which seems to have been facily used. It is difficult to understand how all this can have been done by a subservation of 1/1 per share, but, if it has, we should mean an appearance subscription of 11. per share, but, if it has, we should pronounce this one of the most successful and useful of Limited Companies. We supprese that the band will be a nuisance to the neighbourhood if there be a neighbourhood, but as the admission is confined to members and their friends, it will not be in other respects such a nuisance as Cremorno has been to Chelsea. We observe that Cremorne was open on Easter Monday, and there were theatrical amusements and fireworks, but no dancing. We always hear on

these occasions a great deal of the North Woolwich Gardens, which are a favourite resort of the East-Enders. They are doubtless worthy of the patronage they enjoy, and a site on the flat Essex marsh which skirts the Thames is at any rate suitable for dancing, which seems to have been the favourite amusement on Easter Monday. We wonder, by the way, whether the managers of the Crystal Palace will ever go so low as to erect a dancing platform in the garden. Of course it would ruin the gentility of the Palace, and if gentility pays better than numbers the Directors had better keep to it. But if the Palace existed in a Continental city a dancing platform would be the first thing provided. It seems that there were some miserable attempts at dancing on the grass, and there was music, but it was classical or sacred. We should like to know whether it would pay to build a dancing platform to be used by vulgar people only on Easter Monday and other holidays of the million. We fear, indeed, that it would break the hearts of all the young ladies of the neighbourhood to hear a good band playing quadrilles and valses in which they were not allowed to share. But it deserves seriously to be considered whether music has been sufficiently used as a civilizing agent with the population of London. Girls would soon catch the love of dancing, and they would teach it to the young men. Anybody may see that who watches the gutter children dancing to a hurdy-gurdy on the pavoment. Many of the girls dance admirably, and here and there a boy dances well, but usually in a grotesque style. But when the sons and daughters of respectable mechanics and tradesmen begin to grow up there is almost no place except North Woolwich where they can dance, and thus, if they have the taste, it is suppressed. Much of the solemn talk that we hear about the tomptations of the public-house would be answered by providing places where, at least in fine warm weather, people could do something else than drink. We do not know to what class in life the shareholders

The alarming popularity to which holiday-making has been carried may be judged from the fact that there were close upon forty thousand visitors at the Zoological Gardens on Monday. The reporters are perhaps inclined to exaggerate the pressure of these crowds, as they have a notion that the more the merrier—at least, in print. But still, when it comes to attempting to see a lion or tiger through the medium of several human bodies, we should say, if it were not a holiday, that it was dreadfully hard work. The monkeys in their house are sufficiently disagreeable without the addition of a struggling, resking mob. If this is the only opportunity you have in the year of seeing wild animals, and if, after all, you do not see them, it begins to appear desirable that either you or somebody else should take holiday at a different time. Perhaps when all the places of public amusement become so full on Easter Monday that nobody can see anything at all, there will be a reaction against the present mania for shutting up all the shops and offices in London at the same time. It is rather a serious consideration that a certain proportion of visitors to the Zoological Gardens feed the animals, and if the number of visitors should be very large some of these animals might be tempted to over-oat themselves, and perhaps require physic next day. Happily they have constitutions adapted either to gorge or starve, and probably the crowd would kill one another by pressure before they killed a bear by excess of buns and biscuits. We do not know whether the same people make excursions into Epping Forest or down the river in the morning and return in time for the theatres in the evening. But certainly the Britannia and the Standard always provide special attractions for Easter Monday. At the former of these houses a drams has been produced which we are told "appeals to the sympathies of patriotism, of friendship, of love." The seens is laid in the Low Countries, under the government of the Duke of Alva, and when the stage becomes "lurid wi

wicked wife dies upon the stage. In fact, everybody seems to be dead except Alva, and this is doubtless the sort of thing that the East-Enders like. It gives one a cold creep to think how the leading characters must rant.

REVIEWS.

RACINE.

THAT many Englishmen will resort to the works of Racine as a source of poetical enjoyment is greatly to be doubted. The comedies of Molière command a large body of readers everywhere; but a gulf stands between the Teutonic race and the tragedians who flourished in the golden age of French literature. Quite apart from the old controversy between the Classic and Romantic schools, it is the established belief on this side of the Channel and on the other side of the Rhine that, if the word "classic" has anything to do with Hellenism (as French conservatives suppose), Racine is not any more than Victor Hugo a successor of Sophocles. In the last century, it is true, versions of "classical" French works were not unfrequent on the London stage; but they have vanished even from the memory of all save the readers of the old essayists and the students of theatrical records. When it is said that Lessing freed the stage from the tranmels of French convention, it is assumed without further inquiry that he did a very good thing. But, however Racine may be esteemed as a poet, there is no doubt of his vast importance as a writer of the French language, and as a leading figure in the history of a literature that played a great part in the progress of European civilization; and the student of a past age who, setting aside likes and dislikes, sincerely desires instruction, cannot feel otherwise than grateful for M. Mesnard's superb edition of the complete works of Racine, which forms part of the series Les grands écrivains de la France, published under the superintendence of M. Ad. Regnier of the Institute.

of the series Les grands écrivains de la France, published under the superintendence of M. Ad. Regnier of the Institute.

Never was there a more complete apparatus for the study of a standard author than has been furnished by M. Mesnard. The edition fills eight bulky volumes, and there are, moreover, two supplements, one containing the music proper to some of Racine's lyrical pieces, the other an "Album" containing the poet's portrait, his coat of arms, autographs, maps, copies of medals—everything, in short, that can illustrate the subject. The eighth volume is of a purely philological character, being a lexicon to Racine, in which every word is accompanied by appropriate quotations, preceded by a grammatical introduction. Of the works the text has been collated throughout, M. Mesnard going through labours analogous to those of a Greek editor who is in possession of a new codex. His great authority is an edition of 1697, published shortly before the death of Racine; but his margin abounds in various readings drawn from other sources. On the biography he has bestowed the greatest pains, preferring the chance of being tedious to that of leaving the slightest fact or even plausible conjecture unrecorded. Not only does he give an elaborate "Notice biographique" in addition to the "Mémoires" written by the poet's son Louis, but every single play is preceded by a notice stating in smple detail the circumstances of its production. If the student, after steadily going through the eight volumes, is not almost as intimate with Racine as Boileau himself, it is not the fault of M. Mesnard. When the story becomes foggy, as it not unfrequently does, the editor always supplies torches to the best of his power.

Having described the merits of the new edition, we may say something of the poet, as seen under the newest light. Jean Racine was of a tolerably old family, belonging to what may be called the official middle class. Jean Racine, the first of his ancestors who can be mentioned with certainty, was a collector of royal revenues, including the salt duties for the duchy and domain of Valois. His employment gained him the right to a coat of arms, which of itself implied a sort of nobility; but this distinction by no means filled with pride the heart of his great-grandson the poet, who, used to the Court of Louis XIV., did not scruple to confess that he was by no means of lofty extraction. Old Jean, who had married one Anne Gosset, died in 1593, leaving behind him a numerous family, among whom was a second Jean Racine, who became Comptroller of the Salt-duties at La Ferté-Milon (near Crospy-en-Valois), and married Marie des Moulins, sister of a widow who had taken the vows at Port Royal, and had there been appointed Cellaress (Cellérière). Thus at this carly period we find that connexion between the poet's family and the celebrated Society which had so great an influence on his life. In his little town the second Jean built a house, which we believe is still shown, and ordered his arms to be painted on the windows. The escutcheon was one of those heraldic puns by no means uncommon in the olden time, comprising a "rat" and a swan ("cygne," then pronounced "cyne"), which made together the name "Racine"; and the painter on glass, who thought to please his patron by converting the rat into a wild boar, gave great offence, and found himself involved in a law-suit. The poet, who, as we have already seen, had no great reverence for the family nobility, evidently adopted the painter's view of the rat, and omitted the noxious animal altogether, without finding a substitute. Thus, when his arms were registered in 1697, they presented nothing but a swan, argent on an azure field,

* Guerres de J. Racine. Par M. Paul Mesmard. Paris : Libraire de L. Hachette & Ca. 1873.

which may be found, beautifully illuminated, in M. Mesnard's "Album," and which enables the biographer prettily to call the awan "une cygne fière du cygne du Mantoua."

The second Jean and his wife, Marie des Moulins, had eight

The second Jean and his wife, Marie des Moulins, had eight children, two of whom are important figures in the poet's biography. One is Agnès Bacine, who at an early age joined Port Royal, where she became Abbess of Sainte Thècle; the other is the third Jean Racine, her senior by more than eleven years, who was born in 1615. This Jean was at first brought up as a cadet in the Guards, but at last settled at La Fertó-Milon, where he succeeded to his father's employment. In 1638 he married Jeanne Sconin, of that town, whose family was held in great respect, and formed another link between the poet and the Church. Pierre Sconin, brother of Jeanne, held several important offices, and creditably distinguished himself as the author of a Life of St. Vulgis, patron of La Fertó-Milon, which was dedicated to the Bishop of Soissons, in the name of all the inhabitants. Three of his sons belonged to the Society of St. Geneviève, of which one of them, Antoine, was abbot, and the whole race apparently consisted of persons of some note, either as ecclesiastics or as Government officials. His maternal relations, however, were lightly esteemed by the poet, who, making an exception in favour of his uncle Antoine, called them all a pack of boors (de france rustres).

Fifteen months had elapsed since the marriage of the third Jean

Fifteen months had elapsed since the marriage of the third Joan Racine and Jeanne Sconin, when a son was born to them, who on the 22nd of December, 1639, was christened Jean—the child's maternal grandfather, Pierre Sconin, and his paternal grandmother, Marie des Moulins, officiating as sponsors. This fourth Jean, the poet, lost his parents at an early age. His mother died in giving birth to a daughter in January 1641, and his father, who took a second wife shortly afterwards, died in February 1643, when he was little more than three years old leaving no inheritance behind was little more than three years old, leaving no inheritance behind him. It is supposed that of the two nephews little Jean was confided to the care of his paternal grandfather, and brought up by his grandmother Marie des Moulins, whom he always called "Ma bonne mère," and that Pierre Sconin took charge of the female infant, named Marie. There is no doubt that the future poet spont the greater part of his early youth at the house of his grand-father, the third Jean Racine, who died in September 1649, and whose death was immediately followed by the retirement of his widow, who joined her daughter Agnès, at Port Royal. Young Jean was sent to the college of Beauvais, which he quitted in 1655 in order to receive the benefit of the instruction at Port Royal, where his chief preceptors were Lancelot, then renowned as a Greek scholar, and Nicolas, whose name is famous in the history of the Society, and who was regarded as an accomplished Latinist. A certain inconsistency prevailed in the instructions of those stern Jansenists. On the one hand, they took a position with regard to modern literature with which the Barebones Parliament regard to modern interature with which the Barchones Parliament might have sympathized; on the other, they were as ardent admirers of the ancient classics as they were rigid Puritans, encouraging a profound study of the Greek tragedians, and even translations of Terence. They were evidently influenced by the old bolief, of which we find frequent traces in many modern historians. that they are two worlds, one antique, the other modern, which practically have nothing to do with each other, though books written in the former may be profitably used by inhabitants of the

In 1658 Jean Racine quitted Port Royal, two years before the destruction of the small schools attached to it, and was sent to Paris, that he might go through his course of logic at the College of Harcourt, then in the hands of learned Professors of Theology Paris, that he might go through his course of logic at the College of Harcourt, then in the hands of learned Professors of Theology and Philosophy. He was now under the care of a kinsman, Nicolas Vibart, intendant of the Duke of Luynes, at whose hotel he was afterwards regularly settled. There he became acquainted with La Fontaine and Le Vasseur, an abbé galant, who seems to have anticipated the class so familiar in the following century. Vibart was no severe Mentor, and as he completely ruled the hotel in the absence of his master, life passed merrily enough, and we soon find the Abbé procuring outlines of plays from Racine, that he might convey them to actresses. The austerities of Port Royal had for a while ceased to have their effect. Racine cultivated his postical talent, while he entered freely into the dissipation of the age, and the first work from his pen which passed beyond the circle of his own private friends was an ode to the "Nymph of the Seine," printed in 1660. This was written to celebrate the King's marriago, and was submitted by Vibart to the judgment of Chapelain, who, though his fame afterwards declined, was a great man in his day, and of Perrault. Both honoured it with their approbation, and soon Racine began to test his powers as a dramatist. Two pieces which he began, Amasic and Les amours d'Orule, were never completed; but the latter is worth mentioning on account of the fact that before he began writing he read and commented on the whole works of Ovid. In the edition of his works now before us are comprised remarks of Racine on the Olympian Odes of Pindar and the Odyssey of Homer, both referring to the Greek, and marginal notes to the productions of nearly twenty naciont authors, among which the Book of Job is included. The Tary industry of Racine was marvellous, and those who do not care for him much as a poet must respect him as a conscientious scholar. The fame which the poet was gaining at Paris reached the same of the doctors of Port Royal, and his aunt Agnès was attong in her rem

history of his search after benefices, under the favour of one of the Sconin family, a man of great codesiastical influence, we gladly pass over, referring those of our readers who desire the know all about it to the claborate hierarphy of M. Mesmard. Through an ode, "Le renommée aux Muses," written in 1663, and shown by the Abbé Le Vasceur to Boileau, who pronounced a favourable judgment upon it, Racine became acquainted with that renowned satirist, who through life remained his stanchest and most valuable friend. He was already acquainted with Mulière, the director of the company at the Palais Royal, and presented him with his first tragedy, La Thébatds (completed in 1663), which he had originally intended for the other company at the Hôtel de Bourgogne. La Fontaine, in a sort of novel entitled Les amours de Isyche, gives a picture, under feigned names, of the happy life Bourgogne. La Fontaine, in a sort of novel entitled Les amours de L'ayche, gives a picture, under feigned names, of the happy life he had with his three friends, Boileau, Molière, and Racine, whose characters he describes; and the work is still pleasant reading, though M. Mesnard does not fail to point out that at the time it was published the agreeable relations between Molière and Racine had received a rude shock. The cause of the rupture was the production of Racine's second play. Alexandre is grand, at the Hôtel had received a rude shock. The cause of the rupture was the production of Racine's second play, Alexandre le grand, at the Hôtel de Rourgogne, when it had shortly before been brought out by Molière's troupe at the Palais Royal. From a quantity of somewhat conflicting evidence it may be gathered that the poet deserted his old friend on account of the very indifferent manner in which his play had been acted; and it seems to be an established opinion that the Palais Royal troupe excelled in comedy, but that tragedy was much better performed at the Hôtel de Rourgogne, where Floridor, esteemed the best tragedian of his day, acted the principal parts. It is a singular fact that Racine do not withdraw his piece from the Palais Royal, but that two or three times it was acted simultaneously at both the rival houses. three times it was acted simultaneously at both the rival houses.

In 1665, the year when Alexandre was first produced, the contest began to display itself between the respective connoisseurs of an older and a younger generation; one party espousing the cause of the venerable Corneille, who had rather fallen into neglect, the other believing that the veteran had found at least a worthy suc-St. Evenmond on Racine's second play, which, it may be observed, turns on the contest between Alexander and Porus, will probably seem odd to English readers. The critic observes that the Indian hero ought to have a character different from that of a Frenchman; for when another climate and another soil produce animals and fruits dissimilar to those of Europe, the men are dissimilar likewise in countenance, and even appear to have another reason.

Nevertheless Porus, whom Quintus Curtius describes as alike strange to Greeks and Persians, is in this play purely French—

"Au lieu de nous transporter aux Indes, on l'amène en France." That St. Evremond is perfectly right there is no doubt, but to English cars it will appear singular that a fault which seems to pervade all the French tragedies of the se-called classical period should be all the French tragedies of the so-called classical period should be pointed out as an exceptional defect in Racine's new play. In the midst of literary enemies in Paris, and the spiritual thunders which reached him from Port Royal, Racine startined his theatrical labours, and his pieces, after Alexandrs, were written in the following order:—Andromaque, 1667; Les Plaideurs, 1668; Hritminicus, 1668; Bérénice, 1670; Bajazet, 1672; Mithridate, 1673; Iphigénic, 1674; Phèdre, 1675.

The lows of living of Racine during his commonless with the Tourism

The love affairs of Racine during his connexion with the French stage much interested his contemporaries, and when he became a "convert" Madame de Sévigné said of him, "Racine s'est surpassé; il aime Dieu comme il amoit ses maîtresses." M. Mesnard, however, carefully surveying the evidence before him, comes to the conclusion that the poet, whom his countrymen regard as a great master in the art of theatrical love-making, was himself tolerably heartwhole. The first object of his affections seems to have been Madlle. du Parc, an actress more renowned for beauty than for talent, who belonged to Molière's company, and played one of the parts in Alexandre at the Palais Itoyal. When Itacine quarrelled with Molière she transferred her agrices to the Hatche Russell. with Molière, she transferred her services to the Hotel de Hourwith Money, sale transferred her services to the Hotel de Hourgogne, where she played Andromaque in the tragedy of that name, and apparently distinguished herself more than usual. She died in 1688, and her vacancy was supplied by a much more celebrated person, Madlle. de Champmeslé, whose name, by the way, was by her contemporaries usually spolt "Chammelay." She was the granddaughter of a President of the Parliament of Normandy; and coming to Paris with her husband first beined the formand the coming to Paris with her husband, first joined the troupe at the In 1670, being then about twenty-six years of quitted the Marais for the Hotel de Bourgogne, and made her début as Hermione in Andromague. Racine had never soen her; and, as Hermione in Andromague. Racine had never seen her; and, holding that so mere a novice could not do justice to a part which is still considered one of the greatest in the French classical repertory, was at first inclined to stop away from the theatre. Afterwards he changed his mind, and so highly delighted was he with her acting that immediately after the performance, which was eminently successful, he hastened to her box, flung himself on his knees before her, and overwhelmed her with thanks and compliments. compliments.

A common belief that La Champmeslé was not only very ignorant, but very stupid, M. Mesnard is by no means ready to share. The following story, as told by Lemazurier in his Galerie, is not

La Champmeslé demandait à Racine d'où il avait tiré Athalie. "De l'Ancien Testament," répondit-il. "De l'Ancien Testament!" réplique Pactrice; "ch, mais! n'avais-je pas oul dire qu'il y en avait un Nouvean?" Unfortunately for the authenticity of this story, it was impossible at the time of Athalis for Racine to come into contact with La

Champueslo. The life of this actress was profligite enough. Racine was by no means the exclusive object of her attections, and one of his rivals was Charles, the son of Madama de Sóvignó, who in the year 1671 speaks of La Champuneslo as her "Interfille." However, the relations between the post and the netress continued for soveral years, and the connexion was not broken off until Racine found himself supplanted by the Count of Chement-Tonnerre. The punning epigram written on the occasion of this event is well known to the students of French literature:--

A la plus tendre amour elle fut destince Qui prit longtompe Racine dans son cour; Mais par un mourue malhenr Le tonnerse est vonu, qui l'a desucir :

In 1673 Racine became a member of the I reach Academy, occupying the vacancy left by the death of the lenned Mothe le Vayer, on whom, according to the well-known user, he pronounced

Vayer, on whom, according to the well-known using the pronounced a formal calogy. The speech seems to have be not desiral failure, but was forgotten among the plaudits bestowed on the Mathridate. The retirement of the poet from the stage shortly after the production of Phidre, still regarded as his masterpuce, arose, it is safest to assume, from a combination of notives, the relative force of which may be variously estimated. In the fact when he was of which may be variously estimated. In the first place, he was disgusted by the efforts of a literary cabil, headed by the Duchess of Bouillon, to humiliate him by showing a marked preference for the Phildre of Prudon, a port who, save for his enmity to Racine, would now be entirely forgotten. Then came the millionice of Aunt Agnès and Port Royal, for whom, in spite of outward appearances, he had always retained a profound affection and respect. The anxiety that he showed, even in his picface to Phildre, to rescaled the greatest and the processile translated the greatest and the processile translated. concile tragetly to the consciences of many pions persons by whom it is condemned, indicates a state of mental uncusmess as to the innocence of his occupation which does not uppear in his earlier works, and this particular play was approved by the great Arnauld. The first impulse of Racine after his so-called conversion was to join the Carthusian order, but by the advice of his pions friends he resolved to contract a respectable marriage, and in 1677 took to wife Cathorine de Romaunt, the daughter of a deceased notary, who seems to have been an amiable woman, not remarkable for wealth, beauty, or takent. However, she was an excellent housewife and because the methods of a resolution, and the housewife, and became the mother of seven children, and the happiest hours of the poet, after his marriage, seem to have been those passed in the besom of his tamily.

The nomination of Racine and Boile in as historiographers to the The nomination of Racme and Boile in as historiographers to the King took place in the same year, 1677, and, bringing with it as it did a new occupation, may be set down on the list of motives which led to the abandonment of the stee. The office of recording the glories of Louis XIV, was no smoother; in 1678 the poets accompanied him to Ghent and Ypics, and were present at the slegos of both towns, though, if we may trust the stricted romarks of the warlike aristocrats, who sweered at the two box years, they were causful not to encounter more danger than absolute necessity required. The value of the results obtained by the joint labours of quired. The value of the results obtained by the joint labours of the two historiographers cannot now be as extained. In 1726 their work perished in the flames which destroyed the house of Valucour (at Saint Cloud), with whom they had been deposited; but there is no reason to believe the malicious as extron that the only use which Racine made of his pon in his official capacity was to sign the require for his salary.

the receipts for his salary.

Neither his abandonment of the stage, nor his duties as historio-Noither his abandonment of the stage, nor his duties as historiographer, prevented Racine from complying with the request of Madame de Maintenon that he would write a play to be performed by her protegies, the young ladies of Samt-Cyr. They had already acted Andromagne, but the subject of this work was considered too profane, and the request of the pious favourte led to the composition of Esther and Athalic, respectively performed at Saint-Cyr in 1689 and 1691. Even his Jansonst friends were satisfied with those Scriptural dramas, and M. Mesnerd discovers in Esther passages which express the poet's sorrow over Port Royal, though the play was written at the instigntion of one of its bitterest enemies.

Of the devotion of Racine to Louis XIV, there is less reason to doubt than of the portect sincerity of his religious conversion; for it is an ugly little fact that, after his abandonment of the theatre, he did not scruple to write malicious epigrams against contemporary dramatists. But the relation between him and the "Grand Monarque" seems to have been that of a personal friend. The King liked the courtly manners of the peet; admired his face, which, if portraits are to be trusted, was very handsome; and in 1696, when attacked by a malady which deprived him of sleep, his groatest delight was to hear facino read Plutarches Lives to hearbild. at his bedside. Suddenly the tie is broken, and here again there is a mystery. The position of Racine at Court enabled him to be of service to his brothren of Port Royal, and his Jansenism was a of scrice to his brethren of Port Royal, and his Jansenism was a probable cause of office. On the other hand, mention is made of a paper suggestime means for allocating the poverty of the people, and this, it is urged, may have had an injurious effect on the writer. For a discussion, we will not say a solution, of the question, we refer to the ample biography of M. Mosnard. Whatever may have been the cause of Racine's "disgrace," it seems to have secasioned his death, which took place in 1699, in the inty-ninth year of his age. This at least is the opinion of M. Mesnard, who, anticipating the objection that a wound inflicted on his vanity as a contrier argues much weakness in the case of a poet, observes, "Le dévoucment de Racine à Louis XIV. Stait sincère; son attachment était un culte." THE FOLK-LORE OF ROME.

REPUTATION depends in not a few things more upon time than on positive merit. Many who are now honoured as poetal of the seventeenth century have achieved their fame, whatever it may be, by verses which would do no credit to the weaker am the minor poets of our own day; and many a modern mathe matical genius has been disappointed on finding that his suppose discoveries were old in the days of Euclid or Archimedes. The comparison has special force in the case of those who give them-selves to the arduous task of gathering the unwritten folk-love of any country. Their toil, far from bong less, is even greater than it would have been forty or fifty your n.o. Rulroads and telegraphs have gone far towards placing an impassible barrier between the present and the past. The minghing of people from the four quarters of the heavens in almost every place has dealt the death-blow to the persistence of local traditions; and it is a name question of time how soon the myth-hunter may have to give up his task as utterly hopeless. In the meanwhile he must seek here and there the fragments which may remain from the ancient feast, and seek them at the hands of those who are daily becoming more and more aware of the incongruity of the old thought with the new, and who are disposed to resent any questions which may seem to them much like a request to place a patch of old cloth on a new garment. Hence it may with little hesitation be asserted that the labours by which the brothers Grimm brought together their splendid harvest of Teutonic popular tradition were by no means spientid harvest of feutome popular trantion were by no means so heavy as these which press on their followers at the present time, and that the merit of those who now seek to tread in their steps should be cheerfully and ungrudgingly acknowledged. It is possible that some who fancy that they have brought to light a stock of new material may be deceived by their own want of knowledge or the detectiveness of their method. But there are

no grounds whitever for supposing that this charge can be sus-tained against the collector of these It man stories, who must take a place in the ranks of the senity band amongst which are numbered such men is Gruent for Germin tradition, Ashjornsen and Moe for Schudmayan story, Campbell for the takes of the West Highlands, and Powell and Magnusson for the traditions of Iceland. Whether the harvest reaped on Italian ground be or be not as rich as that which his come from more Northern lands is a matter of comparative indifference. The soil may be, and probably is, for many reasons not so exuberantly fertile; but it is necessary is, for many reasons not so exciterantly tertile; but it is necessary that every country of I urope should be minutely scrutimized, and in one sense it will be scarcedy a happy day when it may be said that the work has been finally brought to a close. The charm which led on the pronects in the great work with a sonse of constant freshness will have lost its power; and the task of assorting and classifying the treasures brought together by happier assorting and classifying the treather brought together by happier investigations will be both more laborious and less encouraging. Meanwhile the author of these Roman folk-takes has done much towards bringing about a consummation not altogether to be desired; and the ransacking, first of the Spanish, then of the Italian pennisula, has rapidly narrowed the bounds of future research. In addition to the names already mentioned, the great storehouse of Russian tradition has been opened by Alanasic for Russians and by Mr. Rulston for Englishmen, while the tolk-lore of Albania and modern Hellas has been not less diligently randacked by Hahn and other inquirers. On the whole, it may be feared that not much more remains to be done; but of the remaining portion of the task the most probable and the most creditable is beyond doubt task the most protatable and the most creditable is beyond doubt that which concerns itself with the preservation of actual popular traditions not yet committed to writing or to the still greater safe-guard of print. We welcome therefore with greater pleasane this volume of Italian folk-lore because we tound ourselves not lorar ago (March S, 1873) compelled to speak less favourably of an attempt of the author to present in an English dress the Kalmuck stories of the Siddhi-Kur. Not only have we in the plan of the book a safe-guard against the faults which marked the Sagas of the Far East, but the notes and introduction are wholly free from that irrelevant matter which may help to swell the size of a book, but which in matter which may help to swell the size of a book, but which in the case of a work falling within the province of the comparative mythologist must deprive it practically of all value. At the same time it must be carefully noted that, although this work is strictly one with which comparative mythologists must deal, it was nevertheless not undertaken from their point of view. The author had read little, it seems, of Max Muller, nothing at all of Cox or of Angelo de Gubernatis.

The stories given in the volume fall under four classes. The first class, called Favole, answer almost exactly to the popular traditions of the Tentonic or Scandinavian world. The second class, entitled Legendary Tales or Escupi, are more strictly Italian, class, entitled Legendary Tales or Escupi, are more strictly Italian, and embody the impressions left on the people by the lives of some among their most illustrious saints and teachers. The third, treating of ghost and treasure stories, exhibits some peculiar forms of Italian superstition; while the fourth, called Charpe, is represented by some tales in the collections of Grimm and Dasent, and by others which seem to be shared by Aryans and Turanians alike. But from the position of Italy, whether in the times of the Republic or of the Empire, or under the new order of things which has grown up with Christian there are necessarily no specially difficult or mysterious questions connected with the mode of the acquisition or transmis-

[&]quot;The Polk-lure of Hone. Collected by word of mouth from the People. By It IL Back, Author of "Patralus" "Sagas from the Far Ka.;" Sc. London: Longmans & Co. 1874.

sion of these tales. At no time has Rome been cut off from intercourse with Nosthern or Western Europe; and so long at the
radical idea of a story is the same, we may explain almost any
amount of variation in detail without carrying back the problem
through an appalling series of generations. It is otherwise with
stories which have manifestly been handed down on Indian soil
from age to age by unlettered peasants, who would have forgotten
almost as soon as they heard them stories belonging to a
civilization and a form of society indefinitely differing from their
own, and which exhibit characteristics hopelessly inconsistent, it
would seem, with any theory of conscious borrowing or even of
gradual importation from other lands. In this light it cannot be
said that these Roman folk-tales have the same value with the
old Deccan stories preserved by Miss Frere (see Saturday Review,
May 9, 1868); but they have nevertheless a value of their own,
as showing the action of Christianity on popular sentiment in
Italy, in contrast with the effects following the same cause in
Germany, Norway, or Iceland; and if the tales belonging to the
first class in this volume must for English readers generally, and
especially for English beys and girls, have a special charm, those
which fall under the other heads are perhaps the more instructive.

which fall under the other heads are perhaps the more instructive. Of the striking features in these latter stories none are more prominent than the ideas which attach a mechanical force to prayer, and which regard interruptions of what is supposed to be the order of nature with a calmness passing easily into the merriment of familiarity. Of these tales not a few are told of Philip Neri, the sainted founder of the Oratory; but one or two related of Father Vincent are even more significant. No difficulty is supposed to bar his eating of a whole codfish, bones and all, sent to him during an illness by the Father-General, with a charge that he was to be sure to eat it; and the tearing of his throat, which was the consequence, not only added nothing to the force of his malady, but was followed by the speedy and complete recovery of his general health. Vincent had to show obedience in other matters besides the devouring of codfish. The wonders wrought by him were so many that, in the opinion of the Father-General, his head was likely to be turned, and the needful command that he was to work no more miracles was issued accordingly, and strictly adhered to. His patience was to be severely tried. He happened to pass at the moment when a labourer missed his footing, and fell over from the top:—

"Padro Vincenzo, save me," cried the man, for everybody knew Padro Vincenzo, and he had just seen him turn into the street. "Stop there," said Padro Vincenzo, "I must not save you, as the Father-General says I'm not to work miracles; but wait there, and I'll go and ask if I may." Then he left him suspended in the air, while he ran breathless to ask permission of the Father-General to work the miracle of saving him.

Some of these strictly Italian stories belong to a class from which Boccaccio drew the materials for his Decameron, and satirize, although with marked indulgence, the faults of seculars and regulars. A few relate to historical personages. Among these Pietro Bailliardo has undergone a strange transformation from the Peter Abelard of the schools, while Heloisa, still more strangely, has vanished from the tradition ultogether. The great scholar becomes a mere sorcerer, who cheats the devil, and then extorts the forgiveness of the Redeemer by beating his breast with a large stone, until the crucifix before which he kneels is constrained from very pits to bow its head in token of his acceptance. In "Pret Olive," with one or two other tales, we have specimens of that free dealing with the most secred subjects which passes into reckless daring in the Norse story of the "Master Smith," given by Dasent from Asbjornsen and Moe. In the latter tale Jesus Christ appears in a character not unlike that of Medeia, and the smith, having so frightened the devil as to be refused admission into hell, hurls his sledge-hammer into the door of Paradise, held ajar by St. Peter for the admission of a half-starved tailor, and so secures his own entrance—a parody, it would almost seem, on the words which speak of the Kingdom of Heaven suffering violence, and the violent taking it by force. In the Italian stories the three wishes which are granted to the Master Smith for no particular reason are the rewards of hospitality offered without hope of recompense. The wary priest who is among the recipients of this bounty asks for a hundred years of life together with the power of giving to Death when she might come for him such orders as he might please, and of extorting absolute obedience. The tricks played on Death are much the same as in the Northern story; but when, having gained three more centuries of life, the priest at length expresses his readiness to go with her, he insists on journeying to heaven by way of hell, where he wins soul af

"Tell him be may come in himself," said Jesus Cirist, "but he has nothing to do to meddle with the others."

Tell Him to be pleased to remand her that when He came to my satinguakop I never made any difficulty how

many soever he brought with Him; and if He had brought an erny I should have said nothing," answered the best; and St. Peter took up that same too. "That is right," answered Jesus Christ. "Let them all in, let them all in."

We may admire the simplicity which can regard a tavern-hooper as having a clearer conception of duty than the Sirviour himself; but the more gentle and tender spirit which marks these stories in contrast with their Northern counterparts is more prominent in the strictly mythical tales which belong to the common inheritance of the Aryan world—nay, it may be, of Aryan and Turanisa and Semitic tribes alike. Many of the most beautiful of these are here, having lost somewhat perhaps of the rude force of the Tentonic versions, but having gained much in other ways from the softer colouring thrown over them. In truth, as the author has remarked, of knightly heroism and of exploits of marvellous valous the modern Roman folk-lore presents not the most distant trace—a marked comment on that change of character which the Dean of St. Paul's ascribes to the direct working of Christianity on the Italian mind. Of the beauty of these tales in their Italian dress there can be no question. Our old favourites of Rapunsell and Cinderells, of the Goose Girl and Katie Wooden Clouk, of Beauty and the Beest, and the Giant who had no heart in his body, are all here, as Filagranata. Cenorientola, Palombolletta, and Maria di Legno or Wooden Marv. Boots who sits among the ashes, the Great Fool of West Highland tradition, is here Scioccolons, who wins a fairer bride than any of his brothers, and, having thrown off the garb of humiliation, appears in all his splendour as a king. But oven in those which are marked off most widely from the kindred tales of Northern land, we find that the story does little more than ring the changes on images common to a heat of tales, and yet does so without losing one jot of its perpetual freshness. Thus in the beautiful story of Vaccarella we have the beneficent cow which befriends the dawn-maiden, and which, to the profound grief of the latter, the cruel stepmother is resolved to kill. The maiden hurries with the horrible tidings to the cow, and entreats her to run away. "There is no need for me to escape,"

We may close each new volume of genuine popular stories, as they come at present in sufficiently rapid succession, with a feeling of regret that the rich mine from which they have been dug must at no distant day be exhausted; nor is this feeling of regret necessarily lessened by the thought that there may be an ample compensation in the advancement of the science which deals with their origin and growth, and which seems to accumulate yearly more and more evidence, tracing the thousand streams of popular tradition to a single source. In this great work the author of these Roman stories has done excellent service, and the present volume, while it instructs the learned, cannot fail to delight all who may open its pages.

A SALON IN THE LAST DAYS OF THE EMPIRE.

A N unscrupulous practice is said to have been invented by the young gentlemen of one of our public schools, with a view to beguile the tedium of frequent chapels, of binding up novels in the outward and visible similitude of prayer-books. Hardly less startling is the discrepancy between the titles and the contents of a good many works of the class which is known as light literature. That an attractive name may serve as a passport to public favour is likely enough; and in christening his work an author has a perfect right to endeavour to prepussess, by all legitimate means, the mind of the reading public in its favour. But, on the other hand, the reading public has a right to insist that the titles of books shall not be illusory and misleading. Unless they serve as signposts which may be trusted, it becomes impossible to thread the bewildering labyrinth of the circulating library with any degree of comfort. Unhappily, what may be termed the literary misdemeanour of obtaining readers under false pretences is becoming increasingly common. One is inveigled into something very like a sormon under the guise of a novel, and lured into a political essay by the label which describes it as a book of travel. It must not be supposed that this growing "smartness" on the part of authors places their works in a favourable light, or adds to their chances of success. On the contrary, the feeling of resentment at having been duped disposes the provoked reader to deal out scanty justice even to their merits. A beggar who has been led to expect a penny, and receives a tract instead, is in no frame of mind to do justice to the motives of his benefactor. We have been led into this somewhat bitter train of reflection by the flagrant failure of the volume before us to fulfil in its contents the promise which its title holds out. What, in the usual acceptation of the word, is the meaning of a "salon"? It means a coterie of choice spirits male and fender.

^{*} A Salon in the Last Days of the Empire. By Grace Hannay. Landon: Richard Bentley & Son.

the charm of a Recamier, the meteoric flirtations of a Mackintosh and a De Staël. Granting that in the last days of the Empire the salon was for various reasons in a somewhat flabby condition, there were still men and women of mark who talked, and whose views of contemporary incidents it would be interesting to know. But what sort of substitute for any such record of the period is palmed off upon the reader in this volume? The first half is given up to the fimsiest gossip about milliners and dresmakers, and the last half to certain episodes of the thrice-told sieges of Paris. As a reprint of femilleton literature supplied to a Catholic periodical in New York the book is intelligible enough. There are probably ladies in America for whom toilet tittle-tattle has an absorbing interest; but to dish up a hash of this kind, under a title which appeals to readers of a robuster stomach and with more intellectual tastes, is a piece of sharp practice which we can by no means admire admire.

In the first chapter we are introduced to the Parisimne en déshabille, in the shape of a lovely Countess Berthe who is expecting a visit from her "manucure." Her bedroom may be taken to symbolize the unbridled luxury of the last days of the Empire. The dressing-table was a "miracle of artistic bubble evolved out of satin and lace," and its silver-framed mirror reflected a regiment of vermilion phials, boxes, and brushes, and "a variety of cunning little implements instinct with some occult power of beautifying for ever." The bed was an exquisite and elaborate creation of lace and white satin, and, shaded by these "appropriate" surroundings, rose a large ivory crucifix. In the adjoining bondoir waits a tall, young, good-looking stranger, "got up in all the outward trappings of a gentleman; an extensive display of snowy linen, unimpeachable tailoring, ganté, botté, in perfection; nothing overdoue." Enter the Countess, "like a blonde nymph from under verdoue." Enter the Countess, "like a blonde nymph from under the blue cloud of the partière." She runs to greet her female visitor, taking no more heed of the gentleman with the snowy linen and unimpeachable trousers "than if he had been a bottle on the toilet-table." By and by the artist begins his work upon the fair hand which resigned itself passively to his beautifying skill. First he soaked the fingers in some fragrant essence, whose virtue it was to render the nails pliable; then he filed them; then he alternately anointed them with pommade à la raine, and brushed them with poudre à l'Impératrice, and polished them off with crème à l'invisible, and finally perfumed them with baume à l'impossible. All the time the Countess run on discussing her own and her friend's most private and intimate concerns, "just as if he had been a bear at the North Pole." The "creature," however, as our author rather impolitely terms him, had a great soul, and proceeded in the course of the interview to utter some noble sentiauthor rather impolitely terms him, had a great soul, and proceeded in the course of the interview to utter some noble sentiments in connexion with his art. He requires two things in his "patients"—the first that they shall be des femmes distinguées, mpatients—the first that they shall be des femmes distingues, and the second that they should be sympathetic to himself. Money he looks on as mud. He has a calle for the resthetic. The hand is the agent of power, and what may it not accomplish when wielded by a beautiful and distinguished woman? With this pleasantly optimist assurance that beautiful and distinguished women invariably wield their hands for the happiness of the human race, M. Delmonferac drops his pomatum-pot, and having bathed the tips of his lower fingers in a basin of perfuned water, takes his leave. his leave.

Next we have Countess Berthe in a dressmaker's shop. is the establishment of the great M. Grandhomme, under which is the establishment of the great M. Grandnomme, under which thin pseudonym we are treated to a sketch of a sufficiently notorious arbiter elegantiarum. Like M. Dalmonferac, M. Grandhomme exacted above all things that his protégées should be distinguished and sympathetic. Acting on this principle, he behaved with startling audacity in the distribution of his favours. An ambassadress would be kept "making antechamber," while the autocrat was deliberately devoting the energies of his milliner-mind to the decoration of some new beauty from the provinces. Into the sanctum of this capricious despot, with its "Asiatic splendour of furniture," few were privileged to enter. Those who did were rewarded by an exhibition of Madana Grandhomme "posing" in her lord and husband's "latest combination." On the who did were rewarded by an exhibition of Madama Grandhomme "posing" in her lord and husband's "latest combination." On the day of our author's supposed visit the lady "posed as Marie Antoinette au Temple," and "anything more insolently picturesque than the pose from beginning to end it would be difficult to conceive." One is puzzled to understand how any "pose" in imitation of the unhappy Queen could be described as "insolently picturesque," and, still more, to understand how the historic black dress and white cambric kerchief could be regarded as one of M. Grandhomme's "latest combinations." The procedure in ordering a ball dress, though invested with a good deal of solemnity, is at least more intelligible. The Countess has ventured to suggest pink for her young friend. Thereupon the Oracle leads the way to a room brilliantly illuminated with wax-lights, leaving Marie Antoinette to continue her perfectly aimless "pose" for the delectation of another batch of visitors. Then follows a remarkable experiment. M. Grandhomme stretched out his hand, and, with the rapidity of magic, a "Satellite," whose talent had promoted her to the high post of assisting her master in his seathetic combinations, "flew forward, with a cloud of tulle of every shade of rose, pink, and crimson, in the gamut of carmine." No suitable shade in the "gamut of carmine"—whatever that may mean—being discoverable, a "blue gamut" is called for, and applied to the girl's shoulders and check, only to be impatiently rejected. The great man is puzzied, and looks down intently at his boots. "Did you over appear as a Naiad?" he presently inquires. "Never, monsieur," is the ingenuous reply. "I should be afraid of the green." Apparently suspecting a disposition to poke fast at him, the Gracle loftily replies, "There is green and green." Finally one of those inspirations to which genius is subject seizes him. "You shall appear as a snow-storm," he exclaims; and then dictates to the "Satellite" a costume, of which we need only enumerate two details to show its ravishing originality—flakes of swan's-down descending on the waves, and icicles of crystal sprinkled from the head to the feet. No wonder that "Quel rêve!" burst f. om the lips of the destined possessor of this masterpiece as she clasped her hands in ecstasy. as she clasped her hands in ecstasy.

as she clasped her hands in ecstasy.

After this we have a glimpse of the Countess Berthe in a bonnet shop. Madame Folibel, the great modiste, expounds her doctrine about that all-important article of dress. She is much exercised by the stupidity of English ladies who do not sufficiently realize the "supremacy of the bonnet." Of what avail, she argues, is a handsome dress, a fashionable shawl, costly fur, lace—an irreproachable tout ensemble, in fine—if the bonnet be unbecoming? All these are but the res-de-chauses and the entresol, while the bonnet is be couronement de l'édifice. Madame Folibel's architectural metaphors strike us as somewhat coarse, but at least it shows her acquaintance with the somewhat coarse, but at least it shows her acquaintance with the political slang of the last days of the Empire. We cannot pretend to follow the Countess on her chequered career of dissipation. have a sketch of her assisting at a charitable meeting, then at a Concert Musard, attended by four gentlemen—one, a tall distingué-looking Austrian, "squirting vinegar out of his eyes" at a handlooking Austrian, "squirting vinegar out of his eyes" at a handsome young Breton on whose arm the lady leaned, an Englishman
whose "notablest idiosyncrasy" was an eye-glass, and "another of
low stature with a Shakspersan head." A stranger retinue
for a lady of the first fashion it is adifficult to imagine.
We understand the handsome Breton, but the Austrian with
the vinegar-squirting-eye, and the Englishman with the idiosyncratic eye-glass, and, above all, the being darkly indicated
as of low stature with a Shakspersan head, sound as if they
were more calculated to adorn an international ménagerie than an were more calculated to adorn an international ménagerie than an open-air concert.

On one or two occasions we are permitted to hear how the strange beings who surround the Countess Berthe talk, and as this is the nearest approach to a "salon" discoverable in the volume, it is only fair to give a few specimens. They are mostly introduced by the definite article, as the Academician, M. le Sénateur, the Deputy of the Left, the Austrian habitué—another title for the hero of the vinegar-squirting eye—the crevé of the Faubourg, the Deputy of the Centre, sometimes called M. du

"I grant you that the signs are disquieting," assented the Senator,

shaking his head.

"A sign to my mind much more to the purpose is that the nation is mortellement ennuye"," observed the Deputé du Centre, with a weighty complasis on the adverb; "when France 'ennuies' herself it is time to cry Gare!"

ery Gare!"

"Gare à qui?" said the Princess de M——.

"To the Government, Madame. We have had this one now eighteen years, three years beyond the lease France usually gives to any Government, and the people are sick of it. Paris especially is ennuyée to death of late."

late,"
"Paris is always enaugee, unless she has an Exhibition or a war or a carnival of some sort to keep her in good humour," said Berthe; "but Paris is not France."
"Paris, c'est le monde," replied M. du Centre, with a melodramatic

"Le monde; non," protested Madame de M-; "le demi-monde peut-être."

This is a kind of talk which, though somewhat commonplace, gives one no reason to doubt the sanity of the distinguished politicians by whom the Countess Berthe was surrounded. But ater on at a wedding-breakfast the "Austrian habitué" takes up his parable on the subject of England and Russia in a strain which his parable on the subject of England and Russia in a strain which makes one fear that frequent vinegar-squirting had seriously disturbed his reason. It is just after the proclamation of war. Berthe ventures to hope that England will keep out of it. The Austrian, on the contrary, thinks that Russia will "pick a fight" with England, and "thrash" her, "every pope and peasant in holy Russia lighting up as many candles as will illuminate the Ural's and the Caucasus":—

and the Caucasus":—

"Après?" I said.

"Après what, Madame?"

"When they have thrashed her, what will they do with her?"

"Do with her? Annex her..."

"What carthly use would England be to the Czar?"

"Use," echoed the Austrian, elevating his eyebrows with a supercilious amile; "in the first place, he might make it a little succursale to Siberia. There is a whole generation of those unmanageable half-mad Poles afely walking about this side of Europe plotting and dreaming and rhapsodizing; only think what a convenience it would be to their father the Czar if he had a centre of action so near them. He would catch them like rabbits, and instead of hawking them over the world to Nerchints and Irkoutsk, he could sentence them to perpetual sciatics, or chronic lumbago, or a mild term of ten years' rheumatism in the Isle of Fogs... Then over and above this immense accommodation, he might have his docks in England; he might make the naughty Poles learn of his English subjects how to build ships, till by and by the navy of Holy Russia would be the finest navy in the world, and bly, top-heavy Prussia would shake in her shoes, and hotheaded France would keep quietly on her knees in the mire, and all Europe would bow down before the Caar and swing the incense-pot under his nose!"

There is some humour in this sketch of England's future, and we confess that we find the ravings of the "Austrian habitus" more amusing than the bagman talk of "M. du Centre" and Oo. After this explosion he disappears from view, exhausted by the fertility of his imagination, or recalled by his Government for the un-

diplomatic tone of his remarks, or, more probably than either, consigned by his friends to the nearest masses de sents.

Probably we have quoted enough to dispose of the claims of this book to any serious criticism as an authentic record of a period of historical interest. We may add, that the well-known visit of the Empress Eugénie to the cholers patients at Amiens is post-dated by-some years, and that the Franco-Prussian war is made to break out as autumn approached, when all the world knows that it occurred in July 1870. To say that it is both silly and vulgar is to understate the bad taste and impertinence with which it retails a certain amount of stale Parisian gossip. To say that there is hardly a page without gross faults of grammar and idiom is very much to understate the liberties which the author permits herself to take with both the French and English languages. It would be difficult to say which suffers more. would be difficult to say which suffers more.

ECCLESIASTICAL MAPS OF ENGLAND AND WALES.

THE author of these maps puts as a motto in his title-page two lines of Juvenal, the application of which has puzzled us ly. What is the application of the verses,

Cum veniet contra, digito compesce labellum, Accusator crit, qui verbum dixerit, hic est.

Who is the accuser? Who is the person to be accused? Who is to put his finger on his mouth? If we had a word of preface, we might perhaps understand; as it is, we do not. Of the maps, one gives the dioceses as they stood before the changes of our own day; another gives them as they are now; the third shows the archdeaconries; the heading of the fourth somewhat puzzled us. It runs thus—"Ecclesiastical Protection in England and Wales." After some thought it struck us that "Protection" on the map might mean the same as "Patronage" in the title, and it turns out that the map is meant to show the patronage of hishors might mean the same as "Patronage" in the title, and it turns out that the map is meant to show the patronage of bishops and other ecclesiastical corporations. We do not remember to have ever seen the word "protection" used in this sense, though we do not say that it may not be justified by the primary meaning of the word "advocatio" or "advowson." We do not know that there is very much to say about the maps themselves. We should have though that any one who underteek such a subject would have done well to correct further undertook such a subject would have done well to carry it further back, and to make it into an atlas showing the successive changes in our ecclesiastical geography from the beginning. One object of the first map is to show the "peculiars" as they existed before the late changes. A list of them is given with references to the map, but the map itself is hardly large enough to show them very map, but the map itself is hardly large enough to show them very clearly, nor do we quite understand the list itself, which certainly does not take in all the "peculiars" which existed in England. The map indeed only claims to mark Bishops' "peculiars"—parishes, that is, in the jurisdiction of one Bishop, though locally in the diocese of another. But it would surely have been better in making a map of "peculiars" to mark also those where the Ordinary was not a Bishop at all; and in one or two cases, though we speak only from memory, the list does not seem to be perfectly accurate. Several parishes in Northamptonshire are marked as "peculiars" of the see of Lincoln but we do not see among them Kings-Sutton. of the see of Lincoln, but we do not see among them Kings-Sutton, so famous as one of the three neighbour spires, "Bloxham for length, Adderbury for strength, Kings-Sutton for beauty." But surely Kings-Sutton used to be in the jurisdiction of Lincoln, and had as a hamlet the town of Buckingham, ten or a dozen miles off, and the central or one of the central or one of the spirals of another shire. hamlet the town of Buckingham, ten or a dozen miles off, and the capital, or one of the capitals, of another shire. Then Dorchester is put down as a "peculiar" of the see of Oxford, though the old city, locally in the diocese of Oxford, seemed of late to have got into a kind of ecclesiastical anarchy, without any certain Ordinary of any kind. All these odd arrangements are now things of the past, but their history is very curious. They mark the characteristic mediaval spirit, by which every corporation, sole or aggregate did all their history is trained to include it to the characteristic mediaval spirit, by which every corporation, sole or aggregate did all their history as the characteristic mediaval spirit, by which every corporation, sole or aggregate did all their trained as include it is the formal spirit. gate, did all that it could to isolate itself or to aggrandize itself, and looked on ecclesiastical jurisdiction less as either a burden or a duty than as a source of dignity, and indeed of profit. The feudal spirit had got possession of everything. The superior church, episcopal or other, stood to its vassal churches rather in the position of a feudal lord, and it was a point of honour not to surrender the humage of any of its subject to any nickleuring leaf position of a feudal lord, and it was a point of honour not to sur-render the homage of any of its subjects to any neighbouring lord. We suspect that a fighting and castle-building Bishop would often have looked on a proposal to divide his diocese much as a temporal prince would have looked on a proposal to divide his kingdom or duchy. At the same time the regular episcopal jurisdiction was invaded both from above and from below. If an Archbishop had tem-poral possessions in another diocese, they commonly formed an archiporal possessions in another diocese, they commonly formed an archiepiscopal "peculiar," while on the other hand monasteries, chapters, separate prebends, even vicars colleges, contrived to get ecclesiastical jurisdiction in the places where they had temporal estates; and, lastly, owing to the alienation of monastic property, the ecclesiastical jurisdiction of an abbey had in several cases passed to its lay owner. This local and corporate spirit, on its ecclesiastical side, did for the most part produce little more than grotesque and mischievous anomalies. But it must not be forgotten that it was another application of exactly the same spirit which won and secured the local liberties of our cities and boroughs, and, in so doing, had so large a share in securing the general liberties of the nation. nation.

We spoke a little time back, having our thoughts led that way through quite another channel, of the characteristics of English ecclesiastical geography as compared with that of France and Germany. Both under Henry the Eighth and under William the Fourth we see the same odd influence of names and traditions even while the greatest real novelties are brought in. The discusse of Bristol as devised at the earlier time, the diocese of Rochester as devised at the later, are memorable instances. Henry the Eighth had settled that Bristol was a place which ought to be a Bishop's see, but it was hard to find him a diocese without breaking in too violently on the traditions of the neighbouring dioceses of Bath and Wells and of Worcester, newly represented by filoucester. So the old diocese of Sherborne was called into being; but with its episcopal church far away at Bristol. It strikes us, by the way, that in the maps before us too much of Worcester or Gloucester is cut off to form this detached head, if that be not a bull, of this strangely conceived diocese. And of Worcester or Gloucester is cut off to form this detached head, if that be not a bull, of this strangely conceived diocese. And certainly if it be true, as it is whisperred, that the present Ministry proposes to do something in the way of increasing the number of bishoprics, surely the first thing to be done is to reform the strange geography of Rochester. Henry again, in dividing the diocese of Lincoln, planted a see at Peterborough because the great abbay formed a ready-made cathedral church. The archdeaconry of Northampton formed an easy boundary for the diocese; but the result was that the church of Peterborough was, and still is, in a corner of the diocese, with narts of another diocese almost within a stone's the diocese, with parts of another diocese almost within a stone's throw of the Bishop's palace. Except that in that case l'etorborough Abbey would most likely have been pulled down, it would have been far better if Henry had planted his new bishoprie at Northampton, with the now vanished minster of St. Andrew as its cathedral. So in our own day, when two new sees were founded in the province of York, they were fixed at Manchester and Ripon, because in both of those places there were collegiate foundations ready made. This accident gave the great city of Manchester a Bishop, but it also gave him a most inconveniently shaped diocese; and the other new prelate was placed, not in any of the lung towns of the West Riding, but in a place so opposite to Manchester in point of size as to have been docked of one of its Parliamentary representatives. The eleventh century, which boldly moved the Bishop to the biggest town in his diocese, without any regard to names and traditions, was really more practical than either the sixteenth or the nineteenth.

The third map, which is on a much larger scale, shows the arch-deaconries, and also the episcopal abodes, both those in use and those which are so no longer. Among these we get a little plan of London, with references showing the old town houses of the Bishops. The map strikes us as not containing all the episcopal houses, and as containing some places which were not episcopal houses, and as there is no explanation of the containing some places which were not episcopal houses. But as there is no explanation, we may not have eaught the exact principle on which the map is put together, and at any rate the attempt is a praiseworthy one. The map brings vividly before us how far Addington is from Canterbury, how far Danbury before us how far Addington is from Canterbury, how far Panhury is from Rochester, and also how near Bishopthorpe is to York. We see the Bishop of Lincoln in his involuntary exfle at Rischolme, and we see the new name of Decade marking the new abode for which the Bishop of Chester has exchanged the old Abbot's house which had swallowed up one tower of the minster, and the hanging garden perched in a Babylonian fashion on the substructure of the Abbot's hall. On the fashion on the substructure of the Abbot's nam. On the other hand, it is a comfort to see Stapleton, as an episcopal abode, already marked among the things of the past, and to see the palace of Lichfield, and not the castle of Eccleshall, again marked as the chief abode of its prelate. The last map, that which bears the queer title of "Eccleshatical Protection," is beyond our understanding. We are told that "the figures placed under the paragraph of parks and mansions show the number of livings in the names of parks and mansions show the number of livings in the gift of the owners and their families," and certainly under a good many places we do see figures of this kind put. But we do not know on what principle they are chosen; at any rate they are not exhaustive. The map is far from showing—doubtless it would be impossible to show—all the lay patronage in England. Altogether the maps seem fanciful, and we cannot always make out their immediate object. But a really good atlas of English ecclesisatical geography from the beginning would be a great gain indeed, if we could get it.

YOUNG MR. NIGHTINGALE.

THE sight of tents and human faces is a pleasant thing to the traveller in the desert. Much of the same kind is the Leaveller in the desert. Much of the same kind is the pleasure afforded to a reviewer weary of tracking an arid way through the confused storms of sensation or the vast expanses of commonplace, which, as Burnet says of William III., are of a "disgusting dryness," by a pleasant, fresh book like Young Mr. Nightingale. The author has chosen the autohographical form for his story. It is a task of greater difficulty, because demanding more intimate knowledge of human nature, to indicate the property of the indicate the form the outside, in the letter seen character from the inside than from the outside; in the latter case, the power of observation alone may do a great deal towards success; in the former, thought, feeling, and experience are absolutely necessary to it. Thus in many cases writers, by making the hero of their story also its narrator, have produced the unpleasant effect of causing him to lose all mark of individuality, and appear

Four Maps of the Ecolorisatical Disisions of Ragland and Wales;
 Tables of Reclarisatical Jurisdiction and Patronage. Compiled by ables of Ecclesiastical Jurisdiction a leavy Dimes. Landon: Wyld. 1874.

^{*} Foung Mr. Nightingule. A Noyal. By Dutton Cook, Author Bobson's Chuice," &c. 3 vols. Landon: Sampson Low & Co. 1874.

merely a peg whereon to hang discourse. Cook has avoided; young Mr. Nightin This danger Mr. Dutton Cook has avoided; young Mr. Nightingale is lifelike and in-teresting alike at the end of the book and at the beginning, when the reader becomes acquainted with him as a boy of twelve, who has made an escapade from the Down Farm at Purrington, where he lives with his mother and his uncle, Mr. Orme, to Overbury. Hall, a great closed house hard by, which, with a child's imagination, he has invested with all sorts of romantic ideas. child's quick incident occurs which in some sort lends reality to the child's fanciful inventions. One of the windows on the ground floor of the hall is, contrary to custom, unprotected by shutters, and Mazmaduke, or, as he is always called, Duke, Nightingale looking in through the glass sees a face looking out at him from the other side, and is suddenly seized and lifted into the room. Here he finds himself for the fore with an allegalg continuous who is necking finds himself face to face with an elderly gentleman who is smoking and drinking with great violence, whose appearance recalls that of a satyr in an engraving from Poussin hanging in one of the rooms at the Down Farm, and who presently reveals himself as Lord Overbury, the possessor of the Hall. He holds some converse with Duke, in the course of which he inquires his name and appears struck by it, and finally sends him home with a parting gift of three sovereigns. The boy returns home delighted with his adventure, but finds its interest little appreciated by his mother and uncle, although from certain significant glances which they exchange he suspects that their curiosity is more roused than it seems to be; and the reader becomes convinced that there is some secret or mystery connected with Overbury Hall and the Down Farm. Duke obtains more sympathy at the hands of Kom the cook, his fast friend on all occasions. The truth of his story and of his having really encountered Lord Overbury, which she is at first bent on regarding as a brilliant fiction composed for her amusement, is confirmed by Reube the shepherd, who presently lounges into the kitchen, having met his lordship on his road back from the sheepfold. Reube, with his absorbing devotion to his sheep, his bashful love for Kem, and his contempt for "Carge," the rival shepherd, makes a capital bit of character. Here is a bit of his

"How can you talk so, Reube," interrupted Kem, "and you setting up for a tidy steady man, and a chapel-goor."

"Well, there," said Roube, "I go to chapel most-in-deal (ordinarily), when the sheep'il let me. But they're amoust too much vor a man. I can't listen to the minister for thinking of things going wrong i' the vold; vootrot, or securing, or dead lambs, or what not. I can't sleep o' nights, let alone saying my prayers. Garge is a church-goer. I see un times and times going over the down, carrying's prayer-hook, though I knows a' can't sead un. Ob, he's a church-goer. But there's some volks as has no conseignce. I doan't say as a' hasn't got a tidy looking lamb or so amang his vlock. A' knows how to cosset 'em up vor show. And there's vools about as hasn't got eyes to see a whole vlock at ance. They'll look at one or two, maybe, and take Garge's word vor the rest. But there; there's sheep in his vold as I'd be shamed to own. If mine wore so desperd bad as some of 'issen I'd take and drown myself in sheep-pond, that's what I'd do. Oh, Garge is a church-goer, certain sure."

"You needn't be so main scrow (cross) about it, Reube," said Kem. "Garge's church-going won't harm un, nor's vlock neither. I'm a church-goer; Measter Duke's a church-goer. Wo're all church-goers in this house. Not that I say a word against the Methodys. My own mother was one on 'em. And I've known a many main tidy volks Methodys."

"Drattle Garge, that's all I ses," observed Reube, by way of a final deliverance against his rival.

The monotony of life at the Down Farm is soon varied by another unusual occurrence in the shape of the arrival of a stranger with a wounded foot, who goes by the name of Fane Mauleverer, and turns out to be a strolling player possessed of many accomplishments and of a hand-to-mouth kind of philosophy which is rather attractive. This type of character has been so frequently made use of by novelists that Mr. Dutton Cook deserves the more credit. for having made Mauleverer original and real. Duke's heart is entirely won by the stranger's fluent talk, imposing manner, and skill in drawing and in cutting out silhouette likenesses :-

skill in drawing and in cutting out silhouette likenesses:

I was loud in my admiration of his manifold abilities.

"Yes," he said, complacently, "I can do a good many things. That I am much the better for it I'll not venture to assert. It's no use making a number of small bids for success. The thing's knocked down to the highest bidder, who hay make perhaps but one offer. Yes, young gentleman, I can set—fairly; I can paint—decently; portraits, landscapes, bistory, anything, including scenery. That's what I've been doing lately, thereby having a few more shillings—owed to me. Still upon the whole Fortune has not smiled upon Fane Mauleverer, or smiling, she has shd her rewards into other palms than his, and less deserving perhaps. So you would hint. I am obliged to you. I'll not contradict you. I like to hear hand-claps greet me, even though they may proceed from the village idiot on the back bench of the gallery. Not that I am associating you, my young friend, oven in thought, with that unfortunate. Far from it. I count you among the bax andience—the front row, if you will. I would only hint my appreciation of applause let it come from what quarter it may. I don't despise the copper coinage because of the existence of silver and gold. Halfpence are of use; so I have found. One can buy many things with them—bread for instance. I have found. One can buy many things with them—bread for instance. I have known adversity; I admit it; and found its uses less sweet than they might have been, or than the poet has affirmed them to be. Still I have not despaired. I am not of a desponding neasure. I persuade myself that luck may be in store for me, must be, indeed—put out at compound interest as it were. That there is a vast amount of it standing to my credit somewhere, I am fully satisfied. When it becomes due and payable I shall be a sort of millionaire. Meantine my position is much less envisible. While the grass grows—the prover is somewhat musty. But the world shall hear of Fane Mauleverer reappears some time afterwar

Manleverer reappears some time afterwards under a different aspect. Drike, who is now advancing to man's estate and completing his education as a farmer, is sent to Dripford Fair with Reube the shepherd to sell a flock of sheep. The fair is the great event of the year for all the country round; a kind of agricultural carnival,

where the noise and crowd are great, so great indeed that Duke, having got detached from his flock, is unable to find them. In the course of his vain search he comes upon Lord Overhusy, who entertains him with champagne, and then drags him out to accompany him in a violent progress through the fair, in the course of which pany him in a violent progress throughths lair, in the course of which they push their way into the interior of a travelling circus when rehearsal is going on. A girl of a wonderful beauty, which instantly enslaves Duke's heart, is dancing on the tight-rope; Mauleverer is standing by in the costume of a ring clown; Herr Diavolo, a tremendously powerful athlete and the girl's master, is superintending the lesson, and when the girl, quite wearied out, refuses to continue it, strikes her across the shoulders with his cane, in return for which he receives a severe thrashing from Lord Ov bury. Then follows desperate love for Rosetta the dancer, on the part of Duke; elopement with Lord Overbury on hers. About a year later, when Duke, whose passion for Rosetta still possesses him, has gone out on a bitter winter's day to the assistance of Reube the shepherd, he discovers a woman, whose beauty of dress contrasts with her misery of appearance, struggling half-fainting through the snow. In her he recognizes Rosetta, recalls himself to her memory, revives her as best he can, tells her something with a hov's mixture of ardour and shyness of his feeling for her, and a boy's mixture of ardour and shyness of his feeling for her, and half supports, half carries her towards the farmhouse until he can obtain assistance. On the way she faints outright, and he begins to despair; but with Kem's help she is conveyed to the farmhouse, and there restored to life and animation, under the influence of which there restored to life and animation, under the influence of which she reveals to Mrs. Nightingale, not without a touch of scornful pride, that she is Lady Overbury. So she thinks, and so she has every reason for thinking. After this Duke's health begins to fail him, and partly on this account, partly because of his evident disinclination and inaptitude for the life of a farmer, he is sent up to London to be apprenticed to a solicitor, an old friend of Mr. Orme's, named Monck. It has not yet been mentioned that the date of the story is a period when railways were not and stage-coaches were; and by bringing his hero up to town from the country on the top of a coach, the author runs some risk of recalling to the reader's mind the journey performed under similar circumstances by David Copperfield. This is the more curious as there are throughout certain resemblances between the manner of there are throughout certain resemblances between the manner of Mr. Dutton Cook and that of the author of Copperfield. Having said thus much, it is but fair to show how Mr. Dutton Cook has said thus much, it is but fair to show how Mr. Dutton Cook has contrived to catch something of Dickens's spirit and habit of close and humorous observation without laying himself open to any charge of slavish imitation. Duke, or, to call him by the more dignified title which the country neighbours bestow upon him in honour of his translation to a London life, "young Mr. Nightingale," is despised by the head waiter at the "(folden Cross," where he puts up for the night, as "a regular yokel," and is much regulared by the possible assail him upon his first sciouse. perplexed by the novelties which assail him upon his first sejourn in London:—

In London:—

The "boots" of the Golden Cross, upon my summons, relieved me of my boots, chalking the number of my boom upon their solid soles, and equipped me with slippers of enormous dimensions. It was a gymnastic and terpsichorean feat, mounting the stairs to bed and retaining these vast receptacles upon my feat. Often I was wrecked from them, as it were, and had much difficulty in getting aboard them again. While I was thus engaged I encountered a laughing chambermaid. It was to conceal her mirthfulness, perhaps, that she proferred me "a pan of coals" for my bed. I declined the proposition, but vaguely comprehending it.

His introduction of himself at Mr. Monda's effice, where he is not stated the proposition of himself at Mr. Monda's effice, where he is not stated to be the content of the content of

His introduction of himself at Mr. Monck's office, where he is received by an old clerk who, whenever he inquires for the principal, informs him that "Mr. Monck is particularly engaged, and not likely to be disengaged for a long time," is attended with the same kind of vague mystery which has hung upon some former incidents of his life. This old clerk, Vickery by name, is one of the best-drawn characters in the book. The dry, suspicious manner the habit of sucking out information while giving none in manner, the habit of sucking out information while giving none in return, caught from constant association with the law, the good heart and unfailing devotion underlying the unattractive surface, are all well brought out. The description of Duke's dull and monotonous life for a time in Mr. Monck's office is good altogether, but the long account of a tedious and never-ending Chancery suit which has been better done before, at a time when there were more abuses to warrant its introduction, time when there were more abuses to warant its introduction, in Bleak House, might better have been left out. The dead level of Duke's life is brightened by his acquiring a new friend in the person of Anthony Wray, commonly called Tony, Mr. Monck's nephew. He is a cheery, pleasant young fellow, full of life and grace and hope, which, by dint of being diffused in every possible direction, never leads him to take up any pursuit definitely for more than a few weeks together; but he is not the less agreeable for that. One is inclined to be angry with the author for letting him drift down through trouble and illness to an early death; only, if he had lived, his friend Duke could never have entertained any serious hope of a union with Rachel Monck, Tony's cousin, who is devotedly attached to him. One is almost as sorry when poor Tony disappears in a consumption as are Duke and Rachel. Before this unhappy event takes place Duke has seen the manners, if not the cities, of many men. He has presented himself to one Sir George Nightingals, whom he takes to be a distant relation of his, and who occupies the brilliant position of serjeant-painter to the King. By an odd coincidence he finds his old friend Mauleverer, the player, domesticated in Sir George's house in the capacity of assistant under the series of ticated in Sir George's house in the capacity of assistants and upon the death of Mr. Monek in very embarrased cinematances he determines to transfer his allegiance from quill and foolacap to brush and palette, and makes a fresh start in life as another

assistant to the great portrait-painter. By snother edd coincidence but odd coincidences are the especial privilege of novelists, and it certainly cannot be denied that they occur often enough in real life—he finds Rosetta, who has suddenly burst upon the town as a brilliant actrees, sitting to Sir George for her portrait. His relations with her are prettily and gracefully kept up to the end. She has grown up as one might hope she would, wild and fanciful indeed, but kind and bright, and displaying real goodness of heart in her generosity to Lord Overbury, who had so cruelly wronged her. Lord Overbury reappears as a broken-down impoverished drunkard, but nevertheless plays a somewhat important part in the closing scenes of the book, and in the revolution of the mystery of Duke's life. This mystery is, until it is told, concealed skilfully, yet without any attempt at sensation or striving after exaggurated effect. It is best to leave readers of the book to find out for themselves its precise nature. The book closes with a pretty love-scene between Duke and Rachel Monck. She, questioned by him, selves its precise nature. The book closes with a pretty love-scene between Duke and Rachel Monck. She, questioned by him, avers that she cannot tell him exactly when liking on her side first developed into love. She remembers having felt strangely anxious when he went away, more anxious than she would confess to herself:--

"For how was I to know that you cared for me?"
"You might have been sure. But, first, you began to like me for Tony's

"You might have been sure. Due, mist, you wegen to sake?"

"Of course. You were so kind to him, and my poor boy loved you so."

"And then, afterwards?"

"Don't ask me; for how can I answer? I liked you—I loved you for his suke—for mine—for your own. What does it matter? I leve you, Duke; you may be sure of that, and you are sure. I love you—bocause I love you. Surely, you don't want a better reason?"

After that we turned homewards, walking quietly, and I must say very alowly, over the down to the farm.

Those who make Young Mr. Nightingale's acquaintance will find that their trouble in making it has not been thrown away, and will probably be sorry when it comes to a close.

LIFE OF ST. VINCENT DE PAUL.

THERE are names which belong to all countries and all THERE are names which belong to all countries and all Churches; and of such, among modern Saints, stands conspicuous that of St. Vincent de Paul. The institutions founded, the missions set on foot by him, have been accepted as models wherever Christian zeal works on system. He is emphatically the Saint of charitable organization. We are not sure that any memoir of him by his countrymen is likely to satisfy the expectations raised by this cosmopolitan reputation. Every religious school has its technical ideas of perfection to which it naturally desires to adapt distinguished excellence. In this case the extraordinary sazacity and time perception of the Saint are the extraordinary sagacity and time perception of the Saint are not made as prominent by the biographer as his perfection in one particular grace; in fact, the crowd of examples of the one a little interferes with a just exhibition of the other. He was, we believe, a wiser man, according to the ordinary standard, than he is made to appear; nor perhaps does it assist our approhension of the character that there seems some attempt at adaptation to the pre-judices of the English reader. Enther St. Vincent's belief on many points was different from that of the modern Roman Catholic, or something is left unsaid that is necessary to our full understanding of the man. This volume contains no allusion to the Blessed Virgin as an object of adoration, nor any mention of any Saint later than St. Augustine; whether silence on these points is due to the absence of them in the original records from which the memoir is taken, or to deference to the Anglican reader, we are not in a position to decide. All we gather is, that St. Vincent was strongly opposed to the Jansenists, and entertained an orthodox horror of Hugaenots and of heretics; but that he had little faith in controversy, and advised all over whom he had authority to have nothing to do with it.

have nothings to do with it.

Of all things an *lope--and the present work, founded mainly on the Life of cit. Vincont by Abbe Maynard, may be so designated--leaves most unsaid, and throws the reader whose experience has not led him in the way of living examples of perfection most upon his own guidance and direction how to reconcile what he reads with his personal observations of human nature. For it is the part of an *lope not only to suppress and ignore all the errors and weaknesses of its subject, but to available its virtues in the light described as *colatont. but to exhibit its virtues in the light described as éclatant. It is perhaps inevitable that saintly excellence should take its colour from the natural character; but also it is prescribed by Directors, after the judgment of St. Francis de Sales, to all seekers after perfection to aim specially at one virtue or grace in particular, and to set that always before the mind. We do not ask how far this is the highest and best rule of action in itself, but at least it is excellently suited to the éloge as leading to the sort of conduct most certain to issue in striking and illustrious examples. The particular grace which is aimed at and held continually before the mental vision becomes an exercise of intellect as well as soul; all the thought, invention, and fancy, and (may we not also say?) wit and humour, of the character, go out towards it to render it conspicuous and memorable. From the present record we learn that the virtue nourished to the exempley point in St. Vincent de Paul was humility;

* Life of S. Finemi de Poul. Edited, with an Introduction, by the Bev. R. F. Wilson. London: Rivingtons.

and the good Saint succeeds, by the aid of the whole forces of his nature, in producing some signal effects. The only thing is, that the slope, prowding these examples together in rapid succession, gives the impression of an expert in a difficult art rejoicing in an exercise of skill rather than of a soul shasing itself at the expense of all it holds done. We observe that an act of hymility of a proceeds followed and the desire of the saint of itself at the expense of all it holds desc. We observe that an act of humility of a properly sciencest order has a double aspect; it exhibits the actor in splendid self-absencent, and at the same time, by an unconscious but still happy feat of the intellect, tarms the tables on the proud persecutor. When a "hot-headed young gentlemen" told Vincout he was an old fool, and the venerable man knott down before him and asked his pardon for any occasion he might have given to call him so, some part of the Saint must have known who looked the bigger fool of the two. The babit of "knowling down to an inferior to beg pardon for the least shadow of a fault" strikes us as a too elaborate and conscious practice of a virtue. We can appreciate at a much higher rate the act of humility that followed a momentary movement of pride when his humility that followed a momentary movement of pride when his nephew, a rough, ill-clothed peasant lad, came to see him. The Saint's first impulse was to see him in private, but he was no scorer conscious of the feeling than he conquered it, and at once introduced the lad to the Brotherhood as the best man of hie family. Every self-suggested exercise of humility, down to kissing the servant's feet if he thought he had spoken sharply, was easy to him; but it seems that to be taken by surprise by a vulgar relation is a trial even to a Saint.

The editor is right in regarding the life of St. Vincent de Paul, from "his eminent common sense, and what may be called worldly wisdom," as well as the practical turn of his mind and work, and the absence of the supernatural in the narrative, as especially fitted for the English reader. We may "surrowfully" acquiesce in some writer's remark that "English Christianity is the most unsupernatural form of that institution"; but not the less is the Saint, as here represented, emphatically a Frenchman. In endeavouring to ascertain the facts of his life we are embarrassed by a very unEnglish fear of the naked truth, like what some people have of a draught of fresh air. It must be veiled and draped for the uses of advication. the uses of edification. For example, in 1605, at the age of nine-and-twenty, Vincent, going by see from Marseilles to Narbonne, was taken prisoner by a Turkish brigantine, and remained a cap-tive in Barbary more than a year. On his release he wrote a ner-rative of his doings and sufferings and of the conversion of the wife of his master. Many years afterwards a copy of this narrative was sent to him, on the supposition that it would interest him. At once he threw it into the fire, and did not cease to implore with the most solemn adjurations, which were of course disregarded, that the original of that "unhappy letter about Turkey" might be delivered up to him to share the same fate. This eagerness, we are told, was due to "his earnest desire not to leave hind him an undeniable authentic record of that episode in his life, which from motives of humility he always studiously concealed."
The effect of this reserve really defeats the intention of the
humility which maintains it. A legend to the Saint's honour loses nothing of its credibility from the fact that through his whole life he was silent upon it. Thus an act of self-sacrifice is accepted as true both by the French biographer and his English editor, which is highly improbable in itself, and of which nothing was known from the chief actor. He had been appointed chaplain-general of convicts and galley-slaves, an office for which his intense spirit of humanity emineutly fitted him. "Pitiable beyond words," we can well and gauey-surves, an onice for which are intense spirit of numerity eminently fitted him. "Pitiable beyond words," we can well believe, was the state of things he found in the galleys. Rockless misery, blank despair, and blasphemy combined, seemed to make the Hagne a hell upon earth. He threw himself into the work of mitigating these horrors with characteristic zeal; this was only to be expected; but what certainly is difficult to credit is that his compassion should extend itself to taking the place of one of the convicts for several weeks, working in chains with the rest of the gang; of course maintaining a strict incognito until the nobleman who procured his appointment caused inquiries to be made which who procured his appointment caused inquiries to be made which led to his release. The editor does not give the story without hesitation, but the testimonies to its truth quoted by M. Maynard appear to him fully to justify it. One thing secons certain—not one word of the story came from the Saint himself, and the fact of his allence goes for nothing with his biographers. We could not approve the act, if the story were true. It is no more the business of chaplains than it is commonly their inclination to change places with prisoners. The life of St. Vincent offers far more edifying features; but some touch of the marvellous is indispensable in the records of a canonized Saint, and this supplies semething akin to the miraculous. something akin to the miraculous.

St. Vincent is known as the founder of home missions. chaplain and tutor in the household of the Count of Joigny he occasionally accompanied the family in their visits to their country estates, and in his intercourse with the poor became country estates, and in his intercourse with the poor necessival policy to the fact that the parish priest was an inadequate medium for receiving confessions. "They were afraid or ashamed of confessing their sins to them." It was for the purpose of supplying a need where the parochial system failed that a new organisation of mission priests was established. The fact is suggestive, but this is not the place in which to enter on a topic of modern controversy. A system may be begun on one ground and maintained on its opposite. Missions are very sealously carried on amongst us, where confession is denounced as the worst error of Romanism. And another change is to be noticed; what was designed for the country flourishes amongst us in the town,

first members of the Congregation of Mission Priests were enjoined to devote themselves entirely to the poor and ignorant of country places, and to bind themselves never to preach in large towns. Rustics, it is found amongst us, do not respond to the spur; it needs numbers, the contact of large bodies, to rouse and maintain any heat of religious excitement. Out of the mission grew the greater institution of Sisterhoods of Charity. St. Vincent was always supported by female wealth and influence. The first members of these societies were Parisian ladies of rank and position; but the claims of home and family, and the dread of infaction, were found to interfere with the tasks and duties undertaken by them. In England such difficulties are recognized, but they do not lead absolutely to the system of substitutes. The French are greater organizers than we, and therefore can boast of a more presentable mechanism and more extraordinary examples of self-sacrifice. It belongs certainly to the member of a society set apart for a single purpose, to share her bed, for example, with a plaque-stricken patient. But ladies lose much, and surely the poor lose not a little, by allowing their work to be done by deputy. St. Vincent had the primary gift, due to ardent zeal, of stimulating others, and he had skill amounting to genius in reducing charity to a system. All seemed to him to grow of itself. It was humility of the truest kind which did not recognize the intellect that brought about such All seemed to him to grow of itself. It was humility of the truest kind which did not recognize the intellect that brought about such an order and succession of great institutions; but, as all seemed to him the simple direction of Providence, criticism was out of place; he could only see unmixed good in every foundation of which he was the nominal organizer:—

The good which is according to the will of God is done almost of itself, and without our thinking of it; it is thus that our Congregation came into being; that the exercises of Missions and of Ordinands were begun; that the Society of the Sisters of Charity was formed; that that of the Ladies for the Assistance of the Poor in the Hôtel Dieu at Paris and of the sick in parishes was established; that the care of foundlings was undertaken; and, lastly, that all the works which we have now in hand took their beginning. Not one of them was undertaken with design on our part.

It was one great and noble feature in our Saint that the magnitude of an evil, or its long standing, was no bar to a bold encounter with it. In his day Lorraine, so often the theatre of war, was reduced to the last extremity of desolation, having been by turns ravaged by the armies of France, Austria, Sweden, and its own. The fields were untilled, wild fruits, acorns, and roots served for food, reptiles and putrid carrion were devoured. When the news of these horrors reached St. Vincent, he instantly collected large sums of money and a body of mission priests, one of whom made ifty-three journeys to a body of mission priests, one of whom made fifty-three journeys to Lorraine in the nine or ten years of the extremity of distress. One of these priests, writing to Vincent, describes the people as being "skeletons covered with skin, and so horrible to behold that, if Our Lord did not strengthen me, I should not dare to look at them. Their skin is like tanned marble, and so drawn that the teeth are dry and uncovered, and the eyes and face all ghastly; in short, the sight is most awful." The condition of Champagne and Picardy after the war equalled in horrors that in Lorraine, and the sufferer were relieved by St. Vincent and his mission with the same energy; large sums of money were collected and carried to the desolated provinces by the priests when his infirmities prevented a visit in provinces by the priests when his infirmities prevented a visit in

All the corporal works of mercy were performed by these good men. They fed the hungry, gave drink to the thirsty, dothed the naked, visited the sick, released captives, entertained the homeless, and buried the dead. This last the most trying part of their work. Not only were numbers of these hilled in battle left to lie unburied where they fell, but the poor, waste, plague-stricken creatures crept like wounded animals into holes and corners, under banks and hodges, and laid themselves down to die with none to care for them or bury them.

We have no space to speak of the rules imposed by St. Vincent on his order or of his personal austerities. His was not an ascetic rule, but he was strict after his own standard, and he took the practical view on all questions. Thus it amuses the accetic rule, but he was strict after his own standard, and he took the practical view on all questions. Thus it amuses the reader to find the secular virtue of early rising erected into a test of a vocation. Prompt obedience to the call-bell was indispensable to a Superior. Whatever his other qualifications and gifts, if he did not get up punctually in the morning he was not fit for the office. As for the Saint himself, the second stroke of the call-bell never found him in the same posture as the first. He was also extremely exacting in all external observances, and for himself exhibited a good deal of that resolution approaching to obstinacy which sometimes strikes the secular mind as a characteristic of most human saintliness. The condition of his legs and kness made knesing at once extremely difficult and of his legs and knees made kneeling at once extremely difficult and most painful and injurious; but the greater the effort the more determined was he to kneel to God and man, and the more gratifying is the record of his sufferings to his biographer. In gratifying is the record of his sufferings to his biographer. In spite of these infirmities he lived to the age of eighty-five, dying September 27, 1660. He was canonized by Pope Clement XII. in 1737. During the Revolution the convent of St. Lazarus, which he had made famous, was pillaged by a band of ruffians, and the shrine of St. Vincent seized by them, its precious contents being however rescued from desecration and safely hidden under the charge of Sisters of Charity till the year 1830, "when the sacred remains were transferred to the church of the convent of the Rue de Sèvre, where in a more costly and beautiful shrine than the first the body of St. Vincent now rests."

LITERARY HISTORY OF CORNWALL.

THE critic has certainly no great right to complain when an author has executed well all that he proposed to himself or promised to his readers; yet we cannot suppress a feeling of regret that this elaborate and valuable work can never be anything more than a book of reference and a storehouse of materials for others to draw upon. "It makes no pretensions to the title of a complete Bibliography of the County of Cornwall; it is content to be considered merely as a contribution to its literary history." The greater the pity, in our judgment. If a little flesh had been laid upon this noble skeleton, the figure would have been far more comely, and none the weaker for the operation. And this voluntary abandonment of all claims on popular acceptance the more provoking inasmuch as the joint editors of this compilation display no lack of literary experience or skill, and must have had within their easy reach abundant means for producing a series of biographical memoirs of the deepest interest to every cultivated mind. As the matter stands, however, we have no choice; we must take their values of a reached the stands and stands and stands are shad every contracted each leave their values of the stands. of biographical memoirs of the despest interest to every cultivated mind. As the matter stands, however, we have no choice; we must take their volume as we find it—a dry alphabetical catalogue of writers and their publications, accompanied by a few dates (usually only of birth and death) and bibliographical notes, without the least attempt to estimate their respective merits or relative importance. Such a list, however, cannot have been produced without years of honest loving labour having been spent upon it, and, if unpalatable or even useless to the general reader, is to the real student highly suggestive and fraught with rare instruction. instruction.

Few counties in England exhibit so distinctive a character as that peninsula which is almost surrounded by the Tamar and the Western Ocean. While the physical features and mineral productions of the Duchy remind us somewhat of the bordering region of Dartmoor, in respect of race and temperament, of habits and language, the native population of Cornwall differs widely from its neighbours in Devonshire. Less imaginative and excitable than their kinsmen in Wales, the Cornish are no less frugal and devout than they, and far surross them in the intelligence and keepness of than they, and far surpass them in fine intelligence and keenness of intellect. The vices of the two tribes correspond in the main, as well as their better qualities; these are those truly Celtic failings—a deficient regard for truthfulness, and a certain strange impatience of sustained industry. The happy circumstance that the Cornish language has been obsolete for at least two centuries has accorded language has been obsolete for at least two centuries has accorded to Cornishmen no mean place in our literature; and since English has been learnt by the mass of the people as a foreign language in comparatively recent times, nowhere else is our tongue spoken with more correctness and propriety, although it may be with a peculiar tone and accent; thus presenting a strong contrast to the almost barbarous provincialisms of the other two or three westernmost counties. Cornwall has indeed given to us few man of the highest engineer in any department. three westernmost counties. Cornwall has indeed given to us few men of the highest eminence in any department; no first-rate poet, or prose writer, or orator, or statesman, and only one worthy, Sir Humphry Davy, who has stood in the very front rank as a master of science. But the present work is a proud memorial of what her sons have achieved in secondary, though distinguished positions, especially for science, for which their pursuits and tastes display a special aptitude. Foremost among those yet living stands John Couch Adams, Senior Wrangler at Cambridge in 1843, who has lacked nothing but the just self-confidence of genius to be universally Couch Adams, Senior Wrangler at Cambridge in 1843, who has lacked nothing but the just self-confidence of genius to be universally recognized as the prior discoverer of the planet Neptune. Two Cornishmen had headed the Mathematical Tripos before him; Kempthorne in 1796, and the great missionary, Henry Martyn, in 1801. The Golden preacher, Henry Melvill, was Second Wrangler in 1821, as was Dr. Colenso, whom the county now regards with mournful coldness, in 1836. Leonard Courtney, who ran a "superior person" so hard at Liskeard in the election of this year, took the same honour in 1855. Hishon Rawle stood third in 1825. Six the same honour in 1855; Bishop Rawle stood third in 1835. Sit Henry James, of the Royal Engineers, who has charge of the Ordnance Survey, is unrivalled in his own branch of study; while the mild decline of Robert Were Fox, of Falmouth, is gilded by the remembrance of his profound investigations in regard to the magnetic needle as early as 1832, when electro-magnetiam was only not in its infancy. We believe we may add to this goodly list the name of Mr. Pengelly of Torquay, the persuasive expounder of the mysteries of Kent's Cavern there.

When we pass into the region of pure literature the descent is

When we pass into the region of pure literature the descent is sharp and steep enough from these sublime heights of science to the level of Samuel Foote, dramatist and comedian, who was born at the Red Lion Inn at Truro in 1720. The famous author of the *Minor*, in which Whitefield (whose ministry he had attended in order to learn to mimic him the better) was coarsely satirized, of the to learn to mimic him the better) was coarsely satirized, of the Liar, the Mayor of Garratt, and a score of other farces yet more completely forgotten, was a considerable man in his day, who never disgraced, if he did not add much to, the reputation of Worcester College, where he was proud of having been brought up. The reader of Boswell will remember Johnson's surly resolution not to laugh at Foote's broad jests, and how ill he was able to keep it; but the most characteristic speech of the sage respecting him was made in reply to a not very unnatural question, "Pray, sir, is not Foote an infidel?" "I do not know," said Johnson, "whether the fellow is an infidel, but if he be, he is an infidel as a dog is an infidel—that is to say, he has never thought upon the subject."

^a Bibliotheor Cornubiessie. A Catalogue of the Writings, both Manneript and Printed, of Cornishmen, and of Works relating to the County of Cornwall, with Biographical Manneranda and copiess Liturally Returnees. By George Clement Bosse and William Pridesux Countries. Vol. z. A.—O. London: Longmans, Green, Rinder, & Dynn. 1894.

We have turned over the pages of the Bhlisthess and maked our memory in vain to recall some respectable Cornish post of the past, for we utterly refuse that sacred appellation to Dr. Wolcot, whose doggred rhymes found their favourite theme in mocking the harmfor we utterly refuse that secred appellation to Dr. Wolcot, whose diagred rhymes found their favourite theme in mocking the harmless' eccentricities and unkinglike savings of poor George III. although some of his pieces, as the "Rasors," and the "Royal Visit to Exeter," are not destitute of a vein of more pleasant and genial humour. Cornwall has at least two living poets of more than local celebrity, whose copious verses are duly chronicled by our editors—namely, Nicholas Michell, and John Harris, whose Lays from the Mine, the Moor, and the Mountain, composed while he was working as a common miner, evince a native power which poverty and obscurity may have weakened but could not destroy. The second volume of this work will doubtless introduce us to the poems of one of the most accomplished and learned residents in the county, of which he is not a native—Mr. H. S. Stokes, Clerk of the Peace. To the rest of the Muses the moist dull air of Cornwall has proved a very Beeotia. Although the fair manuscript of Prideaux's Old very Bootis. Although the fair manuscript of Prideaux's Old and New Testament Corrected is reverently kept at his ancestral seat near Padstow, it is dated from his Deanery at Norwich. Few en possess vigour of mind enough to emulate the zeal of Jonathan Toup, who nearly a century ago sent forth his celebrated edition of Longinus and other classical exercitations from the retirement of his fair living of St. Martin-by-Looe. In truth, the remoteness of this whole district from public libraries would suffice to deter most scholars from attempting such tasks. Throughout the whole length of the county there is no collection of books worth mentioning, save in three or four great country houses, and these formed much at random, representing the varying tastes of successive owners. Hence it results that many Cornishmen whose names owners. Hence it results that many Cornismmen whose names are or will be recorded in these volumes led their mature and active life in other parts of England. Their birth and early education are due to Cornwall, but they owe her little more. Such is, we believe, the case with Dr. Tregelles, the eminent biblical critic, and with Dr. Bastian, whose speculations in biology have recently attracted as much attention. have recently attracted so much attention.

When from the pursuits of literature we pass to the learned professions or the public service, which in their higher ranks are seldom exercised out of London, we naturally find that the shrewd common sense of the men of this county has won for them shrewd common sense of the men of this county has won for them a full share of the prizes of life. Our editors specify the large additions they have been able to make to the list of writings published or left unpublished by William Noy (Preface, p. vii.), the Attorney-General of Charles I., who did not deem it any derogation to his office to draw with his own hand the fatal prerogative writ for the exaction of ship-money. Clarendon, who had no reason to love one who laid the foundation of so much had no reason to love one who laid the foundation of so much mischief, from which he did not live to suffer in person, notes with his usual energy how by degrees this proud and able man thought "that he could not give a clearer testimony that his knowledge in the law was greater than other men's than by making that law which all other men believed not to be so." His industry must have equalled his ability, as plainly appears from the vast number of books and opinions yet extant, for composing which he must have found leisure during a busy life of fifty-seven years. The only other considerable lawyer here recorded is Mr. Justice Buller (d. 1800), now chiefly remembered for his thumb, whose thickness he once assumed, in charging a jury, as the standard measure of a stick with which a man might lawfully chastise

his wife.

Among Cornish Churchmen the most considerable is Jonathan Among Cornish Churchmen the most considerable is Jonathan Trelawney, Bishop of Bristol, one of the illustrious Seven prosecuted by James II., who yet felt able to take the oaths to his successor, and died Bishop of Exeter. A resident in Cornwall, Mr. Hawker, Vicar of Morwenstow, is the author of the well-known pseudo-antique song on the occasion of his arrest—"And shall Trelawney die?" We notice also in these pages a fruitful and miscellaneous writer on learned subjects, Jeremish Milles, Dean of Exeter from 1762 to 1784, whose intellectual calibre may be estimated by the fact that he published a superbe dition of the Poems of Rowley, noor Chatterton's transparent forcery. William Jane, born at Liskeard, Chancellor of Exeter, was the chosen colleague of Patrick, afterwards Bishop of Ely, at the Conference held in 1686, "before His Majesty and the Earl of Rochester, Lord High Treasurer, concerning the Real Presence and Transubstantiation," which ended in the Minister's determination to hear his religious and loss his rest. (Of a middle different cached) substantiation," which ended in the Minister's determination to keep his religion and lose his post. Of a widely different school from this High Church champion was Thomas Haweis, a native of Redruth, the friend and biographer both of John Newton and of that elect lady, Selina, Countees of Huntingdon; he was also commentator and translator of Scripture. Another of that elect lady, Seina, Countees of Huntingdon; he was such a voluminous commentator and translator of Scripture. Another Cornishman, a contemporary of Wickliffe, John de Trevisa, is believed to have translated the whole Bible into English; but, if so, his version lies still in manuscript. Two centuries before him lived one Johannes Cornubienes, who wrote against Peter Lombard s. "Enlogium ad Alexandrum III. Papam," which is rebard a "Enlogium ad Alexandrum III. Papam," which is re-printed in the 129th volume of Migne's huge Patrologia. Of the shoals of clargymen whose modest ambition has contented itself by writing a visitation sermon or some other slight occasional pamphist, our editors have preserved a record whose accuracy, on replaid trial, has never failed us. No one need be teld how much patience and toil they must have expended on these Di-misorum gentium, and that too with the sad conviction that few would appreciate their trouble and fewer thank them for it.

In statemen this county has not been prolific, notwithstanding the forty-two members it sent to the House of Commons before the first Reform Bill. Most of those it returned, such as Jehre Hampden for Grampound, or Sheridan for Saltash, perhaps never saw the boroughs they nominally represented. Committee among a host of obscure names stand forth Sir John Eliot, whose unmerited sufferings and death in the Tower are the darkest blot on the early years of Charles I.'s reign; and the heroic Sir Bevil Grenville, who raised Cornwall for that monarch in the Great Rebellion, and whose menument stands on Lansdowne Hill, near Bath, where he met with a soldier's death in 1643. By the side of such giants we are apt to disparance Sidney Godolnhin. Queen of such giants we are apt to disparage Sidney Godolphin, Queen Anne's Lord Treasurer, the fast ally and connexion of the Churchills, or to think of him only for the sake of his wife, whose saintly life the vilest of courts could not sully, and whose virtues have been so sweetly embalmed in Evelyn's affecting memoir. In our own day the representative of one of the oldest Cornish families, Sir William Molesworth, the editor, if not the disciple, of Hobbes, held the seals of the Colonial Office with much applause of his party. Of warlike glory this county has hardly come in for its share; but Sir Hussey Vivian, the father of the present Lord-Lieutenant, will always be remembered for his repulse of the last French charge at Waterloo; and Admiral Boscawen, the great-grandfather of Viscount Falmouth, and the husband of Hannah More's accomplished friend, lived just long enough nobly to wipe off at Lauthorsh and Care Leve the recent and authors false. off at Louisburgh and Cape Lagos the popular and perhaps false off at Louisburgh and Cape Lagos the popular and perhaps false imputation of undue severity towards the unfortunate Byng. In the great Revolutionary war Sir Thomas Graves was Nelson's second in command at Copenhagen. The long services of the Pellews, especially of Lord Exmouth, have been detailed in one of the most exquisite gems of biography found in our language, his Life by Edward Osler, himself a Falmouth man, whose wonderful

memory, varied information, and quick talents were too long wasted upon editing a local newspaper.

The editors of this Bibliotheca have been anxious to preserve materials which may be available to any enterprising person who shall hereafter undertake a county history of Cornwall; and indeed it is only too certain that the several attempts hitherto made in this direction are, for one cause or other, somewhat unworthy of the subject. The earliest of all is John Norden's Perambulation of Cornwall, made as far back as 1584, though the manuscript now extant in the British Museum is dedicated to James I. It is now extant in the British Museum is dedicated to James I. It is not often met with, and was published as late as 1728, under title of Speculi Britannies pars. "The Survey of Cornwall" (1602), by Richard Carew, of East Antony, a substantial country gentleman, whose living descendant has been a county member, is no doubt the text-book; it is delightfully quaint, and full of excellent matter. William Hals of Merther (b. 1655), wrote a Complete History of Cornwall, which has never been published in full, heavel, week of it appeared in 1750, and are in very very very tree of the second of though parts of it appeared in 1750, and again very recently. The original manuscripts, whose migrations are here faithfully recounted, now belong to Mr. Stokes, of Bodmin. They are said to be full of scandalous charges against the honour of persons long since dead; and, if so, are best left to languish undisturbed. The most voluminous writers on the county history undisturbed. The most voluminous writers on the county history are two clergymen. Dr. William Borlase, Rector of Ludgvan, in his Observations on the Antiquities, Historical and Monumental (1754), managed to find the Druids and their cromlechs everywhere, but his Natural History (1758) possesses more distinctive merit. R. Polwhele, Vicar of Manaccan, himself the head of an old family, gives his History of Cornwall (1803) more of a genealogical character, and contributes much that will prove of permanent value. Mr. Davies Gilbert, of Tresillick, the early patron of Sir Humphry Davy, and his fit successor as President of the Royal Society, put forth a Parochial History, founded on the manuscripts of Hals and Tonkin, just before his death in 1830: but it was compiled under the pressure of failing health by 1839; but it was compiled under the pressure of failing health by one who had not a very happy faculty for this class of study. Of a more recent adventure of the same kind little good can be said, and it may be hoped that one or both of the editors of the Bibliotheca will take up the matter in earnest, and carry it through once for all. We have abundance of materials ready at hand, and a larger pro-We have abundance of materials ready at hand, and a larger proportion than usual of the parish registers are quite complete from the thirtieth year of Henry VIII., when they were first appointed to be kept, or rather from 1507, when the old entries were ordered to be engrossed on parchment. At any rate, the county which has produced antiquaries so eminent as Sir Harris Nicolas and the late Mr. John Carne, who wrote on the "Domesday Manors" and the "Bishopric of Cornwall," will not much longer bear the reproach of being the least worthily commemorated by its loving sons of any similar district in the kingdom. We have learnt so much, and revived such agreeable memories.

We have learnt so much, and revived such agreeable memories, in turning the pages of this volume over and over again, that we have almost forgotten to find fault. Why should the ample list of Cornish worthies be swelled by the names of Lord Byron list of Cornish worthies be swelled by the names of Lord Byron and Dr. Doddridge, whose only connexion with the county was that, taking the packet at Falmouth, they wrote home to report their safe journey thus far? On this principle we ought to enroll Arthur Orton among the notabilities of Devon, on the strength of his hapless love-letter from "Torkey." But these are slight blemishes indeed, and do not sensibly detract from the large debt of gratitude owed by all true scholars, whether Cornishmen or not, for this useful, laborious, and exhaustive publication, whereof we look for the second and final, volume with no small curiosity and investigace.

impationce.

"AZAMAT-BATUK" ON SPAIN AND THE SPANIARDS.

A ZAMAT-BATUK" apologizes in his last chapter for having forgotten altagether to write up to his title. He discovers when it is too late that he has dealt very little in description of the country and the people in the abstract, while he has "written a series of dull recollections of Spain, and of still dullar essays on Spanish subjects." The apology for the matter of the book is very unnecessary, and when he affects to characterize it as dull, we may assume that he is fishing among his critics for compliments. Here is at last a book on Spain of the kind we have been asking for. We have been surfaited with books of touring and sentiment, until we turn from the magnificent scenary in wearinoss of soul, and the Albambra itself begins to sicken us. But Azamat-Batuk tills his pages with his personal experiences among the armed factions who are contesting the government of the country; he takes a comprehensive survey of the present situation, and describes the men who have made themselves most conspicuous. He did a good deal of campaigning with the Carlist chiefs; he visited the head-quarters of the Republican forces; acting as Correspondent of the New York You I ok Herald, he naturally laid himself out for interviewing. Men of all parties, from Don Carlos, Castelar, and Serrano downwards, seem to have consented to be cross-examined with the best possible grace, being eager for appreciation and "moral countenance" from abroad. Azamat-Batuk assuredly is never dull when he deals with the men and incidents of the day, when he is describing night marches or mountain bivouacs, when he is describing night marches or mountain bivouacs, when he is describing night marches or mountain bivouacs, when he is describing his way through pickets on the frontier, or being conducted to a mysterious interview with the Pretender in a lonely chiteau in the Landes. He may be less lively when he goes back to the Seven Years' war, and the politics and promunciamentos of the early days of Christina's rale. But even these chapters gather in

Early in the spring of last year our author made his entry into Spain ander circumstances highly dramatic. The parts of Spain tainted by Carlism had apparently been put in the strictest quarantino by the French authorities, although perhaps the strictness of the surveillance was more apparent than real. At all events when Asamat-Batuk made his start in a friend's carriage from his hotel at Bayonne, a brass cannon in a coffin-like box lay upon the front seat, and the suspicious package attracted no official attention. In a dense forest on the summit of the Pyrences they were stopped by a band of wild-looking men, who undertook to snuggle the active service. At the French frontier village of Ainhous he and his companions called a halt for supper, the landlady being a warm sympathizer with the good cause—it must be somewhat companions, by the way, for some of the people mentioned in the language to be recommended by name to the notice of the authority. ritios on either side. Late in the evening, when every one else had retired to rest, the Correspondent and his companion started under guidance, slipping stealthily out of the village, and three hours rough walking in drenching rain brought them to the first Carlist outpost. Thence it was but a short distance further to General Elio's headquarters. Special Correspondents were less plentiful at that time than they became later, and the old General appears to have been exceedingly civil and hospitable. He offered the journalist a seat in his carriage when he started on a tour of inspection among his troops. It showed the primitive relations between the rank and file and the General commanding them, that the couple of privates forming the escort not only took their seats inside the carriage, but never hesitated to ask the Commander-in-Chief for a light for the coarse cigars they were smoking continually. What was clear then and afterwards was the unmistakable devotion of the population to the cause. Not only when Aramat-Batuk was with Elio, but afterwards, when travelling by himself carrying Carlist recommendations, he was invariably made welcome to the best everywhere. The Cures who generally occupied the most comfortable houses in the outlying villages insisted on his leaving the inns and coming to them for his bed and supper. So in the greater villages and the smaller towns. On the other hand, when the Republicans marched into a place, they found it abandoned to the women and the children. When they made their requisitions, and even when they offered payment in cash, nothing was forthcoming. When they were followed again by the Carlists in due course, sacks of flour were produced somehow, and sheep and cattle driven in from the neighbouring hills. Where loyalty was so universal, there could be no lack of men to recruit the royalist ranks. No one could be no ack of men to recent the repetite ranks. It could have ventured to hang back when the women were such enthusiastic partisans; and the leaders doubtless said no more than they had warrant for, when they asserted that recruiting was a mere question of arms. Even in respect of armament and equipment they did very well considering their difficulties. Residue the arma which they managed to buy and armanded. culties. Besides the arms which they managed to buy and smurgle, they astablished several manufactories which turned out regularly a stablished several manufactories which turned out regularly a literature of weapons. It was perhaps the strongest proof of The Special By N. L. Thieblin ("Azamat-Batuk").

the title of the Carlists to be considered something better than range of guerillas that the troops of the Madrid Government allowed these gun-factories to go on working, although they must have been well acquainted with their localities. As for Carlist cruelties, they would seem, if we may credit the statements accepted by our author, to have been greatly exaggerated. The notorious santa Cruz indeed discouraged making prisoners, as he encouraged his own men never to surrender, but then Santa Cruz was disavowed and sentenced to be shot. As for General Elio, he remarked that it was anything but his interest to be severe to the Republican regulars. He wished nothing better than to bring thom over to his side, if possible, while, by teaching them that they had no mercy to expect, he would have given them the beat of reasons for fighting to the death. Of course there comes a time in civil wars, and especially in Spanish civil wars, when passion overrides policy, as we know by what happoned in the Northern country when Quesado was pitted against Razon Cabrera. But as yet, happily, the Carlist struggle has not passed into that stage; when Azamat-Batuk joined the combatants the generals on either side were manouvring with the most human consideration for human life; and they went on marching and counter-marching, avoiding contact with creditable adroitness. He makes it clear, however, that it was less easy than was generally supposed to propagate the Carlist movement. Not only would it have been the invasion of an enemy's country had they crossed the Ebro and ventured into the plains of Castille, but even the Northern provinces where Carlist sympathies were the strongest would have resented the intrusion of Carlist battalions that had been levied anywhere beyond their frontiers. When the Carlists desired to raise Arragonese, and the Hiscayan or Navarrese general who should have marched to the support of the movement would have been made of Arragonese, and the death.

As for Don Carlos himself, Azamat-Batuk saw him a good deal, and does not greatly believe in him. The qualities that recommonded him to popularity seem to lie on the surface, which may partly explain his having succeeded so wonderfully, and to stop short at a certain point. He has a fine tigure and rather a handsome face, although his features show signs of weakness when you look closely into them. He delights in showing off his horsemanship, and his seat and hand are rather those of the circus than of the hunting-field. He likes the pomp of royal entries and progresses, even among the simple inhabitants of the mountain districts; seem and although affable enough and easy of access, used to keep up much of the ceremony of a Court, apparently from the absence of a sense of the ridiculous. Perhaps, however, these royal progresses, which seemed to be a waste of valuable time, may have proved good policy in the long run, for they certainly animated the loyalty of the people and nerved them to endure their privations and sufferings. But the operations of the troops must have been seriously embarrassed by the strong bodies of them that were detached for the purpose of guarding the Royal person. Not unfrequently, as Azamut-Batuk tells us, a column of a couple of thousand men would be detailed for this service. As to the Pretender's opinions, they are described as an odd mixture of Liberalism and absolutism; on matters of religion he is by no means a bigot personally. In short, he might have made a tolerable constitutional King had he slipped into his hereditary place in a constitutional country, and given himself up to be governed by wise Ministers. But, if Azamat-Batuk judges him rightly, he certainly has not the tact, the resolution, or the genius to triumph over the difficulties of his situation. He might reign in the North, were that admissible. But were he to march on Madrid it is difficult to see how he could conciliate the intense animosity of three-fourths of his subjects, and at the same time preserve the aff

Of Serrano Azamat-Batuk speaks with extreme frankness, considering the friendly footing on which he seems to have been received in the Marshal's pleasant villa at Biarritz. It may be supposed, however, that the politic statesman had a purpose in welcoming the Correspondent of the New York Herald in his family circle. At all events Azamat-Batuk discusses the Marshal's rise and progress, and all the scandals as to his early relations with the dethroned Queen, so as to bring out his ingratitude in the darkest colours. And he goes on:—"Sure it is, that of all living Spanish statesmen, the Duke de la Torre has the most pliable and accommodating political conscience, and that may prove a great advantage just now." Sure it is, we may add, that whoever might have put themselves forward in the revolution that exciled Habella, the Duke de la Torre was bound by every consideration of gratitude and honour to keep himself modestly in the background. Oastelar and Figueras appear to have been equally outspoken in their intercourse with the Herald Correspondent; but they are the men of yesterday, and for the present they count as ciphers. More interesting at this moment are his interviews with the notorious Curé, Santa Crus, who has just been ones more arrested by the French authorities. At that time the Curé had his quarters in the little town of Vera, where he was obeyed absolutely either from love or fear. Indeed he terrorised his followers and friends as much as his enequity. When irritated or offended, with him the blow cases Indeed shooting offhand for a variety of officers in his classin seds, and the bustinado that beat men within an inch of their lives was a

very favourite punishment. When Assanat-Batak paid his visit, the Cure's mood was naturally more disagreeable than usual, for he was himself discounsed by the royal staff, and was under sentence of death by the general commanding the district. It is not surprising that he showed slight regard to the general permission from head-quarters permitting the better "to circulate freely," &c.; still less surprising is it that the bearer was extremely ghad to alip through the Cure's hands, on the pretext of going off in a hurry to see operations elsewhere. But on a second visit Assanat-Batuk saw Santa Crus in a much more genial mood. This time he was introduced by a South American gentleman resident in France, who had been the Cure's generous patron, supplying him freely with the necessary funds for his campaigning. And they had a very pleasant and sociable dinner-party, where the talk turned of course on the services of the guerilla hero and the gross ingratitude with which they had been repaid. Don Cruz Ochoa, ingratitude with which they had been repaid. Don Cruz Ochoa, the Cure's secretary, made it his business to blow his chief's trumpet and dilate on his really extraordinary adventures, Santa Oruz correcting him when he made a mistake. A very semiational story it was, and argued the hero of it to be no ordinary man, although he may be but indifferently endowed with the milder virtues. He had decidedly mistaken his vocation in entering the Church, but it is not very certain that he is better fitted to be a soldier; for, however well he can command, he has never learned to obey. He has the art of inspiring obedience, however; learned to obey. He has the art of inspiring obedience, however; and, more than that, he seems an admirable organizer. He not only equipped and armed his men, but actually managed to make rifles and cartridges for himself with such inadequate means as he found in the little mountain towns. Altogether Azanut-latuk's gallery of contemporary portraits is alone sufficient to recommend his book, especially now that the originals take so prominent a place in the daily telegrams. They are vigorously sketched; from the way in which individualities are distinguished we should take them to be good likengages and they containly give one a fresh in them to be good likenesses, and they certainly give one a fresh in-terest in the usually monotonous details of Spanish military opera-

THE CAREW MANUSCRIPTS.

THE CAREW MANUSCRIPTS.

THE Carew Manuscripts have now been completely calendared. Six volumes have appeared at intervals of about a year, and all that can be learned from these papers concerning Irish history is now in the possession of the public, and made as easy for historical investigators as is possible. Some of the previously published volumes, as our readers know from notices which we have given of them (see Saturday Review for Sept. 19, 1868, July 31, 1869, Dec. 3, 1870, and Feb. 24, 1872), contain information not only of interest, but of the highest importance to those who would form a fair estimate of the relations of England and Ireland, especially during the sixteenth century. The present work runs over the first quarter of the seventeenth century, beginning with the commencement and ending with the conclusion of the reign of James VI. We cannot pretend that all the volumes are equally James VI. We cannot pretend that all the volumes are equally interesting or valuable. And, unquestionably, whatever may be the value of the present volume, it is by far the least interesting of the series. It must have been somewhat weary work for Mr. Bullen to go through and to analyse papers which, from the mere fact of their paucity, are far less connected or intelligible than those he has hitherto had to deal with, and which, from the countries of the residual transfer of the contribution of the residual transfer. parative quiet of the period, present none of those brilliant episodes which distinguish the rebellions of Irish history. Mr. Brewer has had the pleasanter task of criticizing the papers when analysed, and written a preface that emboldens us to continue the subject, which, had we only had the Calendar to guide us, we might have shrunk from altogether, or perhaps very reluctantly have entered upon. Indeed there is scarcely a document which we have particularly marked for comment that has altogether escaped his notice in the masterly introduction which he has prefixed to these

Papers.

The very name by which this collection is known will suggest to all who have any acquaintance with Irish history the main subject of the volume—namely, the Plantation of Ulster. Carew had been sent in the summer of 1611 as Principal Commissioner to inquire into the general state of the country and to assist the inquire into the general state of the country and to assist the Deputy in the arrangement of the Northern province, so as to avoid such mistakes as had been made in the settling of Munster. In this capacity Carew was to take precedence of the rest of the Council, though it was not intended that he should interfere in matters which belonged to the jurisdiction of Sir Arthur Chichester as Lord Deputy. No Parliament had assembled in Ireland for nearly a quarter of a century, and Carew was expected upon his return to report to the King what would be the best time for summoning one. Not much less than half the volume is taken up with the proceedings of the latter half of this year. And these papers, together with the account of the disturbances in the Irish Parliament of 1613, and the "Discourse of the Present Estate of Ireland" in 1614 by Carew, are the most important documents in the volume.

The suppression of the rebellions during the reign of Elizabeth

Calcuder of the Corno Manuscripts preserved in the Archipeleonal Liberty at Lambeth. Edited by J. S. Browser, M.A., and William Bullen, Ber. Published by the Authority of the Lordo Commissioners of Her Melety's Treasury, under the Direction of the Master of the Relia. Lendon, : Longments & Co., Trainner & Co., 1873.

had made room for the adoption of peaceful measures by her mac-cessor. Mr. Brewer seems somewhat jealous lest too much medit should be given to James and too little to Elizabeth; yet he quotes and endorses as substantially true the remark made by Gir John Davys that the defects in the previous government of Ireland had "been fully supplied in the first nine years of James's reign; in which time there had been more done in the work and reforma-tion of this kingdom than in the four hundred and forty years which are yest since the Conquest was first attenuated."

which are past since the Conquest was first attempted."

As regards the first eight years of James I.'s reign we must not, of course, find fault with Mr. Brewer for making no reference to a portion of history which his documents do not touch; but we may be allowed to express our regret that the Carew MSS. furnish no information whatever as to the stirring events connected with Tyrone's renewed attempt at rebellion. Whilst we are upon Tyrone's renewed attempt at rebellion. Whilst we are upon the paucity of documents we venture to call attention to what appears to us to be an omission of a paper which has been printed in Leland's History, vol. ii. p. 425, and which belongs to November 15th of the fifth year of James I., i.e. 1607, and for which a reference is given to Lambeth MSS., No. 617, p. 96. It is entitled "A proclamation touching the earles of Thome and Tirconnel," and was intended to deprecate their being received at foreign Courts, proclaiming them to be fugitives on the false pretence of religion, whereas they had been ennobled by the late Queen in preference to many others who were more deserving, and had no lineal or lawful descent from ancestors of blood or virtue. The proclamation asserts also that they were persons of virtue. The proclamation asserts also that they were persons of no value, who thought murder no fault, marriage of no use, and no man worthy to be estoemed valuent that did not glory in rapine no man worthy to be estoemed valuent that did not giory in repine and oppression, and that they had entered into a conspiracy utterly to extirpate the English residents in Ireland; and it ends with expressing the hope that these men would be treated as rebels by other States and princes. Probably a petition printed afterwards in the same work (p. 443), with a reference to a Lambeth MS., does not belong to the same Collection. It is dated Nov. 12, 1612, and is upon the subject of the l'arliament summoned for the following year.

The first document in the volume holds out to a casual reader hopes which he will soon find disappointed. It is a letter from Lord Deputy Mountjoy to Carew, written a few days after James had been proclaimed King, in very doleful terms, anticipating rebellion. "If," he says, "I shall stay here till all things be so settled that they will never break out again, God knoweth when I shall come over. For my part I do still propare myself for the worst"; and he ends his letter with the request that the King might not be permitted to see his last letter to the Queen, "for it is full of fustian." What this means we are quite at a loss to determine. Is it possible it could allude to a suggestion made about a month before to Carew that Tyrone should be admitted to his submission, pardoned, and created Earl of Tyrone? This letter is supplemented by "a brief relation of the robellion of the city of Cork," which had already begun before Mountjoy wrote it, and both here and at Waterford the mass was openly set up again. But after this several years occur either without any The first document in the volume holds out to a casual reagain. But after this several years occur either without any again. But after this several years occur either without any notice, or else with one or perhaps two unimportant documents, down to the year 1611, which we have already mentioned as being fully detailed; and unfortunately there is not a syllable that throws any light on the proceedings of Tyrone till the year 1608, when, on the division of lands in the county from which his title when, on the division of lands in the county from which his title of Farl was taken, there is just one reference to the departure of "the late traiter Tyrone." With this exception the present volume supplies no information as to the history of Ireland during the earlier years of the reign, till we light upon a document of the year 1613 which purports to be a brief relation of the passages in the Parliament summoned in Ireland in that year. It is, however, prefaced by a slight mention of the attempt at rebellion in Munster, which was put down by the energetic measures adopted by the Lord Deputy Mountjoy, and a very bare description of the plot the discovery of which caused the flight of Tyrone and his accomplices, and of the renewed agitation in Ulster which ended in six counties being escheated to the Crown. A fuller account of all these events would have been very acceptable, but no such all these events would have been very acceptable, but no such all these events would have been very acceptable, but no such account is supplied by this volume, and we cannot help thinking that Mr. Brewer, when he wrote his preface to the preceding volume of these papers, had not looked ahead to see what was coming. There is a sort of half-promise at the conclusion of that preface that the writer would tell the story of the relations in which Tyrone stood to Elizabeth and to James at the time of his submission first to one sovereign and then to the other and how the horse entertained by the Irish and then to the other, and how the hopes entertained by the Irish at their change of ruler, as well as their expectations of assistance from Spain, were disappointed. But nothing of all this is to be found in the present publication, and the editor has been obliged to doubt himself the pleasure of continuing his graphic account of the Irish and their rebellions, and to confine his attention to the actilement of the country, the subject which occupies nearly the whole of the volume.

Nevertheless, though Mr. Brewer has not been able to tell the story how the escheated lands came to be the property of the wn, he has given us a most interesting account of the mode in which they were so successfully portioned out as to lay the foundation of all the subsequent prosperity of the Northern province. It is to the judicious measures adopted by James that Ireland owes the suppression of the irregularities committed both by Irish chiefs and by English soldiers. And under this King,

lands which had hitherto been held by most uncertain tenure were secured to the freeholders, whilst the substitution of a fixed rent in the place of arbitrary exactions both afforded protection to the tenant, and encouraged habits of industry and frugality. The most interesting portion of Mr. Brewer's preface is here, where he is occupied in contrasting the policy of this reign with that of the preceding fifty years in the management of Ireland. From the time of Henry VIII. many Irish chiefs had condescended to resign their possessions into the hands of the sovereign, and receive them again relieved of all uncertainty as to their tenure, because henceforth they could be considered as a grant from the Crown. But though this measure acted as a protection to the great landholders, it by no means secured any better cultivation of the land by the inferior tenant, who was subjected to the same exercise of arbitrary power on the part of his landlord as before. And here Mr. Brewer shall speak for himself:—

as before. And here Mr. Brewer shell speak for himself:—

The lands he [the lord] had thus secured were no better cultivated, the condition of the people no whit improved, the hope of reclaiming them from disorder, barbarism, and distress no greater; in fact less, for the chief had become stronger and more able to tyrannize.

It was no more than even-handed justice demanded that the benefit he had himself received he should be willing to see extended to others. But the Irish Chief, so far from being inclined to this, resisted the attempt with all his might; and it is this resistance which was at the bottom of all his opposition to the English Government during the reign of Elizabeth—a resistance so extraordinarily misrepresented by writers on both sides of the Channel, and held up for an example of Elizabeth's severity on one side and a struggle for national independence on the other. As tenants of the Crown, these Irish chiefs were bound to obey the laws of the Crown, but of that they never had the least intention. They covered the protection that it gave them, and the security of a certain in place of an uncertain title; but submission to the law in return, or admission of the administration of any other law than their own, in the vast territories thus granted them, was furthest from their thoughts—that, I repeat, they resisted; and in their new position were more able to resist than before. I do not say that there were not other concurrent causes; but this, I submit, was the real and original cause; security of their own interests only; an obstinate determination to prevent any reforms, or English protection in any shape being allowed to reach to those beneath them.—P. xvii.

This evil was in the main remedied by the strict administration of justice under James I., who enjoyed, Mr. Brewer thinks, special advantages for prosecuting the task. We must be content to refer our readers to the preface itself, which will amply repay the trouble of perusal, though we are not sure that the writer has not somewhat overstated the case. Anyhow, there will be found a masterly and philosophical estimate of the real grievances of the Irish as well as of the measures adopted for their removal. We have already implied that in the Plantation of Ulster James managed to avoid the mistakes that had been made by Elizabeth in settling the the mistakes that had been made by Elizabeth in settling the Southern province. Instead of reckless grants of territory, in some cases amounting to ten or twelve thousand acres or more, to cases amounting to ten or twelve thousand acres or more, to English settlers, on condition of having no Irish resident amongst them, all the six counties of Tyrone, Armagh, Coleraine, Donegal, Fermanagh, and Cavan were parcelled out in allotments, varying from one to three thousand acres; and thus a number of smaller gentry were attracted, both from England and especially from Scotland, who were content, under the improbability of rising to anything higher in their own country, to settle in Ireland and cultivate their own lands. Under these, Ulster, from having been the most rude and uninformed part of Ireland," slowly developed, and the resulting prosperity of that part of the country at this day bears its testimony to the wisdom of those who planned its colonization more than two hundred and fifty years ago. Another colonization more than two hundred and fifty years ago. Another condition imposed upon these settlers exercised its influence in stimulating them to labour and perseverance. Each undertaker was stimulating them to labour and perseverance. Each undertaker was bound to erect within three years a substantial dwelling-place, and those of the first rank were also obliged to place on their estates forty-eight able-bodied men, born in England or Scotland. Nor were the Irish altogether excluded, a considerable proportion of the land having been granted to them on condition of their submission to English forms of justice and English modes of husbandry, and conforming themselves to English modes of worship.

This last condition reminds us that we have little space remaining for the notice of ecclesiastical affairs, which we should have expected to occupy a more prominent position in these twenty years than they actually do. Mr. Brewer is absolutely silent about the religious difficulty in his preface, and the Carew Manuscripts make but slight allusion to it. Unfortunately there are no more volumes of these MSS, to tell us how the fire which was amould aring in James's reien hunt forth and her Iraliand was amouldering in James's reign burst forth, and how Ireland was afterwards convulsed by feuds and rebellions, which originated mainly in the irritation the natives so keenly felt at the attempt to destroy their religious faith. Here and there we have a notice of the proceedings for the reformation of religion, or a casual reference of the proceedings for the reformation of religion, or a casual reference to the fine imposed for not attending a service at church conducted in a language which not a single native understood. But James was powerless to exterminate the Papal power, even in Ulster; neither did he succeed in establishing the religion which he had set his heart upon. The maxim "No bishop, no king" might do very well for England; but the Establishment in Ulster was obliged to waive its pretensions, and to admit the services of Presbyterians for the sake of those who were prejudiced against prelacy; and the example of the compromise may probably exert a considerable influence on the future position of the Discessablished Church of Ireland.

A FRIEND AT COURT.

WE had but little hope of this story when we found that it opened with the Oxford and Cambridge boat-race, and still less when we found that the hero, Kit Mowbray, was the Oxford stroke. We were alarmed when we read that to the race than had been "one continual flow of visitors—patricians and proletarians," for we foresaw that till the end of the book there would be one continual flow of words—ampullarian, if we may coin the word, and seequipedalian. Still more alarmed were we when the hero was introduced as a man who "looked like form and fettle, and worthy to possess the confidence of his University." We thought we knew too well what was coming—the terrific fight he and worthy to possess the connected of his University." We thought we knew too well what was coming—the terrific fight he would have in which he would hit some scoundrel, whether patrician or proletarian as the case might be, between the eyes, and win a patrician and not a proletarian bride. We felt sure that before the first volume had come to its close the heroine would be in a carriage that was run away with along the edge of a precipice; or in the attic story, as heroines are so often found, of a house that was on fire; or in the Limited Scotch Mail, as it was going through Wigan station; or in some other place where life is not set at a pin's fee, and that she would be sayed by the hero's form and fettle. We were agreeably surprised when we found that Mr. Ewald made the most moderate use of the great strength with which he had endowed his hero. He does indeed go down a mill-race under a huge mill-wheel, but this only indirectly bears on his marriage. He rescues the only child of the great statesman Lord Salamis, and in return gets a Government appointment so good that, when at the end of the third volume the stern parent of the heroine relents, Kit, in a money point of view, is found as "worthy to possess the confidence" of his future father-in-law as in form and fettle he had been worthy to possess the confidence of his University. He does indeed knock thought we knew too well what was coming—the terrific fight he his future father-in-law as in form and fettle he had been worthy to possess the confidence of his University. He does indeed knock the villain down, but as the villain long before had ruined his health with drink, it is no great credit to Kit. Later on no doubt he gets a sword run into him by the villain, who, to the reader's great relief, goes mad; but though the dangerous wound that Kit received greatly improved his position with the heroine, yet it might of course have been received by a man who was gifted with neither form nor fettle. On the whole, the author makes so very little use of Kit's athleticism that we scarcely see why he need little use of Kit's athleticism that we scarcely see why he need have introduced it at all. The boat-race, however, takes up twenty-six pages, and so no doubt fulfils a very useful purpose. The last few lines which ends the patricipal which it is described. afford so happy a mixture of the patrician and the proletarian styles of speaking that we should do wrong not to quote them:—

By the time Oxford had reached the Brewery Cambridge was two lengths behind, distressed, defeated, but not dishonoured.

And now loud yelled the crowd, and bang! bang! boomed the cannon, as dark blue, fresh as paint, sent her boat past the winning-post, and Cambridge, toiling astern, heard the voice of the judge cry out, "By four clear lengths!" And so the race was over, and Oxford scored another victory to her already long roll of successive triumphs.

"Clothe up! Paddle back!"

It must not be thought, however, that Mr. Ewald often con-descends to use such an expression as "clothe up." He has a good many very big people to deal with, and he uses very big words. Kit's aunt is no less a lady than the daughter of "the Most Honourable the Murquis of Tunbridge," as he is twice called. Why this particular Marquis is a Most Honourable, and why his daughter, Kit's aunt, in page 36 before she is married is Lady Selina Rusthall, and in page 139 after she is married is Lady Isabella, we are not patrician enough to pretend to know. This Lady Selina, or Isabella, whichever name her godfather and godmother had given her, was "the châtelaine" of Yllton Tyrrell, while Lady Barillon, the aunt of the heroine, became "the châtelaine" of Royston. A hero who is nearly related to a Most Honourable Marquis and has two aunts who are châtelaines Honourable Marquis and has two aunts who are châtelainer scarcely requires, we should have thought, to be carried under a mill-wheel to get a friend at court. And yet perhaps to rescue the only daughter of a great Minister may in these days of competitive examination be the only means a rowing-man has of entering the Civil Service of his country. Among Kit's acquaintances was one gentleman who was "a misogynist" and another "whose head was brachycephalic." Muriel Barillon, the heroine, on one occasion "arranged her drawing paraphernals," while Kit, the hero, on another occasion "could have wept as his gaze met his knapsack, thick boots, and other Alpine paraphernalia." He drank beer "at an ancient hostel, yelept the 'Pferd,'" and he belonged to "that great department of State yelept the Board of Conventions." Muriel "on the altar of filial duty had sacrificed the dictates of her heart," for her father, maintaining that he was "illumined by the light of the present, and not of the past," was for nearly three volumes obstinate in his determination that she should only marry a rich man. Among Kit's comrades at the Board of Conventions was one of whom it is said that "the ego of his own intellect was the standard by which he measured everything"; while he and another said that "the ego of his own intellect was the standard by which he measured everything"; while he and another comrade with whom he went one day in "s speedy hancom, were deposited on the pavement in front of Shoreditch Station. It was there they had elected to alight." Let us hope that with the spread of education the day may come when even the most prole-tarian of cabmen will ask his fare where he elects to alight, what

A Friendist Court. A Novel. By Afex. Charles Ewald, F.S.A., Author the "Life and Times of Algunous Sydney," &c. '3 with. Lundon saley Brothers. 1874.

there he may deposit him. Though in this story people going on foot "wend their way," though "the day wanes," though "a sunset tinges the mellowed somery with its cold, bright sheen," though a certain lawyer "has never put his leg over a horse for the last decade," yet we regret to say that we read that a squire on his deathbed "would lay (sic) for hours quite silent, as if rapt in reflection." Before a writer uses wending, waning, sheen, and decade, it would not be too much to sak that he should know the difference between he and low. It is not only in attle that there difference between his and lay. It is not only in style that there are inaccuracies. The Friend at Court, the great Minister, Lord Salamis, "the upper part of whose massive head phrenologists say Salamis, "the upper part of whose massive head phrenologists say is the finest monument to intellect they have over seen," was not so accurate in his facts as so great a man should have been. A monument, however, is generally set up to that which no longer exists. And so it would seem to follow that a head which is a monument to intellect must be as empty of intellect as any funeral urn. We suppose that Lord Salamis with his Eastern origin, "his epigrammatic sharpness, his eloquence, his biting sarcasus, and fierce denunciations," reproached too, as he was by his enemies as being an "Attic Adventurer," is meant for Mr. Disraeli. Whether Mr. Disraeli is as inaccurate as Mr. Lowe pretends we need not now consider. 'Certainly he is not so inaccurate in literary matters as Mr. Ewald in his admiration makes Lord Salamis. "Hume's father," says Lord Salamis, in a long address he made to Kit, "thought his son fit only to be a merchant." The elder Hume must have formed his judgment somewhat hastily, and on somewhat scanty facts, for "my father," merchant." The elder Hume must have formed his judgment somewhat hastily, and on somewhat scanty facts, for "my father," says Hume himself, "died when I was an infant." "Burke's first speech," says Lord Salanis, "was coughed down." Every one will remember the passage where Macanlav says, "The House of Commons heard Pitt for the last time, and Burke for the first time, and was in doubt to which of them the palm of eloquence should be assigned. It was indeed a splendid sunset and a splendid dawn." Again, "Gibbon's History of Switzerland was a miserable failure." Let any one turn to Gibbon's Autobiography, and see how utterly misleading is such a sentence as this. Besides Lord Salamis, there is another learned blunderer in the story, a Mr. Kingairloch, who, speaking of art. says: speaking of art, says :-

All I know is, that it wasn't more developed in Germany than in France or England. As for Rembrandt, he was a Dutchman, and the Dutch are different from the Germans. Rubens—yes, Rubens was a German—but he owes all his fame to having followed the Dutch school of art, and not the German.

It is hardly worth while to expose the inaccuracies in such an absurd statement as this.

We must do Mr. Ewald the justice to admit that, if Lord Salamis is inaccurate in dealing with the great, Mr. Ewald is not inaccurate in dealing with Lord Salamis. His Lordship's consistent affection for a cigar or a cigarette and strong black coffee is admirable. "Tobacco is the Muse of conversation," as the hero said while recommending some "weeds." "Tobacco is the muse of novel-writing" might with more truth be said, for we doubt if a certain school of novelists could write their stories if they were not allowed on avery other page (or so to position that a given not allowed, on every other page or so, to mention that a cigar was lighted, or else thrown away. His Lordship one morning "was slowly puffing the smoke from his fragrant cigarette," while "was slowly puffing the smoke from his fragrant cigarette," while "Kit was smoking his after-breakfast cigar (that most enjoyable of all weeds!)" Enjoyable as is the after-breakfast cigar, yet the after-dinner cigar would seem to be of more practical service, for it is "the cigar of digestion" which should be "placidly puffed after "a capital dinner and a proper homage paid to the choicer vintages." Whether Lord Salamis, by indulging in this, saved his digestion for his own good and that of his country, we are nowhere distinctly told. His midday practice, as described in the following naragraph. would lead us to expect that the close of his day was paragraph, would lead us to expect that the close of his day was not unlike the opening:—

It was the custom of Lord Salamis always at one o'clock to order a cup of black coffee, and to indulge in the luxury of a midday cigar.' As soon as he had got his long and full-flavoured weed well under weigh, and had ensconced hisself in a roomy cane rocking-chair, he sent for Kit.

It may not be amiss to mention, as an interesting trait in Mr. Ewald's characters, that to their love for tobacco and black coffee was added a high appreciation of "dry sherry." Those novelists who drag into their stories these minute accounts of what their heroes like to eat, drink, and smoke, doubtless only wish to let the world know what they themselves like to eat, drink, and smoke. One writer, who is proud of his steady appetite for rumpsteaks, oyster sauce, and Presburg biscuits, makes the lives of his favourite characters a continual feasting on these deinties. Another who, like Mr. Ewald, does like a cigar after breakfast and does not take milk in his coffee, and prefers a dry sherry, makes his men of genius and of virtue share in the same innocent tastes. We may suggest that a good deal of trouble would be saved to the writer, and a good deal of weariness to the reader, if each writer set forth his appetites on the title-page and kept his eating, drinking, and smoking out of his story. The title-page of the novel before us, for instance, would have been somewhat after the following fashion:—A Friend at Court. A Novel. By Alex. Charles Ewald, F.S.A., author of the Life and Times of Algernon Sydney, &c., and a lover of cigars, black coffee, and dry sherry. There would have been a further convenience in this. As there is clearly a close, if an unexplained, connexion between the kinds of foods a man relishes and the kinds of foods he likes, any one at a glance could tell whether an author It may not be amiss to mention, as an interesting trait in Mr. of kooks he likes, any one at a gisnoe could tell whether an author was likely to suit his palate or not. For though he could not be sure that anovelist, however much he might agree with him in tastes,

would produce an agreeable book, he might be quite certain that a novelist whose tastes were altogether opposed to his would produce a book that would be anything but agreeable. Admirable though our suggestion is, we have but little hope that it will be adopted. For in the modern novel, as at a City feast, talk about eating and drinking helps to fill up a gap which would have otherwise appeared.

otherwise appeared.

From the space we have given to criticism on the composition of this story, our readers may perhaps think that it has scarcely any plot. Fortunately for them, we have no space left to spoil its interest by an analysis of it. We will only say that, as the heroine's father, a man of large estates, will not let his daughter marry a comparatively poor man, a will is found, when things are at their blackest and matrimony is at its furthest, "in the strong-room of a firm of solicitors, beneath a broken stone slab, under a box." One of the two scoundrels who had thus hidden away the will was the drunken madman, while the other, when the right time comes, gets knocked down by an engine at Broad Street station. Both his legs are crushed, but "he lingered two days and two nights, and on his recovering con-Broad Street station. Both his legs are crushed, but "he lingered two days and two nights, and on his recovering consciousness a few hours before death," made a confession which fills seventeen pages. It is hard to decide whether the great length to which his confession extends testifies more to the skill of the surgeons at St. Mary's Hospital, Shoreditch, where he was nursed, in thus husbanding his strength and prolonging his life, or to the natural gifts which he possesses in company with Mr. Ewald of telling a short story in many words. Considering the great facility for composition which he showed when his legs were crushed, we cannot but feel that, had he kept out of the way of the engine, he might, if he had lived, have written quite as good a novel as A Friend at Court.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

THE UNITED STATES.

The Annual Subscription to the SATURDAY REVIEW, including postage to any part of the United States, is £1 10s. 6d., or \$7 80 gold, and may be forwarded direct to the Publisher, at the Office, 38 Southampton Street, Strand, or to Mr. B. F. STEVENS, American Agency, 17 Henrietta Street, Covent Garden, London. THE BUDGET.

The been much worse. The repeal of the Sugar duty is judicious, and, when Mr. Disparal's Aylesbury speech is remainbured, it may be swall considered meritorious. There is no objection, if the means tan be spared, to the removal of two or with the important and the dissatisfied brewers, who grid the preference with has been accorded to horse-ballers may councile themselves with the contemplation of a breedent which ought to render their own claims hereafter invalid its applied to the discharge of debt, and a considerable sum might have been advantageously applied to the purpose. In some of the remaining parts of his Budget the Chancalor of the Exchequer probably yielded to a pressure which may perhaps have been irresistible. Mr. Disparall had distinctly promised that the ratepayors should be relieved at the expense of the Imperial revenue, and a large majority of his milierents, following the example hastily set by their leader, had pledged themselves at their elections to tamper with the Incometax. It would perhaps not be unjust to attribute to Sir Starrord Northcote's better judgment all the sounder part of his proposal, and to his party connexion the unfortunate concessions which he has made to clamour and prejudice. The sacrifice of a million and a half of Incometax during the current year, and of a targer permanent amount, inflicts a low on the revenge utterly disproportioned to the relief of the targetyre. The tradesmen who habitually complain of the temptation to fraud which they are apparently thalple to resist will not be conciliated by a reduction to the extent of one-third of their opportunities of evasion. A large section of the commercial and professional contributors to the tax have never joined the ignorant agitation against it, and the owners of property, who pay the largest charge of that tax, have not asked for the boon which they now grading the distance of the relief o

taxed at three millions and a quarter.

It is not infprising that the Opposition should have included in a complacent cheer for the first time since their reverse of fortune when the Chancellor of the Exchequer enformed, with many complimentary expressions to his enforcement predecessor, that the surplus amounted to five natification and schalf. It was indeed improbable that a financiar of consummate ability and of long official experience should have made a public statement on such a matter without having previously ascertained that he would be able in some size to justify his estimate; yet it would have been better. Both in Gladstone and Sir Stateogr Northcotte had adopted a more cautious method of calculation. The satisfic is a saided by the assumption that the revenue will introduce the information and schalf in the course of the Excontinua in a satisfic and the Stamps of 350,000. The large part of the interest and the Stamps of 350,000. The large part of the interest and the Stamps of 350,000. The large part of the satisfic shall revenue which is derived from duties on finance state the last two or three years, and there is no fusion to a surplier that two or three years, and there is no fusion to a surplier that the of the expenditury rise in the satisfies the satisfies about to a fall of the satisfies a satisfies a satisfies

is impossible to doubt that, with the diminution of income colliers and ironworkers will diminish their consumption of beer, spirits, and tobacco. It would not be surprising if the Excise and Customs revenue should display a fulling off in the ensuing year; and, notwithstanding the deference which is due in their own sphere to the permanent heads of the Revenue departments, it is a cause for regret that they should have induced two successive Ministers to adopt calculations founded rather on the experience of an average of years than on the present circumstances of the country. The Chancellos of the Excheques had apparently hesitated to adopt the estimates which had been submitted to his predecessor; and his acquiescence was explained by a vague hope that the repeal of the Sugar duties would by some undefined process stimulate commercial prosperity so as to compensate for any deficiency in the estimated revenue. Unless the advantages which will undoubtedly result from the repeal assume the form of arrincrease in the consumption of taxable commodities, the anticipation of an equivalent for any excess in the estimated revenue will be an equivalent for any excess in the estimated revenue will be disappointed. It is possible that some of the money saved on the price of sugar may be spent on tea, which is still subject to duty; but the increase is doubtful, and at best it will be insignificant. It seems on the whole not improbable that the greater part of the estimated increase of revenue may prove to be imaginary. If the expected surplus of the ensuing year should be converted into deficiency, the Government will not be acquitted of rashness because it may have relied on the authority of Mr. ness because it may have relied on the authority of Mr. GLADSTONE. The considerable part of the Stamp duties which is levied in the form of a percentage on different kinds of property will almost certainly show a reduction. Probate duties, legacy duties, and ad valorem stamps on contracts will correspond to values which within a few months have been greatly diminished

The arguments of the Chancellos of the Exeneques in

The arguments of the Chancellos of the Exeneques in favour of an attempt to reduce the debt were perhaps open to criticism; but it would be idle to examine doctrines which seem to have had no practical influence on the Budget. The margin between estimated and actual receipts which ordinarily furnishes the means of a moderate payment of debt had already been unduly curtailed; and the half-million which is to be invested in the purchase of Terminable Annuities is derived from a mere change in the mode of keeping the accounts. Repayments to the Exchequer of advances have hitherto been credited to the capital account as part of the balances; but the Auditor-General has suggested that, according to the true principles of book-keeping, the interest ought henceforth to be distinguished from the instalments of principal. By adopting the suggestion the Chancellor of the Excheques increases his nominal surplus from 5,500,000l. to 6,000,000l., and he applies the windfall to the redemption of debt according to the system which seems to be definitely established. He is aware of the objections to an artificial contrivance for producing a simple result; and he admits that it is impossible to place Terminable Annuities in the open market; but the Savings Banks still furnish a large fund which the Government can manipulate at its discretion; and the taxpayers of 1885 will not inquire too curiously into the process by which they will find themselves relieved from a considerable amount of debt. Another dispreportion of general argument to specific policy consisted in Sir Stafford Norracotr's arguments against the repeal of the Incometex. It is undeniable that the tax ought to be retained a mighty structure, which has been in continuous.

"of the country not less than 350,000,000l." ought assuredly not to be subverted without full consideration. The reduction from threepence to twopence in the pound can be justified by no sufficient argument of principle or expediency, unless it is preparatory to total abolition. That the Government inclines to a measure which will be equally diapproved by sound financiers and by prudent politicians, may also be inferred from the omission of any plan of relief to the smaller contributors to the Income-tax. There had been an almost ununimous consent of opinion in favour of an elevation of the standard of exemption; nor would any other change have been either more equitable or more effective in the mitigation of the undoubted annoyances connected with the tax. The CHANCELLOR of the EXCHEQUER may possibly have been compelled to compromise with colleagues who had too hastily pledged themselves to bid against Mr. GLADSTONE'S profuse offer of relief.

The Budget will probably be on the whole not un-popular, and in many parts it will be exempt from the oriticisms of members of the late Government. The abolition of the Sugar duties is an almost necessary consequence of the previous reductions effected by Mr. Lowe, because the interference with trade and manufacture was a constant quantity, while three-fourths of the duty had been abandoned in two successive remissions. If Sir Stafford Northcore had been loss amicably disposed towards his predecessor, he might have remarked on the price which the country sometimes pays for the advantage of possessing an inspired statesman. The whole course of the successions are inspired statesman. of the sugar trade has been for three months atterly paralysed by the premature declaration of the surplus, and by the announcement that a reduction of duties was probable. The Treasury will not recover the amount which it has lost; and either dealers or consumers, and perhaps both, will have suffered perceptibly by the derangement. The abolition of the Sugar duty can scarcely fail to be highly beneficial to the community. The retail price of one of the most nutritious and useful of all articles of con-The abolition of the Sugar duty can scarcely fail to aly beneficial to the community. The retail price of sumption will be reduced; and the CHANCELLOR of the Ex-CHEQUER reasonably expects that, as a result of the measure, England will become the great centre of the sugar trade. The minor parts of the Budget are, like reductions of taxation in general, not objectionable. The fault of the scheme is that the estimates of revenue are too sanguine, and that a portion of the Income-tax has been unnecessarily abandoned.

GERMANY.

THE breach between the German Government and an important section of its Liberal supporters has been made up by a compromise satisfactory to both parties. peace effective of over 401,000 men has been voted, not in perpetuity as the Government wished, but for seven years. The dissentients had previously discussed a compromise by which the numbers of the standing army in time of peace were to be put at somewhere about 20,000 less, and this smaller number to be voted in perpetuity, leaving the surplus to be voted or not annually, as Parliament might determine. The Government has, however, preferred the present arrangement, by which it gets as large a force as it asks for, but is only certain of it for seven years. Nor can there be much doubt that, if the main object of the Government is to be obtained, and if the military authorities are to know precisely the value and extent of the force on which they can rely, it is much better that there should be a limitation of time within which the arrangement is to be in force, rather than they should be every year in a state of renewed uncertainty as to whether they would not have twenty thousand men struck off the effective army. Marshal Von Moltkespoke in thodebate which took place afterit had become known that the compromise was accepted both by the Government and by those who, however anxious to support the Government, could not admit that the control of Parliament over the army was to be abandoned for ever. He said that he still retained his opinion that the Government ought to be in a position to let the world know that it had as large an army as it thought necessary to meet any Power or Powers that wished to disturb the peace of Europe; but he accepted the compromise, and felt no doubt that at the end of meyen years a patriotic Parliament would again take care that the Eatherland was adequately protected. To the amount of the force there was no real Parliamentary againstition, although outside there were muserous writes who

undertook the easy task of proving that a peace effective of 400,000 men must be a serious burden on the resources of the country. But among those who were invested with real responsibility there was no resisting the Ministerial argument that, in face of the enormous military preparations of France and Russia, Germany was not down too much when she countried herself with occupying the third place in the list of nominal military streeth. That peace can only be secured by its being know that Germany can any day take the field, and that a large and well-prepared army is thus the indispensable basis of German finance, was urged with considerable force by the FINANCE MINISTER, and Marshal Von MOLTKE again the Finance Minister, and Marshal Von Moltke again entreated his countrymon to bear in mind that, as they had been within hearing of the shouts for revenge that had been recently raised, they final keep their hands on the sword. This, it must be remembered, is the Gorman way of doing business. What they think important to be understood they say plainly and forcibly, regardless of any effect it may have in bringing about the very evils against which the warning is given. That France would thirst less for a war of revenge if Gorman statesmen affected to believe that such a war need not be apprehended affected to believe that such a war need not be apprehended, is a thing which men of the stamp of Von Moltre utterly disbelieve. In their view the only way to prevent a war of revenge is to make it visit improbable that a war of revenge would be a successful war. To effect this it is necessary that Germany should not only have a large and strong army now, but be absolutely determined to keep such an army on foot for a long time to come; and Marshal Von Moltke does not he sitate to say that Germany will need fifty years' possession before she is left in undisturbed ownership of her newly acquired territoria. One way of regarding such gloomy anticipations of the future is to treat them as showing what is the cost to a conqueror of a war of conquest. But this, it is scarcely necessary to say, is not the German view. What Germans say is that Germany by a terrible war gained certain bulwarks against a nation always longing to invade, spoil, or weaken her, and that the nation which has thus lost the opportunity of doing harm will for many years cling to the notion that it can recover somehow the means of doing harm which it has lost. Foreign critics may laugh at this way of putting things, but it is the way of patting them which the great body of Germans honestly believe to be the true and fair way; and it is to this. belief, and not to any pride in conquest or lust for territory, that the Government has appealed in its attempt to make the military strength of the country safe for a long time to-come from the uncertainties and vacillations of Parliamontary government.

Yet the German Government appears to be so far desirous of conciliating the good opinion of Europe—for which, however, it probably cares comparatively little-and the good. opinion of those Germans who regret that their country should be accused of following a reckless and arrogant policy, that it has on more than one occasion lately made an endeavour to exculpate itself with regard to the treatment it has bestowed and is bestowing on France. That there has been any unreasonable interference in French politics is strenuously denied, and possibly there may have been some exaggeration in the accounts that have been given of the various acts of dictation to which the Government of Marshal MacManon has had to submit. The French bishops more especially seem inclined to give trouble to a Ministry which is too little Legitimist for their tastes, rather than to oppose the German Government for the sake of opposing it; and if the German Government has requested in a somewhat decisive way that manifestations of afceling hostile to Germany may be repressed in France, it is difficult to see how the French Government can meet the argument so often applied to all meddling despotisms, that as for its own purposes it interferes with everything and everybody, the permission to indulge in expressions of enmity to a foreign Power is really a sort of challenge on the part of the Ministry to the Government which it allows to be attacked. Marshal Von MOLTEE, however, thought proper to go further, and to justify the treatment of France wi peace was made in 1871 on grounds which most candid. Germans would agree in considering absolutely untenable. He said that Gormany in the last war had not abused her power, as she could have forced the French. Government to great anything also chose to demand, but she only exacted the land which a realess country had formerly torn from a weak neighbour. Neither part of formerly torn from a weak mighbons. Notice part of this statement is more than superficielly time. Germany

might no doubt have asked and got more, but she asked and got as much as the thought it would suit her to got. She might have asked for more territory, but what would have been the use of it to her? She would only have had so many more hundreds of thousands of disaffected Frenchmen to govern and to pretend to treat as German subjects.
Her internal difficulties would have been proportionately
present, and the German Parliamentary Opposition made opertionately more formidable. She might have asked for mire money, but she asked for as much as she thought she could get without making it impossible for a regular, orderly Government to exist in France capable of finding the money bargained for, and finding it quickly. Nor, after experience has shown how resolutely Alsace repudiates in practice its historical connexion with Germany, is there any advantage in covering annexation with the thin veil of a fictitious rescue of loving German hearts from the tyranny of the stranger.

The real defence of Germany is of a totally different kind. Germany wanted a strong military frontier, and has got it and is resolved to keep it, regardless of the hitter regrets she thereby causes to the inhabitants of the territory she has seized. She asked for a large sum of money-a sum as large as she thought France could pay without so great an inconvenience that a Government strong enough to find the money, and to give Germany some one to deal with for the future, would become impossibility. The primary object of the indemnity was to indemnify Germany for the war; the secondary object was to enable her to complete her military system, and more especially to make her newly annexed provinces available in the highest degree for the purposes of a military safeguard for which they had been taken. The indemnity was not meant either to amass capital for Germany or to cripple France so that France should be permanently impoverished. These are the grounds, if they can but be established, on which the treatment of France by Germany is to be justified; and it is to be regretted that so eminent a speaker as Marshal Von Moltke should have gone out of his way to justify his country on grounds which his countrymen must be sensible will not bear examination.

The majority for the Government on the Army Bill was nearly eighty in a house of less than four hundred, so that everything has been arranged satisfactorily. Once more, however, we are told that Prince BISMARCK had to come in as the deus ex machina. He can hardly leave his sick-bed, but no one could get on without him. He had first to decide that the seven years' compromise was admissible, and then to get the EMPEROR to agree to it. If it speaks volumes for Prince BISMARCK'S influence, it speaks also much for the EMPERON'S substantial good sense, that when the Prince says plainly that a particular thing is the one right thing to do, the EMPEROR at once comes round, gives up his own opinion, and lets the CHARCELLOR have his way. One of those inventive politicians who can see through any number of millstones lately wrote to the Times to say that the notion of making the vote for the army a perpetual one was a cunning device of a narrow clique of Pietist aristocrats, who thought that, if they could once get the Eurenon to commit himself and take up the question as one affecting his own personal honour, things would get into such a mess that the only outlet would be the resignation of Prince BISMARCK and the installation of a reactionary Government in power. The Pietist Conservatives would then ally themselves with the Ultramontanes, undo all Prince BISMARCK'S work, and govern every part of Germany on purely despotic principles. That there may not have been politicians in high places capable of dreaming so very silly a dream it is impossible to say; but it is obvious that the EMPEROR and his military advisers took up their position on what seemed to them very good grounds, and because they believed that they were only asking what the interests of Germany imporatively demanded. They have to a very great extent succeeded, as the establishment of an effective of 400,000 for so long a period as seven years is an embodiment of their views with which they may be very well satisfied. It is the Government, and not the ters of the authority of Parliament, that has got the est of it in the compromise. But the Eurenon and his military advisers held so very strongly, and even passionately, to their opinion of what the Parliament must be required to concede, that, had it not been for the intervention of Prince Busineck, the Engagement and the intervention of Prince Busineck, the Engagement in the intervention of what fudence justified. It is this personal influence of Prince Business over the Engagement renders the isolated prince as Chanceller for the dime.

indispensable. A system of Government in which appears as Chancellor is everything, and his nominal solicates are nothing, cannot last very long. Another Trince Bestages is not to be found, and Prince Bestages is not only mouth, but, like other mortals, is liable to be all and to become incapacitated for work. He cannot be always at head to do everything, say everything, and settle everything. But while the Emperon lives it is not easy to use how the present system could be changed advantageously. The Emperon thinks too highly of himself, and is thought of too highly by his subjects, to make it possible that he should stand by and let a group of Ministers govern, and it was with unfeigned astonishment and pain that he discovered that, after he had settled what ought to be the footing on which the army should be placed, any one should have a word more to say. Prince Bismasca, and Prince Bismasca alone, can bring him round, and make him trust a judgment which he knows to be surer and sounder than his own. When the Emperor has passed away, but not before them, a new order of things may be commenced with a retional prospect of success.

THE EDINBURGH REVIEW AND THE WILLOS.

S the traditional and official organ of the Whigs, the La Edinburgh Review very properly sets itself, in the first number that has appeared since the Dissolution, to account for what has happened, and to conjecture what is going to happen, to its friends. It naturally feels that now is the time when it should be made clear what Whig principles are, and how it is that the party which has assumed to interpret them has met with so much recent calamity. One or two modest admissions at the beginning harmonize very well with the humble position of men whose fortunes are for the moment depressed. The Edinburgh makes no scruple in conceding that, if the Whigs were always in office, which they ought to be in the nature of things, it is difficult to see how the great scheme of government by parties, a scheme dear to Whigs as part of the British Constitution, could well be curried on. Further, it not only allows, but claims as in some special sense a pure Whig truth, that a Minister who has lost the confidence of the country ought not to remain in office. Nevertheless it bitterly mourns the folly of Mr. GLADSTONE in dissolving Parliament, and compares his utter want of sonse with that of the chiefs of the late French Empire, who, instead of guarding Paris, marched all their forces off to Sedau. However that may be, Mr. GLADSTONE'S Government is at an end somehow, and must be brought to the bar of critical philosophy; and what is the verdict that must be pronounced on it? cal account of the GLADSTONE Government is, that every thing it did of a purely Whig type was very wise and right and creditable. What it did not of a purely Whig type was dangerous and ruinous. But then what was it that it did of a purely Whig type, and how are we to distinguish it did of a purely wing type, and now in a Whig way, and the between the Liberal party acting in a Whig way? The answer is Liberal party acting not in a Whig way? simple enough, if once one great guiding principle is firmly rasped. Whatever the Liberal party does that answers is Whig; whatever it does that does not answer is not Whig. Lord PALMERSTON was totally inactive, but it then paid to be inactive, and he was walking in the straight, simple path of Whig principle. When Mr. GLADSTONE came in he carried half-a-dozen great measures with comparative case and amid much applause. These changes had, it appears, been all prognosticated in the Edinburgh itself by Mr. GLADSTONE himself in 1867. All these measures were founded on the dear old unexceptionable Whig principles for which, as we know, Mr. Fox and others have repeatedly done things more or less striking as occasion offered. But Mr. GLADSTONE was not a pure Whig. He had a taint of the Manchester School which led him and his Whig colleagues to push the principle of peace to the dangerous extreme of the Alabama Aristration, and the Whig principle of retrenchment to Breasury aquabbles and quarrels with the Civil Service. This is the gist of the Edinburgh article, the cream of its philosophical reflections. The Whigs might go on for ever, inactive when inactivity was the read to success, full of legislative energy when legislation was wanted, always ready for everything, but never ready factor much. Unfortunately there is one deliciency under the wanted was a successful to the them. The consequence is that they have always to

ally themselves with dangerous outsiders, with Nonconformists, Ultramontanes, Cobdenites; and although the alliance does very well for a time because there is enough Whiggism in it to keep things in a comparatively wholesome state, yet sooner or later the taint shows itself and then the fruit drops from the official tree.

Turning from the past to the present and the future, the Reviewer is filled with a rapturous admiration of the present Ministry, which is, he says, to all intents and purposes a Whig Administration, and with a sort of gloomy contempt for the heaten and dejected Liberals. The con-templation of the present Ministry is in every way delightful to him. In the first place, it is most fortunate in the circumstances in which it has taken office, and it is the Whigs who have created these happy circumstances. There is a magnificent surplus; there is peace everywhere; a war has just been successfully finished through the wise foresight of the late Government; Ireland is tolerably quiet. Exactly the amount of big legislative measures has been recently carried to recommend and justify repose; the nation is rich, powerful, and contented. For all these nation is rich, powerful, and contented. For all these things Mr. DISRAELI is indebted to his predecessors, who in turn were indebted for them to the Whigs, who showed how all this might be managed. Somehow or other, in spite of the great claims of the late Government, always excepting Mr. Lowe, whose name acts on the mind of the Reviewer like one of Mr. Lowe's own pink flies, the country got tired of these model Whig-influenced men. But who has succeeded them? A set of people wholly, delightfully, undeniably Whig. It is true that Mr. DISRAELI is so much of a Sphinx that there is no saying precisely what he may not be after, and no doubt Lord Salisbury is a little "fervent"; but then there is Lord Derry, who is a Whig of the Whigs, and ought to be the head of the Whig party, only Dis aliter visum est; and there is Lord Cauras, who loves moderation and compromise; and, in fact, there is all the rest of the Ministry, who are good Whigs every one. And the Ministry has been most beautifully put together. It is aristocratic, but not too aristocratic; for a banker, a farmer, and a tradesman have been put into office, like faint shreds of ouion to flavour the Ministerial salad. The beauty of this arrangement, this suspicion rather than presence of onion, fairly overcomes the Reviewer; and it must be allowed that a man's mind must have been steeped in Whiggism and Whig principles, and a Whig manner of regarding life must pervade his whole being, when this illustration of the onion can occur to him and seem to him in every way satisfactory. When we recall the history of the Whig party, and remember how the onion shreds, the Sydney Smiths, the Macaulays, and Moores, used to be adroitly mixed in to the great glorification of the rest of the salid, we feel how thoroughly a true Whig must be able to relish the cunning with which Mr. DISEARLI has assorted his materials, and how keenly he must appreciate the nextness of an arrangement by which these happy successful officials are actually permitted to give a certain flavour and zest to a combination of incontestably great people. Lastly, the Ministry are to be congratulated on having no Opposition Ministry are to be congratulated on having no Opposition worth mentioning to embarrass them. The adherents of the late Ministry are all at sixes and sevens, and there is no virtue left in the party. Almost all the old Whigs have been made peers, and there are no young Whigs; but the Reviewer does not like to suppose that this will last for ever. He trusts that there may be a Whig nucleus formed, apply the first but destined to grow who will exist to their small at first, but destined to grow, who will stick to their principles, and learn how to wait quietly and see which way the wind is blowing, and who will strive to get the art of claiming everything successful as their own. This process, which alone can lead the Whigs to recover their birthright of office, must necessarily be a slow one; but meanwhile things are not so very bad while there is the present Ministry, with its suspicion of onion about it, to comfort the soul of a Reviewer.

It never seems to have occurred to the Reviewer to ask himself why there are no young Whigs, why most moderate Liberals hate above all things to be called Whigs, or how it has happened that the bestowal by Mr. GLADSTONE of ten peerages on his friends has drained the House of of ten peerages on his friends has drained the House of Commons of almost every one whom the Reviewer recognises as a good old Whig in his way. He is confident that the nation is Whig at heart, but yet the constituencies decline to return Whigs. Mr. BOUVERIE, the purest type of a Whig, failed to retain his seat; and Mr. HORSMAN just mayed his by the barest possible majority. To see how all this happens would be to have a vision which no Whig

could look on and continue his Whig existence. It would never do for him to realize the fact that a party which simply waits to see how the cat jumps, in the hope that if it can calculate this very nicely it may get into office a grand Whig Ministry with just a faint breath, a very faint breath, of onion about it, is not exactly the sort of party to awaken much enthusiasm in these days. It would, be difficult to hit on a wilder travesty of recent history than one which ascribes the successful measures of the last Government and the Reform Bill of 1867 to the Whigs. The one idea of the real old Constitutional Whig was not to have a Reform Bill. It was the want of any vital power in Parliament through the hold which obstructive, undecided, comfortable people, whether nominally called Whigs or not, had on the minor unenlarged constituencies, that constituted the chief mischief which the Reform Bill of 1867, at considerable cost to the national welfare in other ways, succeeded in remedying. The whole programme of the Gladstone Government of the constitution of the consti ment was based on the assumption that during twenty years of Whig Government abuses had been going on which the time had come to remove. The GLADSTONE Government carried with it those who had before been known as Whigs, but it was the horse and not the cart that was the cause of the journey being accomplished. The Reviewer's notion that, if it is very careful and patient and watches its opportunity, the cart will some day learn how to go by itself, is nothing but a pleasant dream. The Liberal horse and cart may both rest now, for there is no journey for them to make; but when there is a journey to make, which can scarcely fail to be the case some day in a country like England, they must go on their road together, and the horse must go first.

SPAIN.

N interval of more than three weeks has passed since A Marshal Serrano began his attack on the lines of Somorrostro, probably in the hope of immediately breaking up the siege of Bilbao. The attack has been suspended, but not abandoned, and it will probably be renewed as soon as sufficient reinforcements have arrived. If there is any foundation for the rumour of negotiations with the Carlist generals, nothing is known as to the purport or result of any communications which may have been exchanged. The statement that Serrano was about to relinquish his command to a lieutenant, and to return to Madrid, proves to be erroneous, as it was originally improbable. The Chief of the Executive Government depends for the maintenance of his position on the confidence reposed in his military ability and fortune by the army and by the country; nor could he afford an acknowledgment of failure in an enterprise which was nevertheless still regarded as practicable. Some hesitation is apparently felt as to the mode of conducting the campaign. Admiral TOPETE has paid a visit to Madrid for the purpose of consulting the Ministers, and General Concha is said to have proposed to the Commander-in-Chief a diversion to be effected in Navarre. In the meantime Bilbao is hard pressed, not so much by a feeble and intermittent cannonade as through the exhaustion of provisions. No attempt has, since the first attack on Somorrostro, been made to relieve the town, except that a Carlist officer was induced by a bribe to connive at the passage through the lines of a herd of cattle. The townsmen are, it seems, unanimously hostile to the cause which finds favour with their rural neighbours; but it is impossible that their resistance should continue unless the blockade is forcibly raised. The besiegers may almost be charged with a waste of means in directing against the town the artillery which might perhaps be better employed in the defence of their own fortifications. They have hitherto owed their safety to the natural and artificial strength of the works which they occupy; and they are evidently unable to assume the offensive in their turn. If their troops are sufficiently provided with small arms and ammunition, they may perhaps succeed in repelling assaults, even when the breaches have been rendered practicable. In the meantime amicable conversation is held at the outposts; and, as unexpected events are common in Spain, the struggle may perhaps after all end in a friendly transaction.

The weakness of both combatants is proved by their inability to operate against the respective lines of communication. Marshal Serrano indeed has the great advantage of commanding the sea, but the reinforcements which have

resched his camp have marched from the interior. es in different Carlist bands which obtained some success parts of the country might have rendered good service by intercepting Sermano's convoys, although they are probably not strong enough to meet any considerable body of troops in the field. The provincial character of the insurrection is a constant source of weakness. It is possible that the force thich lately levied a contribution on Gerona may not be losable for operations in the neighbourhood of Bilbso. The Carlists represent, above all things, a more genuine federal spirit than that which was lately professed by the demagogues of the South. To them Sebrano and his army are alien enomies, and some of the supporters of their own cause are no better than foreign auxiliaries. It must be admitted that their local patriotism is vigorous in proportion to its narrowness. It is remarkable that after the failure of repeated insurrections thousands of men can be found to submit to continual hardship and danger for a Pretender who has no strong personal claims to enthusiastic regard.

The Carlists are probably better supplied with leaders at in any former insurrection. Some of the Artillery officers who were recklessly affronted by King Amadeo's Progressist Ministers have taken service with Don Carlos, and a sprinkling of other military converts have transferred to a new Sovereign the allegiance which they were unwilling, after the overthrow of Queen Isabella, to render either to a foreigner or to a Republic. A part of the Carlist army is serving under compulsion, but the possibility of conscription implies, in the absence of an established Government, a strong popular opinion. Both the hestile armies consist in a great measure of recruits, and it would seem that the Carlist levies are of superior quality. Their weakness consists in their isolation, while the Madrid Government is recognized in the greater part of Spain.

According to a not improbable report, the Pope has recognized Don Carlos by addressing a letter to his wife under the title of Majesty. As a general rule, no political importance attaches to a ceremonial acknowledgment of titular sovereignty. The widow of NAPOLEON III. is still an Empress, and ISABELLA 11. holds the rank of Queen, although both are dethroned exiles. On the other hand, custom has instituted a kind of etiquette which prevents Pretenders who have never reigned from assuming Royal style. Only the most enthusiastic Legitimists designate the Count of Chambord as King of France; and the head of the family of Royanager calls of the family of the fa of the family of Bonaparte only claims the rank of Prince Imperial. The Duke of Madrid is probably known to his partisans as Charles VII.; but he would not bear such a title at any foreign Court. The Pops, if he has really acknowledged Don Carlos as King, has only afforded another illustration of the singular ineptitude which has involved him in quarrels with nearly every existing Government. In Italy Pius IX. has for well-known reasons obstinately maintained the claims of the numerous dispossessed princes who, like himself, reign only do jure.
He is scarcely in a position to admit that Don Carlos is the rightful King of Spain until he has converted his candidature into possession. Few years have passed since the Pops rewarded the public and private virtues of Queen ISABELLA by the gift of the Golden Rose, which is exclusively bestowed on exemplary princesses. It is not to be supposed that he can have regarded the recipient of his bounty as a mere usurper; and nothing has since happened to impair her pretensions to sovereignty, except indeed a revolution which according to Papal rules must be regarded as irregular and void. A compliment to Don Carlos may involve great injury to the Church in Spain, which may perhaps be compelled vicariously to atone for the mistakes of its infallible head. No secular potentate is in the present day likely to entangle himself in the labyrinth of Spanish politics. The French Legitimists who naturally sympathize with the pretensions of Don Carlos are covereless to help him excent perhaps by insignificant are powerless to help him, except perhaps by insignificant subscriptions. Their own Pretender is too prudent, and probably too conscientions, to foment in France a civil war which would be scarcely more hopeless than the Carlist insurrection in Spain.

The courage and pertinacity of the Royalists of the Northern provinces entitle them to sympathy and respect; and their success, if only it were possible, might be regarded with only a qualified regret. An absolute King, reigning by divine right at Madrid, would practically depend, like his constitutional predecessor, on the support of the leading politicians and the chiefs of the army. No

great legislative or administrative changes would probably be introduced; and the element of sentimental Liberalism which forms a part of the modern Legitimist doctrine might furnish an excuse for the practical adoption of Parliamentary government. It is indeed improbable that Don Carlos would be a wise or prosperous ruler; but a far more conclusive objection to his claims is that they will in all probability never be established. The best result which can happen in a civil war is that it should end as soon as possible; and the defeat of the weaker name. end as soon as possible; and the defeat of the weaker party is the only possible termination of the dispute. Northern provinces which are always the seat of war while it lasts, and the whole country which provides men and money for the struggle, will gain more by peace than by the triumph of any political cause; yet at the present time it is also desirable that the existing Government, as the representative of order, should be confirmed in power by the successful close of the insurrection. If SERRANO were defeated, it might be difficult to collect another respectable army; and the disaffected anarchists who have been temporarily silenced would almost certainly take advantage of the weakness of the Government to organize another cantonal insurrection. The Carlists are probably innocent of any sympathy with the extreme Republicans, but common enmities tend to produce involuntary alliance. The rebels of Carthagena gave the Northern insurgents a long interval of security from serious molestation; and the service might perhaps be repaid by the capture of Bilhao and the repulse of Serrano before Somorrostro. While Spain is distracted by domestic contest, the interminable rebellion of Cuba constitutes another drain on the national resources. No other European country has witnessed so many painful illustrations of the inevitable tendency of bad government; but extreme instances sometimes furnish the most valuable political lessons.

THE FIJI ISLANDS.

A LTHOUGH the Ministers have not received official information of the proposed transfer, the Commissioners who were instructed by the late Government to inquire into the condition of the Fiji Islands appear to have encouraged the local desire of annexation, and it may be presumed that their Report will favour the same conclusion. The appointment of the Commission implied a change in the policy which had been previously adopted. Notwithstanding Mr. GLADSTONE'S repugnance to the extension of territory, his colleagues had perhaps convinced him that in the matter of Fiji it was impossible permanently to decline national responsibility. The majority of the settlers consists of English subjects, greatly in need of control, and with occasional claims to protection. A fitful sovereignty or consorial jurisdiction is already exercised by the inconvenient agency of naval officers on the station, who have no title to obedience except the natural right which arises from the combination of good sense and honesty with superior force. A more directly legitimate duty of their profession is discharged in their supervision of the labour traffic in the neighbouring seas, which sometimes partakes of the character of a slave trade. The inhabitants of the difcharacter of a slave trade. The innabitants of the dif-ferent islands are not capable of distinguishing between European traders from Fiji and Australian colonists. It may perhaps be less troublesome to govern the Fiji Islands than to correct the evils which are inseparable from anarchy. The morrow of the Ashantee war is perhaps not an advantageous season for the proposal to establish new relations with tribes of savages, some of whom are also cannibals; and it would not be desirable to interfere in the affairs of Fiji for the purpose of extending the area of civilization, if the enterprise of private settlers had not anticipated the action of the Government. The appetite for cotton which was stimulated by the outbreak of the American Civil War produced a large increase of the immigration into the islands; nor have the reverses which have since befallen the cotton-planters inclined them to abandon their settlements. European adventurers in barbarous countries have found it necessary to provide themselves with a government of some kind; and after the failure of one or two previous experiments, a constitutional Monarchy was devised, with the authors of the scheme as Ministers of a native chief who was supposed to occupy the theme.

abolished as too flagrantly absurd; and the Minist formed themselves into advisors of a despotic King. . Difficulties were unfortunately interposed in the way of the collection of taxes; and probably a little civil war might have occurred but for the judicious intervention of the commanding officers of English cruisers. It would seem that there is now a general concurrence of opinion in favour of the expediency of making the islands an English colony, and it is even asserted that the German and American Consuls recommend the annexation. The late Government displayed political aptitude chiefly in the rapid creation of a national debt consisting mainly of a paper currency which probably commanded little confidence. The holders of inconvertible notes perhaps hope that their securities will become for the first time valuable if they are acknowledged by a colonial Government. It may be convenient that they should at once understand that Fiji issues are not to be redeemed by English taxpayers. If it is true that some of the Australian Governments are disposed to assume the debt to some fractional extent, one difficulty in the way of annexation will be removed.

When the assumption of the sovereignty of Fiji was first proposed fourteen years ago, the Duke of NEWCASTLE, then Colonial Minister, is said to have stood almost alone in the Cabinet as a supporter of the project. It was a part of the political gossip of the time that Mr. Glad-STONE had opposed the annexation with unusual vehemence of demeanour; and there can at least be little doubt that he was an active member of the majority of the Ministers. The institution of a new colony may probably cost money; and it might, as in Now Zealand, result in a war with the natives. Those who have local knowledge of the islands assert that the indigenous race is neither formidable nor warlike; and the contingency of a possible contest furnishes no conclusive argument against annexation. The precedent of New Zealand is, after allowance for all drawbacks, in the Although the resistance highest degree encouraging offered by the Maoris was vigorous and obstinate, a flourishing community, certain hereafter to become a prosperous State, has already outlived the difficulties of the early settlers. The investment of money, of life, and of energy has been repaid many times over, although the mother-country participates but indirectly in the profits of the enterprise. The climate of the Fiji Islands is genial, the enterprise. and not unsuited to European constitutions. much fertile soil, well adapted to the growth of sugar and The Comto other kinds of sub-tropical cultivation. missioners will probably include in their Report to the Government some account of the capabilities of the harbours on the coast. Competent authorities have recommended the islands as snited to a naval station near the track of navigation between the Australian ports and Panama and San Francisco. The protection of the Australian colonies in the event of a future war is perhaps not a matter of immediate urgoney; but a coaling station and a refuge for English vessels would probably be found not only useful, but indispensable.

The present Ministers are not pledged to any policy in connexion with the Fiji Islands; and probably they will not find thomselves hampered by any positive sugagements on the part of their predecessors. In considering the on the part of their predecessors. In considering the subject they will not fail to perceive that the demand for annexation will not be withdrawn on their refusal, inasmuch as independence, involving chronic anarchy, will become more and more intolerable. There is indeed one contingency in which all fature Governments would be permanently relieved from the annoyance of offers of allegiance. It is not impossible that some other Power might, on the refusal of England, undertake the burden of pacifying and governing the islands, with the intention of obtaining some commercial or political advantage for itself. To the Australian countries the proximity of a foreign colony would be highly distasteful; and, although the Fiji Islands are more than a thousand miles from the nearest part of the continent, distances in these thirty settled labitudes look comparatively small on the map. It would be well to consult the feelings and opinions of the colonies, and in their turn the Australians may be reasonably asked to contribute to expenses which are mourred mainly for their benefit. Those colonists who look forward to future independence will approve of the enlargement of the estate in which they claim a reversion; and, during the continuance of the existing connexion, the Fiji Islands will for many purposes be virtually a dependency of Australia. It would not be

easy, nor would it be worth while, to introduce a tion into the complicated relations of the Hunp vising a sub-culculal organization for the govern mininf n colony by a greater and older colony. The Australia vinces have no navy, no Colonial Office, and no machinery for the administration of outlying dominicas. It may also perhaps be respectfully suggested that they are themselves pure democracies of recent origin and limited emphysical properties of recent origin and limited emphysical and their own interests. competent perhaps to understand their own interes manage their own affairs, but not possessing the qualifica-tions of disinterested rulers. It will be agreed on all sides that the Imperial Government is better able to organize's new colony; and if the annexation is accomplished, it may be hoped that the only system which is suited to the present state of the islands will be adopted without hesitation. The experience of Sir John Peres Grant's administration of Jamaica, compared with the history of the island under a representative Constitution, points to the necessity of concentrating all power in the hands of the Governor. If the population consisted wholly or chiefly of English or European settlers, it might not be necessary, nor perhaps possible, to withhold from them the blessings of universal suffrage and popular government. In the Fiji Islands the natives, still in a low state of civilization, outnumber in a large proportion the race which is probably destined to approach or to supersede them. It would be absurd to propose that the natives should send representatives to a Colonial Assembly, and a sham Parliament elected by the planters and settlers would inevitably use its powers without the smallest regard to the interests of the natives. The first duty of the Colonial Government will be to protect and to control the weaker part of the population. The most competent candidates for the office of Governor would be found among Indian civilians accustomed to administer justice between men of different races, and deeply imbued with the spirit of equity and toleration which has become traditional among Indian statesmen. Even the self-elected Ministers of Ling Thanomen grew tired of the farce of a Parliament, and saw that men who have not learnt to govern themselves must be governed by others. The lesson will be complete when the settlers are convinced that the rulers of a mixed population must be not only independent, but upright and impartial.

THE LEGITIMISTS AND THE FRENCH GOVERNMENT.

T becomes more difficult every day to say at what the LExtreme Right in the French Assembly are really aiming. Perhaps it is unreasonable for spectators to hope to know what the actors in the drama are apparently themsolves ignorant of. Down to the 31st of last October the purpose of this section of politicians was clear enough, and the modification of that purpose which led them three weeks later to support the prolongation of Marshal MacMalon's powers was also intelligible. While they thought that the Count of CHAMBORD could be proclaimed King, they were Royalists before everything. When they discovered that a Restoration was not at present on the cards, they became Conservatives before everything, and consented to offer a provisional worship at the alter of Marshal MacManon. It all along seemed probable that when the promised constitutional laws came under discussion, the alliance between the Extreme Right and the Dake of Brogger would be severely strained. It is not easy to frame a Republican Constitution which shall in no way derogate from the indefeasible claims of an absent but absolute Sovereign; and between the Minister who wishes to keep the throne open for the Count of Pasts and the deputies who wish to see it filled by the Count of CHAM-BORD, differences of a very serious kind may easily grow up. What is so difficult to account for is the determination of the Extreme Right to precipitate the quarrel. The Duke of Brogues has done nothing to provoke the hostility which he has at length been forced to notice. He has shown kimeelf remarkably forbearing under "Legitimist encers; he has allowed an amount of latitude to Legitimist eneers; he has allowed an amount of latitude to Legitimist criticism which has justly laid him open to the charge of partiality; he has consistently used the vaguest possible language in the Assembly; he has again and again refused the challenges of the Left to define precisely the pretensions of Marshal MacManow's Government. Yet, activities adding all this, the Legitimist press has gone on from one degree of violence to another. All it has at last become impossible even for Ministrial metalines to

beer with it any longer. If Marshal MacManon were a President set up by the Left, there would be nothing strange in his defeated opponents refusing to by down their arms. But the men who are assailing him are not his opponents, but his supporters. It is the authors of the law of the 20th of November that now insist upon vilifying it. If they had any just cause to be disgusted with their own works for would be nothing strange in their wishing to undo it. But until within the last few days the Government has been as tender to them as any Government not expressly commissioned to make arrangements for a Restoration could possibly show itself. They have been the spoilt children of the Conservative family, and one principal aim of the Duke of Broune's Administration has been to keep them from crying for the moon in the person of HENRY V. Tho attacks on the Septennate which have at length provoked a circular from the Minister of Justice cannot have any practical value until the Legitimists are prepared to propose that the French crown be offered to the Count of CHAMBOBD, or until the MacMahonists attempt to carry some constitutional law which may either postpone unnecessarily the making of this offer or render its acceptance less certain. The effect of a secession from the majority at this moment must be either to make the Government overthrow the Ministry, or to drive it to look about for some addition of strength which shall balance a loss that it can ill afford. Neither of these results could benefit the Legitimist party. The resignation of the Duke of BROGLIE would either reduce the Assembly to a state of absolute anarchy, which would probably be ended by a coup d'état of some sort on the part of Marshal MacManon, or it would lead to a Ministerial reconstruction under a member of the present Cabinet more decidedly anti-Legitimist than the existing Prime Minister. If the Duke of Brockle, instead of resigning, sought to strengthen his position in the Chamber, he could only do so by appealing to the Left Centre; and such an appeal, if successful, must necessarily give either a more Republican or a more Orleanist complexion to the policy of the Government. On no conceivable supposition, therefore, can it serve any reasonable purpose of the Legitimists to quarrel with the Duke of Broglik.

The particular shape which the action of the Government has taken cannot be commended. In so far as the Duke of Brodhe is resisting the extravagance of an impracticable party, he deserves sympathy. But it is impossible to sympathize with the wrongheadedness which opposes one form of impracticableness by another.
The Extreme Right declare that they will never rest until Monarchy has been definitively re-established in France.

The proper answer to this declaration would be to point out to them that the majority of Frenchmen have come to a determination which is altogether inconsistent with this declaration, and to leave them to draw the natural conclusion that, if they cannot alter the decision of the country, they have no choice but to acquiesce in it. But this is not the answer the Government gives. On the contrary, it insists that the majority of Frenchmen have come to no determination on the subject, and that Marshal MacManon has been instructed by the Assembly to prevent them from coming to any determination for seven years. The Legitimists may fairly resent this interpretation of the law of the 20th of November. No Legislature can condemn its constituents to seven years of uncertainty on a matter of such paramount moment as the form of government. If the decision of the Assembly can be questioned in no other way, it may be questioned by a motion to repeal the law. The Minister of Justice may prosecute newspapers which attack the powers conferred on Marshal MacMahon, and may contend that, in prolonging those powers for seven years, the Assembly intended to place them above all challenge for that period, and that this resolution is immutable, either by the Legislature which made it or by the country upon which it has been imposed. But he cannot compel the President of the Assembly to apply the same rule to a deputy who introduces a Bill to vary the Marshal's powers or to transfer them to other hands; and even if M. Burver should agree with M. Deperge, neither of them can prevent a majority of the deputies from taking an opposite view. No doubt, so long as the majority of the deputies are in agreement with the Government, they can refuse to entertain any such motion, and can even pass a resolution that no such motion shall be brought forward. But this only puts this controversy a step further back. It will still be open to a Legitimist deputy to move that this resolution shall be rescinded. No feet of

3 July 1 & 14

Parliamentary legerdemain can hinder a Parliament from reconsidering its own decisions. Nor is it at all probable that upon this point the Duke of Brocker will long command a majority in the Assembly. The Right Centre may aid him in his endeavour to keep the form of government an open question for seven years, because the longer a decision can be postsponed the more chances there are that the Count of Paris may have become the undisputed heir to the French Throne, but no other party has any special interest in supporting this view. The Left Centre desires to see the Republic established under Marshal MacMaron's guidance, and this wish is probably shared by a certain portion of the Left. The Extreme Left is opposed no doubt to this solution of the problem, but it is so because it refuses to acknowledge that there is any problem to be solved. It holds that the Republic exists in France by indefeasible right, and it cannot consequently betrusted to support a Government which preaches that for the next seven years no Government shall exist in France except by a merely provisional and defacts title. The Duke of Brockle may have secured quiet for the remainder of the Easter recess, but, when the Assembly meets again, he will find that to silence the Legitimist press does not of necessity involve the silencing of the Legitimist party.

AMERICA.

THE current history of the United States possesses only a domestic interest; but, in the general stagnation of politics at home and abroad, occasional notices of American affairs may perhaps gratify a languid curiosity. The most important of recent or impending transactions is the adoption by the Sonato and the House of Representatives of the proposal for inflating the paper currency by an additional issue of about 9,000,000l. The banks will at the same time be enabled to increase their circulation of notes to the extent of four or five millions, and the effect of the measure will be to postpone, perhaps for a long time, the resumption of specie payments. The amount actually taken from creditors to be gratuitously presented to debtors is in itself not inconsiderable, but the worst part of the Bill is that it establishes a precedent for future attempts to tamper with the national credit. Since Congress has thought fit to exercise its undoubted power of depreciating the currency, there is no reason why the same motives should not hereafter justify further inflation. An apparent rise of prices is always popular with large and active classes, which will be encouraged by their present success to prosecute on future occasions is similar agitation. The loss which is inflicted on foreign holders of American securities will be generally popular in the States; and indigenous creditors will command little sympathy. All the principal representatives of commerce and finance have stronuously opposed the Bill, and it is unanimously disapproved by every competent authority; but in a country which requires no special knowledge as a qualification for the office of Secretary of the Treasury, it is not surprising that elected legislative bodies should disregard the plainest principles of finance. The additional issue of greenbacks closes the controversy which commenced with the illegal proceedings of Mr. Bourwell in the autumn of 1872. His predecessors at the Treasury had from time to time withdrawn from circulation notes to the amount of nearly 9,000,000L, and according to law the notes ought to have been cancelled. Mr. Bout-well, who was avowedly ignorant of economical and fiscal science, thought fit to reissue a portion of the defunct securities, which he described as a reserve, for the purpose of moving the crops." The PRESIDENT, who was not less innocent of financial knowledge, strennously adopted the policy of his Minister; but, although the offender has enoyed perfect impunity, it was perhaps thought prudent not again ostentationaly to violate the law. Mr. Bourwall, now a Senator, has the satisfaction of assisting to legalize: the injustice which will no longer be an irregularity The dissatisfaction which the measure has caused to the powerful minority of intelligent economists is aggravated by the recollection that greenbacks were only declared to be a legal tender by a Bench deliberately packed for the pur-pose. The Supreme Court in the first instance declared the Ast of Congress which created an inconvertible currency to be unconstitutional; and Chief-Justice CRASE, who had himself as Secretary of the Treasury, procured the enactment of the Legal Tender Bill, concurred in the judgment. The

PRESIDENT afterwards took advantage of a vacancy to appoint a judge who was pledged to the opposite doctrine, and, in disregard of usage, the Supreme Court was induced to reverse its former decision. The withdrawal of notes from circulation was the proper mode of bringing the paper curroncy by degrees down to the level of gold. The reversal of the operation is almost equivalent to an abandonment of the policy which had apparently been approved by Congress and by the country.

The dryness of fiscal controversy has been relieved by various scandals which, as usual, are traced more or less clearly to the agency of General Butler. A satellite of that remarkable politician has lately been appointed by the PRESIDENT, in spite of remonstrance, to the lucrative and important office of Collector of Customs at Boston. The fortunate official, who is named Simmons, was a few years ago a waiter at a tavern, and it is not known that he has since displayed any capability except as a low electioneering agent. It is more certain that he will use the powers of his office for the promotion of the political interests of his patron than that he will be an efficient and creditable public servant. All the respectable part of the community in Massachusetts expresses indignation at the appointment; but General Butler, who might us easily have procured the selection of a creditable Collector, may be supposed to know his own business. For a still more outrageous job perpetrated in favour of one SANBORN Mr. BOUTWELL is primarily responsible, though he was aided and perhaps prompted by the ubiquitous and indefatigable BUTLER. A Bill was smuggled through Congress, apparently without exciting attention, authorizing the Secretary of the Treasury to appoint a certain number of special agents to assist the Collectors of the Revenue by discovering evasions of payment; and it was strangely provided that the detectives should be rewarded by a half of the sums which they might receive. Sanborn, who is said to have been a dependent or associate of General BUTLER, was appointed to the new office by Mr. Bour-WHLL, who 'then instructed the Collectors, not to accept Sansorn's assistance where it might in special cases be required, but, on the contrary, to render him all the aid in their power; or, in other words, to treat him as a principal or official superior. The agent who was to receive fifty per cent. for his services was thus preferred ceive fifty per cent. for his services was onne product to the regular salaried officer; and Sanborn is perhaps surprised at his own moderation in having in two years a fortune of 40.000l. or 50,000l. A large only realized a fortune of 40,000l. or 50,000l. A large share of penalties and unlimited facilities for extortion might have been expected to produce larger returns; but it is not improbable that the detective agent may have been compelled to account to others for a portion of his official and extra-official gains. Unfortunately, not contented with his regular profits, SANDORN blundered into conflict with the law, and, to the satisfaction of the traders whom he had harassed and plundered, he is now in prison awaiting his trial for frand. It is possible that, as in the case of Tweed and the other New York swindlers, corrupt audacity may eventually provoke a reaction; but for the present General BUTLES, whose admirers never dispute the charges which are urged against him, is the leader of the House of Ropresentatives, the chief adviser of the Presi-DENT, and the most powerful person in the United States.

It might have been thought that the universal suffrage which produces General Butler's influence in the North, and anarchy and repudiation in several Southern States, could not since the enfranchisement of the coloured population be depreciated, like the currency, by additional issues; yet in each of two or three Western States one of the respective sections of the Legislature has lately passed Bills for the extension of the suffrage to women. American innovators are more consistent than Mr. Forsyth, inasmuch as they have never thought of first enfranchising women by a clause, and then distranchising married women by a provise. Experience and popular opinion have produced in America general contempt for the privilege of voting, and total indifference to its practical results. The admission of the negroes to the suffrage has produced all the mischief which was contemplated by its opponents, but the convictions of philanthropists and advocates of equality are not for a moment disturbed. Now that women are becoming clamorous, the project of doubling the constituencies is regarded with indifference, although the political aptitude of the aggrieved sex has lately received conspicuous illustration. The indecorous and disoppolitable conduct of large numbers of women in

Ohio appears to have been regarded by a weak-minded minority with admiration, and by the community in general with amused complacency. Feminine mobs might at least have been expected to retain some respect for religious observances and language; but in Ohio they used the form of prayer with a levity which, if it had been masculine, might have been thought profanc, for the purpose of creating disturbance in the streets. The infection of hysterical felly and of imitative hypocrisy has happily subsided as rapidly as it spread. In the meantime the anti-alcoholic rabble succeeded in proving that a sober woman might in a state of excitement sink to the same level of morals and manners with a drunken man. The sellers and consumers of whisky in Ohio will probably make some exertion to prevent their late antagonists from substituting voting tickets for prayers. The felicity of equality in social conditions is in the present day loudly extelled; but for women, if not for men, there is perhaps some advantage in the existence of a class which maintains a certain standard of refinement. The respectable wives and daughters of Western farmers and tradesmen might have been saved from the perpetration of absurdities which they perhaps now regret, if they had the opportunity of observing that ladies are not accustomed to kneel and bawl in front of liquor-stores.

INDIA AND THE MANSION HOUSE.

TWO questions were unfortunately, though perhaps unavoidably, mixed together in the speeches at the Mansion House on Tuesday. There was the question whether any part of the cost of the Bengal famine ought to be borne by the English Exchequer. There was, secondly, the question whether the cost of the famine ought to be entirely thrown upon the Government—either of India or of England—or to be defrayed in part by private charity. It appears to us that Lord Salisbury was hasty in pronouncing a positive opinion upon the first of these points at this stage of the calamity. It is certainly not expedient at this stage of the calamity. It is certainly not expedient to help the Government of India by a grant from the English Treasury, unless the need for such aid is very great indeed. It is impossible to estimate at present what the need of India in this respect will be. It is known that the outlay upon mere relief will be counted by millions; there is reason to fear that the revenue may be very much lessened for some time after the famine is over; and the experience supplied by the famine may make the execution of additional public works a matter of absolute duty. Any calculation as to the last two of these heads would now be nothing better than guesswork; and even as regards the first head it is obvious that estimates of expenditure extending over vast areas and long periods of time can at best be only approximative. An Indian Secretary who, under these circumstances, pledges himself to a particular theory of financial policy, runs, as it seems to us, a needless risk of having at some future day to eat his own words. There appears some inconsistency, too, between the enthusiasm which diotates an order to the Viceroy that no expense is to be spared and the caution which adds by way of corrective that the the caution which adds by way of corrective that the money must all be provided by the people of India. We should equally have regretted any premature assurance that a grant from the English Exchequer would be proposed to Parliament. The proper course would have been to make it quite clear to the Government of India that they are to spend whatever money may be necessary to meet the famine, on the understanding that, when this has been done, the question whether any part of the money so spent shall be repaid will be considered in its relation to the ultimate well-being of India. A year or two years hence the materials for determining this question will be forthcoming. When they are forthcoming, the Cabinet will have to make up its mind whether the conditions of the Indian Budget are such as to necessitate anything in the nature of a grant from this country. Nothing that a Minister can say to-day, when the materials for a conclusion are wanting, can relieve the Cabinet of this ultimate responsibility. The precedent of the cotton famine, to which Lord SALISBURY referred as one so binding that it would be impossible to depart from it, does not really apply. We left the people of Lancashire, says Lord Salisbert, "as far as public grants were con"cerned, to the aid which their own local taxation could "afford." But supposing that, when the cotton famine was at an end, it had been found that the resources of the

county were exhausted, that the enormous rates required to pay the interest of the loans contracted on the security of them threatened to pauperize the ratepayers, and that, from being one of the most prosperous districts of England, Lancashire had been reduced to the level of poorest districts of Ireland, would the people of Lancashire still have been left, as far as public grants were concerned, to the aid which their own local taxation could afford? For the present it may be conceded, or more accurately it ought to be insisted, that India must bear her own burden. It is only in the event of that burden proving to be beyond her power to bear except at the cost of the entire derangement of her finances, that it would be expedient for the Imperial Government to come to her assistance. Whether any such derangement as this will follow upon the famine is a matter which will appear when some future Indian Budget comes before Parliament. Till then the discussion had better be adjourned. Nothing that Lord Salisbury can say in 1874 can be held to pledge either the Government or Parliament as to the measures which it may seem expedient to take in 1875 or 1876.

The question whether the cost of the famine shall be entirely thrown upon the Government, or be partly met by private charity, was, we believe, practically decided by Lord Salisbury's speech. It is clear that he does not look to private charity as in any way taking the place of the Government as regards the distribution of food. Any one who has read the letters of the Daily News Correspondent must see that the distress, at all events in the districts where the pressure is greatest, is of a kind that can only be relieved in a rough and ready way. The function which it has been supposed that private charity might beneficially discharge in Bengal is to search out cases of distress among the respectable classes and relieve them without publicity or degradation. Now this function must be discharged through the agency either of the Government servants or of benevolent natives. As regards the Government servants, there are hardly enough of them to get through the work which must be done if the population are to be kept from dying by hundreds of thousands. Mr. FORDES'S letters tell of unwearied labour on the part of every white man employed—labour which begins with dawn, and ends when sleep cannot be put off any longer without the certainty of the worker being fit for nothing the next day. In what interval of the time thus employed the overtasked official is to betake himself to the necessarily slow process of relieving concealed distress by a process of diplomatic investigation does not appear. The same corrediplomatic investigation does not appear. The same correspondence may be appealed to for information as to the probability of native distributors being found to perform the duty. We have no wish to generalize from the scanty data at the disposal of English observers; but there is one fact which must be accounted for before much reliance can be placed upon native agency. If in all parts of Bengal there is a staff of benevolent natives only waiting till the requisite funds are placed in their hands to begin their charitable labours, why has not the Government made more use of them when the demands on the officials are so severe and so urgent? There is no obvious reason why natives who would be invaluable in distributing relief supplied by private liberality should be useless in super-intending the distribution of relief supplied by the Government. Lord NORTHBROOK'S anxiety to impress every white man he can lay hands on into the service of the State is at least prima facie evidence that there are disad-vantages connected with the employment of native agency on a large scale which have not been considered by the promoters of the Relief Fund in England.

We may fairly assume, however, that the money raised in this country will be spent, not as those who contribute it expect, but as they would wish it to be spent supposing that they had an accurate knowledge of the circumstances of the case. The administration of the Relief Fund must be left to the Committee in Calcutta, and, as they will command full local information, they may be trusted not to commit the mistakes which would be unavoidable if the decision to what objects the money is to go were left to the Committee at the Mansion House. To the purposes enumerated by Lord Saussour on Tuesday no exception can be taken. On the contrary, they are such as the Bishop of Manuscript, and those who think with him on the policy of attempting to prevent starvation by private subscriptions, many thoroughly support. The Government of India has undertained to do for the people of Bengal in this tremendous

emergency what the Poor Law does for the people of England at all times. It will ensure them, so far as human effort can ensure them, against the physical consequences of destitution. No man will die of sheer starvation if the Government can by any means prevent it. But over and above the physical consequences of destitution there are social consequences only one degree less disastrous. There will be, as Lord Salisbury said, the survivors whom the famine "will have turned loose and naked upon the world"—the peasantry who will have no capital with which to go on cultivating their lands, the labourers who will have no tools to go to work with, the small householders who will have sold their furniture to buy rice, the old people who will have parted with the ornaments which represent the hard-won savings of a frugal life, the children whom the diseases brought on by insufficient food have left orphans, or whom the hard-heartedness which is bred of suffering and terror will have left deserted. The time has hardly come perhaps for adequately appreciating or succouring distress of this kind; but it can never be too soon to collect the money by which the succour must oventually be provided. Looked at in this aspect, the Famine Relief Fund has an indisputable claim upon the charity of Englishmen.

DR. LIVINGSTONE.

WE are treating Dr. Livingstone as we have treated many other benefactors of the nation. We cannot do too much other benefactors of the nation. We cannot do too much for him now that he is dead, but we could easily do too little for him while he was alive. Slowly and with difficulty was the feeling spread that Livingstone was doing a great work in which both honour and interest called on us to help him. Happily for himself, no man was ever less dependent on moral or material support from others in doing his chosen work. With pain, weariness, and disappointment he struggled on, hoping to do to-morrow what he failed to do to-day, and even in his enforced halts learning something which would be useful when he could resume travel. We may console ourselves for not having rewarded him more handsomely in life with the reflection that the greatest of all rewards to such a man was that which we could neither give nor take away—the consciousness of having done great deeds. In him lived the spirit of the early navigators. When he first saw "his own river," as he called it—the great river Lualaba—he came nearest perhaps of modern men to the discoverers of continents and oceans. When Vasco Nuñez de Balboa climbed a height and looked down on the Pacific, "he fell upon coverers of continents and oceans. When Vasco Nuñez de Halboa climbed a height and looked down on the Pacific, "he fell upon his knees and thanked God who had given to him first of Europeans to see so great a sight." After him came other explorers from his own country, equally bold and more selfish, who laid strong hands on the wealth and oppressed the people of those new countries; and then came our own countrymen, "the flercest nation upon earth," to spoil the spoilers and take vengennee on the Spoulards for the proper done by them to Maries and Peru. The nation upon earth, to spoil the spoilers and take vengence on the Spaniards for the wrongs done by them to Mexico and Peru. In humble parallel to this heroic history we may venture to predict that Livingstone's footsteps in Gentral Africa will be followed by the Arab slave-dealer and the British bagman. Already the commercial instinct asserts itself in countries which a few years ago were fabulous. At Unyanyembe bills have been drawn on London, and English explorers are in danger of being drawn and the state of the format with the livest and the state of the drawn on London, and English explorers are in danger of being devoured, not by the lions of the forest, but by the money-lenders of the towns. It would be agreeable to believe that the influence of this and other civilized nations is likely to restrain in future that slave-trade which for all time past has been the curse of Africa. But, considering the power of lust and cupidity in London and Paris, we may doubt whether these passions will be easily checked at Zanzibar. Livingstone in one of his last letters said checked at Zanzibar. Livingstone in one of his last letters said that he looked to benevolent statesmen and the public press as more likely to stop the East Coast slave-trade than any other agency. If, indeed, benevolent statesmen and newspapers could regenerate mankind, this country would easily take the foremost place in philanthropic work. Our Foreign Office has been for some years prepared to give good advice to all the world, and the only difficulty has been to get the world to listen to it. We have constantly more and more written on every subject but it the only difficulty has been to get the world to listen to it. We have constantly more and more writers on every subject, but it may be doubted whether the whole army of penmen will poreuade Eastern princes to renounce polygamy. "The Manyuema women," says Livingstone, "are very pretty, and are sold off often as goon as captured for very large prices, and are never sent in chains to the coast." It is not difficult to pretend that this trade has been suppressed, when really the only change is that it is carried on more secretly. It would be agreeable to share Livingstone's belief in the power of despatches and leading articles to effect moral reforms; but unfortunately we are able to observe the work of Ministers and editors more closely than he could, and we may Ministers and editors more closely than he could, and we may suspect—although we should gladly find ourselves mistaken in suspecting—that what Livingstone calls "the open sore of the

world is not healed, but only skinned over.

In August 1872 Livingstone started upon what proved to be his last journey. He desired further to explore the country to the south-west of the southern extremity of Lake Tanganyika.

During that journey he addressed to Mr. Stanlay a latter which was published in the Times last week. It is dated "Lake Bangweolo, South Central Africa," and acknowledges Mr. Stanley's exertions in securing "all the men and goods needed for this my concluding trip." He says he is perpetually reminded that he owes a great deal to Mr. Stanley for the men he sent. The party works like a machine. But he had parted with an Arab engaged by Mr. Stanley. After detailing instances of his misconduct, he says, in the terse style which shows the freshness and vigour of his mind. "No one, either hefore or after that, could get any good his mind, "No one, either before or after that, could get any good out of him." He omitted to supply himself adequately with donkeys, having, indeed, that confidence in his power of walking proper to one who had travelled some thousands of miles on foot. proper to one who had travelled some thousands or miles on reso. Riding in the sun, he says, is more trying to the system than marching on foot. He was so overjoyed at having got the men necessary for his expedition that the idea of being knot at a but of a law gring. necessary for his expectation that the idea of being knocked up by marching found as little place in his mind as in that of a boy gring home from school. He was, indeed, to the last a boy. To him the greatest pleasure, while health lasted, was to obtain necessary stores and start upon one more journey. "I cannot rest from travel, I will drink life to the lees." If he had returned home, it is unlikely that he would have stayed. He would have longed for the lakes and rivers of Central Africa, as Druke and Cavendish longed for the Parity. longed for the Pacific. He was indeed a master of the art of travel; skilled to obtain what he wanted, and more skilled to do without it. "All very clever contrivances for travellors' convenience ought to be shunned. In general they are heavy, burdensome trash, which any one who has learnt to use his eyes and ears finds to be intolerable nuisances. The only arti-The only articles essentially necessary for a missionary of the Robinson Orusoe type that strike me at present are a few light tools, a few books, clothes, soap, and shoes." With quiet immour he demolishes the imaginations of earlier travellers. An African potentate had the reputation of sacrificing twenty human victims daily. Livingstone visited him, and found that he sacrificed five or six pots of native beer daily. "The mightiest potentate and the most dreadful cruelties owe much to the teller." In a letter addressed to Dr. Marsh, Livingstone ascribes the difficulties under which he had long contended to a "slave-trading ring" who plundered his stores and destroyed his letters, and made him lose two years of time and untold money, besides entailing on him two thousand miles of useless tramping. "It looks to me as if the members of the ring all expected me to die." But Mr. Stanley nobly relieved his wants. "I am now by his means enabled to go away back to take up the thread of my explorations, for I could not bear to be beaten by the wretches." These words show the spirit of the man. They were written on November 21, 1872, and the letter already quoted to Mr. Stanley was written a few weeks later. An approximate date may be supplied to this letter by the reference which it contains to the late of a plum-pudding which had been sent with other stores by Mr. Stanley. After writing this letter, "the idea of being knocked up by marching" became unlappily a reality. Livingstone had for some time been weak and ailing, and he told an attendant that he felt unable to go on with his work of exploration of the lakes and rivers, and would turn aside to the hills of Katanda, and return through Manyuema to Ujiji to recruit. But he first had to take to riding on a donkey, and then to suffer himself to be carried on a bedstead. As he became worse he said "he should never see his river again." A rade hut was built for him when he could no longer travel, and he died is it on the night of the 4th May, 1873. The spot where he died is about 11° 25 S. lat. and 27° E. long., not far from the south-west bend of Lake Bangwoolo.

The best way to show appreciation for Livingstone's services is to take care that nobody shall suffer loss in trying to assist him. The case of Lieutenant Cameron, who led the dast expedition sent to Livingstone's relief, is likely under present circumstances to be generously considered both by the Bloyal Geographical Society and by the nation. It appears that Lieutenant Cameron, and Dr. Dillon, who was appointed to accompany him. arrived at Zanzibar on the 13th January, 1873. Thence they crossed to Regamovo, and commenced the wearisome process of higgling for stores and porters. Prices have risen, as might be expected when the rich English nation came into the market and Lieutenant Cameron was warned to be careful and economical, as expenditure beyond a fixed sum would rest upon his own shoulders. It is almost impossible to give any agent carte blanche, but it must be remembered that, when Mr. Stanley started, his commission was to draw money as he needed and find Livingstone. Lieutenant Cameron got away from Bayamovo on the 18th March, and reached Unvaryembe on the 4th August. Prices were abnormally thigh; black mail had frequently to be paid; there were many antoreseen expenses. Lieutenant Cameron judged, as we think rightly, that his employers would not desire the expedition to be abandoned, and, to obtain supplies to enable it to proceed, he drew hills at Unvaryembe on Zanzibar for 1,400l. With the means thus obtained he masde proporations to mart for Ujiji, and after struggling with repeated attacks of fever he had just completed his arrangement when news arrived that Livingstone the dead. This was on the 16th October. As Livingstone had expressed a wish that a box of papers left by him at Ujiji should be recovered, Lieutenant-Cameron started for that place. Whether he will carry further Livingstone's supported.

comes to this, that we must either pay or fight our way. It would probably be easy after any one of these expeditions to show that there has been unnecessary outlay, but, on the other hand, you are certain to ruin this work by starving it. The feeling of the country will ensure payment of the expenses incurred by Lieutenant Cameron, without haggling over the question whether law, was authorized or justified in exceeding a certain limit. We shad not find another Liwingstone. He knew the country as no other European knew it, and, as we have already said, he had a talent for doing without that which he could not afford to buy. Exobably he could have travelled alive more cheaply than his shody was carried to the coast. If we feel that during his life we were sparing of honours and rewards, we may console ourselves by remembering that for such things he did not greatly care.

REPUBLICAN SIMPLICITY.

MELANCHOLY complaint comes from the United States. A Correspondent of the New York Times gives us details of the hardships suffered by Cabinet Ministers at Washington, and the case seems truly to be a sad one. A Cabinet officer receives 8,000 dollars a year, a sum which doubtless appeared to be superabundant to the simple-minded founders of the great Republic. abundant to the simple-minded founders of the great Republic. Those wise legislaturs, however, did not foresee the growth of a set of customs more imperative than any written laws. Duties never contemplated by Washington and Jefferson have been imposed upon the officials, and no provision has been made to meet them. The first need of the Cabinet Minister is a house "handsomely furnished and conveniently situated," the rent of which is estimated at from 5,000 to 6,000 dollars. The ladies of the family have the pleasure of receiving their friends every Wednesday afternoon. The number of guests varies from three hundred to six hundred, and, as they need some refreshment, the cost of the Wednesdays and, as they need some refreshment, the cost of the Wednesdays and, as they need some refreshment, the cost of the Wednesdays seems to be moderately estimated at a thousand dollars. Besidesthis everybody who has left a card on Wednesday is entitled to receive a call from the ladies, and to be invited to an "evening receive." The Correspondent is quite pathetic on the misery of these entertainments. We fear that Londoners are scarcely entitled to ridicule the folly of their cousins too freely. It is, indeed, a barbarous custom to pack a thousand men and women together. so closely that no rational enjoyment is possible; but it is a barbarism from which the most civilized nations have not emancipated themselves; and we can only lament that the inhabitants of the New World are not in this matter wiser than those of the Old. The Correspondent's soul is principally vexed by considerations of supper. The bill of fare, as he assures us with a shudder, includes supper. The bill of fare, as he assures us with a supper, coffee, "claret punch, sherry wine," ices, sundwickes, and chickens-coffee, "claret punch, sherry wine," ices, sundwickes, and chickens-declared coffee, "Claret punch, sherry wine, here, shindwiches, and chickens alad. A poor hady who had bought six dozon chickens declared that she had found it impossible to provide salad enough. But seventy-two chickens do not give a very large meal for a thousand people, even when backed up by sandwiches. "Four or five gallous of sherry were necessary," as the Correspondent pathetically exclaims, "and even a larger quantity of claret." Doubtless the quantity is calculated to shock a teototallar, and yet, when we come to calculation, it does not appear that a gallon of wine for a hundred people should be enough to cause any serious misgivings for their sobriety. When, indeed, we reflect on the nature of the liquid which is probably indicated under the name " we are ready to believe that the less drunk the better. The next result of the system is that the luckless ladies upon whom all the social labour seems to fall have to pass their time in making calls upon the two thousand and more visitors who are supposed to be included in an average list. This, we are told, involves keeping a footman; and the consequence is that a Cabinet officer, though there should be but four or five persons in his family, requires as many as five servants—namely, a cook, two maidservants, a coachman, and a footman. This list again sounds maideervants, a coachman, and a footman. This list again sounds very moderate to English ears, but of course it must be remembered very mederate to Enguish ours, out or the one intolerable plague of that the evils of domestic service are the one intolerable plague of that the evils of domestic service are the one intolerable plague of English mistresses often enough complain of servents, and the servents return the compliment. The same complaints, indeed, have been made in very much the same language for at least two or three centuries. It would be worth while for some of the unfortunate victims to make a short trip to America to realize the vexations of a land where service is really what it is only tending to be in England. We must remember that the five only tending to be in ringram. We must remember that the five servants are probably five insubordinate persons of Links origin, who discharge their functions by instinct, and that the cook thinks nothing of taking an abrupt departure in the midst of the preparations for dinner. The necessity of giving dinners is another of the hardships of Cabinat Ministers; and the appearse seems to be the hardships of Cabinat Ministers; and the appearse seems to be the hardships of Cabinat Ministers; and the appense seems to be very great. A good dinner, we are told, caunot be provided for less than "eighteen dollars a plate." And thus we are not surprised to be told that a Cabinet Minister cannot manage to get through the year for a less cann than 17,000 delians, that is about 3,000. The total expenses, that is, are about double the incides; and the expenses abe less part of the annoyanse. The delicity appelling." They increase that the ladies are expensed is "daily appelling." They increase than for hours at their own assentions; to stand at a sarrige of other people's acceptions; and to return impactantly the multivalinous calls that are made upon them. Therefore I be fainted that, although the publishes a simplicity arby to make a standard that, although they make the standard that are made upon them.

de" at the President's official residence. The last time the cention was attempted, one gentlemen was cheeved helping his dy friends to drinks. He filled a tumbler, and after handing it. may resent to drinks. Its signs a tumbler, and after handing it to one, threw away what was left in the glass over the carpet and the dresses of the neighbouring ladies. If there are still many persons those customs would fit them for a place in Affire Champlers, we can understand that entertaining in Washington has its disagreeable side.

he question which naturally arises is, who would be a Cabinet The question which means it, arises is, who would be a Capinet Minister at Washington? and, still more, who would be a Cabinet Minister's wife? If this is stated as a purely financial question, we fancy that it may admit of an answer. The ingenious plan of giving small salaries in order to ensure frugal officials is one of which we know the mannal consequences. It may, of course, be true that all American Ministers, Senators, and officials are mea of immaculate parity, who spend upon their countryman twice as much as they receive, from a simple impulse of generosity. But it is certainly believed pretty generally that the balance sheet of these gentlemen's incomes would not always be found to include those items which are publicly avowed. Such a phenomemon may be occasionally observed as a man who grows rich by an office, whilst spending two dollars for every one that is paid to him. Some political speculators have inferred that it might be an economical plan it lie long run to increase the legitimate at trastions of office in the hope of diminishing the necessity for less desirable modes of orbancing its value. We will not set tractions of office in the hope of diminishing the necessity for less desirable modes of enhancing its value. We will not at present discuss this point, on which American writers are in the nabit of expressing themselves with sufficient frankness and force. But it is amusing to see how naturally certain absurdation-mongers, and the holicovers in the officacy of paper reforms, might learn some useful lessons from such observations. It is curious now to read some of the discussions which took place at the foundation of the Union, and to remark how curiously-erroneous were the speculations of the really alie men who took part in them. The great danger anticipated was that the people would "lose their liberties." That phrase was understood to mean that some fibe morning General Washington would wake up and declare himself to be a Transatlantic George III. One of the declare incidents of the revolutionary time was the formation of the oddest incidents of the revolutionary time was the formation of the Society of the Cincinnati. The officers of the War of Independence, on returning to their ploughs, were to form a charitable and convivial association; for the purpose of talking over their old performances and affording relief to their distressed colleagues. Nothing could apparently be more harmless; but unluckily it was proposed that the ranks of the Society should be filled by a kind of herolitary succession. The mere mention of such a scheme filled eroditary succession. The mere mention of such a scheme filled all Americans with horror. Here, they thought, was to be the foundation of a military order which would gradually develop into an aristocracy, and who could say that it would not in time lead to a House of Lords, a Constitutional Monarchy, and all the other abominations of effete countries? The Society managed to prolong its existence by softening its objectionable features, and has certainly given no signs of a disposition to usurp political power. But the legislators who flattered themselves that by suppressing such feeble associations they were ensuring the preservation of a Danublium simulation was applicable by the real a Republican simplicity were curiously blind to the real ager. The development of an aristocracy of the old type upon American soil is rendered impossible by circumstances of much more importance than any set of constitutional laws. Such an aristocracy presupposes a history, from which, for good or bad, America has been completely cut off. Any affectation of ceremonies associated in the public mind with the claims of royalty would doubtless be resented as vigorously as ever. During the Civil War President Lincoln was, one of the most powerful rulers in the world; but his power would have vanished into smoke if he had tried to wear robes over his black cost, or forbidden free and independent citizens to shake hands with him on equal terms. There was, in its way, something impressive in the combination of the reality of great power with the absence of the external ceremonial with which it is associated in Europe. A man who could order any of his subjects to be locked up in prison at a moment's notice, and who would at the same time open the door in his shirtsleeves, has a certain picturesqueness of his own. Meanwhile, however, it is plain that human nature is insisting even in America upon developing an otiquette and a ceramonial of its own. America upon developing an enquette and a ceremomas of its own. The ceremonial it is true, anits the manners of a plutocracy rather than of an aristocracy; but it is growing to be as tiresome as that of old countries. The Cabinet Minister has not to appared himself in a uniform, and when the Fresident receives, the streets are not kept by house guards, and his visitors do not kine his hands. But a similar performance has to be enacted. in a slightly different costume. Power is pretty much the same in America as here, and the influence of a small class is pashapa as great, though it is an influence of money, instead of hirth, and is exercised in an anonymous and not too elevating fashion. And it seems that a nearer approach is made to the external forms of power than we might have expected. Gheat officials cannot aventure. Republican atmosphere dispuse, with stiquette. On the constrary, they seem to subject themselves to make officials cannot aventurely, they seem to subject themselves to make of its most troublescent, the subject of official life are just the matters which we could affine it might be thought, to shallow, without any assume regist. And yet our American couches, though they had apparently, the past possible chance of doing without them, have revived them America as here, and the influence of a small class is perhaps as

of their own: free will, though apparently, in a rather more disagreeable form. The Constitution does not make it measure for the wife of a Cobinet. Minister to call upon two thousand people, some of whom are capable of threwing the dregs in their glasses, over ladies, dresses; but she is forced to do it by that unwritten law of custom which is of more universal validity. According to Burks, the old chivalrous sentiment deprived vice of half, its evit by removing all its grantenes. by removing all its grossness. The doctrine is perhaps disputable; but certainly there is plausibility in eaving that it deprived caremonials of half their absundity by removing; their obvious incongruity.

COUNT ARNIM'S LETTERS ON THE VATICAN COUNCIL.

THE two letters written from Rome by Count Arnim during the Vatican Council, but only published a few days sup in the Press of Vianna, will be read with a strange mixture of feelings. by those whom they more immediately concern. The first is stated to be addressed to Dr. Dollinger, and the second to Bishop Hefele; but the members of the Council generally, and especially those forming the Opposition, are throughout made the subject of comment. There is indeed little in the way of fasts that will be new to any one moderately well acquainted with the history of that too nutorious assembly, and some of the comments had already been anticipated in the Letters of Comments. But what gives its poculiar force and odge to the trenchant criticism of the writer is the circumstance of its emanating from an interested but importial and external observer; not a Catholic divine of any school, or an anti-Catholio controversialist, but a Protestant statesman of high standing and strong religious feeling, who had always exhibited a disposition to cultivate friendly relations with Uatholicism, and who had even expressed the desire so common in Germany not many years ago, both among Catholics and Protestants. for an ultimate rounion of the two great confessions which divide the allegiance of his countrymen. If you Catholics who are far removed from Ultramontanism may not unnaturally distrust the motives as well as the policy of Prince Hismarck, but they could allege no ground for crediting Count Arnixa, who is understood to be by no means on very cordial terms. with the Imperial Chancellor, with hostility to their Church. These very letters, addressed to distinguished members of the Catholia hierarchy, are evidently written with the sincere desire of helping to avers what the writer and his correspondents slike considered a serious menace to its best interests. And it is some proof of his segmenty that, with one exception to be noticed. presently, his advice should have been so strikingly justified and his predictions carried out by the event. To say that Prince To say that Prince arck's Church policy is just and consistent with the rights of conscience is one thing; to say that, but for what occurred at Rome in 1870, it neither could nor ever would have been attempted And there is abundant evidence in the Fulds Pastoral of 1869 and in many of their utterances at Itome, that the German Bishops thesuselves were perfectly aware of the probable results of: an intellibilist triumph. That many of the wiser heads in the Roman Curia were aware of it too there can be little doubt, but: they were overborne by numbers and by the tyranical coercion of what Count Arnim calls the "Camarilla" who surround and dominate the Pontiff.

Count Arnim's first letter, dated Rome, January 8, 1870, was written when the Council had been already eitting just a month without doing anything at all. The original design of carrying through the Papal and desnit programme by a sudden coup do main, and dissolving the Council in three weeks, had been foiled, and it. had become clear that a real opposition would be offered to the infellibilists. An address in favour of the proposed new dogmas, got up by the Ultramontane Bishops of Paderborn and Ratisbon, had received 500 signatures—chiefly of Italian or theroughly Italianized Bishops—of whom 300 were moreover "Papal boarders." On the other hand, 25 Austrian and German prelates had subscribed a protest reserving the rights of the Church and the Episcopate; 15 French Bishops had objected to the order of business, which almost wholly tied their hands; and 40 Bishops had demanded in altera-tion in the Council Hall, so as to make their speeches audible, and also permission to revise the stenographic reparts and to print and circulate cases among the Bishops. These "very moderate" requests were promptly refused. Count Armin hero observes that, whother or not the infallibilist decree was actually carried at the time, the Curia would have gained an important step, and that nothing of the kind could have happened if the Opposition had: sufficiently possessed the course of their convictions to begin by contesting the jurisdiction of the Council as then composed, and contesting the jurisdiction of the Council as then composed, and refusing to accept the vexations rules for the conduct of the delates forced upon them. We may add that subsequent experience amply continue the wisdom of this suggestion, which the Opposition Bishops did in fact try to act upon in a feeble sort of way some months afterwards, when the golden opportunity had; been lost. As it was, he perceived obsert that the German Bishops haddened demoralized by "the fillings growing on them for the last twenty years"—that is, by the rapid growth of Ultramatantism dirring the raign of the present Pope—and that it was reasonable first by the Lines first amount means they would go beyond words in opposing the first first amount means of the Curic. Great confidence has large for the present confidence of the present of the subtle influences of the means have further than the subtle influences of the means have for the lines. As not reasonable in the lines are away from home and subtle minimum of Rome, and Count Assimilations from home and subtle minimum of the lines are away from home and subtle minimum of the lines. attenuables of Rome, and Count Armin, testifies that it was not mit famili. "The longer the History are away from home and subject to the influence of the spirito Romano, the more will the Fulda rominiscences fade from their memory. Its sont tous excellents, it is said here, mais its ont perdu les grandes idées de l'Église; il leur faut deux mois de Rome, et tout le monde sera d'accord. Up to a certain point this is perfectly true." And he urges that German Catholics should come forward to support their Bishops, and let it be plainly understood that "they would not accept laws from 500 Italians, 300 of whom are pensioners of the Pope." The situation at Rome, in the opening months of the Council, could hardly be more accurately described than in this letter, nor would it be easy now, with all the light of subsequent experience, to offer any better suggestion as to what ought to have been done to avert the threatened danger, and was not done.

any better suggestion as to what ought to have been done to avert the threatened danger, and was not done.

It is, however, the second of Count Arnim's letters, written five months later and just a month before the closing scene of July 13, that will be read with the greatest interest. It is the longer and more instructive of the two, and though the writer still insisted that the minority might win the day if they could bring themselves to show more spirit and firmness, he had little hope of their doing so, and chiefly occupied himself with the nature and probable consequences of the impending Ultramontane victory. The close of the general debate on infallibility had been forcibly carried a few days before, in accordance with the obnoxious regolamento, thus choking off a number of intending Opposition speakers. The minority were disorganized and cowed, and it is curious that Bishop Hefele, to whom this very letter is addressed, was one of the few leading men among them who shrank from the bolder policy recommended by his colleagues of holding aloof from the future debates by his colleagues of holding aloof from the future debates and declining any longer to acknowledge the validity of the Council. The first half of this letter to Bishop Hefele reads to us now almost like a prophery. The keynote is struck in the opening paragraph with a curious felicity, and the passage deserves to be put on record as it stands:—

From the day on which Infallibility is proclaimed, with the consent or tacit connivance of the Episcopate, the Governments, as the representatives of the modern political and national interests, will find themselves attacked by the Roman Church. I do not, indeed, assert that the enactment of Infallibility will immediately result in a state of things much worse than what has been induced by the practices prevailing in Rome for the last thirty years; but I am afraid the history of the Genmenical Council will prove to the satisfaction of all that there is a power at Rome warring against the political progress and organization of the modern world. More than this, the German Bishops in all probability will show themselves so utterly dependent upon the mischievous central power at Rome that at the eleventh hour they will not only abandon their own deliberate opinions, but actually accept as revealed truth what they have denied before, and what the socular power can never put up with.

It is hardly necessary to point out that the German Bishops have exactly fulfilled this anticipation. Count Arnim proceeds to remark that, if they do so act, there will be not simply separation of Ohurch and State, but "war between Church and State." This prediction also has been fulfilled. He explains that the State will be obliged to regard "the New Catholic Church," changed by the enactment of infallibility, as a different body from that with which Church are the country to the country that with which country the country to the country t enactment of intellibility, as a different body from that with which Concordats and other civil compacts were made in times past. This is unquestionably the view taken, whether reasonably or not, by leading statesmen both in Germany and Austria, which finds its latest expression in the ecclesiastical bills just passed by large majorities in both Houses of the Austrian Reichsrath, and to majorities in both Houses of the Austrian Recensrata, and to which the Emperor has promised his cordial sanction. "If Rome is intent upon war, the challenge she throws down is sure to be accepted. The German Governments may be sure of the consent and encouragement of the nation in taking up the gauntiet." The writer goes on to describe in detail what would happen, and what now has happened, and it must be remembered that he has had no hand in framing the recent Prussian legislation. He speaks of "endless controversies in filling up episcopal sees, expulsion of the Jesuits, restrictions of personal liberty as regards monastic orders, prohibitions of studying in Rome, and, above all, the doing away of all ecclesiastical influence over schools." He adds, with an equally true instinct, that this reaction will not be confined to Protestant countries, that it will very likely lead to measures being adopted which will not bear scrutiny, and that this again will inevitably throw back the Bishops more entirely on the Papacy. And he intimates, with only too good reason, the injuries to religion which such a conflict must produce; "and all this merely because the minority in the Council cannot make up their minds to deny to Pio Nono the gratification of his personal desire." Hardly less acute is his moral analysis of the composition of the infallibilist majority. Several, he observes, including the English and the few infallibilist Several, he observes, including the English and the few infallibilist Germans, sincerely believe the new dogma, but the others do not. The French prelates simply make it a political stalking-horse; the Spaniards cluster round the Pope because they find no support at home; as to the Italians it is absurd to speak of their seriously embracing any dogma, or having the faintest idea of what moral conviction means to a German. The German Bishops should have understood this, and not argued and negotiated when the time was come for resolute action. To stern uncompromising resistance, and to that allow, the Vatican always succumbs:—

If we know anything of the Vatican by experience, it is that concessions are always made by the leading priests when danger is immediate and trangible. Though it may sometimes appear as if the Curia acted on principle, a dozer investigation would satisfy anyone that what appears manifests and hereig devotion to their creed is, in reality, nothing but the result of an erronsous estimate concerning the nearness of danger. Even during the present crisis the Vatican has repeatedly wavered. But these transfered accessions of weakness have been regularly overcome, not by the

reflection that the majority have the better argument on their eide, but that the minority are weak, feeble, and disorganized.

This is the verdict of all who understand the modern Papace There was a canonized Saint, whose name has escaped our memory whose admission into the Calendar was for some time delays because he was related to have said on one occasion that the Pope wanted a good frightening. Like Count Amim, he understood Rome. The minority Bishops who were afraid of pushing matters to extremities at the Council, for fear of producing a schism, did not. There can be no doubt that if they had acted resolutely the Vatican would have taken good care "not to force them into any position at all approaching schism"

position at all approaching schism."

But on one point Count Arnim was out in his calculations. If it had been clearly understood that the Opposition were prepared to repeat their non placet in the Solemn Session appointed to be held on July 18 for the formal enactment of the dogma, that Session would never have been held. To make a written protest and leave Rome, which was the course here suggested, and actually followed proved insufficient, because there was no security and leave Rome, which was the course here suggested, and actually followed, proved insufficient, because there was no security for the remonstrant Bishops adhering to their protest afterwards. The Court of Rome foresaw that they would fall off one by one when separated from each other. It had too much discernment to press heavily on those who were willing to temporize. The most formidable member of the little host was shot down by the Paris Commune. A tacit recognition of the decrees on the part of the Hungarian prelates was discreetly allowed to suffice. Hefele, whose political position was weaker, while his literary connexion made submission of paramount importance, was brought to his knews after a considerable interval, and constrained to mutter a half inaudible Shibboleth. Strossmayer to this day has made no recantation nor published the decrees in his diocese; but he is formidable from position as well as from character, and his reserve has been readily connived at. The German Bishops were expected to persecute as well as to recant. Meanwhile not one of the remonstrants has ventured to maintain a public protest, and in such a case to be silent is recant. Meanwhile not one of the remonstrants has ventured to maintain a public protest, and in such a case to be silent is virtually to submit. They have fallen, as Count Arnim predicted they would fall, "not before their adversaries, but before their own conscience, timidity, and unacquaintance with the enemy's strategy." To those who are familiar with the inner history of the Council and with the various official manifestoes put forth during its progress by these same obsequious prelates there is something pitiable about their docility in kissing the rod. One thing only could have made their humiliation look respectable, and that was that they should be persecuted for accepting it. This semblance of respectability has been bestowed by Prince Bismarck. Dr. Döllinger, who should be a good judge in such a case, is resemblance of respectability has been bestowed by Prince Bismarck. Dr. Döllinger, who should be a good judge in such a case, is reported to have warned the Prussian Government that its policy had aimed the most fatal blow yet struck at the interests of the Old Catholic movement. The most ardent partisan could hardly have made heroes of the Archbishops of Posen or Cologne a twelvementh ago. But in prisons which are not as "the prison of the Vaticaa," or under sentence of deposition—which has just been pronounced on the former prelate—they inevitably command the sympathies of half Catholic Europe. A tithe of the courage they have lately shown in resisting legislation which they are not the sympathies of nail Catholic Europe. A tithe of the courage they have lately shown in resisting legislation which they are not singular in regarding as unjust would have saved them four years ago from the infliction of dogmas which they professed to deprecate as untrue, and which alone have rendered that legislation possible.

BURNING THE DEAD.

THE disposal of the human body after death is obviously a sanitary question of the first importance, and it would be unfortunate if any false delicacy or morbid sentiment were allowed to stand in the way of its being freely and fully discussed. The utmost respect ought of course to be paid to the remains of the dead, but the health of the living must also be considered. It is now some twenty-five years since the horrible disclosures with regard to the overcrowded and miasmatic condition of the London churchyards forced the subject into notice. It was conclusively proved by the inquiries which into notice. It was conclusively proved by the inquiries which were then made that an accumulation of dead bodies in the midst of a town was most injurious to the health of the inhabitants; and an Act of Parliament was passed prohibiting intra-mural interment. The old graveyards—each a putrid mass of rotting bodies, will describe the province bear a period bear a period by the province bear and province b piled layer upon layer—were closed; and burials have since been re-legated to suburban cemeteries several miles from the heart of the city. As far as the central part of the town was concerned, this was no doubt a simple and effectual remedy. The people who lived near the churchyards were relieved from the fatal influences to which the churchyards were relieved from the fatal influences to which they were formerly exposed; and as long as the cemeteries were isolated, and at a distance from population, their sanitary state was not a matter of pressing interest. Now, however, these cemeteries have been, or are quickly being, brought within the continually expanding ring of the great city. Some of them are already the centres of large districts, with houses built up close to their walls; and others are beginning to be similarly threatened with enclosure. It is impossible to doubt that within a few years the suburban cemeteries will be surrounded by quite us dense a population as the old churchyards; and it therefore becomes a very anxious question whether, apart from their comparative remotences, which is continually decreasing, there is anything in the mode of sepalture at these places to render them less dangerous than the graveyards of the town. Upon this point the Report of the Commissioners of 1849 is by no means encouraging. Their condemnation appears to extand to all collections of putrefaction. "We may," they say, "safely rest the sanitary part of the case on the single fact that the placing of the dead body in a grave and covering it with a few feet of earth does not prevent the gases generated by decomposition, together with putrescent matters which they hold in suspension, from penetrating the surrounding and escaping into the air above and the water beneath." Dr. Lyon Playfair stated that he had examined various burial-grounds in order to ascertain whether the layer of earth above the hodies was sufficient to absorb the putrid gases evolved, and found that it was certainly not sufficient. The feetid emanations of the burial-ground could be traced in drains thirty feet distant. Dr. Playfair calculated that from the 52,000 annual interments of the metropolis in 1849—they are now 80,000—no less a quantity than 2,572,580 cubic feet of gases were emitted, "the whole of which, beyond what is absorbed by the soil, must pass into the water below or the atmosphere above. In fact, it is asserted generally that the corruption poisons both air and water, that the health of the neighbouring inhabitants is lowered, and that fatal consequences frequently ensue. The vicinity of a burial-ground is said to be an invariable cause of "headache, diarrhese, dysentery, sore throat, and low fever." In the cemeteries the bodies are not packed together so closely as in churchyards, and there is also a larger amount of vegetation to absorb the emanations. The decomposition, however, goes on as before, and the cemeteries are certainly becoming more crowded, as well as more thickly surrounded by the advancing population. It is impossible that they can retreat further into the country, since ground for such purposes is constantly becoming scarcer; and we may therefore expect to find ourselves before long in the presence of another cr

as before, and the cemeteries are certainly becoming more crowded, as well as more thickly surrounded by the advancing population. It is impossible that they can retreat further into the country, since ground for such purposes is constantly becoming scarcer; and we may therefore expect to find ourselves before long in the presence of another crisis as perilous and revolting as that of 1849.

There can be no doubt that this is a very serious question in a country of limited area with a large and increasing population. It is clear that, if a burial-ground is, under all circumstances, necessarily unhealthy, and if the only reason why cemeteries are less deadly in their effects than the old churchyards is that they have, for the present, fewer people about them to poison and kill, the danger deadly in their effects than the old churchyards is that they have, for the present, fewer people about them to poison and kill, the danger to the public is only a matter of time, and it would be madness not to be prepared for it. Some means may possibly be found of purifying and disinfecting burial-grounds, but apparently they have not yet been found; and it is therefore worth while to consider whether after all there are any valid reasons why this mode of sepulture should be regarded as the only one open to us. The question is obviously one which concerns the living rather than the dead, and it may be assumed that. one open to us. The question is obviously one which concerns the living rather than the dead, and it may be assumed that, if the dead could be consulted, they would prefer not to be commemorated by pestilence upon earth. The essential point to be observed is that the physical dissolution of the body shall take place under such conditions as shall neither revolt the feelings nor injure the health of the survivors. The mammy belongs to a primitive state of society. In Italy and also in France the embalmer still practises his trade, but it is gradually dying out. The experiment is seldom permanently successful, and in any The experiment is seldom permanently successful, and in any case the result is ghastly and disgusting. Any one who cares to see what can be done to arrest decay by artificial processes can gratify his curiosity at the Museum of the Royal College of Surgeons. He can there compare ancient Egyptian mumnies with modern attempts in the same direction. On one shelf may be seen modern attempts in the same direction. On one shelf may be seen the first wife of Martin van Butchell, who, as he was to enjoy a certain property as long—so the deed ran—as his wife was "above ground," thought he could not do better than have her stuffed as an ornament for his sideboard. The operation was performed by Dr. W. Hunter and Mr. Carmenter in 1775, and creek pains were Dr. W. Hunter and Mr. Carpenter in 1775, and great pains were taken to preserve the form and features of the deceased lady; yet nothing can be more hideous and repulsive than the preserved remains—a rotten and withered figure, with a mahogany face in which the teeth glitter as if in mockery of the surrounding decay. An Australian mummy, dried by exposure to the sun, represents an equally disgusting mode of preservation. Jeremy Bentham's body has also been preserved, and is no less horrible in its waxen inanity. In all civilized countries attempts to arrest the process of nature either have been, or are being, abandoned; and this mode of treatment may therefore be set aside. The question remains hew, if the body is to be allowed to return to its elements, is this to be accomplished? Since the earliest ages there have been mainly only two ways of doing this. One is by burial, either in a case or underground, and the other by burning the remains. It is difficult to see why one should be considered more respectful to the body than the other. Nothing can be more lost home and horrible than the natural course of corruption. Dissolution by fire may distress some persons as a departure from familiar procedure; but, after all, it is only burning the rage of the deceased. The object in each case is the same—to get rid of something which, for physical, if not also for moral, reasons, must be put out of the way. In the case of burning, a handful of pure and delicate ashes alone. burial the remains are put out of sight, but decomposition goes on. In the case of burning, a handful of pure and delicate ashes alone remains. It is impossible to resist Sir Henry Thompson's argument that burning, if carefully and efficiently conducted, would avoid the sanitary dangers of burying, though it might perhaps have senitary dangers of its own; and no solid reason can be suggested why, it should be more painful to the feelings of the dead man's friends; indeed, there are obvious reasons, if one reflects not merely on the momentary but the future treatment of the body, why it should be welcomed as a means of avoiding a dreadful

process of decay. Anybody who wishes to take a sentimental view of the matter has only to ask himself whether he would like to look at a friend in his ashes or in his grave at the end of a fortnight. The ordinary sentiment on the subject is merely a desire to get rid of the body without, as it were, laying violent hands on it in any way. This, however, is only postponing for a moment the great crisis. If the body is not destroyed in one way, it is destroyed in another.

Rightly considered the question is mally much worse a savitary.

Rightly considered, the question is really much more a sanitary than a sentimental one. There is no reason why it should be more distressing to a thinking man to follow an inanimate mass of clay to the door of a furnace in which it is about to be consumed by fire than to a grave in which it is to be consumed in another fashion; and religious services might readily be adapted to cremation. The superiority of burning to burying really turns on the question. Can it be decently and efficiently performed, and without danger to health? At present the subject is in an experimental stage, and it is no disrespect to Sir H. Thompson and the advocates of the system to remark that their assertions require to be carefully tested on a larger scale before they can be unhesitatingly accepted. Sir Henry, who has practised on the bodies of animals, says that a powerful reverberating furnace will reduce a body of more than average size and weight, leaving only a few white and fragilo portions of earthy material, in less than one hour; that no truce of odour is perceived, and that nothing can be more pure, tested by sight or smell, than the remaining dust. He admits that during the first three or four minutes of combustion the gases emitted are noxious, but after that time they cease to be so, and no smoke is seen. Moreover the noxious gases do not escape into the open air, but are entirely consumed in a second furnace. Some sixteen hundred bodies have to be disposed of every week in London, and the question is whether the process of cremation could be carried the question is whether the process of cremation could be carried out on this scale, or anything approaching to it, without producing offensive or dangerous results. It is clear at least that, in order to do justice to it, very perfect and consequently very expensive apparatus and theroughly skilled attendants would be required. Clumsy or imperfect cremation would be on every ground intolerable. It is this practical side of the question which requires to be elucidated. There is also another point which demands consideration, and that is the means of ascertaining after sepulture whether death has been caused by criminal means. A body can be due out of the grave, but a calcined body is repre-A body can be dug out of the grave, but a calcined body is represented only by its dust. To obviate this difficulty, Sir II. Thompson proposes to preserve for a certain number of years, in a public institution, the stomach and a part of one of the viscers of every person who dies. It is obvious that this would be rather a for-midable undertaking. An efficient system of official inspection after death, which is undoubtedly much required, might perhaps answer the purpose as a check upon poisoning or violence; but answer the purpose as a check upon possoning or violence; but the mere mention of these points shows how crude the whole project is in its present form. A Mutual Cremation Society has been formed in New York, and in various parts of Germany the movement is said to be drawing towards it numerous adherents. But it is evident that many questions must be accounted by the computation of the control be answered before cremation can come into general use. In the meanwhile the advocates of the system would do well the meanwhile the advocates of the system would do well to confine themselves to its sanitary recommendations. A French writer has suggested, with truly French taste, that "the funeral urn may soon replace bronze clocks and china vases as ornaments on our consoles and mantelpieces"; and Sir II. Thompson has thought it necessary to try to persuade the British public that the ashes of the dead would be an extremely profitable article of trade. "To treat our dead," he says, enthusiastically, "after this fashion" (i.e. cremation) "would return millions of capital without delay to our mother-carth, who would give us back large returns at compound interest for the deposit." Most persons, we imagine, will be content to ornament their mantelpieces and eke out their incomes without turning the remains of deceased relatives to account for either purpose. It is only from the point of view of sanitary reform that cremation has any substantial title to consideration.

THE COMIC GOSPEL.

IT appears that for some months past much excitement has been produced in Edinburgh and other towns in Scotland by the singular exercises of a couple of itinerant Americans—Mr. Moody and Mr. Sankey. For a very long time no entertainment has been so popular in Edinburgh as that which goes by the name of these gentlemen. It is attended by overflowing audiences. Crowds of enthusiasts follow the performers from one place to another, for it is part of their system to have as much variety as possible, and to hold their meetings in all sorts of different buildings—in town-halls, lecture-rooms, and churches of all denominations. The meetings are held at all hours of the day, and some are for young men, some for mothers, some for fathers, others for young women, clerks, students, or little children. Curiosity is stimulated by huge placards on the walls, and several periodicals command a large sale by describing the performances. The nature of the exhibition is stated in the following announcement:—"At 6.30 p.m. Mr. Moody will preach the Gospel, and Mr. Sankey will sing the Gospel." Mr. Moody and Mr. Sankey are Americans from Chicago, and we learn from one of their organs that their visit to Scotland was prompted by a feeling that the churches there stood "specially in need of the application of those brisker, livelier, more

direct modes of appeal which are characteristic of America."
Mr. Moody, we are further told, is "not a man of much education or culture; his manner is abrupt and blunt; his speech bristles with Americanisms; his voice is sharp, rapid, and colloquial." He is remarkable for his want of sanctimoniousness, and humour spurts out sometimes in his most serious addresses. interlards his lectures with droll or wonderful stories, or, as the writer puts it, "he has in his possession a large number of incidents and experiences well fitted to throw light on the points he employs them to elucidate, and to clinch the appeals which he uses them to enforce." In the intervals of Mr. Moody's lectures, Mr. Sankey sings hymns. "Abhorring the notion of providing a musical entertainment merely to please those who are not in the Kingdom of God," he seeks to move "by truth expressed in the most winning tones." It is also "in subservience to spiritual ends." that Mr. Sankey uses the harmonium." Sankey's "Sacred Solos" are sold by the thousand; and is example and exhortations are also said to have given a great impulse to the trade in harmonium. harmoniums. The sort of entertainment which is thus presented harmoniums. The sort of entertainment which is thus presented may be gathered from the descriptions given by persons who profess to have enjoyed it. "We are having a very good time just now," writes one; "old Formality has got his neck broken." "On Friday night," says another, "after Mr. Moody's solemn word, there seemed to be a great smashing up of souls." The audience is alternately moved to laughter and tears. "The Gospel is preached not only with the pronunciation, but in the dialect, of Chicago; and the result is no doubt something years different from that to and the result is no doubt something very different from that to which Scotch congregations are accustomed. Jokes, slang, stories, and sensational exclamations are freely interspersed. Mr. Moody's strange accents and "spurts of humour" work up the people into a state of excitement in which it is as easy to cry as laugh. A parable translated into the language of Artenus Ward, and enlivened by tenches of Yankee wit, is a novel sensation, and the effect is enhanced by a sudden change to startling threats of damnation, and appeals to come and be saved. Then comes Sankey's lively solo, sung in very good style to a melody that might pass for secular in a worldly concert-room but for the words. People who go only to be amused, as most of the audience go, are provided with a curious and racy entertainment, quite as good in its way as the Christy Minstrels. Others of an impressible temsrament are thrown into more or less violent paroxysms of hystorical emotion.

Those who are acquainted with the history of revivals will recognize in the agitation which has been carried on in Edinburgh and elsowhere a repetition, in a slightly modified form, of the ordinary type of these disorders. There are different methods of getting intoxicated, and this is one of them. Nothing is easier than for a skilled and daring expert in revivalism to work upon the nerves and feelings of weak, susceptible persons so as to throw the blood to the head, and bring on all the symptoms of violent excitement. One of Mr. Moody's disciples has designated him the "Lightning Minister of the Lightning City," and there can be no doubt that his performance is of a very rousing kind. In common revivals mere shouting and shuicking answer the purpose of the operators, but Mr. Moody's exercises are of a more artistic squality. Friends of the movement, mingled with the audiance Friends of the movement, mingled with the audience, their aid. They pounce upon any one who seems to be also lend their aid. moved, and pour in their exhortations; and there are also private rooms to which cases of distress are conveyed. "About forty," says one account, "confessed that they were new converts, and about forty stood up as anxious to be saved, and were asked to go to the other side of the hall, where they were conversed with. A servant-girl is described as weeping like an inundation. The "workers" in attendance on her had to keep her constantly supplied with a change of fresh pocket-handkerchiefs and dry hymn-Another time Mr. Moody called upon seven gentlemen on the platform "Most of them were to tell the company how they were saved. well-known men—a minister, a colonel in the army, a merchant, a sheriff, a doctor, anobleman, and a captain in the navy. The offset was Prayers were offered up for "an uncle who is an infidel," for "a family, the father an avowed infidel, and the mother and children unconverted," for "a clergyman of the Church of Ireland who is imbued with Rationalistic errors." At one of the meetings the experiences of a young lady were given as part of the entertainment. "For an hour she sat in the greatest agony; her hands were chaped, her eveballs looked as if they would start from their sockets." Even children are worked upon—little children of eight or nine-with all the terrifying formula of the Revivalist school. A little boy illustrated his faith by remarking that, if his sister received an offer of marriage from a very rich man who had promised she should live in a fine mansion, would she not be very foolish to refuse such an offer? At one meeting we are told of "a dear little boy, about nine years of age, at most tan, who was crying as if his little heart would break," while a "kindly fatherly-like man" was torturing the poor child with things too deep for him-to understand. We read of a book which was sent to another shill contained. one white, the was seat to another child containing three leaves—one winext blood-red, and the third white, indicating salvation. can't have too much blood," is Moody's motto.

It is said to be too soon to estimate the results of the agitation

It is said to be too soon to estimate the results of the agitation which has been carried on by these expedients; but it is not very difficult to anticipate what, judging from former experience, they are likely to be. It is impossible to imagine anything more unwhichsome and debilitating than the sort of morbid expirement and destroic tapture which is thus cultivated; and in other cases the consequence are invariably been a reaction of a deployable kind. In

the country districts of Scotland, revivals have usually left than mark in an increase of drunkenness and a scandalous addition the Registrar-General's statistics of illegitimacy. In Editaba the heat and frenzy have probably been less into e than might supposed from the extravagant language of the organs of the most ment. It can readily be understood, that, as one of these paper says, "hundreds of young persons who were formerly accus says, "nundreds of young persons, who were formerly accusationals to go to the theatre, opera, and pantennime, gave up deliberately, and from choice and the force of conviction abble tended the prayer-meetings"; but the explanation in a great many cases is no doubt that the prayer-meetings were founds to be more amusing and stimulating. One of Mr. Moody's most "acreaming hits," as they say in the play-bills, is a mock representation of a court of law for the trial of Jesus Christ. He asked sentition of a court of law for the trial of sente Online. Also assessment to be consider itself a court of inquiry, and nominates one of the ministers present to be usher and to call in the witnesses, who are then examined with Yankee freedom and jocularity by Max. Moody: Pilate's wife is called Mrs. Pilate, and among the other witnesses are the Apostles, the angels, and the Doity. This sort of with the inflation of maliciants agreement and corrections agreement the inflation of maliciants agreement agreement of the stage. It is hard to say whether the treatment of religion in this manner does most harm by bringing sacred things into ridingle, by afflicting some feeble minds with idle agony, or by overbalancing others with the inflation of maliciants agreement and correct. with the inflation of self-rightsous arrogance and concert. There is not the faintest trace of educated intelligence or spiritual elevation in Mr. Moody's harangues. They are as mere gabble of texts, interspersed with grotesque or sensationals anadotes, and spicel with valuer American slang. The most anecdotes, and spiced with vulgar American slang. The most extraordinary feature of the agitation is that it should be connived: extraordinary feature of the agriculton is that it should be connived; at and patronized by the clergy of Edinburgh, and other towns, It is obvious that, if Moody and Saukey are right in their mode of preaching the Gospel, and if the success of theorem performances is really a "great awakening" and the "Powers of the Holy Choet in Scotland," the ordinary services of religion must be a melancholy farce. Everybody who likes been in Scotland must have been struck with the severe endurated ance and fortitude with which a Scotch congregation site out note only a long and dreary sermon, but a series of prayers which are the worst sort of sermons in disguise; and it is not surprising that the Scotch laity should be thankful for a little relaxation. But that the ministers themselves should come forward in this manner to proclaim publicly that their whole system is a failure and waste of time, is really strange. It must be still more wonderful if, in supporting and recommending Mesers. Moody and Sankey, they do not see that they are condemning themselves. Either a great awakening is good for their flocks or it is not; if it is, why do they not takemeasures to bring it about on their own account? The only justification which is offered for the eccentricities and bullponeries of the Yankee propaganda is simply that the end justifies the means, and that the great thing is to produce an impression on the public mind, no matter how. It would appear therefore that sermons had better be abandoned for singing and story-telling, and there is: no logical reason why the reform should stop here. The banjo and the bones might be substituted for the harmonium, and Mr. and the bones might be substituted for the harmonium, and MRC Sankey's soles might be occasionally varied by a little dancing. The Funce Flip-flap Fandange would be an appropriate accompaniment to Mr. Meedy's "spurts of humour" and select anecdetens. If it is to be understood that it is the business of Christian charches to compete, as the British Evangelist holds, with "the theatre, opera, and pantomime," why is the competition left to these American gentlemen? It is stated that Messre. Moody and Sankey may shortly be expected in London, but they will perhaps discover that their line of business has already been pretty well, worked at the Tabernsole and elsewhere. worked at the Tabernacle and elsewhere.

MR. F. W. NEWMAN ON ANCIENT GREECE,

A Narticle by Mr. F. W. Newman in this month's number of Fraser's Magazine may claim some notice both on its owns account and on account of the reputation of its author. Mr.: Newman has perhaps tried his hand at too many things to be thoroughly successful in all of them, and there is often a touch of eccentricity in what he writes. Still he is always thoughtful and often original; he represents a good and sound style of echelarships though perhaps one which a younger generation of scholars has gray somewhat shead of. On matters of ancient scholarship and history. Mr. Newman long ago wen, and he has not lost, a right to be heard. A few thoughts suggested by what he has to easy about "This Strivings of Ancient Greece for Union" may therefore not be out of place.

The first question which suggests itself to us on reading the title of Mr. Newman's article is, whether there ever were strictly speaking, any strivings in ancient Greece after anything worthy to be called union. By union in such a case we should understand the merging of various separate States, whather they take the form of aities or that after these or districts, in one greater political whele. It does not matter whether the constitution; either of the States whether the pare to be joined or of the greater State into which they are to be joined or of the greater State into which they are to be joined on the greater State into which they are to be joined on the greater state into which they are to be joined of the greater state into which they are to be joined on the greater state into which they are to be proposed of the greater there are included at the greater they are to be a second of the constitution. But, one things can would have thought, was also being conscious these and greater these and greater there are also being the second of the constitution after many after many the scale of the constitution after many after many the scale of the constitution after many than the constitution after many the scale of the constitution of the constitution after many than the constitution of the constitut

"admitted into the whole shall be ministed sinto item equal terms. Movile stilles into at first night velex terms of manism like these severe moves offered to manient Greece as a whole, and that it was only in quite the blater stays of the history that they were uffixed to say large proportion of her commonwealths. We can see no styre of the separate of the or munities of Grace attiving to maile themselves into a n. The lesson of Grack history rather is that, though the tribes may fuse themselves into a nation, asparate cities mot. If modern Italy and modern Switzerland abould be quoted nples to the contrary, the answer is plain. The striving one perfect unity did not begin in either case till the city ments had, by widely different processes in the two cases, peaced to be city governments. Switzerland too never was wholly a collection of cities; it always was, and still is, partly a collection of tribes or districts. Italy did not strive after union till her city governments had ceased to be city governments by seing crushed down under native tyrants or foreign kings. Is itserland did not strive after more perfect union till her city vernments had ceased to be city governments by admitting the whole population of the Cantons to equal rights. And neither in or in Switzerland were the independent States so absolutely independent as they were in old Greece, because they were all, in theory at least, members of the Empire. Most of the historians off old Greece have carofully pointed out, some of them have rather needlessly lamented, the absance of any strivings after amion among the Greek commonwealths. They have dwelled with much force on that unconquerable instinct of the Greek mind which ever clave to the absolute independence of each separate city, and which revolted, till quite a late time of Greek history, from any attempt to fase separate cities into a greater whole. They have shown that a Federal union—much more any closer union—of all Greece was never so much as thought of; that the institution which has been sometimes mistaken for a common council of the enstion was in truth not a political dist but a religious synod.

They have shown that the existence of the Amphiktyonic Council tells the other way, because, if there had been any wish for union, that Council, awkward as its constitution was, might have supplied the groundwork out of which union might have grown. They have shown that during the most brilliant times of Greek history any real Federal union, even among cities or districts the most mearly akin, was confined to the more backward portions of the Greek nation, and that the more vigerous was the political and intellectual life of any city, the more errorstly did it cleave to absolute independence. They have shown that, though, as a matter of fact, many cities did fail to keep that absolute independence. dence, yet it was always against their own will that they lost it; that they would probably have rejected any proposals for real federation on equal terms, but that in truth they never really had the choice, for the alternatives offered were always either absolute independence or a greater or less degree of subjection to some other city. The utmost in truth that any Greek city ever willingly consented to was a lax Confederacy under some leading State whose πητιμονια was limited to the chief command in a common war, and did not hamper the general free action of the other members, much less meddle with their internal constitutions. And when, after experience of Macedonian supremacy, the Federal principle began to have greater vogue, and when the most part of Greece was mapped out among Federal commonwealths, still there was no attempt at any union of the whole country, and several cities, smong them those which had been most illustrious in past times, stood out to the last against union even with their nearest neighbours. In the face of all this one is rather surprised to hear of "the Strivings of ancient Greece for Union," when one would be more inclined to In the speak of "the Strivings of ancient Greece against Union." latter form of words, one might have thought, though not strictly accurate, would come much nearer to accuracy than the other. We cannot fairly say that arcient Greece strove against union, because we cannot fairly say that a man strives against a thing which is mover really placed before him. But we might certainly have been my that ancient Greece came much nearer to striving inclined to ninet union than to striving for it.

Mr. Newman quite takes in the fact that the Greek cities did earnestly cleave to their separate independence. After speaking, as Mr. Grote had done before him, of the various elements of unity camong the Greeks, especially their common festivals, he goes

Tet, while the nation was thus conscious of unity, and its very narrow area seemed to make union both natural and necessary, it was vehemently, almost fenatically, attached to local sovereignty, ont of which its great political activity flowed; and with difficulty did any asste resign the right horder war, for regaining or retaining its rightful limits. While Greeinn managy mainly depended on the intensity of local politics, which in the more democratic states gave free course to takent; yet the great used of Greece, if she was to stand against the far greater mass of surrounding monarchies, was (as she herself knew and felt) a willing and permanent federation.

It is at these last words that we have to part company with Bir.

Newman. We sannot see that Greece "knew and falt" her "great need" of forming hauself into a willing and permanent federation. Mr. Newman not only thinks that the "sardinal profession." Mr. Newman not only thinks that the "sardinal profession." It is the head of Greece; he would have conquered some of her western provinces, and would have set up a Greek dominion over certain manageable provinces of Europe and Asia. He would have stopped, in short, where Alexander would have stopped if he action," that "she made manch progress towards it," and head been Parmenion, but where, being Alexander, he did not stop. Alexander, by going too far, ceased to be Greek or Macedonian, and became Persian; and Greece became subject, not to the reason-she main of the Attic towns in pers-historic times, of the mism of the Attic towns in pers-historic times, of the form the personnel of the main of the maritime confederacy under

Athens after the Bersian war, of its revival in the fourth century s.c., of the Olynthian. These lian, and Aradian leagues, and of the chance of unity which, as he further holds, was lest uniter. Alexander Philip, but which, as he further holds, was lest uniter. Alexander Philip, but which, as he further holds, was lest uniter. Alexander Throughout he attributes artracrdinary importance to the agency of particular men. Kimon had a noble scheme which Paidles spouled; so had Epameinondas; so had Jason; only they died too soon; had he lived longer, Alexander might have been wiser. It is of source easy to laugh at speculations as to what might have been, and Mr. Newman protests beforehand erainst such laughter. We hold with him that "in studying the life of a man, we not only learn what he did, but speculate on what he was capable of doing." We denotified fault with Mr. Newman on this score; where we quarrel with him that is simply that we do not see that there were any such strivings after union as he talks about. Mr. Newman seems to us throughout to confound subjection with union. No doubt subjection is union in a sense, but it is not the kind of union which people strive after. Till we get down to the Federal period, which Mr. Newman, as is the fashion, outs rather short, his only real instance of union is the union of the very truest kind, and, though it is placed in prachistoric times, there is no ground for doubting its reality. We infer its reality from the exceptional circumstances of the Athenian commonwealth. Athens stands by itself in having its full franchise extended to all the free inhabitants of what, according to Greek notions, was a large district. The utter contrast between such a state of things and anything which we see elsewhere in Greece makes it emphatically one of those exceptions which prove the rile. It can hardly fail to have been the work of one of those men, whether his name was Theseus or anything else, of whom Mr. Newman truly easy that it makes a grant difference whether they are low

The contraction of the con-

Throughout Mr. Newman fails to distinguish real union, whether in the form of federation or of consolidation, from subjection on the one hand, and mere confederacies and alliances on the other. Confederacy of Delos, which gradually changed into the Athenian Empire, is a case in point. It changed from a free and equal confederacy, under the military guidance of a leading State, into subjection, more or less complete, to that leading State. At one time certain independent States entered into a close alliance for certain defensive purposes; in another stage certain States, no longer independent but still distinct, were hold in bondage by one ruling State. It is undoubtedly true that their bondage was much lighter than it became when they fell into the hands of another ruling State; but it was bondage nevertheless. did Athens offer—indeed there is a touch of absurdity in the supposition that she could have offered—the franchise of her own city to Sumos, Chios, or Melos; there was not even any moment in which she offered them admission into an equal federation, such as that to which Aratos in after times offered admission to Corinth, Argos, and a crowd of other cities. When Athens and Sparta were each followed by a crowd of allies and subjects, it was no step towards union; it rather divided Greece more hopelusely than before. In the next century Mr. Newman speaks of the Olyathian League, on which he somewhat oddly remarks that it is one "to which our histories do not appear to direct adequate attention." Now surely no one can say that Mr. Groto has failed to give adequate attention to the Olynthian Lengue, about which he has said all or more than all that Mr. Newman has said. If there is anything to be complained of, it is that Mr. Grote, as we think, draws rather too hopeful a picture of what was likely to come of it. Mr. Newman sees another step towards union in the dominion founded by Jason in Thessaly. But he adds, with some simplicity, that the men who killed Jason "received such honour in cities that the murder must be ascribed to the fears which Juson inspired." This is perfectly true; Jason did inspire great fear cities that the murder must be ascribed to the fears which Jason inspired." This is perfectly true; Jason did inspire great fear lest he should be able to extend more widely the kind of union which he had set up in Thessaly; but the kind of union which men fear is not exactly the kind of union which they strive siter. Then we come to Philip. Now we are by no means disposed to be so fiercely anti-Blacedonian as some people. That is to say, we can quite understand the position both of Philip himself and of those Greeks who willingly accepted his supremacy; but we cannot therefore join with Mr. Newman in his rejoicings that the battle of Chairôncia "silenced" Demosthenes. Mr. Newman goes on to speculate upon what would have happened if Philip hid not been killed so soon. He would, he thinks, have invaded Parsia in the character of the head of Greece; he would have conquered some of her western provinces, and would have set up a Greek dominion over certain manageable provinces of Europe and Asia. He would Mr. Newman's history of the Federal period is somewhat odd-He calls the Achaian Lesgue ill cemented; but the Ætolians, though he calls them buccaneers, he seems half to admire. He brings them in when speaking of the failure of the supposed attempts at union under Athens, Sparts, and Thebes. On this he comments thus.—

When Athens, Sparta, and Thebes had all failed from refusing to treat their allies with equality, some will say, "The age was not morally advanced enough for it; the thing was morally imposable; failure was predestined." Yet to believe this seems quite unreasonable, when in the next century the semi-barbarous and piratical Ætolians set up a league and extended it by violence, yet admitted into full equality the men whom they overpowered, and treated all public interests by a public assembly, freely electing their yearly leaders without distinction of district from district. Out of this rose their power and prosperity. This was what the great Aristides desired the Athenians to do; but the subtle and unprincipled Themistocles thwarted and undermined him, whose policy Pericles followed; otherwise Athenians were surely capable of being as virtuous as Ætolians.

Surely Mr. Newman must have forgotten that the Achaians, who were not buccaneers, and who did not, till a very late stage in their history, annex any canton against its will, did at least as much as he not untruly attributes to the Ætolians. This extract alone will show that Mr. Newman holds strong, and indeed rather strange, views about some of the leading characters in Greek history; but our business is with what seems to us a quite mistaken view as to the general subject, and we do not care to enter on his estimates of particular men.

THE EXETER REREDOS.

Of the two questions involved in the Exeter Visitation, one relates to the authority of the Bishop. In January last Mr. Justice Keating set aside as groundless the objections of the Dean and Chapter to the jurisdiction of the Bishop over the fabric of the Cathedral; and in his opinion on the whole case, which has just been adopted by Dr. Temple as the basis of his Judgment, his views on this point are repeated in a very emphatic and decisive manner. It would certainly, he remarked, be strange if a power existed to exclude the control of the Bishop over a church which was the parish church of the whole diocese, which in all formal documents was called the Bishop's church, and which without a Bishop could not exist as a cathedral; and no statute or usage limiting the authority of the Bishop in this particular case heen produced. He therefore held that the Dean and Chapter had no power to make alterations in the Cathedral without a faculty from the Bishop, and that consequently the omission to procure this sanction made their proceedings in the present instance illegal. It is difficult to see how the Bishop or his assessor could have arrived at any other conclusion; and so far, therefore, the Judgment is satisfactory. Unfortunately as much cannot be said for the remainder of it.

The second question which had to be determined was whether the reredos with its sculptured groups or "images" was contrary to ecclesiastical law. The reredos, it should be borne in mind, is not an isolated addition to the minster, but part of the general work of restoration, carried out in harmony with the rest of the edifice. This structure consists of several compartments. In the central one is a figure of the Saviour ascending; another compartment contains a group of the Apostles on the Day of Pentecest, with "tongues, like as of fire," on their heads, while the Holy Chost, in the usual form of a dove, hovers over them; and in a third compartment is seen the figure of our Lord transfigured, with Moses and Elias on either hand, and three Apostles in front. These figures are all small and in altorelievo; and there are four statuettes of angels. The question was whether these alto-relievo figures and statuettes could be fairly considered images of the kind forbidden to be erected in English churches. Mr. Justice Keating went into a long historical argument, which appears to us quite beside the mark, to show that images were prohibited by the regulations issued in the reigns of Edward VI. and Elizabeth. No reasonable person would think of disputing this; but the point at issue is not whether images have been prohibited, but what is an image in the sense in which such things are prohibited. It seems to us that there can be no doubt whatever that what was intended to be struck at was images which were the object of idolatrous worship and reverence. The first prohibitions were, in fact, limited to such images as had been previously abused with pilgrimages or offerings, or that had been, or might be, censed unto; all such were directed to be forthwith taken down. Afterwards, it is true, the prohibitions were extended, and all images were placed under a ban; but this is easily accounted for by the state of mind of the general body of the people, who were ton ignorant to understand the distinction between one image an

point at once by looking at the object. It would not appear blue to one and red to another. But the difficulty about a superstitions image is that its character is determined not by its physical appearance, but by the feelings which it excites in the minds of persons looking at it. Mr. Justice Keating incidentally observed that Queen Elizabeth's public instructions on this subject were rather opposed to her private conduct, as she had a crucifix in her private chapel, while pohibiting images in churches. If she had been asked for a justification of this apparent inconsistency, she would no doubt have replied that it was not really an inconsistency at all, because she did not worship the crucifix in the superstitious sense in which many of her subjects worshipped images. The object of the authorities at that period was to detach the people as far as possible from the observances of the Roman Catholic Church; and when it was found that images which had previously attracted little attention were, in the absence of more important ones, adopted as objects of veneration, and thus helped to keep the minds of the people in the old groove, it was exceedingly natural that the order for the removal of such things should be made more sweeping. Nothing, however, can be more absurd than to construe rules of this kind in their application to the present day in identically the same way as when they were applied to an entirely different state of affairs, and to leave altogether out to an entirely different state of affairs, and to leave altogether out of view the revolution in religious thought and general education which has taken place in the interval. The point raised as to whether the figures being in alto-relievo and in groups, instead of being separate figures in a detached form, made any difference as to their legality may be passed over as trivial. Mr. Justice Keating said very justly that "what those who framed the prohibitions wished to guard against was what they considered the peril of idolatry, and they could scarcely have supposed that any one would worship a figure only if wholly detached, and withhold worship from an alto-relievo." If Sir II. Keating had taken an equally broad view of the whole question, he would have seen that it turned altogether on the use that was to be made, or was likely turned altogether on the use that was to be made, or was likely to be made, of any particular image. The prohibition is not to images as matters of ornament, but only to images as the objects of idolatry and fetish worship. The condemnation of the figures on the Exeter reredos is, in fact, altogether absurd, except on the supposition that Sir II. Kenting and Dr. Temple were really afraid that the Dean and Chapter or the public would be in danger of treating them as objects of superstitious veneration. It is obvious that if it were to be laid down as a rule that everything that could by any chance be used for such a purpose must be excluded from English churches, a such a purpose must be excluded from English churches, a vast number of churches would have to be immediately reconstructed. There is quite as much to be said against the use of structed. There is quite as much to be said against the use of stained-glass pictures as against sculptured images, which are only a different form of art; and in a great many churches there are ornaments of various kinds which might as well be suspected of serving the ends of idolatry as bits of alto-relievo or statuettes. Indeed it is difficult to see where, if the principle laid down in this Opinion is to be accepted, its application will cease.

It should be observed that the images on the Exect reredos are condemned, not because there is anything peculiar or suspicious about their design, but simply because they are a representation of

It should be observed that the images on the Exeter reredous, are condemned, not because there is anything peculiar or suspicious about their design, but simply because they are a representation of Scriptural persons sculptured in stone, and must therefore be held to be images according to the literal meaning of certain regulations made three centuries ago. Mr. Justice Koating took a very narrow and imperfect view of the judicial functions which he was practically discharging in the name of the Bishop when he said that "it was not necessary to anticipate questions which might nover be raised." We should have thought that every judge, ecclesiastical as well as lay, was bound to consider how far the precedent he was going to lay down was likely to extend, and to try to prescribe some intelligible general principle for guidance in regard to the matter under consideration. One qualification, indeed, the Judge attempted to establish, and that was one entirely of his own invention. He began by endeavouring to prove that all images were equally illegal in a church, and that the general prohibition of images in Edward VI.'s reign must be slavishly observed in its strictly literal sense; and then he went on to lay down the principle, which is entirely without warrant either in the laws or usages of the Church, as well as directly in the teeth of his previous ruling, that an image is not an image unless it is in a particular part of the church. He supposed, he said, that "figures, sometimes grotesque, and sometimes serious, which appeared on the boss of a column, or interwoven with a tracery pattern over a door, all of ancient date, would probably receive a different consideration from the question of the legality of images of our Saviour and His Apostles placed over the holy table in the position used in the Romish churches for the purpose of honouring the altar of sacrifice supposed to exist there." What warrant there is for this distinction it would be exceedingly difficult for either Sir H. Keating or Dr. Temple to s

Church of England. It is impossible not to see that the Dean and Chapter have been condemned on a mere valgar cry of "No Popery!" and under such circumstances they are entitled to the sympathy and support of all who do not wish to see our churches restored to a state of Puritan nakedness and unliness. This restored to a state of Puritan nakedness and ugliness. This decision strikes not merely at this particular reredos at Exeter, but at all structures in which sculptured figures are represented that the reredos which it is understood that the Queen is putting in the Albert Memorial Chapel (formerly Wolsey's Tombhouse) in St. George's, Windsor; at the reredoses at Ely, Lichfield, Hereford, Gloucester, Chichester, Worcester, and in the University Church of Cambridge, at the images with which the old remotes of Westminster has been adorned, as well as at innumerable altar-pieces in other less conspicuous churches. And able alter-pieces in other less conspicuous churches. And not only does it strike at these, but, if the broad principle laid down by Mr. Justice Keating be taken as a rule, apart from his private distinction as to the altar, it strikes apparently at every image in or about every church. Not even King George on Bloomsbury Church is now lawful, we suppose. Monstrous as is the result of the judgment—and it is also likely to be exceedingly vexatious—there may perhaps be an advantage in this reduction and absurdum of literal compliance with all the fessel provisions of the Reformation period as if they were valid statute law. Such ridiculous extravagance can hardly fail to lead to some compromise, which in order to be practicable must necessarily be twosided and elastic, and must show some complete. sided and elastic, and must show some consideration for the seathetic as well as for the Puritan temperament.

PILGRIMS AND THEIR SUFFERINGS.

==-=

THERE was a rumour a few weeks ago that some scores of pilgrims had been swept off the decks of a Mediterranean steamer in a violent storm. As it appeared that there had been some irregularity in the invoice, it was impossible to tell the exact number. Since then there has been an investigation into the matter by order of the Roard of Trade, and, on comparison of the pilgrims duly delivered with the number that were shipped per bill of lading, rould seem that there were only one-and-twenty unaccounted for The mishap occurred to the steamship Laconia, on a voyage between Alexandria and Tunis. Having discharged cargo, she had spare stowage room. When she was on the point of sailing, the owners' agents in Alexandria proposed to fill her up with live freight, and accordingly 1,123 hadjis were sent on board. The freight, and accordingly 1,123 hadjis were sent on board. Inceeded was licensed to carry only twenty passengers; but it seems that the restrictions of the certificate did not apply to trade between Mediterranean ports. However, the captain thought that upwards of eleven hundred persons with their baggage was rather a heavy consignment, and prudently insisted on 180 of the holy travellers returning to shore. He sailed with the rest, and came in for very rough weather. His passengers were troublecame in for very rough weather. His passengers were troublesome and refractory, which is not astonishing, all things considered. They objected to the accommodation between decks,
although they were assured that there was ample stowage
room, and preferred remaining above with their buggage,
which we may be sure was made up in sufficiently compact
bulk. On the whole, it would have been better perhaps had
they elected to stifle under hatches, but who can foretell the
future or avoid his fate? A wave pooped the steamer, breached
the quarter rails, swept the decks, and carried away most of the
missing pilgrims. For the Captain avers—and this is the most
characteristic part of the story—that all the casualties that took
place on the voyage did not happen upon that occasion. Some of
the pilgrims—how many he does not say—had died from other
causes, and were dropped quietly overboard by their companions.

The Captain was acquitted of blame, and had his certificate
returned to him; and we are certainly not inclined to find fault

returned to him; and we are certainly not inclined to find fault with the decision of the Court. No doubt the story is a terrible one. About a thousand souls with their belongings were stowed away at a moment's notice in a ship licensed to carry twenty. There might no doubt be space to pack the crowd, but it was impossible that due appliances could be provided for their accommodation, sime that due appliances could be provided for their accommodation, and they had a voyage of several days before them. Had the weather been propitious, they might have roughed it on the deck without any extraordinary misery; but they sailed in the depth of winter, when the Mediterranean is proventially treacherous, and when the breeze freshened and the waves ran high they had a most unpleasant option between the deck and the hold. On the whole, we should agree with them in preferring approximately accommodately. we should agree with them in preferring exposure above to confinement beneath. Had the crew once persuaded them to go below, they would assuredly have kept them there to be out of the way of the working of the ship, and a thousand men in low close compartments under battened-down hatches must have low close compartments under battened-down hatches must have experienced something like the horrors of a slave-ship on the middle passage. They chose the less disagreeable of two miserable alternatives, and a wave carried away twenty of them. It was a meshancholy accident, but such accidents will occur in the best-found ships; the strongest bulwarks will anap like twigs under the force of a mass of water, and when a sea surges over a ship everything that is not secured must necessarily go by the board. What is really terrible is the Captain's statement, made by way of faitigating the gravity of the particular charge, that assume of the bigrims had died from other causes in the course of the few days and hights they passed on board the Laconia. There is no suggestion that they were suffering from an epidemic when they shapped;

had it been so, indeed, they would never have been eccepted as passengers. Consequently we are left to assume that they expired of their misery—of starvation, exposure, anknustion, overcrowding, one thing or another; and if several of them succumbed in so short a time, we may conceive something of the sufferings which the rest of them survived. Still we repeat that we see no particular reason to blame the officers of the Laconia; nor are we disposed to be severe on the shipping agents in Alexandria. True, it reads like a strong measure to send 180 more people on board than the Captain deemed it prudent to undertake to carry; but, after all, when pilgrims set such small store by their own lives, other people cannot be expected to be over-cautious on their bohalf.

The hadjis who shipped on the Laconia did not find berths of

cannot be expected to be over-cautious on their bahalf.

The hadjis who shipped on the Lacous did not find berths of roses on board, or indeed borths of any kind; yet, all things considered, they might think themselves excessively lucky. They might count on having a hard time of it with rough quarters and short commons, but at all events their discomforts would be comparatively soon over. What were half-a-dozen days at sea in a swift, well-manned steamer, to hanging about in Alexandria begging and starving, and then making the voyage in a cocklechell of a screw, or possibly a native coasting craft? Few of us have an idea of the sufferings undergone in the ordinary course of business by pilgrims to the sacred shrines, or of the proporof business by pilgrims to the sacred shrines, or of the propor-tions of live which they annually sacrifice to their superstitions. Even well-to-do Orientals travelling for their pleasure or profit make a rule of economizing everything that can be economized in transporting their persons from one point to another. Wealthy Hindoo landowners or merchants will stifle themselves in a third-class carriage, stuffing up the compartment with strange bundles of baggage. You may see rich Ottoman gentlemen taking their deck passages on the Black Sea and Levantine steamers; sitting with the ladies of their families, and their miscellaneous sitting with the ladies of their lamilies, and their inscalaneous household goods covering the piles of vociferous honcops to leeward of the odoriferous cattle-pens. No wonder then that the pilgrim of the lower orders, who leaves home in sublime faith and besotted ignorance, is exceedingly indifferent to all that lies before him. From the Regency of Tunis, from Algiers, or more distant Bombay, the peasant, the artisan, or the small trader sets his face towards the Sacred City to perform the great work of his life. It is far cry to Mecca, and his stock of hard-saved cash is as slender as the travelling paraphernalis which he prepares for the journey. He a far cry to meeca, and his stock of hard-saved cash is as singuer as the travelling paraphernalia which he prepares for the journey. He has not the faintest conception of distances, or of the geography of the globe, beyond the horizon of his native village. He has never been in the way of taking much thought for the morrow, and has been in the habit of living from hand to mouth. He has been used to hardships, anxiety, and oppression; perhaps he has tided over more than one period of semi-starvation, vowing this pilgrimage if he escaped with his life. So that hardship in an ordinary way has few terrors for him; he has no data for realising the various forms of suffering that await him; nor can be estimate what it is to endure for months upon months in blank hopelessness should his faith fail him. Not that he would be deterred, in all probability, even if he had a juster appreciation of all that lies before him. He makes the pilgramage for the safety of his soul, and salvation is worth the buying with a great price. Should be succumb on the way back again, his fate is a blessed one. The more intense his misery, the more buoyant should be his hopes; for if his sufferings are only severe enough to kill him outright, he will be borne straight to Paradise, to be handed over to the care of the hours.

Once fairly started on his expedition, he needs every spiritual consolation to enable him to triumph over the woes of the fiesh. He cannot even suffer in ocstatic abstraction, comforting himself by communion with the powers above. He must charge himself in nuneteen cases out of twenty with a heavier load of worldly cares nmeteen cases out of twenty with a heavier load of worldly cares than he had to bear at home; for he must buy or trade his way if he is ever to arrive at his journey's end. Every year, for example, for months before the annual caravan leaves Cairo for Mecca, numbers of the wealthier of the intending pilgrims have formed a bazaar of their own, buying and selling to clear their travelling expenses. We may imagine that the pauper pilgrim has made his way from somewhere in North-Western Africa to Cairo. His small means are exhausted, and he has been able neither to beg. borrow, nor steal sufficient to lay in a been able neither to beg, borrow, nor steal sufficient to lay in a provision to carry him across the Desert. Perhaps even his water skin is tattered and leaky, and he has no means of replacing that first essential of Desert travel. But the caravan takes its departure on a given day, and the Sheikh waits for no man. If the pilgrim misses it, he must linger on for some six months more, with small hope of bettaring his condition; and, besides, he grows eager to have done with the sacred work, for he has been long absent from home, and is turning very home-sick. So he decides to start with the caravan, and trusts to Allah and charity to pull him through. By collusion with comrades similarly situated he manages to pass the examination which is tratituted into examination which is tratituted into examination which is tratituted into examination which is tratituted. the examination which is instituted into every man's means of subsistence, and congratulates himself on having made a fair start of it. Speedily, however, he changes his cheerful tone. Worn down by previous low living, and now put on starvation rations, he toils ankle deep through the burning sand, under the blazing sun, after the horses and camels. He finds his fellow-pilgrims very chary of their charity, for food and water grow daily more precious, and many of the poorer of the company are in the same case as hunself. Many of them, after suffering pitiable extremities, have left their bones to bleach in the Desert; nor is the passage in a crowded dhow in the Red Sea at all preferable to that overless route. The poor fellows find it no jesting metter, and the examination which is instituted into every man's means of sub-

although those who have reached Mecca and kissed the Kaaba, and then found their way back to Alexandria, may think themselves, comparatively speaking, extraordinarily lucky, yet a good part of their screews are still before them. When they have to do the long hit of country between the port of the Khadive and that of the Bey, no wonder that there is a scramble for a powerful English steamer like the Lagonia. The "Ancient Egyptian" whose letter appeared in the Times of Tuesday gives us a notion of what they may expect in most instances. "Ancient Egyptian" whose letter appeared in the Tomes of Tuesday gives us a notion of what they may expect in most instances. He tells of small, crank steamers overladen, and mentions one particular case where the boats hanging at the davits of a screw collier were actually filled with people. Nor is it anything unusual for them to go to see in sailing ships and trust themselves to the mercies of the winds, as scantily provided and as uncertain of relief as when they plunged into the heart of the Desert. It is all very lamentable, no doubt, yet we do not see what is to be done for them. We cannot argue with their fanaticism, and indeed it might be conferring a doubtful benefit were we to deprive them of their firm though misplaced faith. Certainly we might pass more stringent Acts regulating the carrying trade in English attemers. In that case, however, we should only throw them back on an inferior class of vessels, prolong indefinitely the time they must spend at see, and consequently increase immeasurably the aggregate of suffering and mortality.

THE ANTI-BEER WAR.

WE are sorry to hear that the teachers in Sunday achools VV confess themselves beaten by the public-houses. They require, for the successful performance of their own duties, not only that the public-houses shall not receive customers on Sundays, require, for the successful performance of their own duties, not only that the public-houses shall not receive customers on Sundays, but also, as we understand, that the sale of beer for domestic use shall be prohibited. The teachers have been deeply grieved to find that the houses of many of their scholars have been rendered missrable, and their lives embittered, by the intemperance of their parents; and the only wonder is that they do not demand entire prohibition of the sale of intoxicating drinks. It appears that the elder scholars, after coming to school in the merning or afternoon of Sunday, are sometimes tempted to enter a public-house in the evening. It might happen, for example, that a young man took a country walk with a young woman with whom he was "keeping company," and that they refreshed themselves with a pint of beer under a tree in front of a rural public-house. This is called, in the language of Exeter Hall, "spending the sacred hours in vicious indulgence," and in order to prevent the possibility of yielding to such temperation, it is proposed that all public-houses should be closed. The reasoning of the Memorialists who have addressed the Home Secretary on this subject is, to say the least, surprising. They state that a large proportion of prisoners in our gaols have been taught at Sunday schools, and have afterwards frequented public-houses, and then have become criminals. They argue that public-houses ought to be abolished; but surely the same conclusion might be applied to Sunday schools. It may be true that there is more need than ever of Sunday schools, because the instruction given on weekdays is becoming more and more secular. But if that be so, let Lord Shaftesbury and his allies labour diligently in the work they have undertaken, without meddling with that which lies beyond it. If they can teach any religion or morality worthy of so, let Lord Shaftesbury and his allies labour diligently in the work they have undertaken, without meddling with that which lies beyond it. If they can teach any religion or morality worthy of the name, it will enable a pupil to support the shock of seeing a parent imbibling his Sunday beer, or even of the pupil taking a sip himself. But if they can only produce a delicate hothouse plant, unequal to the storms of life, we should fear that the religious teaching of Sundays will not greatly influence the secularism of weekdays. If the teachers have so little faith them. secularism of weekdays. If the teachers have so little faith thems-solves in the power of the religion which they teach, they can hardly be surprised if others do not greatly believe in it. The middle and lower classes of Englishmen almost invariably put upon their tables the best dinner they can get on Sunday, and if they have not cellars of their own, they must supply themselves with drink not cellars of their own, they must supply themselves with drink from a public-house. It may even happen, although we feel that the suggestion is shocking, that the identical child who goes afterwards to the Sunday school has carried a jug to be filled with beer, and understands what is meant by asking for "half-and-half." This, in the eloquent language of Lord Shaftesbury, is deteriorating that child's home by evil example, and leading it, as it grows up, into destructive sin. An East-End clargyman imported some novelty into the discussion by urging that it was inconsistent to shut up every other business on Sundays and open those "places of shut up every other business on Sundays and open those "places of evil," the public-houses. It probably did not occur to him that the evil," the public-houses. It probably did not occur to him that the only business which cannot be conveniently omitted for a single day is that of eating and drinking. It seems as if the speakers at all these meetings contemplated London as exclusively consisting of householders having kitchens and cellars reasonably supplied with food and drink. But there are many thousands of Londoners who do not possess these conveniences; and, although the last Licensing Act has interposed some difficulties, it is still possible, within certain hours, for these persons to obtain a decent dinner with the drink to which they have been accustomed. It would probably be difficult to persuade them that they ought to go without their dinners on Sundays in order that the virtue of pupils in Sunday schools may be preserved from the possibility of detorions who are apt to fisal a thirst that objects to be assuaged by gingerbeer. If the father of a family honestly tuge a perambulator or

carries a baby into the lanes and fields, we think he is entitled to rest at a public-house and take his beer; and whatever we ma think, he certainly will do so, and those who interfers with his

will regret their meddling.

The latest news from the Crusaders, as they call themselves, is that they have carried a fashionable boarding school in New York by storm, and that fifty young ladies have signed an agreement not to marry any man who does not first sign the pledge. It is to be feared that this agreement, like the pledge itself, is subject to exist ceptions. The crusading army has made a less successful assault on the American Senate, who, being requested to close their har and sign the pledge, only answered by laughter. "The tidal wave and sign the pledge, only answered by laughter. "The tidal wave of temperance" does not seem to have produced much effect ist Washington, and indeed it is confessed that the praying women can do little in the large towns, although they have at least temporarily destroyed the trade in liquor in many villages. Some liquor-desders have employed a brass band with good effect, and the Mayor of Cleveland is stated to have "the fire-department" in readiness to repress any fresh outbreak of prayer. The Cruseders have quickly made themselves ridiculous, and it is hardly possible that the best cause could survive the leadership of Mrs. B. M. Lawrence, M.D., who publishes what she calls "the ten commandments of health" for the guidance of her own sex. Women are exhorted not to eat pork, gresse, butter, or spices; to encourage a cheerful disposition by judicious recreation, music, and mirth, including congenial grease, butter, or spices; to encourage a cheerful disposition by judicious recreation, music, and mirth, including congenial magnetic relations; to seek "a true life-mate," and strive to sustain, if health permits, the sacred relation of parent. Of course the Crusaders have started a journal, in which Mrs. Lawrence, M.D. is powerful. We gather from its pages that temperance is in some way connected with Turkish baths. A correspondent states that he has had another bath, and "feels that it is the first time that ever he was washed." This circumstance is perhaps more interesting to himself than to the world at large. "They rubbed of a pound or two of what never should have been there"—matter in the wrong place, in fact; and he felt considerably better. It is not a pound or two of what never should have been there"—matter in the wrong place, in fact; and he felt considerably better. It is not of course surprising that Crusaders should have acquired during flastern travel a taste for Turkish baths. Indeed the editor seems to be going in for them to that extent that it may be doubted whether any editor will be left soon. There is an hotel adjoining the baths, and "we are so delighted with the establishment that we not only pay full prices for our board every Saturday, but give them this first-class reference for nothing."

All this is so wonderfully absurd that we have difficulty in believing that it is part of the same movement which, under the name of the Women's Whisky War, appeared likely to have serious effects. We should think that Mrs. Lawrence, M.D., and the gentleman who takes Turkish baths are capable of bringing the most solemn and sacred cause into ridicule; and even without the "fire department" of Cleveland we should expect that the excitement of the praying bands must have considerably cooled excitement of the praying bands must have considerably cooled down. The heavy respectability of the leaders of tectotalism among ourselves renders it unlikely that they will attempt such absurdities as have been transacted in America; and besides, if a praying band did start in London, we fear that it would be moved on by the police before the real fun could begin. But although we cannot parallel the grotesque features of a temperance agitation in America, there is something of a temperance agitation in America, there is something of droll in the unconscious self-condemnation of the meeting of Sunday-school teachers. The Memorialists desire the Home Sunday-school teachers. The Memorialists desire the House Secretary to take notice that out of 232 prisoners in Leeds gaol in August 1854, 180 had attended Sunday schools, and out of 724 prisoners more recently confined in Salford Hundred prison, 644 had been at Sunday schools "between seven and eight years on an average." If we desired to commence an agitation for the total and immediate suppression of Sunday schools, we could scarcely desire a more complete and convincing demonstration of the mischief done by them than is furnished by these statistics. It might be argued that, if you desire a man to go to gaol, your best plan is to send him regularly as a boy to Sunday school. We learn that recently at Liverpool the criminal class has become too numerous for the gaol, and it is suggested that this class might be reduced by closing the public-houses. But we doubt whether the case against the publicans could be made so strong as against the Sunday-school teachers. It would probably turn out on inquiry that almost every porson confined in good had at some time visited a public-house; but the same is probably true of churches and chapels, which nevertheless the country is hardly prepared to regard as pernicious institutions. It may be hoped that the forthcoming petition of the Sunday-school teachers will at least teach Parliament to dissunday-school teachers will at least teach Parliament to dis-regard statistics, with which this question of the Liquor Trade has been overdone. Proposals for restriction or prohibition may be best answered by reference to the American Correspondents of the London newspapers who describe with apparent fairness the result of the Whisky War. "For the large cities," says a writer in the Daily News, "I am afraid there is not much hope either in the law or the crusade." Any law that has been or could be passed would be evaded, and the praying woman would magniful be passed would be evaded, and the praying women would require for the sake of their own safety and the public tranquility to be supfor the sake of their own selety and the public tranquility to be suppressed by the police. In Boston lately, says a Correspondent of the Twee, there has been "a spaam of virtue" for the enforcement of the prohibitory law, and under it a large stock of champagne was seized and the owner fined. But on appeal this sentence was reversed on the ground that the Custons' Law of Congress protected imported liquous from seizure under State laws. The principle of this decision would be applicable among custodws. Zon dannot

iocally condamn that which by Imperial policy is permitted. It may be hoped that the eccentricities of America will help to keep this country in a prudent course.

ILLUMINATED MANUSCRIPTS AT THE BURLINGTON CLUB. IT may be a question whether we are to lament or to rejoice that
all those arts which required time, individual experience, and
labour are, one by one, being crushed out of existence by machinery,
hurry, large demand, and the cry for cheapness. Our stone-carvers
know how to cut the mouldings of a restored Gothic arch so as to produce nearly the same play of light and shade as the original intricate and elaborate arrangement. Our jewellers can by engine-turning make ornaments of gold, covered with a minute dust of tiny globules, nearly equal to the Etruscan work they imitate. Our glace-stainers obtain by varnish and other subtle appliances an effect as good to the uneducated eye as the twelfth-century window in the next sisle. Labour is too costly for perfection, and life is too short for all that has to be crowded into it. We cannot wait for what we want. If we did wait, we could not afford the cost. Mediocrity, and even a high mediocrity, may be commanded; but the influences of a spreading taste and a more discriminative expenditure of wealth tend rather to discourage true art than to fester it. Every day we recognise with sorrow the decedence which hurry is bringing upon Oriental manufactures. Shawls, inlays, and carpets, as they were lately understood, are already things of the past. Embroidery and ensmelling are almost as extinct in the East as illumination in the West, although their use has not departed as in the other case. The Burlington Club can do nothing to influence contemporary art in the sense of encouraging the reproduction of anything in the present exhibition. As a means of book decoration illumination is practically dead. Still, beautiful in itself and interesting archeologically, it is not without use to a student of the history of art. To produce a book like some of those now shown would tax for years the energy and genins of a first-rate artist, and the result would be of little value compared with a great picture painted perhaps in a few days to be seen and admired by thousands. The miniature-painter can never have worked rapidly. Execution as it is now in fashion would have been out of place in work a few inches square. We have book illustrators by hundreds, and have brought woodengraving to great perfection. Ohromo-lithography has its infinite possibilities. Books may again universally glow with colour and engraving to great perfection. Chromo-lithography has its infinite possibilities. Books may again universally glow with colour and gold, and illustrations may be produced worthy of true art, high in its aims and also popular. Photography in colour has yet to be discovered, but will certainly be attained in time. We have made great strides since the days of Bewick. Pefore him book illustration, in England at least, might have been considered extinct. Copperplates will not print the thousands of impressions now required, and no better process had then been invented. The law that supply equals demand has its converse, and where there was no demand the supply failed. So little indeed did any taste for picture books prevail that Dr. Clarke's account of contending with a butter merchant for an illuminated volum Bible fits naturally into the history of the time. All art was at a low cbb while King into the history of the time. All art was at a low obb while King George expressed his contempt for "boetry and bainting"; and George expres the revival when it did come was in a totally different direction from what had been seen before. Yet it is worth pausing to note that the earliest books of woodcuts were little removed in style from what we roughly name illumination. An immense field of investigation is now concerned with the production of block An immense books and their hand-work contemporaries. The points of inquiry thus started are largely illustrated by the present exhibition, and a careful and painstaking review of them must include the whole range of the mediaval system of book decoration. We have classified window tracery and even wall-painting, but the ornamentation of manuscripts still requires its nomenclature. A comparison of notes already in existence as to artists and schools may have important results. Before oil-painting was common many skilful l ands and inventive brains were engrossed by such an It is well worth while to make a list of the chief pictures in the books of any large collection, and it is satisfactory to find that something has been done to this end both in the British Museum and in the Lambeth Library.

The art of illumination, strictly speaking, flourished during many centuries, but in the modern sense it may be comprised within the limits of at most four hundred years. Leaving out the curious and interesting, but not very beautiful, work produced by the Irish, Anglo-Irish, and German schools before the beginning of the thirteenth century, of which two fine examples (Nos. 1 and 2) are in the Gallery, we come at once to the Psalters, with which an unbroken succession commenced. Printing was in full play before the end of the tiftoenth century, and the partial revival under Louis XIV., due to the talents of Nicholas Jarry, belongs rather to the sister art of calligraphy, and is wholly dissociated from it. Several specimens of what Jarry could do are in the table cases; one of them is historically interesting as having been presented by Louis XIV. to his writing-master, and another as containing a series of portraits of Madlie, de la Vallière as Mary Magdalane, but they have little relation to the works of which the stands of the collection consists. Restricting our observation to them, we may at once remark that though they may easily be divided into periods and schools, a distinct principle of succession runs through them all. We may take an example from one of the calliest and one of the latest

books in the room. With all the enthusiasm and all the religious and artistic life which is the middle ages, as we are constantly runninded, did so much abound, we nevertheless find that originality was as rare and as much prized as it is now. The form of the decontions and the arrangement of the figures in the horders, once invented, was fixed for generations. In a Fuelter of the thirteenth century (No. 7), there is under Jannary in the calendar the painting of a grotesque little figure warming himself at a firsplace. The hearth below, the chimney-pot above, on which a stork is feeding her brood, with the intermediate chimney shaft utilized as a border to the page, look like a scientific preparation from the interior anatomy of a house of the period. Tursing now to the "Home" of St. Maur (No. 86), one of the finest but one of the latest manuscripts in the Gallery, the self-same design appears. The little man is no longer a grotesque, and the picture has all the finish and artistic perfectness that we expect in a Franco-Flemish work of the time. Another page of the same magnificant book affords a second grample of the value of an original design when compared with its neighbour of the same period and school in another case (No. 94). We find that one of the pages of sech represents by an ingenious arrangement, highly artistic, if somewhat unnatural, a series of seemes from the Passion, the Betrayal, the Agony, and the Healing of Malchus. The same drawing, the same colours, are used in each picture, and the pair only differ in size and in some minor details. Nor is this all; for the same design may be traced through one book after another, back to the earliest dawning of the art, till we are landed again on ground closely adjoining that which hears the chimney-top and stork of the thirteenth century. Examples of the same kind might be multiplied almost infinitely; but one more will suffice for our purpose. A dozen books of the fifteenth contury stand on a shelf, all open at a picture of the chainting so much spec

articles of merely curious, or even purely antiquarian, interest. Yet one or two books have associations connected with them which will attract the gaze of the ordinary aightseer. Thus one case conone or two books have associations connected with them which will attract the gaze of the ordinary sightszer. Thus one case contains what on fair historical grounds is believed to be the identical book of prayers used by Mary Stuart on the scaffold. In another there is a little volume which belonged to her descendant Cardinal York. But both possess a value on artistic grounds apart from this merely sentimental interest. These are exceptions. The bulk of the exhibition consists of certain definite classes of leading an argument from health with the format of interests. books, or excerpts from books, in the form of single leaves and cuttings, framed on the wall, which, taking them to be typical of the majority of similar collections, offer some suggestive topics for inquiry and discussion. A single glance round the room gives us grounds for a simple classification. With few exceptions all the illuminated manuscripts of the first part of the thirteenth contary were Psalters. It is not easy to say why this should be. only note the fact, and the further and equally curious fact that before the close of the same century an enormous issue of Bibles, of all varieties of form and size, succeeds. These are followed by an apparently endless series of books of Hours, which, as the fifteenth century is entered, appear in Dutch, French, English, and other vernacular languages, busides the orthodox Latin. Another series, consisting of fewer examples, runs side by side with this, the strictly religious one. There are some Evangelisteria, chiefly in French, and with them sermons and homilies, but they are the invecention among leads with nictures. But from the beginning exception among books with pictures. But from the beginning of the fourteenth century romances, including poetry as well as prose, begin to appear. With these must be classed religious and moral allegories, such as the Complaint of "La Dame contra Pertune," and the "Pelerinage de l'Ame" of Guy de Guileville, which is said to have given Burren the medium of the Division Representation. is said to have given Bunyan the machinery of his Pilgrim's Progress. Among romances also are the Vies de Philosophes, Reynard ophes, Reynard while English grees. Among romances also are the Vess de Philosophes, Reynard the Fox, and Les Fables d'Esope, all in French; while English popular literature of the same period is illustrated by Gower's Confessio Amontes, and German by a Chronicon—as much a romances, by the way, as any of the others. All these will be found in the Gallery, and more like them; but there is a vast preponderance of the devotional books. The history of an age which produced the Mendicant Orders and such men as Adam of St. Victor, Thomas of Colone, and Rubert Greessteets in France, Related and Rubert Greessteets in France. dicant Orders and such men as Adam of St. Victor, Thomas of Celano, and Robert Grosseteste in France, Italy, and England, accounts for the great and, considering the difficulties of the task, the unparalleled circulation of the Bible which took place in the fifty years preceding and following 1400. The present exhibition bears strong witness to this outburst, for it is nothing less. Three-fourths of a large case are filled with copies of the Latin Bible of all sizes; they are German, Italian, some possibly English, but the majority certainty French. A folio in the British Museum, closely resembling one here shown, bears the name of an English scribe, and it is worth noting how nearly it is approached in style and writing by some of the sariier copies of the so-called Wycliffite version. The smaller examples are chiefly interesting for the minuteness of the writing, many of them having thirteen lines to an inch. One bears the name of Viviano Sani of Cremons as its an inch. Can been the name of Viviano Sani of Cremons as its writer, with some Leonins verses in his own praise. Another has a contemporary inscription mentioning the name of a priest of St. Agricols, perhaps the church at Cologne, as its owner. On the

whole, however, it is very puzzling and well nigh impossible to say where the larger number were made. The Italian are the least where the larger number were made. The Italian are the least common, and those of a French type most frequently occur, being often written on as many as five hundred leaves of very thin vellum, and decorated with curious little miniatures with a preponderance of blue. There is no greater difficulty in the whole subject than this as to the actual writing of manuscripts, until the very close of their period of production. In the case of secular works the author was often the scribe and illuminator. secular works the author was often the scribe and illuminator. Dunstan is said to have done something in this way, and the historian Matthew Paris certainly made some drawings in the St. Albans Chronicle. But nothing has been more common than for an ignorant catalogue-maker to confound author, writer, and artist in one, from a misreading of the colophon. Jehan de Vignay, two copies of whose translation of the Epistles and Gospels are in the room, has repeatedly been spoken of as the writer and illuminator, because, though they are both of fifteenth-century work, his name and a date in the fourteenth are appended to them.

Another point as to the production of illuminated manuscripts is also illustrated in this collection. Five or six books in which the ministures are unfinished are placed side by side. But their im-

miniatures are unfinished are placed side by side. But their importance must not be overrated, as they all belong to the same date and school, namely, the later Flemish. Early manuscripts seem to have almost almost almost have fluided in avery porticular as they and school, namely, the later Flemish. Early manuscripts seem to have almost always been finished in every particular as they were written, a fact of importance as throwing light on the double acquirements of such writers as Matthew Paris. In the later period a different system prevailed in Flanders, and probably in other places. There is an Italian guild-book in the Gallery which contains the arms of the Ministori as well as of the writers of Perugia, and the guild of St. John the Evangelist at Bruges allowed of a division of labour. It comprised members who were scribes, gilders, illuminators, and nainters, and the books of Hours. scribes, gilders, illuminators, and painters, and the books of Hours almost invariably commence with a picture of their patron, engaged in writing, while a spiteful little fiend upsets his inkhorn. As many as three or four hands may sometimes be traced in the same book. A prominent example is a beautiful volume (No. 55) in which two styles occur in the borders and three or more in the miniatures. The writing and embellishment of such a work must miniatures. The writing and embellishment of such a work must have been a serious undertaking. A sheet cut from a chorale book shows that in some cases a regular subscription was made towards the expenses. Isabella de Gelria gave "xx marcas ad istum librum complendum," and other Christian souls are commemorated who did the like. To judge by this specimen, their liberality was incommensurate with any great degree of excellence. Another example of the slow growth of one book is afforded by Mr. Malcolm's precious set of volumes which formerly belonged to the Crown of Spain. Part of the history of this book is a more deduction from internal evidence, but it makes a tale which holds well toogsther. The work was begun for Bone of Savov, widow of Galeazzo duction from internal evidence, but it makes a tale which holds well together. The work was begun for Bona of Savoy, widow of Galeazzo Visconti Duke of Milan. She died in 1494, and appears to have left it to her granddaughter, Bona Maria, Queen of Poland, by whom it was bequeathed, still unfinished, to Philip II. of Spain. Unfinished it remains, though there are sixty miniatures by at least three different artists, Italian and Flemish, the Flemish being the latest. The present owner has judiciously divided one fat little volume into four, and a page of each is open, the prettiest picture being an exquisite "Assumption" by Memling or an artist of equal power: the picture is only four inches wide by five in height. A being an exquisite "Assumption" by Memling or an artist of equal power; the picture is only four inches wide by five in height. A somewhat similar example is a large book of Hours (No. 95), begun in England for Henry Beauchanp, last Earl and only Duke of Warwick of his family, who died in 1445, and finished in Italy in 1481, the later work offering one of the few instances known of Italian art in imitation of English. We are but too well accustomed to a reverse method of procedure. Students of Italian art will feel greater admiration for four cuttings from a Florentine art will feel greater admiration for four cuttings from a Florentine Service-book painted by Silvestro, whom Vasari surnames Camadolises. They are very fresh and gorgeous with colour and gold, the best of them being a picture of the death of the Virgin, in which the design of a Fra Angelico is brought into small compass and treated with great harmony and minuteness. Of a later style is a miniature of Christ preaching, surrounded by Saints, and resembling in some respects a work by Pollajuolo. Of the latest Italian art of the kind is a glowing Buonfratelli, painted about 1554 for Pope Paul IV. A Breviary which belonged to Pius V. is in a table case containing Mr. Gibbs's contributions to the exhibition. art will feel greater admiration for four cuttings from a Florentine

One or two curiosities remain to be noticed. Three books are aced together as containing representations of the "Five placed together as containing representations of the "Five Wounds." One of them is an English poem, in which all the in-struments of the Passion are celebrated. There is another in which struments of the Passion are celebrated. There is another in which five gory spots are framed together by a border of gold, in a manner most repulsive and disagreeable to modern eyes, but, to judge by the pictures used to stir up the faithful in the late mission, not altogether repugnant in the present day. These are very late works, as are the curious and equally distasteful representations of the Trinity in a neighbouring case. The condemnation of Pope Urban VIII. in the seventeenth century, and the haief Solicitudini nostra issued by Benedict XIV. in the eighteenth, rendered such pictures unlawful to the orthodox. A more pleasing subject of contemplation is to be found in a little eighteenth, rendered such pictures unlawful to the orthodox. A more pleasing subject of contemplation is to be found in a little volume entirely painted in pearl colour and grey of various shades down to black, so that every picture looks like a Limoges enamel, and near is lies a good specimen of the French fashion of interpretation donors, which was sometimes, as in the Luttral and Colours and the contemplation of the hooks of which this exhibition is formed

belong to one collection, that of Mr. Bragge of Shaffield, and belong to one collection, that of Mr. Bragge of Sheffield, and that among the other chief contributors, in addition to those already named, are Mr. Richard Fisher, Mr. Fuller Russell, and the executors of the late Sir William Tite. The impossibility of any serious revival of an art whose original motive is gone from the earth may be seen from half-a-dozen modern copies of ancient work which hang in a corner. Some of them, especially those painted by the late Henry Shaw, are even finer than the originals from which they are taken, but they lack the spirit which makes those so fascinating. those so fascinating.

REVIEWS.

RECENT SCIENCE IN NAVIGATION.

UR seamen are much beholden to men of science for what has been done within the last forty or fifty years for the regu-larity, the speed, and the security of navigation. The revival of The revival of great circle or tangent sailing, well known to our older voyagers, but strangely neglected by later generations, has done much to shorten courses and to point out the sailor's true pathway across the globe. Surveys and soundings have supplied him with landmarks around him and beneath him, stretching out to him, so to say, a friendly hand which he may grip even in the darkness.

When neither headlands nor shore-lines meet his eye, nor hospitable beacons light his way, the leadsman's hand can feel the features which earth holds up to him beneath the waters. Above all, the study of the movements which are ceaselessly stirring the oceans of air and water has made the seams familiar with their play and all but superior to their violence. The laws of ocean currents and atmospheric storms have been reduced to a degree of precision which, to the mind of a sailor at least, sinks the proverbial dangers of the deep below those which environ the lands-man. The spirit of science which largely animates our naval service and the higher branches of our commercial marine has blended with the results of physical research and observation at home in securing these advantages, putting into the hands of the home in securing these advantages, putting into the hands of the practical navigator a series of manuals for his guidance in almost every contingency and of safeguards against all imaginable risks. Under the Board of Trade regulations a competent knowledge of these adjuncts of science is assured on the part of every shipmaster. For the higher grades of the national service, and, we may add, for the general advance of scientific seamanship, the best hopes may be entertained from the organization of naval studies at Greenwich under the headship of a distinguished mathematician and with the co-operation of an able and zealous staff.

The works which may be taken as forming the literature of navigation, or making up together the vade mecum of every sea captain with the least protension to scientific rank in his profession, are of two classes. The one, wholly new within the last fifty years, deals in the most general way with the more abstract

years, deals in the most general way with the more abstract investigation of the phenomena of air and ocean. Of these Lieu-tenant Maury's valuable work forms the most familiar, as it forms tenant Maury's valuable work forms the most familiar, as it forms well night the original type, although foreshadowed by, and in no slight degree based upon, the labours of Humboldt, Herschel, and other physicists and explorers. The second class, more homely in character and more in common use, consists of such books as, without much pretension to philosophy, put the results of science into practice, and give the seaman his rules and directions ready made. Each of these two classes of works has lately received a valuable addition. Mr. Laughton's Physical Geography in its Relation to the Prevailing Winds and Currents, which has rapidly passed to a second edition, forms an admirable manual of knowassed to a second edition, forms an admirable manual of knowpassed to a second carrion, forms an and shifting phenomens, and ledge with regard to these complex and shifting phenomens, and reuge with regard to these complex and shifting phenomena, and gives us confidence in the soundness of the physical course through which our young officers are taken at the fountain-head of naval learning. His leading principle is to rid his subject of the trammels of mere hypothesis, and to come face to face with the facts and conditions as they exist in nature. It has been too much the fashion to treat the atmospheric or accession. the fashion to treat the atmospheric or oceanic currents as explicable by general rather than by topical causation, or as a branch of abstract metoorology. It is true, Mr. Laughton urges, that hydrostatic fluctuations, such as depend upon the density, the elastic force, the temperature, or the humidity of the air, or the depth, the temperature, or the motion of the ocean masses, are to be regarded as true and even primary elements of the problem. What he protests against is the arbitrary severance of meteorology from physical geography. The local configuration of the earth has been too little considered in comparison with the theoretical movements or changes calculated to take place in fluid masses apart from such limit or restraint. It is only from a detailed and analytical survey of the whole phenomena that he can be a trace them head to their natural sources that he would seek to trace them back to their natural causes, whether geographical, meteorological, or cosmical. There is no more dangerous error, he contends, in physical science than a conviction that certain phenomena must exist and a determination to find them. And in no department of science have preconceived.

Physical Geography in its Relation to the Prevailing Winds and Corrects.

By John Knox Laughton, M.A., F.R.A.S., Mathematical and Neval Instructor at the Royal Naval College. Second Edition. Lindon: J. D. Potter. 1879.

The India Directory. Founded upon the Work of the late Captain James Hersburgh. Part I. Containing the East Indias and hiterjacent ports of Africa and South America, &c. By Communiter Africa Dundae Taylor, F.R.G.S., task lands Mary. Limiter & Co. 1874.

ideas, hasty generalization, and the assumption that all the conditions of the problem are ready to hand, beam more prevalent or more injurious than in that of occanic and aerial circulation. That the primary motion of the earth's atmosphere, for instance, is, as a whole, from east to west, has been adopted in the main upon a priorical cultion of the incovernent of fluid masses. Too little is known from that observation of the primary currents of air over the surface of the globe at large for us to accept this statement of the case as a matter of experience or of fact. Connected with this is the view of the trade winds as constituting the primary currents. Mr. Laughton, without putting it forward as an axiom or postulate, inclines towards the possibility of the opposite hypothesis, and suggests the importance of inquiring how far the details of prevalent winds in various parts of the earth agree with, and are capable of being explained by, a motion from west to east. An extensive correlation of facts bearing upon this problem leads him to seject decisively the theory of Hadley and Maury. Phenomena actually observed, not described inferentially in accordance with the requirements of any theory, cause in his view the easting said to be due to the earth's rotation to give way to westing, and this in localities where such an effect cannot be attributed either to an in-draught towards heated plains, or to deflection from a mountain chain. In rejecting, as he does almost absolutely, the influence of the earth's rotation, our author goes indeed a length to which not many will be prepared to follow him, however streamously they may repudiate the arguments based by Maury and others upon the assumed tendency of railway trains to fly eastwards from the track or of rivers to wear and scarp their right banks in Northern latitudes in obedience to this rotatory law. The friction of the earth's surface is, he considers, sufficient to neutralize all independent motion of its envelope. That the one great cause of wind is the une

The new Sailing Directory for the East Indies and interjacent ports of Africa and South America, the first instalment of a general work extending, we presume, to all navigable portions of the globe, is perhaps the most valuable boon of its class that science has placed in the hands of scamen. Modestly put forth as founded upon the familiar and useful manual of Horsburgh, which has for the greater part of a century been the horn-book of every navigator, it has only to be set aide by side with the latest edition of that work for its manifold features of improvement and of novelty to be seen at once. Far more convenient in form, and compressed in bulk by the use of a smaller yet clearer type, the book has been rewritten throughout, incorporating the latest information to be gathered, not only from official surveys, the logs of vessels, or the reports of voyagers, but in large measure from the personal experience and professional services of the writer. One of the able staff of hydrographers reared up by the defunct Indian navy, Mr. Taylor's name appended to the charts of the Persian Gulf and Malabar coast attests the extent and the laboriousness of his surveying work; whilst the wind and current charts drawn up by him, and issued under the sanction of the Navy Department, have formed in great measure the groundwork of all safe navigation in the Indian Ocean. Never was there a more questionable piece of economy than the suppression of the Indian Navy when the Company's rule was merged in that of the Imperial Government. Not only was a fine school of marine surveying done away with, but much of the work done to hand and awaiting publication was, if not allowed to perish, stowed away in obscure corners. The logs of some two hundred years were sold for waste paper. The want of a proper marine department at the India Office has in some degree been made up, as the writer before us thankfully acknowledges, by the courtesy of Mr. Olements Markham and Mr. Trelsemy Saunders in giving access to all documents saved from destr

Ocean form a valuable accession to a Directory of this kind. What will be found, however, its most novel feature, and what gives its exceptional importance to Mr. Taylor's work, is the series of charts which lay down the best tracks or passages for sailing ships and steamers at different seasons of the vear. Of these there are seven, besides one of the iceberg zone of the Austral-Indian Ocean, reduced from the Admiralty chart of Captains Evans and McDougall, R.N., which is a great safeguard to the Southern navigator as indicating the range within which floating ice has been met with during every month in the year. The same chart also exhibits the so-called composite tracks for the Austral hemisphere, or modifications of the direct great circle courses necessitated by the monacous. Horsburgh's original table, compiled from the logs of 238 East Indian traders, sufficiently shows the equatorial limits of the Atlantic trade winds; but it is a great thing to have the results of experience combined with calculation made thus obvious to the eye. For the first section of the eastern route, till the Cape is passed, a route still kept up by sailing ships and by not a few steamers, no such chart seems to have been thought necessary. Nor would it be applicable to that pottion of the exclusively steam route which lies on this side of the Strait of Bab-el-Mandeb. For the Mediterranean and Red Sea the ordinary charts meet every need when conned by the light of the minute and capout rules laid down in the Directory. The currents of these seas, shifting as they do with the seasons, are heedfully noted; but it cannot be said that the materials for our knowledge of these landlocked basins are such as we have a right to expect from our official hydrographers. With the able staff of officers always at hand at Malta and eager for employment, much more should have been done for the survey of the Mediterranean; whilst the physical changes of the Red Sea bed from coral growths and sandy deposits are enough to make the antiquated charts

No longer pent up between these dangerous narrows, the mariner when Aden is well passed finds the wide Indian waters inviting him. Here the courses open to him are manifold, and, whithersoever he would wend his way, a glance at the new Directory shows him the specifiest and safest track. We cannot speak too highly of the pains bestowed upon these passage charts. Complex as they may appear at first sight, especially to the eye of a landsman, they are in fact simplicity itself, as a seaman will recognize with gratitude. Of great use in avoiding confusion is the plan of making the homeward-bound courses to be read the reverse way from the outward-bound, the page having to be turned round when the former are to be followed. Thus the eye can never go wrong, even when the chart is as crowded with diverging and crossing curves as those of the Indian Ocean for sailing vessels during each of the four quarters of the year (Nos. 6, 7, 8, and 9). These are necessarily more various and complicated than those for steamers, which are far more independent of times and seasons. An entirely different set of tracks is provided for each class of vessel. Nor would the same chart by any means serve the purpose all the year round, though pretensions to this kind of nostrum have been at times put forth. Very wide apart are the steamer tracks during the S.W. (April-September) and the N.E. (October-March) monsoons (Charts IV., V.), and still more diverse are those for sailing ships during the four quarters of the year. Those charts are franced from a careful correlation of local or periodical sets of winds and currents as influenced by the sun's place in the ecliptic. In his summary of the chief elements of calculation, in which the various symbols employed in the charts are explained, Commander Taylor distinguishes between stream and drift as different names for ocean currents. The drift current, being merely the effect of the wind upon the surface, especially in the instance of the trades, is shallow and slow, and can run in no other

wind. Our author is confident that the steam clippers with the new season's teas leaving China from mid May to the end of August, by coming through the Sunda Strait, whence a fair wind with no adverse currents awaits them to Cape Guardafui, will gain no less than two or three days over those which adopt the Malacca Strait, emerging from which they must under great disadvantages hammer against the full strength of the S.W. monsoon. Were but a coaling station established at Diego Garcia, which lies in the same track, he believes that the mail stramers for South Australia and Melbourne might (especially during the S.W. monsoon in the Arabian Sea) greatly expedite their homeward journey, stealing a march of fully five days upon those which (as the P. and O. steamers now do) run to leeward at that season to coal at Point de Galle. As much as seven days might, he adds, be saved on the new line from England to East Australia vid Singapore, Java, and Torres Strait by despatching the homeward mails by special steamer from Batavia direct through Sunda Strait to Aden between May and September, instead of Malacca Strait vid Galle. As a minor instance of what has been done of late years to supply deficiencies and to increase safety in Eastern navigation, we may recall to the memory of those conversant with the last famine in Bengal that when ample cargoes of grain were awaiting shipment in Burumh, no skipper would risk landing them at Chittagong, no charts or sailing directions being available for that port. No such impediment need now be complained of on any const of British India; or indeed anywhere within the scope of the New Directory—thanks to the industry and talent of the compiler, and to the enterprise of the firm who have brought it out.

TWO BOOKS ON RUSSIA.

A BOUT eighty years ago Mrs. Maria Guthrie, "formerly acting directress of the Imperial convent for the education of the female nobility of Russia," travelled from St. Petersburg into South Russia, and in the year 1802 her account of her travels was published in Landon. It was for its day a very remarkable work, and it is still of considerable value, containing an excellent description of the Crimea and a carefully-written account of the antiquities discovered in that part of the Russian Empire. And now, by a strange coincidence, another Mrs. Guthrie offers us the record of her impressions during a journey similar in part, but performed under very different circumstances. The new work has not the scientific value of its predecessor—which was revised and edited by the writer's husband, Mr Matthew Guthrie, the author of a book of great ment, considering the period at which it was composed, on Russian mythology—but it is a pleasant book to read, and it contains a fair and often very picturesque description of a part of Europe which is by no means familiar to tourists.

The writer's werst fault is that she is, like so many of her amiable sex, over-fluent, even merchessly prolix. The passage, for instance, in p. 40 of vol. i., in which she describes her horror on having to receive a French visitor while she was still in her camisole, throws but little light upon the interior of the Russian Empire. Fortunately the book improves in this respect as it advances. But the account or St. l'etersburg might well have been compressed into a fifth of its present bulk, for a great part of it (and indeed of many other portions of the work) could easily have been written by a traveller who never stirred from within the precincts of a well-stored London library. The account of the fabulist Krilof, for instance, is suspiciously surgestive of a method too often adopted by modern writers of travels. The five pages devoted to him (vol. i., pp. 90-94) are taken bodily from the introduction to the English translation of his works, but not a word of acknowledgment is voucheded by the fair annever. Nor does she always copy correctly. It is stated in Krilof and his Fubles (p. xli.) that the fabulist's memorial in the Summer Garden is "a thoroughly national monument—a somewhat rare object in Russia, where previous statues have for the most part greatly puzzled the natives, who call them boltant—ndols." This statement is altered by Mis. Guthrie, but not improved, into an assertion, given on her own authority, that "it is a great honour to have a statue in Russia, where such things are so rare that they puzzle the simple countryfolk, who call them boltani, or idols." Then again it was stated in the same work that Krilofs fables were so well received by the Russian public that "between the years 1830 and 1840, the publisher Smirdine printed 40,000 copies of them in various forms." Mrs. Guthrie takes it upon herself to assert that they "ran through 40,000 (?) editions in ten years," a fiction to which not even a cautious note of interrugation will serve to convey an appearance of fact. We might give severa

would have been better not to alter the Daxamenos of the Haudbook into Daxamenos. In all these instances a little knowledge has proved a dangerous thing.

But, instead of testing any more of Mrs. Guthrie's contributions to our literary or artistic knowledge, we prefer to turn to her really attractive descriptions of the scenery and the figures which she saw with her own eyes. After paying due attentioned the sights of St. Petersburg, all of which have been sufficiently often described before, Mrs. Guthrie and her travelling companion were conveyed in one of the delightful carriages of the Nikolai Bailway to Moscow, and then driven "to the Hôtel Billat, feeling ar roste in mortal fear of being set down at the Hôtel Billet, which is all but next door." For Billat let us read Billot, and let us also inform Mrs. Guthrie that she need not have been subjected to "mortal fear" by the idea of being set down at what is one of the most comfortable homes for English people in Russis. On her descriptions of Moscow we need not tarry longer than to quote, by way of illustration of her style, the following picture of the view from way:—

Sunset is decidedly the favourable moment for the view from the Sparrow Hills, and now it threw its departing glory upon perhapathe most picturesquecity in the world, bathing it in a flood of rose-coloured and amber light. In the centre of all this, and as if conacious of kesping guard over the whole, towered the long grim walls of the Kremlin, a black line above which rese spectral towers. As we guzed, the soft breeze brought on its wings the distant harmony of many bells; while those of the Novo Devichi convent, nearer, deeper, stronger than the others, chuned at our feet. We drew a deep breath, and felt that we were rewarded for many a long day's journey, many an hour of sickness and fatigue. To our left the Moskva wandered awate of bog and moor. Here and there the curing smoke betrayed a village; but, built of unbarked wood, the rude cabins were not to be distinguished from the dark and dusty soil.

From Moscow Mrs. Guthrie proceeded to Nijny Novgorod, pausing just long enough at Vladimir to favour us with an (unacknow-ledged) extract from Mr. Michell's Handbook, and at Viazniki to see the majority of her follow-travellers, "one after another, dip their heads into tube of water which were placed in a row for that purpose." Of the Novgorod Fair she gives a bright and attractive account. It would have been better, however, to omit all notice of the monument to the patriots Minia and Pojarsky than to turn their names into Minim and Bojarski. Not that such an error will disturb the equanimity of, the general reader. "De Minimis non curut lex" will probably be his motto on the present occasion. From Nijny Novgorod the two adventurous ladies steamed boldly down the Volga on board a vessel which her captain, "a tall, fine, gentlemanly man, the son of a German officer living at Hamburg," had brought "all the way from Glasgow, complete as she was, down the Clyde, along the English coast, and through the stormy North Sea, into the Baltic, up the Gulf of Finland to Lake Ladoga, and from thence through bread canals into the waters of the 'great river' henceforth to be its home." Mrs. Guthrie's account of the voyage forms one of the best parts of her book, her descriptions of the scenery being highly picturesque, and her sketches of her fellow-voyagers pleasantly humorous. From the mosquitoes, for which the Volga has an evil reputation, the cabin of the steamer "was pretty free, overy open window being fitted with a sloping machine in zine, resembling a sloping chimney-pot, closed in by a net of fine wire, which could be turned at will so as to catch the breeze." Of other insect horrors we are told nothing, but the vicinity of a number of natives who grew dirtier every day, and never changed their clothes, must have been trying. It was not till after the ladies had descended to Astrakhan and then steamed up the river again to Tsaritsyn that their powers of endurance were really tried. In the Vauxhall (Vollshalle or rai

The tourist should visit the Don before he voyages upon the Volga. The seenery of the former river is rural, pretty, and homelike, with its vineyards, its white villages and clean German settlements; but one is greatly tempted to look down upon it after having made acquaintance with the majestically rolling waters of the "great river," its wild sandy shores, solitary stepped, and unmeasured stretches of prairie land, swelling on to the Chinese from inhabited only by tribes of nomad Cahmucks and camel-breeding Kurgis.

From Taganrog the travellers started on a Crimean tour of which Mrs. Guthrie has written a very pleasant description. Her account of the English cemetery, to which she paid a visit from Sevestopel, is decidedly favourable. The greater part of the tombs, she says, are in good repair. Under a few the earth has sunk, "but is all this great cemetery we saw no signs of wanton mischief, no damage that a few hours would not repair, though time and weather had rendered illegible some of the names and inscriptions." In such cases as this much depends upon the nature of this observar's eye, and to Mrs. Guthrie's eyes most things assess to wear a cheery

^{*} Through Russia: from St. Petersbury to Astrakhan and the Crimea.

companion may doubtless be searfied much of the success of their journey. They spent three months in Russia, she says in her summing up, uttacky ignorant of the language of the country, entirely at the many of the people they were among. But they always uses "with the utmost respect and courtery from all classes," and they left Russia "with a werm facing of regard for its people." It is amusing, and not a little editying, to compare these cordial expressions of liking with the terms of abuse which a Mr. George Carrington, of St. Alban's Hall, Oxford, has thought fit to shower upon the Russian nation, as well as upon the cockery, the climate, and the other characteristics of the Russian Empire. Even its thunderstorms do not satisfy him; for, as he complains, "such thunderstorms as we have occasionally in England, accompanied by torrents of rain, are rare in Russia." About the Russian language he confesses that he knows nothing, and therefore his comical blunders whenever his quotes a Russian word or mentions a Russian writer may be set down as venial offences, the results of invincible ignomance. Thus when he informs us that Vug is Russian for God (Hog), and that wave, yarassa, and watever respectively represent the Russian words for "beer" (pivo), "ready" (gatova), and "if you please" (rendered by himself elsewhere as pajouse), we can afford to smile at the innocent display of sham learning. But when he ventures to describe the emancipation of the series as "only a political juggling trick which relieved despotism from a temporary difficulty," and tells us that "the peasants are still, as ever, in Russia the slaves of the masters of the soil, just as that master is in fact the slave of the Emperor," he goes beyond the limits of harmless blundering, and deserves to be placed upon the same level with the Hyde Park orators who upon Sunday afternoons denounce, or used to denounce, the vices of a bloated aristocracy, and prove to the entire satisfaction of themselves that the British Empire is in a thoroughly rotten

THE VON MOLTKE NARRATIVE OF MARS-LA-TOUR.

THE Fourth Part of the Official Narrative put forth by the Berlin General Staff left the Second Army of Prince Frederick Charles arrested completely, so far as regarded itaright wing, on its way past Metz, by the supposed possibility of a sudden advance from the works of Bazaino's whole force. This was on the 14th of August. On that day a sudden resolve taken by two generals of the First Army in Steinmetz's absence had brought on—as we have before noticed—the battle of Borny, and with its first sound had begun the fatal return of the French over the Moselle. The immediate tectical result of the action may be judged indecisive. We know that the Emperor actually congratulated Bazaine on it as a success. And, on the other hand, it is clear from a despatch which the German Staff writer of this new Fifth Part publishes, that Von Moltke took quite the opposite view of the result of the movement. Prince Frederick Charles had carried his head-quarters on to Pont-à-Mousson that afternoon, and issued orders for the next day in accordance with former instructions, implying that the right wing or northern column of his army was to continue its halt—nominally to rest, in reality to remain within supporting distance of Steinmetz. But early on the 15th he received news from headquarters of the events that had occurred in the front of the latter, Von Moltke on the instant releasing him from his attitude of suspense. The despatch ran thus:—"The Ist and VII¹¹² Corps have yesterday evening driven a strong force of the enemy in upon Metzafter a sharp fight. Part of the 18th Division" (which belonged, be it noted, to the Prince's own army) "took part in it. The IX¹² Corps is to be held subject to special orders for the present. It is important to pursue on the Metz-Verdun road." In these last words lies the key to all that followed. This III¹² Corps was destined, before forty-eight hours should elapse, to accomplish the weightiest achievement that has ever fallen to the lot of such a body—to bar the path of a retreating foe of sixf

their side.

We shall now follow chiefly its fortunes, on which indeed the whole issue of the campaign on the Moselle was to turn. Prince Frederick Charles at once issued the necessary order for its halt. So great, however, is the independence allowed to the higher generals in the Prussian service, that his aide-de-camp was crossed by a message from Alvensleben, the chief of the corps, to the effect—the words are not given by the official writer—that he intended to cross the Moselle that day, as he had heard enough of the events of the 14th to know that there was now no fear of a blow from the French on the right bank; and it was necessary, therefore, for the Prince to send a second order in order to enforce the halt enjoined by the instructions he had himself received. Scarcely had this been done, when fresh despatches reached him which restored his right of disposing of the corps. Von Moltke wrote again in the spirit of one who regarded the battle of Borny as a direct success:—"The French have been completely thrown back on Metz, and are probably already in full retreat on Verdun. All the three corps of the right lines (the IIIrd, IKth, and XIIth) are

now left to the free disposal of their Commander-in-Units, and the KII's " (this, it must be remembered, lay near the King's own hesdquarters) "is already on the march to Nomany "—that is, continuing its original route towards the passages of the river. On this the Prince—not a whit less willing to reach the Moselle than Alvenaleben—sont at once to hurry the III" forward from their bivouac. Without finishing the meal that had been prepared, its divisions were gathered and were soon on the way. The 5th, which led, found the bridge at Novéant, indicated as its points of passage, still left by French carelessmess unbroken, and, continuing its advance until midnight, got fairly across the Moselle. The 6th, which went higher up on Champey, had to use its pontoons, a part of its warlike equipage which the Gorman army employed in the campaign of 1870 to an extent quite unheard of in any previous war. Like the other arms, in fact, the Engineers had laid to heart the lessons of 1865, and especially the sharp comments then made on their frequent absence from the points where their help was needed. With their sid the division got across, though without its guns. The IX's and XII's Corps were still some distance from the river when darkness full. But then these, as we have before said, formed only the right wing or column of the vast mass moved from Grunany under the direct order of Prince Frederick Charles. Their halt to support Steinmets had served to cover a continuous advance of the rest of the Second Army; and the X's Corps, which led this, having already reached Pontabous on the 14th, had occupied a position beyond it to cover the bridge against any attempt of the French to advance up the river by its west bank, whilst still more to his left the Prince had bridge against any attempt of the French to advance up the river by its west bank, whilst still more to his left the Prince had bridge against any attempt of the Guard. Some of the Uhlans of the latter, sighting that town, so important in covering the line of rall-

There had been some skirmishes of cavalry beyond that river on the day we have spoke not. General Forton, lying with part of his division on the Mars-la-Tour road, had discovered Garman hussars close to him, and had even been fired on by a German battery. But beyond the strange want of enterprise shown by the French cavalry, there is little to remark on here. Probably Forton, if reporting the affair at all, express of the view which he evidently entertained, as the surprise of the next day proves, that this was a mere affair of Uhlans. The ubiquitous detachments to whom the French gave this generic name had already made their wide excursions known every where. And when Bazaine's troops moved deliberately on the next morning, there seems to have been not only no precaution following this first appearance of the Germans, but no one to suggest the possibility that the enemy was already in force over the Moselle, and the heads of some of his corps the night before within a few miles of the road. Military histery is full of examples of military negligence; but in all its coarse it has none more striking to record than that of the French corps commanders and their chief on the fateful morning of the 16th August. Ignorant of the storm gathering on their left flank, they were quietly retreating on the two great roads which lead from Metz to Verdun with no more precaution than in an ordinary peace march, whilst Von Moltke, though unaware of the greatness of the 14th with an energy and a breadth of view as to the future of the campaign as great almost as though he had had exact information of the strange truth from Bazsine's own headquarters. The circumstances of the late action, he wrote to his two Commanders-in-Chief, forbade direct pursuit by the First Army which had fought it. "The fruits can only be reaped by a bold dash (eine krifting Offensier) of the Second Army on the road from Metz towards Verdun." In these pithy words the chief of King William's staff spoke the fate of Bazaine and his host—a fate so entire tha

The first honours of the day may be assigned to General Voigts-Rhetz, who commanded the Xth Corps. His infantry indeed we have left nearly a day's march from the French flank at Pont-3-Mousson. But the cavalry, which had pierced the country on the French left the day before, and had shown themselves near Mars-la-Tour, were at present under his orders. French camps had been reported to him early in the morning as still left standing unsuspiciously within gunshot of the covered ground which

^{*} Der Geschsch-franzlisische Krieg 1970-72. Redigirt von der kragsposchichtlichen Abtheilung des grossen Generalsteben. Heft V. Berlin: Mittler.

begins half a mile south of that village, and concealed every movement of the Germans from that point to the Mossile. About the great road itself between Rezonville and Mars-la-Tour on the contrary, the country is perfectly open, and every post of the French near it could be discerned. Just west of Vionville, a village between the two, Murat's dragoon brigade were bivouacked, some of them comfortably cooking, others taking their horses to water. Voigts-Rhetz had already reinforced his cavalry advanced guard with all the reserve horse artillery available; and so astoundingly carsless were the enemy that four batteries opened at once on them at short range without anybody appearing to conceive of such an interruption possible. In a few minutes the French dragoons were flying northward to escape the shells, carrying confusion and panic with them through an infantry camp that had been visible to the Germans in the distance. Not that the panic lasted long. The surprise occurred about half-past eight A.M., and before ten the French were driving these bold horsemen off their flank by moving infantry against them.' Presently the cavalry with their guns were falling back on the woods which had covered their advance, and in thus retiring had spread out gradually into a wide curve, when suddenly at each extremity of this appeared bodies of helmeted skirmishers, urged rapidly on to the front to take the place of the retreating horse. The advance guards of the two divisions of the IIIrd Corps—the infantry of the Xth as yet far off—were already on the ground, and the battle of Mars-la-Tour was fairly begun. Of the desperate struggle that ensued we must speak on a future occasion.

AT HER MCRCY.*

THE author of Lost Sir Massingbord has certain undeniable merits, although we are unable to agree completely with his view of a novelist's duty. He has a keen sense of humour, which, it is true, sometimes leads him to indulge in rather questionable fun, but which also provides a pleasant spice for his writing. He has a quick perception of character, though the minor characters in his novels are sometimes more amusing than the chief performers. He has again a certain freshness of style which is remarkable in a writer of such unbounded fertility. And, finally, he has an ingenuity in the construction of a plot which we must regard as rather excessive. We doubt whether Mr. Wilkie regard as rather excessive. We doubt whether Mr. Wilkie Collins could manage to dovetail together a number of characters and incidents more skilfully with a view to working out a given catastrophe. We will not inquire too closely how far the amusement due to such ingenuity is a legitimate part of the pleasure which we take in an artistic performance. Certainly it involves a good many inconveniences, When the various personages in a novel play into each other's hands as cleverly as so many confederates in an apparent game of chance, the felicity of the coincidences naturally impresses us with hands as cleverly as so many confederates in an apparent game of chance, the felicity of the coincidences naturally impresses us with a sense of the utter unreality of the narrative. It is curious to consider one of Scott's novels from this point of view. That part which has a permanent interest is generally distinguished from the merely perishable materials by the fact that it has not been shaped by the oxigencies of the plot. Take, for example, the admirable novel of Guy Mannering. There are some half-dozen characters in it, to say nothing of the descriptions of scenery, which are masterpieces in their way. Dandie Dinmont is almost unrivalled as a direct portrait of an interesting type of character. And besides the inimitable Dandie, Direk Hatternick, and Meg Merrilies, and Counsellor Pleydell, and Dominie Sampson are described with a force and vivacity for which it is difficult to find sufficiently appreciative language. But unluckily these characters had to be involved in the meshes of a complicated plot; and all the more business of the novel, the chapters which have to account for the situations in which the actors find themselves, drop suddenly to the ordinary level of flat inhave to account for the situations in which the actors find themselves, drop suddenly to the ordinary level of flat insipidity. Nobody really takes the slightest interest in the chain of ovidence by which Van Beest Brown is found to be the rightful owner of Ellengener Castle or in the country of Ellengener Castle or in the country of of ovidence by which Van Beest Brown is found to be the rightful owner of Ellangowan Castle, or in the machinery by which he is provided with a bride in the last chapter. The gems are so genuine that they survive the framework in which they are set; but we cannot help wishing that it had been possible to dispense with the framework altogether, or, still better, to have some simpler story which would not bother us with the unravelment of rather childish puzzles. The best novels of recent times have generally very little of this complexity of construction, and keep as nearly as may be to the ordinary realities of life. But second rate novelists are aware that there is a class of readers who are little attracted by imaginative power or intellectual depth, and little attracted by imaginative power or intellectual depth, and who are much more interested in trying to guess at the solution of a more or less ingenious riddle. Such readers want to be or a more or less ingenious riddle. Such readers want to be amused with the least possible intellectual exertion, and would rather puzzle over an acrostic than study a sonnet or an ode. There is no use in quarrelling with tastes, and we must take such stories as At Her Merry in the spirit in which they are offered. We must be content for the time with the rather puzzle occupation of granting at the relation of the time with the rather puzzle occupation of suprairies at the relation of the spirit in the spirit in the relation of the spirit in the spirit in the relation of the spirit in the spirit i puerile occupation of guessing at the solution of a mystery which will be laid open in the third volume, and insist comparatively little upon the humour, the descriptive power, or the width of sympathy implied.

Let us, then, endeavour to take At Her Mercy to pieces and consider the process of composition. The story is, of course,

* At Her Mercy. By the Author of "Lost Sir Massingberd." London:

wildly improbable when coolly examined; but one is only meant to read it once, and then at too great speed to notice the artificial nature of some of the chief incidents. Still there is quite enough ingenuity to deserve brief examination. The main purpose of the author is indicated by the title. Somebody is to be "at the mercy" of a designing young woman. Now the best somebody is obviously another young woman who is to be as simple, virtuous, and attractive as her rival is cunning, vile, and repulsive. It is obvious, in the next place, that one person is generally at the mercy of another when the second has discovered the first to be guilty of a time. It is, however, rather unpleasant to put your heroine in the position of a victim of extortion; and the story can be managed just as well if the lady's parents or guardians are under the thumb tion of a victim of extortion; and the story can be managed just as well if the lady's parents or guardians are under the thumbs of the cruel tormentor. Miss Eve Carthew, the heroine, is therefore provided with an uncle, Mr. Angelo Hulet, who may be worried by the wicked young woman, Miss Judith Mercer. The question now arises what is the crime of which Miss Mercer is to become cognizant; and here we must commend the ingenuity of the plan, though we are painfully reminded of the extreme improbability of the incidents which it requires. Miss Mercer, like a great many of the wicked young girls in novels, is supposed to be bability of the incidents which it requires. Miss Mercer, like a great many of the wicked young girls in novels, is supposed to be a dependent; and indeed the author remarks with some force on the naturally corrupting tendencies of such a position. A governess in a novel is, generally speaking, a model of virtue, whilst a female companion is generally supposed to be the embodiment of spite covered under a thin veil of servility. Miss Mercer is therefore trained to be at once fawning and despotic by being adopted by a capricious elderly lady. It then turns out that this lady is the wife of Mr. Angelo Hulet, from whom she has parted many years before on account of a total whom she has parted many years before on account of a total incompatibility of temper. They accidentally meet, and very foolishly agree to live together again, some forty years of complete separation giving a rather bad omen for conjugal felicity. Now, however, the explosive elements are brought together. The wicked Miss Mercer is introduced into the bosom of the Hulet family, and has therefore cover shapes of complete or the starting out therefore cover shapes. and has therefore every chance of carrying out her base designs. The arrangement naturally suggests the general nature of the circumstances which she is to turn to account. Mr. Hulet, as we have seen, is to commit a crime of which Miss Mercer is to become cognizant, and the sufferer pointed out by nature is of course his recovered wife. Now a novelist not fertile in expedients would probably have made Mr. Hulet simply knock Mrs. Hulet on the head and have allowed Miss Mercer to be looking through a keyhole or over a hidge. The author of Lost Sir Massingberd is above such commonplace tricks. A genuine murder would introduce too tragic an element into the story; and moreover would make it impossible to bring Miss Mercer finally to justice by the complete rehabilitation of her nurder as may enable her to threaten Mr. Hulet with exposure, and yet leave him really innocent. The preparations for this catastrophe, which of course is the central incident in the novel, are made with great care and judgment. In the first place, it is impressed upon us that Mr. Hulet is a confirmed valetudinarian, impressed upon us that Mr. Hulet is a confirmed valetudinarian, and is in the habit of using very powerful medicines. Then we have innocent little descriptions of a sea-coast, and of Mr. Hulet's pervensity in taking a little cottage, the gardon of which is bounded by a perpendicular cliff. A quarrel then follows between the lately reconciled pair; as indeed quarrels always happen in novels for the sake of producing a little circumstantial evidence. Mrs. Hulet, agitated by the dispute, takes off one of her husband's bottles of poison and dies on the spot. He come the room, discovers her lying dead, and hits upon a plan for remove the room, discovers her lying dead, and hits upon a plan for removing all suspicion which is, to say the least of it, rather eccentric, though in fact it is imposed upon him by the exigencies of the story. In short, he takes up his wife's body and heaves it over the cliff, calculating that she will be assumed to have walked over it by accident. Miss Mercer, however, has been watching all his proceedings, in the general hope that something will turn up to her advantage. She immediately puts a screw upon him by threatening to give avidence at the inquest which will conside him. threatening to give evidence at the inquest which will convict him of murder; and finally lets him off only on condition of his signing a confession of having thrown his wife's body his signing over the cliff. A good many difficulties might be suggested as to the real potency of the weapon thus put into Miss Mercer's hands; but, granting the author's assumption, we must admit that he has got just what he wanted. Mr. Hulet is innocent of any worse crime than that of being a stupendous fool; but Miss Mercer has a very fair excuse for telling him that she can hang him whenever she likes, and thereby squeezing anything out of him which she pleases. him which she pleases.

The remainder of the story may be easily deduced from what we have said. The virtuous Eve Carthew is to be the really interesting victim, though the blow is to be aimed at her through her uncle. She therefore is provided with a lover, who is all that a lover ought to be, and who becomes the object of Miss Mercer's machinations. It is only necessary to put her in such a position that the lover can be detached by the will of her uncle. For this purpose the lover is made to be the nephew and rightful heir of a distinguished pear, and Mr. Hulet a bitter republicant to the relation of so disreputable a person. The lovers, therefore, depend upon the fortune to be received from Mr. Hulet. But Miss Mercer, by gradually tightening the screw, first forces Mr. Hulet to give up his whole fortune, and then contrives, by throthing out dark hints, to make him so disreputable that Miss Eve herself

The second

refuses to bring her lover into so disreputable a commerion. So effectually is the plan carried out that the lover is not only detached from the admirable Eve Carthew, but induced to many the disreputable Judith Marcer. And here the story might naturally end, except that in novels of this kind vice is never to be allowed to triumph. The conclusion is therefore brought about by a device which one regret to say, scarcely displays the same ingenuity. Miss Missers's, or, as we must now say, Mrs. Heyton's, back is summarily broken, reducing her to such a painful state of protestion that she is only able to falter forth a harrowing confession in three chapters. Mr. Hulet's character is cleared, Miss Carthew marries the widower, the widower is reconciled to the peer, and everything ends as happily as the most innocent of readers could desire.

We have only to add that we have Add Add.

We have only to add that we have told the story in our own way, by attempting to exhibit the logical process of its construc-tion. The secret of the novelist consists in telling it in a different so as to throw his readers off the scent, and to reconcile us to his little artifices by describing the various peculiarities of the characters before their use is revealed to us. If the whole device seems to be rather wanting in intellectual interest, we must repeat infairness that the puppets, though designed to act parts in a particular plot, are amusing enough in themselves when we are innoticular plot, are amusing enough in themselves when we are inno-cant enough not to look behind the scenes. Some of them are really-described with a good deal of spirit, and though the main con-trivance verges upon the impossible, a good many of the subsidiary performers are lively portraits of possible, if not of actual, persons. The old peer, for example, has more reality than most old peers in novels; the republican Mr. Hulet, with his supposed descent from a regicide, is a good specimen of the eccentric valetudi-narian; and though the lover is simply a fool, and the lady of his love not very superior, we are afraid that that circumstance does not make him less lifelike. We are tempted to ask one question in conclusion—Why, namely, does the author, who professes in conclusion—Why, namely, does the author, who professes sentiments of a democratic kind, think it necessary to reward his heroine by converting her into a peeress? Are we never to see a hero who is allowed at the end of a novel to make his living in an honest profession instead of being provided with a real estate?

THE INDIAN ADMINISTRATION OF LORD ELLENBOROUGH. (Second Notice.)

NEXT to his foreign policy, Lord Ellenborough's most important business was his administration of the army. He was too fully occupied in wars to enter on any civil reforms, but the army occupied his constant attention. And well it might, for this volume shows it to have been in a chronic state of mutiny throughout his term of office. When he touched at Madras on his voyage out, he was met by news of the refusal of two regiments to embark for service in China, and of a very mutinous disposition manifested at the same time by the garrison of Hyderabad. Then the force assembled at Peshawur for the relief of Jellalabad was in a thoroughly disorganized condition for many weeks, and was with difficulty brought up by General Pollock to the point of marching onwards when ordered to do so, some of the European officers (as the lately published memoir of General Pollock shows) being almost as bad as the Sepoys. Next, when, after the return from Afghanistan and the conquest of Scinde, Bengal troops were ordered to that province, several regiments refused to go. These instances were surely enough to indicate the thoroughly bad condition of the army; but it cannot be said that the measures taken by the out his term of office. When he touched at Madras on his voyage out, the army; but it cannot be said that the measures taken by the Governor-General were at all adequate to the occasion, or calculated to restore the discipline which it so grievously lacked. One regiment indeed which had been worse than the rest was disbanded, but generally the mode of action adopted was to reward all those but generally the mode of action adopted was to reward all those who did their duty, as if their conduct had been extraordinarily excellent, and to visit the guilty with but the lightest punishment. The troops returning from Afghanistan could not have received higher praise if they had performed the most heroic exploits, instead of having merely defeated a badly-armed and ill-trained army in a few trifling skirmishes. A regiment which does not refuse to march to its appointed station when ordered is increased by thirty per cent. of its strength, so as to give some promotion to its native officers. Writing to the Duke of Wellington after the return of the troops from the frontier, in November after the return of the troops from the frontier, in November 1842, Lord Ellenborough says:—"You would be delighted with the spirit which now animates this army. [It was just after this that a part of the same heroic army refused to march to Scinds.] I have done all I could to create it. Praises, honour, and substantial rewards have been all lavished upon them" (p. 303). There was no doubt about the latter point; the spirit which animated the army may be inferred from the mutinies which occurred a few months later. Lord Ellenborough mutinies which occurred a few months later. Lord Ellenborough seemed to be impressed throughout with the belief that army organization was his peculiar forte, while he certainly held to the conviction, and rightly, that preparation ought to be made for the impending struggle with the Sikhs; but his only idea of preparation seems to have been continued augmentation. Writing in April 1844 he says:—"We are altogether very ill provided with officers for the higher commands. The whole army requires a great deal of teaching, and I am estimated the eighteen months I

ask are not more than enough to make it what it ought to be ask are not more than enough to make it what it ought to use (P. 435). But it does not appear that the army was undergoing any teaching whatever in the proper sense, or any improvement ave augmentation. The incompetence of the senior officers, due to the faulty system by which not only promotion but appointments to brigade and divisional commands were determined solubly by seniority, was not remedied by Lord Ellenborough, who left the system just as he found it. Nor did he apply any remedy to the vicious avatem which denuded the native army of all its

the system just as he found it. Nor did he apply any remedy to the vicious system which denuded the native army of all its best officers by transferring them to civil employment. His successful generals were all rewarded in this way. Looking at the rotten state of the Bengal army in 1844, as described in the Governor-General's own letters, and at the fact that no sort of remedy was applied to stay the disease, the wonder is, not that it broke up in 1857, but that it held together so long.

But, while we thus criticize Lord Ellenborough's acts and views, the difficulties of the circumstances in which he was placed must in fairness be admitted, succeeding as he did to one of the weakest of Governor-Generals, with the services and the army panic-stricken and demoralized, a part of his forces shut up in a barbarous region, and a part engaged in a distant expedition beyond the sea. Other faults are of trifling importance in a ruler during such a crisis, provided he be neither indolent nor weak nor faint-hearted. Lord Ellenborough may have taken a wrong view at first as to the policy to be pursued in Afghanistan, but his courage never faltered, and, although his judgment was very often at fault, his energy and public spirit must command our admiration. Let us add that public spirit must command our admiration. Let us add that these letters are models of lucidity and vigorous writing, and that the collection forms a very interesting, if not a very important, contribution to the history of British India.

the collection forms a very interesting, if not a very important, contribution to the history of British India.

Quite as interesting as Lord Ellenborough's own contributions to the volume are the very characteristic letters from the Duke of Wellington to him. From the first day of entering on his new office the Governor-General consults the Duke on almost every point arising in the course of affairs, and sets the Duke's approbation of his conduct before him as his highest aim; and certainly he could not have looked anywhere else for sounder or better advice. The first subject that occupies the Duke's attention is management of the Ohina war, then running on into a second campaign, and we see at once the practised discernment of the great commander in the points to which he directs attention. The Duke says little or nothing about the character of the troops or the sort of fighting that they are to undertake, but lays all the stress of his remarks on the need for harmony in working between the naval and military heads of the expedition, and for the provision of sufficient transport and supplies. Reading his lucid memoranda on these subjects, drawn up for the information of the Oabinet at home and the Governor-General in India who had the general direction of operations, one feels that, if the Duke had been alive in 1854, the Orimean disasters from shortcomings in supplies and transport would in all probability never have occurred.

In his recommendations regarding the military policy to be pursued for retrieving the Cabul disaster, the Duke, as we remarked in our

In his recommendations regarding the military policy to be pursued for retrieving the Cabul disaster, the Duke, as we remarked in our for retrieving the Cabul disaster, the Duke, as we remarked it our former notice, was cool and cautious, but he points out very forcibly the need for taking up a strong military position in the North-West provinces of India; and, writing from London, he hits at ones upon the blot in that position—the establishment of our principal magazine at Delhi, in the heart of the most disaffected city in India, without a European soldier to guard it, and in close proximity to the Great Mogul and his Mussulman Court. Lord Ellenborough had broached the idea of moving the Emperor and his family from Delhi, and converting his palace into a fortified

his family from Delhi, and converting his palace into a fortified place. This the Duke discountenances, saying—

However inconvenient to retain the Mogul and palace and his Court and retainers in the town, I should prefer to leave them there than to incur the odium of removing them, and of exposing—particularly the Mogul and his family—to the inconvenience and expense, and degradation in the eyes of those attached to him, of a forced removal.—P. 305.

He recommended instead that the magazine within the city should be completely entrenched and converted into a citadel, commanding with its guns both the palace and the city, the part of the city immediately round it being cleared away for the purpose. He also recommended that the "castle," as he terms it, of Agra, which is we believe nothing more than an Oriental palace with a lofty and very beautiful wall, should be converted into a real fortress and properly armed, and that the fort at Allahabad—which, situated at the junction of the rivers Ganges and Jumna, is the key of India -should be placed in a proper state of defence. None of these measures were, we believe, over adopted, as was found to our cost in the Mutiny, and it may be added, save that the European garrison of India has been strengthened, another such crisis would find us again equally unprepared.

While always sticking staunchly by his friend, and defending him against the attacks made upon him both in the press and in Parliament, the Duke does not hesitate to tell the Governor-General whenever he thinks the latter goes wrong; in fact, as often happens in friendships, the two men were utterly unlike, and the sober practical good sense of the one was an admirable foil to the stilted mode of action affected by the other. Thus, referring to the complaints made by the Court of Directors to the Ministry of (among other things) the Governor-General's continued absence from the seas of Government at Calcutta, and consequent separation from

his Council, the Duke writes:-

These are all important topics, calculated to make a real impression upon the public, and they must be attended to by us, if, as I anxiously hope, they should not be by you.

There is nobody approves more highly than I do of those provisions of the

Estady of the Indian Administration of Lord Ellenborough, is his spendence with the Duke of Wellington. To which is prefixed, by permit of Her Majesty, Lord Ellenborough's Letters to the Queen during seriod. Edited by Lord Colchester. London: 1874.

Act of Parliament furthe government of Ladia which enable the Government. General to quit the seat of Government, and to exercise all the powers constitutionally extended to him while absent from the Council of Government.

But it must never be forgotten that these provisions provide for extraordinary cases and emergencies, and that they must be considered as an exception from the rule, and the course adopted under them to endare only as long as the emergency lasts, and not as the sale of Government.

Lam also of opinion that Fort William, in Bengal, is the proper seat of the supreme Government in India. The provinces administered by the Government of Fort William afford more resources of all kinds than an accumulation of all the rest. They are unattackable by sea as well as by land. The communication with them by sea, however, is perfectly practicable at all seasons; more so than with either of the two great maritime settlements.

It is true that the climate of Fort William is not stall seasons very agreeable, but I believe it is in no way unhealthy, if common care be taken; and there is now at the disposition of those whose duty requires their residence there the use of the sanatoria in the Himalaya mountains, to which the access will every day become more easy. On the whole then I would examestly recommend your early return to the seat of the Government at Fort William, with the decided intention of remaining there—P. 271.

Fort William, with the decided intention of remaining there.—P. 271.

The Duke therefore would apparently not have approved of the annual migration to Simla, although his objection to the Governor-General's going away was based meinly on his absence from his Council, an objection disposed of by the practice which Lord Lawrence introduced of taking his Council with him.

But, although the Duke held manfully by his friend, defending and supporting him in and out of Parliament, he could not prevent Lord' Ellenborough's read!

After the latter had made over the charge of the Government to his anccessor. Sir Henry Hardinge, but before

of the Government to his successor, Sir Henry Hardinge, but before his departure, the officers of the army stationed at Calcutta gave thin a dinner, at which the enthusiasm evinced for the retiring Governor-General amounted to a very distinct expression of feeling towards their honourable masters for recalling him. The Court of Directors were very angry at this, and pressed the Duke to enforce a general order of the army, "which that body (the Court) assumed to exist, prohibiting all festivals, demonstrations, &c." This called forth a very amusing and characteristic memorandum from the Duke, wherein he administers a severe and perhaps well-deserved anub to the Court .—

I who am thus called upon to notice this affair as a serious offence against chickly him and a braach of military orders, have served the public for nearly a century, and I believe I may safely say that neither in these times nor in any other did thore exist an officer half so feasted and "feativated," or who any other did thore exist an officer half so feasted and "feativated," or who received half the number of testimonials from those under his command that I have. . . . I never went anywhere that I was not feasted and 'feativated, and leaded with swords of honour, and other testimonials of creativated, and leaded with swords of honour, and other testimonials of creativated, and esteem. . . Indeed, I am not certain that the East India Company itself was not party to a featival, given to me in London, after my return from the Puninsula and France in the year 1814. Under these circumstances, and for the reasons which I have above stated, I must decline do take any notice in the way of military order of the transaction referred to.

With this memorandum the correspondence ends.

ANGLO-LATIN SATIRISTS OF THE TWELFTH CENTURY.

IN furnishing a careful edition of the curious satires, enigmas, and epigrams of the monkish Latinists in England during the twelfth century Mr. Wright has established a title to be remembered as the first considerable illustrator of an obscure page of dered as the first considerable illustrator of an obscure page of literary history. In that part of his Biographia Britannica Literaria which contains the Anglo-Norman period we had already the best and fullest account of the author of the "Speculum Stultorum," and it is astonishing to note how little light our literary histories have to throw upon a period which influenced so materially our earlier vernacular poetry. Ransacking the bookshelves to supplement Mr. Wright's prefatory account of such writers as Nigellus de Wireker and Johannes de Hauteville, whose satires fill the volume of the present work, we are rewhose satires fill the volume of the present work, we are re-warded by little more than a casual notice in Warton's "English Poetry," to the effect that the former was a profound theolo-Poetry," to the elect that the former was a profound theorygian, a monk, and precenter of Canterbury about 1200 A.D., to whom Chaucer was indebted for the figurent of "Dan Burnell's Ass" in the "Tale of the Nonne's Priest," and by three pages in Professor Morley's sketch of English writers before Chaucer, which, though helpful as far as they go, are much too brief. As to De Hauteville's "Architronius," or Arch-weeper, a satire in hexameters, abounding in good descriptions and moral sentiments as well as in pungent sareasm, and moreover exhibiting no little skill in compungent sareasm, and moreover exhibiting no little skill in composition and versification, it is odd that a poem several times commented upon by earlier writers, and exceedingly popular in the thirteenth and fourteenth centuries, should have fallen into such needect among moderns that Mr. Wright may be said to have saved it from disappearing out of the annels of literature; a loss which would have been the more to be regretted as the work, like those of Wireker, throws useful light on contemporary manners, especially in connexion with the mitre and the cowl. De like those of Wireker, throws useful light on contemporary manners, especially in connexion with the mitre and the cowl. De Hautoville is variously supposed to have come from Anville near Evenx, and Anville near Rouen; but what is more certain is that his friend and patron was Walter de Coûtances, an English churchman in the latter years of Henry II.; whose exchange of the bishopric of Lincoln for that of Rouen, and whose virtues and kindly countenance of the anthor, are referred to in complimentary verse in the peem of "Architrenius." A reference to the grey hairs of Hanry II., introduced into a description of the Hill of Presumption

* The Angle-Latin Satirical Poets and Engramments of the Twelfth stary. Now first Officeted and Edited by Thomas Wright, M.A., F.S.A., a. Vola L.—II. Chronishes and Memorials Series. London: Longmans.

in the Fourth Book, see swall as other internal evidence clinest certain that the writer had sojumned in linguis there is nothing to prove that the was a matire of it. Alies in mative descriptions, in a satyle that might have spicen as hint to Spener, strike uses this amost mentioner passages; but more interest will attach to discount the choice he gas over day at the University of Paris, on which topic he gas over.

Not so much for the make of his wasse, which continued the country of the wasse. Not so much for the sake of his vesse, which contains dive un-Ovidian laxities, as for his fertile invention and insula fund of humour, we confess to a preference for this letter Letiz

of whose principal work we propose to treat chiefly in this artist.

The Morror of Fools is a satire on the scholars, ecclesianties, an The Mirror of Fools is a satire on the scholars, ecclementics, and monastic orders of the day, written in elegiac couplets, and addressed to William de Longthamp, Bishep of Ely, in the reign of Richard Ceur de Lion. The professed here of the poem is an assumed Burnellus or Brunellus (a nickname from his brown colour, justess the fox is called Richard from the red colour of his far), who represents the mank of the period, whom the author would convict of being a "dissatisfied ass;" not content with his normal position, but always eager to attach to himself "priories and ableys," or, as the writer would express it, "to pull off his old tall, and get a newer and longer one to grow in its place." Brunell here excelesiastical peccadilloes and preferments. When introduced to make has just given his master the slip, and is consulting Galienus, a stastical percaditions and pressuments. We had introduced to us has just given his master the alip, and is consulting Calierus, a physician, about exchanging his present tail for a denger one. This is "Foolery No. 1," and it gives occasion to a parible or episode from the mouth of Galierus as to the adventures of two cows, Brunetta and Bicornis, whose tails were suddenly frozen in the ice. Bicornis, not brooking enforced absence from her stall and breakfast, took summary measures and left her tall behind her; and not only so, but harded the knife to her companion, on the principle of the tallless fox in the fable. Brunetta, however, had more sagacity, and saw that one tail was worth more than a pair of horns to keep off the flies in the heat of summer. The mid-day sun unfroze her tail, and her prudence came out in strong contrast with Bicornis's end and epitaph:—

Que dum stulta fuit doctos docuisse probatur, Hac postquam sapuit, vermibus esca datur.

Burnell, however, is not to be put off with Galisma's storycovert reproof to the monks, who in their worldly ambition barter peace and Heaven for good things now and misery hereafter; and, as he will not be persuaded, is bidden go with all speed to the medical school of Salernum, whither he is to carry a satirical prescription to be made up. (talienus's formula for bidding him take seven-leagued boots is contained in the couplet:—

Perge, redique celer: noli tardare pedester: Quatuor his quintum, si potes, adde pedem.

Ase as he is, Burnall gots cheated and worried. A London mer-chant takes him in, and his glass bottles are as brittle as the average of worldly vanities. On his departure from Salernum one Fromund, a Benedictine monk, sets four mastiffs upon him, and, adding injury to injury, these not only bite off half his tail, but upset his baggage and break his bettles. Fromund in the end gets the worst of it, for, like many a plotter, he is caught in his own toils, and, meaning to drown Burnell, he is himself pushed into the river and perishes.

But Burnell's orand has not been so successful as to encours him to return home and become a laughing-stock, with half a tail and without his medicines. So he resolves to proceed to the famous University of Paris, and enroll his name among its students. Discipline, he reflects, will be no new thing to him, for he has borne the lash and the yoke from his youth up, and he has time to spare, for he is pretty sure he is not yet a centenarian donkey. To Paris he goes, and on the way falls in with a certain Arnold from Sicily, who is made sharer of his plans and secrets, in return for entrusting Liurnell with the carriage of his packages and books. Arnold beguiles the way with a tale of a priest's son and a chicken, the moral of which is that it is dangerous to provoke the vengeance even of the weak. The cream of the whole, man is the sojourn at Paris and what comes of it. Burnell associates himself by preference with the English students' quarter, because they are bettered mannered, better looking, and better spoken than the occupants of the three others, and have the national weakness for free living and strong potations. In the most tolerant and condonatory language Hurnell says of them t-

Wesseil et drinkhail nec non persona secunda, Here tria sunt vitin que comitantur ses.

Love and wine, we gather, interfered with their getting the fullest benefit of their University course. In another, place he distinguishes the English from the French, as free handed, whilst the latter were tenacious, and as given to multiply cups mither than threats, as the braggart Gaul did. Possibly it was as much owing to the company he affected as to natural obtuseness that seven years residence in the University did him so dittle good. Seven years reundance in the University the min-to arms good. All that he could do at the end of the time was no armounted the dissyllable which same most natural to him. "Nil potation prester ys" is a queer-looking tag of a pentameter, and disorby intelligible if we presource "ys" "weepast," a word which any donkey would master without a University course. Ma the estimate adds:—

A puero sidicit Baratliança ; zilili silera Quene quod matera delicationes potest.

espetett. karndarð kenn samien in Not that he had not tried or thirt his time

their pains with his education. Indeed his endeavours did not bear after he had left Paris. His cannot bear the thought that he is unable to remember the name of his Alma Mater, and, fearing that his parents will account him a vagabour and a dolt, he picks up its name from a rustic in the suburbs, and resolves to say nothing hat Plays for fifteen days, by way of impressing, it or his memory. As had duck would have it; he is met at the end of the twelfth day, as he is crossing the Alps, by a traveller on his way to Rinne, whose Listin salutation, "Sit till mans bonum," reads strangely like dog-Listin for "good morning." This wayfarer is more devout than Burnell, and confuses the puor head of the latter by parental "pater-nesters," so that all his labour is lost. He retains the first syllable. "Pa," but cannot retain the turnination. He consoles himself as best he may by the scholastic axiom that "the part may stand for the whole." For some time it had been dawning on him that the sciences were a mistake, and that nature "the part may stand for the whole." For some time it had been dawning on him that the sciences were a mistake, and that nature meant him for a bishop, perhaps for a Pope. Odder things had happened ere now than that a Pope should be an ass, or rece versd. But it is clear that, if he attains these honours, the celibate life will not be enforced or illustrated by his example. And, besides, he must be a mank before proceeding to these higher grades. This rebe a monk before proceeding to these higher grades. This reflection leads to a review of the different Orders—Templars, Hespitallers, Black Friars, White Friars, Brothers of Grandmont, Carthusians, Presmonstratensians, Secular Canons, and Nuns; and his hits at each, as he gives his reasons for declining to join one after another, are exceedingly lively. The White Friers don't eat flesh, he tells us, but make up for it by fewl of the choicest serts, and pick the birds so clean, that no bones are left to cry "Here, here!" Perhaps the Carthusians come in for the best character for hospitality and independence; and among the merits of the Black Canona is recorded, the fact that they do not screech when they sing

Nee nituntur ad hoe ut vocibus immoderatie Ardus pravaleant rampers tecta domis.

The worst characters are given to the seculars and nuns, and Burnell designates the latter as

Corpore serpentes, sirenes voca, dracones Pectore, Susanna smigmate, corde l'aris,

besides impeaching their chastity in the strongest language. On the whole, Burnell thinks it best to found a new Order comprehending the best features of all the old ones, and to call it by his own name. He singles out for retention the Templar's horse, the Cluniac's sixth holiday, from another Order the license to lie, and from another the liberty of sleeping without a cassock on. From Grandment he borrows freedom of speech; from the Carthusian the minimum of masses; and whilst the Premonstratensians lend him a pattern of soft and manifold clothing, he takes a rule from the practice notoriously prevalent in all the Orders to have a halpmate for every brother:—

Ordine de reliquo placet ut persona secunda feeders perpetuo at mibi junata comes. Hic fuit ordo prior, et conditus in l'aradiso : Hunc deus instituit et benedixit es.

And, if half that he lays to the charge of the Nuns was more than simple libel, the resolution of the founder of the new order was by no means so asimine as one might have expected. Big with his new and grand scheme, Barnell falls in with his old adviser Galienus, to whom he launches out about the faults and vices of the clergy, from the Pope and the bishops downwards. cessaries conveyed partly in direct attacks, as where he says anti-thetically that the bishops like marks (i.e. coin) more than Mark, and lucre more than Luke; and partly in fables, such as the conversa-tion, between the raven, the cock, and the hawk, which would be werth extracting were it not for the prolixity which characterizes there satires. It is edifying to hear what the raven had to say about confession, and to learn from the cock why that truent bird seems carried on a hill-top below high-water mark. "Que to detinuit cause, cadaver crat!" In this the author seems to follow the account of the Fathers and the Talmud. Whilst Burnellus is airing his new acquirements and trying to convert Galienus to his ness brotherhood, his nose bleeds; and this sure omen of ill is quickly followed by the appearance of the ass's old master Hernard, of whom an episode story is told, contrasting man's ingratitude with the gratitude of dumb animals. Burnell meanwhile goes back to his burdens, his bridle, and his original duties; and so ends a satire which exhibits no small dramatic power, a flow of lively e learning, and a fair share of common sense.

wit, some learning, and a fair share of common sense.

Of the other remains of Nigel Wireley, none have the same interest as the "Speculum Stultarum," which we prefer also to the "Architenius" of De Hauteville. Nigel's tractate on the correspions of the times (Contro Curioles et Officiales Clericos), thougatituelf in proce Latin, is prefaced by a postical description of "Spring," and a culcum of William de Longchamp, the author's friend and patron, to whom also another copy of eleginos, of similar culfbre, is desicated. These last, Mn. Wright tells us, are printed in this edition from the only MR. in which they are to be found; and that, toe, an MS. which suffered from the fire in the Cottonian Tellersys. Library

The estimate remains, as collected by Mr. Wright, who has perfected his track with industry and judgment, are calculated to give an fracturable impression of his skillity, and still more of his fractiones and seed for reform. We are not so sure that the skills will think highly of his ventilitation, which is fraquently for from Orbitis, whilst his liberseaves to quantity are enough to

make an elegies writter a hair stand on and. But what en he expected of one on whom the laws of quantity int themselves so lightly that he would fire off such a two-sided. as the following, either in contempt of metrical prescription order to anticipate a critician on the palpable weekens vorses in this respect. He writes to his patrant in radia one of his town: one of his tours :

Anglorum sedem primam pets, sive Brittinu Si Brittinum muvis dicare, nemo vetat

sness as to true or false quantities which is somethy found among botanists and other men of solence nowadays. may notice the epigrams and enigmas of the second volume on another occasion.

THOMSON'S PHOTOGRAPHS OF CHINA.*.

THERE is a most depressing sameness in everything that is artificial in China. The high state of perfection reached by the Chinese in almost every art as every early period has served to check all vigorous and independent endeavours after new and still greater excellences. The literary models laid down by Constitution and his followers the architecture which adorned their fucius and his followers, the architecture which adomed their homes and beautiful their temples, the walls which protected the cities of the ancient States of China against the invokes of crival clans, the roads and bridges on and over which the Sage and his disciples walked and rode, have all been handed down from generation to generation as types of the highest development of each art. And the consequence is that, having what they doen the best models perpetually before their eyes, they have servilely followed them, without attempting to make any change, and without daring to believe any improvement possible. The popular mind has thus become paralysed. All inventive genius has died out from among them, and from being one of the most enlightened people on the face of the earth they have degenerated into a nation of copyists. To quote the words of a well-known essayist, they have rechad-that when "men learn instead of reasoning. Instead of meditating they remember; and, in place of the glow of inventive grainer, on the warmth of a generous admiration, nothing is to be met with in the warmth of a generous admiration, nothing is to be met with in society but timidity on the one hand and fastidionaness on the other—a paltry accuracy and a more paltry derision—a sensibility to small faults, and an incapacity of great merits; a disposition to exaggerate the value of knowledge that is not to be used, and to underrate the importance of powers which have ceased to exist." Every traveller in China possessing the least observation must recognize the truth of this description as portrayed by everything which surrounds him. The buildings which line the streets of Canton are the exact counterparts of those similarly situated in Peking, and the Yamuns, temples, and ransparts of Shanghai are precisely the same as those which are to be found in and around precisely the same as those which are to be found in and around

every city in the Empire.

If therefore Mr. Thomson had only used his camera in the native cities and foreign settlements, he would have found some difficulty in tilling the four folio volumes of which his work consists. But fortunately he has made his collection of views on quite another principle. Without repetition he has, in parts of quite another principle. Without repetition he has, in parts of the present and former volumes, given us all that is distinctive in ordinary architecture of the towns and villages, and thon, t ho taking us far from the haunts of men, he has enabled us, in some of the best specimens of photographic art, to peer into the wild depths of primayal and almost tropical ferests, to gase on romantic glens and on river gorges, to admire some mountain monastery perched on a rock, or to wonder at the rude dwellings of Szechusa miners hollowed out of cluffs overhanging the mighty stream of the Yang-teza Kiang. In the third volume Mr. Thomson first introduces us to the scenery in and about Ningpo-a town which will always hold a prominent place in the history of European inter-course with China. There the Portuguese have twice established. settlements, and as often have been driven thence by fire and sword. in consequence of the invincible tasts for buccaneering which appears to be inseparable from their character. Twice the ramparts have been stormed by British forces, and once the foreign Consule have witnessed the occupation of the native city by rebels to the Emperor's Government. Fortunately many of the most interesting public buildings have survived the various vicinsitudes to which the town has been exposed, not the least carious of which is the Temple of the Queon of Heaven, of which Mr. Thomson has given us a p graph. The carving of the pillars which support the portion is well worthy of notice as presenting a more than ordinarily good specimen of native art and of the popular representations of Buddhist and Hindoo mythology. Unlike most Oriental sents, the Chinese Buddhists possess very liberal ideas as to the purposes to which it is proper to turn their places of margabia. There are not which it is proper to turn their places of worship. There are nose a few temples dedicated to Buddha in which Sunday after Sunday, may be heard the doctrines of Christianity expounded to native profeesing Christians and to way ide heaters by foreigness in the con-ventional black cost and white tie. In others the priests not the ventional black cost and white tie. In otherwise passes are ventional black cost and white tie. In otherwise passes are vell as of religious, and some are the recognized meeting-places of guides or clubs. At the Temple of the Queen of Heaven the Fukien Guid holds its meetings. There are over mercantile transaction affecting. cateful watch is kept over every marcatile transation affecting; the Frikien trade, and there the merchants feast and rejoice over the antivals of their flests and the success of their ventures.

Bistrations of China and its People. A Series of Two Hundred Photographics; with Letterpessa Descriptive of the Places and People Represented By Fribonson, FRECS. 4 vols. Vall. III. and IV. London. Sampson Line 2008. 1874.

Like all tourists who visit Ningpo, Mr. The excursion to the Snowy Valley; but, unlike all the shown who have previously admired its beauty, he brought those who have views of its most lovely features. No olack true and faithful the East, and who has not become acqual who has not lived in which cling even to the finest palaces sted with the foul odours can fully appreciate the exhibitantial the most sacred temples, scenery to one who has been a effect of mountain air and castellated walls of a Chine-offined for any time within the castellated with the foul of a Chine-offined

tion o'visit to the "Thousand-Fathom Fall":—

le cling to a tree and then look down into the abyss. In abition I was desfened by the roar of the Tseen-chang-yen Fall, but discern nothing for a cloud of mist that floated beneath my feet. At the start I was startled from my contemplation by a vulture that shot out from the face of the rock and caught a tiny bird as it hovered over the cloud. I afterwards descended to the fall through a steep shady path in the woods. The great height of the fall may be guessed by looking at the full-grown trees above. It exceeds five hundred feet, and descends about as many more in cascades over the rocks before it reaches the valley. No picture can convey an idea of the romantic beauty of the place. The variously coloured rocks were covered with ferns and flowering shrubs, and the water, broken over the mossy ledges, fell like the delicate folds of a bridst process. Climbing over huge boulders and beneath bamboo clumps, I reached the stone basin below, where the spray was lit with a hundred rainbow hues, scattering a thousand gems on the ferns, which seemed to bend their leaves and catch the burden of the fall.

The growth of cities in the East is provorbally mushroom-like.

The growth of cities in the East is proverbially mushroom-like, and Shanghai is certainly no exception to the rule. "The site granted for the erection of the foreign settlements," says Mr. Thomson with truth, "was partly a marsh in 1843," and yet, writing two years ago, the British Consul at that port thus describes the change which has come over the scene:—

Not very many cities can vie with Shanghai in the attractions and extent of the front view from the approach to it up the river, and in its streets may be seen public and private buildings equal in style and importance to those that grace European towns.

This statement is fully borne out by the photographs before us. From its position Shanghai was from the first marked out as the principal port for foreign trade in China, and it has been there that the first attempt has been made to assimilate foreign with native institutions. For some years a mixed Court, presided over by English and Chinese officials, has decided all Anglo-Chinese police cases; and the effect on those matives who have had practical experience of the system thus introduced has been so far beneficial that they have learnt that it is possible to obtain justice without bribery, and to go into the witnese-box without fear of torture. Whether it will ever be possible to break down the system of administering justice which has for so many centuries prevailed in China, until the entire government of the country has been revolutionized, remains to be seen. Much has at times been written on the gross corruption of Chinese officials, and no doubt bribery of the most flagrant nature enters into the business of every day of official life. But we must go beyond the individual officials if we wish to reach the real cause of this systematic extortion. And we shall then find it in the utterly insufficient incomes of the Mandarins—incomes so small as to be quite inadequate even to pay the wages of the servants and followers whose presence is necessary at the various Yamuns. The result is that they are compelled to derive their private incomes from the people of the districts or townships over which they preside. This is looked upon by the people themselves so much as a matter of course that, unless an official is more than usually grasping and oppressive, the bribes and "squeezes" are paid with a willingness almost approaching to chearfulness. It has been calculated that the highest Mandarins get about ten times, and the lowest about fifty times, the amount of their legal incomes; and one whose salary was twenty-two pounds sterling has been known to complain bitterly that his gross income did not exceed 2.3336

In his fourth volume Mr. Thomson completes his tour. Journeying northwards from Shanghai, he touches at Chefoo, and thence, without stopping at Taku—an omission to be regretted, since the forts at that place have become historical—he visits Tientain, and thus passes onwards to the Great Wall by way of Peking. As might be expected, the chief interest of the volume is centred in the views of the capital and the portraits given us of some of the most prominent Chinese statesmen of the day. It is true that Peking is not a pleasant city to live in; that an air of dilapidation pervades ninety-nine houses out of every hundred within its walls; that the streets and lanes are well migh impassable from the ruts and holes with which they abound, and that the universal filth which covers it as with a garment will hear comparison with that of any city in the Fast. But at the same time the monuments of former stages in the history of the nation's development, which stand out giant-like and unchanging amid their puny and decaying surroundings, must always be a source of intelligent interest to those travellers who are capable of understanding their significance. Even the shape of the city has its meaning, and in the vast altars of Heaven (Nos. 41 and 42) we see remnants of a patriarchal worship which existed for agus before the time of Confucius, and which finds its closest

parallel in the ritual of the old Persian religiou as it was before the introduction of Ormuzd and Ahriman, and the wombip of fire.

At the Nankow Pass in the Great Wall Mr. Thomson takes leave of his readers. And thus in the four volumes of which his work consists he has illustrated China and its people throughout the length and breadth of the land. He has placed before the English public accurate reflections of all the principal pieces of interest which are to be met with from Hong-Kong to the Great Wall, and from Shanghai to the western portions of the Empire. As works of art the photographs are excellent, and the letterpress and to the point. The entire work is worthy of all praise, both on account of the style in which it is executed, and of the discrimination, industry, and tact employed in its compilation.

THROUGH THE MIST.

THERE is much in this novel to charm a not too fastidious reader, if there is also something to weary and disappoint. The naturalness of certain of the characters strikes us as pleasantly fresh and vigorous; but at the same time the details are often trivial in themselves, and repeated till they become intolerably monotonous. As an instance of this we may mention the frequency with which the "high teas" at Tigh-na-Beinne are introduced, and how often the events in the story are set in the framework of a country walk or a burnside scramble. Many of the more subtle personal characteristics of the people who live in and through the "mist" are of the kind which only an actor could rightly represent; and some scenes want paint and canvas to render them wholly intelligible. But indeed one of the most common mistakes of authors is to make excursions into the province of the actor and the painter, rather than confine themselves to that of the narrator, which yet, rightly handled, is rich and various enough for all the purposes of dramatic story-telling and pictorial description.

The two young heroines of the novel, Dulcie and Ruby Duncan, are a charming pair of twin sisters, of whom the one is the saucier and more high-spirited, the other the mecker and more tractable. But it takes some time before the reader is quite sure which is which, and whether it is Dulcie from whom he has to expect the more kittenish conduct and independent action, or Ruby, for whom Norman Ruthven has the deeper feeling, or on which of the two Harold Pierrepoint has fixed his heart. It is only by degrees, and after the introduction of Maurice Ingram and the progress of the love affair between him and Dulcie, that the characters and personalities of the two sisters get quite separated and distinct. And though this indistinctness carries out into the book that close likeness by which their friends were so often puzzled as to which was Dulcie, and whether Dulcie was not Ruby, it makes the earlier pages a little confusing and innecessarily perplexing. In spite, however, of this small drawback, we have seldom net with more charming girls than these two sisters. Scaling wulls, scrambling down steep hillsides, fording rivers, tramping over the country in wind and snow and rain for fish and eggs, swinging their creaking basket between them, their long bright hair flowing down their backs, and their red clocks points in the landscape that "tell," always laughing, running, singing—till the shadow of the inevitable love and the as inevitable sorrow falls on them—they are just what country girls of the best kind are in that happy period of life when girlhood and womanhood are meeting, and the morry tomboy age has not subsided into the more self-restrained bearing of sentiment and dignity. Brought up by two old maiden aunts in the safe fastnesses of the Islo of Arran, there was apparently no need for fear or chaparonage. In the beginning of things their sole male companion was Norman Ruthven, Uncle Donald's son; and as both Auntie Jean, the strong-minded ruler of the little family at Tigh-na-Beinne—called also in considerat

The blot of the whole is the character of Maurice Ingram. We grant all the difficulty novelists have in finding sufficient motives for crime and tragedy. Bigamy, murder, and forgery have been run to death, and the vengeance taken by the prenuptial lover on the happy and respected wife is also a thems worn threadbare. But, while granting all the difficulty, and disposed to accept leniently any attempt to open a

^{*} Through the Mist. By Jeanie Hering, Author of "Truth Will Out," &c. &c. 3 vols. London: Virtus Spaiding & Besty, 2879.

with favour on Miss as the secret of her cannot my we look of delirium tremens new path, we cannot say we look Hering's choice of delirium tremens hero's crime and poor Dulcie's sorrow. Hering's choice of delirium tremens as the secret of her hero's crime and poor Dulcie's corrow. A man standing on a table yelling at the top of his voice and shouting out that a fivetable veiling at the top of his voice and shouting out that a five-legged monater is crawing about the room, though probably taken from the life, is not a theme within the legitimate scope of written tragged. The very fact that it is a mere hallucination of drunken-ness robe it of all the dignity which comes from horror; and though to living witnesses such a scene in actual life must be re-volting and terrifying in the extreme, to readers, not in danger of their lives, it is simply revolting without the horror which alone redeems it from vulgarity. Such a thing as drunkenness is best expressed by a mere suggestion. We quote from memory, but we remember in George Eliot's Janes's Repentance how poor Janet's lapse into her failing was indicated solely by her holding her candlestick aslant. Five-legged monsters crawling out of holes, and rooms barricaded with furniture by a howling drunken maniac, are mistakes in art that set one's teeth on edge for the one part and make one sorry for the other. We wish that some other sin had been invented which would have excused old Mr. Ingram's harshness to his only son, and have given an intelligible reason sin had been invented which would have excused old Mr. Ingram's harshness to his only son, and have given an intelligible reason why Harold Pierrepoint and Norman Ruthven, both men of clean lives, had that odd instinctive and persistent dislike to the handsome young man who took their Dulcie from them, but who, in the beginning, certainly made her a good husband and renderedher life blessed. Or, if Miss Hering stood by her choice of crime, then we wish that she had given it with less detail and more broad and vague suggestiveness. It would have been the better art and the more impressive method.

We think too that she is out in her dealing with the Roman

We think too that she is out in her dealing with the Roman Catholicism of the Ingrams. At one time the smooth, stealthy, ubiquitous Father O'Brian seems as if he is to have an important part assigned him, but he goes off into nothingness, and never does anything to justify Dulcie's superstitious dislike of him. On the contrary, he seems to have been a quiet, amiable, attentive kind of person, womanishly fond of knowing all that was going on, but taking no active part for or against man or circumstance; and indeed not rendering a reason why he should exist at all. We do not believe that either Maurice in the first instance, or Father O'Brian in the second, would have consented so easily to the little son and heir of the Ingram estate being brought up as a Protestant. He had been baptized into the Romish Church, and we fancy that those who had authority in the matter would have made a vigorous opposition to Dulcie's design of heretical education. We hold the whole episode as a rather silly sacrifice of vraisemblance to British orthodoxy, and think the question should not have been touched on at all. The Ingrams were sincere in their own faith, as sincere as Dulcie was in hers; and the Romish Church does not easily loose its grasp where it has once struck. As for poor Father O'Brian, whose duty it was to have cared for the young lamb of the flook more closely than he did, we think he has been treated at the register and while presented to us in the beginning. treated rather unfairly, and, while presented to us in the beginning as the probable spiritual tyrant and spy of the drams, goes out into

space at the end as the spiritual and personal coward.

The two old aunties—Joan, the strong-minded, capable, and sensible elder, and Bell, the sentimental, tender-hearted, and weakbrained younger—are well-drawn portraits. Poor Auntie Bell, always undecided and always fearing evil consequences, is the one to whom the two girls go in their little domestic troubles, when Jean's hand lies heavy on them all, while she is also the one on whom Miss Jean lays the burden of most of the ill that happens. She tells all she ought to keep secret, and she keeps secret all she ought to tell. She knows nothing of right moments and judicious explanations; but maunders away her days in sentimental reminiscences of the time when she was in love with Harold Pierrecances of the time when she was in love with Harold Pierrepoint, and he was, in a fashion, in love with her; and the more
her stalwart sister bullies her, the more helplessly silly and inept
she becomes. But the contrast is well presented, and Jean
McInnes, if not a specially lovely, is at all events a strong and
natural, presentation, broadly and firmly touched. She too is in
perfect harmony with her locality and personal surroundings, and
would not have showed so well anywhere but where she is placed. But we should have liked her to have had more vital influence in the story. With all her strength she has no real grip on the action; and things drift or arrange themselves according to their own will without help or hindrance from her, outside the "rowing" she gives all round when the weather is bad and she is rather more ill-tempered than usual. To be sure it is her temper, and the scoldings she administers to the two nieces, that send Dulcie out into the storm, there to meet her fate and Maurice Ingram, just as it is discarded Alice's spiteful desire to pit her influence over Maurice against his wife's that the secident which in its turn brings against his wife's that leads to the accident which in its turn brings on the catastrophe. Still these side actions are not quite satisfactory in the case of a character so strongly marked as Jean's, and we think it would have been better, after having painted her so powerfully, to give her something to do of proportionate value. Why too was that queer little episode of the poor woman Helen Murray, found by the young people in the crypt, inserted? It has nothing to do with the story in any way, and reads oddly and absorbly when we find that it is a mere excrescence without roots or lines of relation anywhere. It looks as if that terrible "copy" was, running short, and space had to be filled anyhow. The old antillors used to give independent stories in the body of the original tale, but we have abandoned the habit in these latter days, and we do not think it would be good to revive it. do not think it would be good to revive it.
With all its shortcomings, however, both in treatment and design,

Through the Mist is a readable and pleasant book. It aims et Through the Mist is a readable and pleasant book. It aims at nothing great, but it accomplishes something very fresh and tender. Slipshod at times, at other times it is well written, with brilliant little touches that light up the pages as points of colour light up a picture. Miss Hering has evidently a keen eye for scenery and a strong love for nature; she has caught the Scottish character too, and gives it with force and subtlety; and she knows how to make her red-cloaked, scamparing, scrambling, heedless heroines natural without being vulgar, and playful without being silly. She is not strong enough for the portrayal of such a character as Maurice Ingram, but she excels in such little touches as those which show how poor old field Bell still cherishes her sontimental attachment for Harold Pierrepoint: while he, man-like, wonders how he sould how poor old faded Bell still cherishes her sontimental attachment for Harold Pierrepoint; while he, man-like, wonders how he could ever have been "spoony" on such an unlovely creature as she has become. Also she has treated very prettily the risk there was at one time of Ruby's falling in love with Harold, he all the while worshipping Dulcie, and Norman Ruthven doing the same by herself. We are glad that the whole imbroglio gets arranged before it is too late, and that every one but poor Hell is made happy in turn. As for her, we can but hope that sister Jean will be merciful, and that the "potato scones" for which Tigh-na-Beinne is famous may not suffer too much by Dulcie's departure from the scene of their baking.

GERMAN LITERATURE.

HERR AUERBACH has for some time attained the perilous eminence of an author whose new works are regarded as events of national importance. Such a implies high distinction in the past, but generally excludes the hope of any marked development in the future. The original freshness of ideas is usually by this time exhausted, and the c lies between the blank repetition and the dexterous manipulation of old materials. Few are capable of the amazing tours de force of Lord Lytton, and Goethe's dictum respecting the impossibility of jumping off one's own shadow is exemplified even by him. Herr Auerbuch has not unsuccessfully striven to cover the growing requirement of the properties the properties of the ing penury of invention by associating his own fortunes as a novelist with the political fortunes of his country. His present novel is in fact the prose epic of German unity, and the choice of subject is cartainly in some respects indicated. is certainly in some respects judicious. A patriotic theme can hardly fail to please a patriotic public, especially when the genius of the writer is also an article of patriotic faith. It does not follow that it will be equally interesting to foreigners, and it may be feared that the readers of the four translations already announced. (French is significantly absent) will pronounce it tedious, and deficient in unity of action and concentration of interest. The latter defects are well nigh inseparable from the scheme of a family history, where the characters are numerous, and the incidents spread over a series of years; nor is tediousness easily avoided in a narrative put into the mouth of a respectable elderly citizen, with whom prosiness seems almost a requisite of dramatic propriety. Waldfried's quiet matter-of-fact way of telling his story pricty. Waldfried's quiet matter-of-fact way of telling his story would repress anything like excitement on the reader's part even were the tale exciting in itself. On the other hand, the work has many merits. It is just the book for leisurely perusal, one to take up and lay down as convenience suggests. If frequently languid, it is never dull, and when the current is slowest, it often holds nuch valuable matter in solution. It probably reflects the average public opinion of Germany on political matters with fair impartiality; it also illustrates many of the most pronounced tendencies of modern German thought. The pervading atmosphere of refined yet slightly pedantic culture is characteristically German; and though none of the personages are very individual or very typical, they embody most of the ideas which for the last quarter of a century have fermented in German intellectual society, converging as to a focus in the accentance of the present order of things in practo a focus in the acceptance of the present order of things in p tice, while republicanism is still professed in theory. On the whole Waldfried is worth reading, but not as a novel. The manners depicted are stated on high authority to be wholly inconsistent with those of Southern Germany, where the scene is laid.

W. Maurenbrecher's essays on the history of the Reformation w. Maurenbrecher's casays on the history of the Reformation period † make a very acceptable volume, conveying the results of much research in a pleasing style. They are all founded upon the study of materials already in print; the writer's occupation as successively Professor at Dorpat and Konigaberg having compelled him to discontinue the examination of archives which he had previously undertaken. There is accordingly little absolute novelty viously undertaken. There is accordingly little absolute novelty in these casays; but the results of former inquirers are reproduced and combined in an agreeable manner, and the sober and experienced judgment of the writer himself always commands respect and confidence. The most important part of the book is that relating to the comparatively little-known history of the Church of Spain in the afficient and sixteenth continuous a project of the

relating to the comparatively little-known history of the Church of Spain in the fifteenth and sixteenth centuries; a review of the most recent biographies of Luther also offers considerable interest. Karl Fischer's "History of Foreign Policy and Diplomacy during the age of the Reformation"; is not so much a history of the politics of that period as of the development of diplomacy, which then began to part with its irregular and occasional characteristics.

^{*} Waldfried. Von Berthold Ausrbach. 3 Bde. Stuttgart: Cotta. London: Kolckmann.
† Studien und Shizzen zur Geschichts der Reformationszeit. Von W. Mausenbrocher. Leipzig; Grunow. London: Trübner & Co.

rester, and take rank as a regular profession. With the increased complication of public affairs the post of envey rose more and more in importance, and required more and mose of a special training. Instructions became more formal and precise; ciphers increased in difficulty and intricacy; while questions respecting the validity of passports and safe-conducts, the inviolability of correspondence, and other subjects of general interest to the profession, gradually elevated diplomacy to the rank of an important department of international law. This progressive development is very intelligently and agreeably set forth by Harr Fischer, whose volume also gently and agreechly set forth by Herr Flasher, whose volume also contains abridged accounts of the more remarkable ambassadors and embassies of the period, and amusing particulars of the political tribulations and personal discomforts to which envoys at that time were errosed.

a cutreme: perplaxity arising from the minute subdivision of the German territory is notorious to all students of German history under the ancient Empire. Dr. C. Wolff has prepared a very useful emmerstion of the various minor principalities which contributed to the composition of that vezerable, but unwieldy, body politic; describing the history and boundaries of each, with the aggrandizements, diminutions, and other mutations to which it has been subjected from its original constitution until the present

The history of Germany during the Spanish War of Succession is,
a manner the history of Europe. The history of the conflict in a manner, the history of Europe. The history of the conflict between Sweden and Russia from the peace of Utrecht to that of Nystad (1721) is of more limited interest, but even more important; as describing the process by which Russia obtained recognition as a great Furopean Power. In. Sugenheim, thas treated both periods with brevity and clearness. His prefuce contains some curious particulars respecting the Frankfort public library, where, owing, to the late librarian's exclusive partiality for the middle ages, not a single work required by the historian for his

present publication is to be found.:

J. J. Breitinger, the leading pastor at Zurich during the first forty-five years of the seventeenth century, is one of the most respectable figures in Swiss history, a man distinguished by learning, platy, segecity, administrative ability, and a candour and tolerance much in advance of his age. As a pastor he introduced many useful reforms, especially with reference to education and the relief of the poor; as a politician he was eminent for firmness and circumspection. His merits as a divine and a citizen are very agreeably set forth in the little biography by Dr. Mörikofer, which also contains valuable incidental illustrations of the condition of a

Protestant community a century after the Reformation.

F. von Löher's work on Hungary § is an interesting contribu-tion to one of the most perplexing political problems of our time:— How will the motley populations of the Lower Danubo ultimately constitute themselves? As an independent State centralized under constitute themselves? As an independent State centralized under one dominant race, or as a federation of distinct nationalities, or as a dependency of Germany or Russia? German rule has broken down for the present, and the experiment is not likely to be repeated until the incorporation—be this remote or near at hand—of Austria with the German Empire. The Magyars are labouring hard to forestell this contingency by imprinting their own that one of the population. Their success surpasses expectation; nevertheless Hear von Löher considers that they are attempting an impossible task. The Servian's national pride rivals that of the Magyar; the Wallach is supported by his pride rivals that of the Magyar; the Wallach is supported by his kinsmen on the other side of the mountains; the Slovach's nationality is assured by his very dulness and insensibility to all new ideas. All these races are marvellously prolific, and the numerical proportion between them and the Magyars is continually altering, to the disadvantage of the latter. While the Magyar aims merely at guiding and controlling the non-Germanic races, he is bitterly hostile to the Tenton. German speech, German schools, German hostile to the Tenton. German speech, German sendon, Communication to the great injury of culture and good government. The writer admits, however, that his countrymen, except in Transylvania, are in a fair way to become Magyarized, an end which the Hungarian Government would consider cheaply attained at any cost. Generally speaking, the political administration, since the recognition of Hungarian autonomy, has been highly successful, but the financial most dissertous; the Mugyars generally making very efficient members of Parliament, but very poor administrators. Germany alone, Herr von Lüber thinks, can supply the needful element of an honest and capable bureaucrucy; and the leading idea of his book is that the two superior races should forget past animosities, and endeavour to rule in common. If a reconciliation be not brought about, the most probable result will be the ousting of both German and Magyar by the Slavonian. Another race is making great progress, and more and more building up that great desideratum of Eastern Europe, a middle class. This is the Jewish, which year by year engrosses more of the trade and of the real property of the country. The sympathies of the Jews are

morally with Germany, and from their general one of the file language they may almost be regarded as an eddising Tentonic element. Besides Herr von Löher's political app rentonic element. Besides mark von Löhers political appendictions, his volume contains numerous sketches of seenery, and manners, and customs, and studies of the Magyer national character from various points of view. His admiration of its many dina qualities—lends weight to his condemnation of the impulsiveness, unrequestableness, pugnacity, and poverty of ideas which in his opinional disquality this people from becoming the ruling mess of South-Riesterns, Express.

Europe.
The first volume of Dr. Maximilian Party's work on anthrope logy embraces both the physiological and psychological departments, insonuch that, unless the author proposes to descend from his philosophical altitudes to the humbles office of a compiler. of ethnological facts, it insuly appears what he has left himself.tos discuss. Such a descent would involve no loss of originality, for we meet with none here. No originality is claimed for W. Beesand I'. von Hellwald's "Premistorio Man," a rendable and quarerally judicious, if occasionally somewhat creduleus, compilation of accertained and surmised particulars respecting primitive mankind, from the ancient or modern fabricators (a term appropriate on either hypothesis) of St. Acheul flint knives to the architects of Stonehenge. The book would be better without the full-page-illustrations, which depict the assumed incidents of uncivilised.

existence in a highly imaginative fushion.

Herr Koerner's treatise on Ethics; as deduced from the laws of nature is a comprehensive and able work; sufficiently comprehen nature is a comprehensive and able work; same starty constraints sive to take cognizance of such questions as the propriety of rendering a State licence obligatory upon doctors and sufficiently able to escape the great enemy-of treatises on othics—commonplace. The interest of the work is partly owing: to its variety, and partly to the author's consistency in deriving ethical obligation solely from the diotates of natural law, which at. once sweeps away most of the copybook morality which repetitions has rendered conventional. The author can hardly be classed under any of the recognized schools of ethical philosophy; has keeps as close as possible to positive science, and in general contents himself with a plain common sense view of moral problems. passing over speculative difficulties with a levity which will appear

shocking to philosophers. A number of interesting particulars respecting Jewish erndition and methods of instruction during the Arabic period in Spain will be found in a treatise by Ir. M. Güdennam, For the early period of Jewish culture in Spain, Joseph ben Akuin is the principal. anthority. His treatise appears to be mainly founded on an

Arabic work by Ghazzali, and the peculiar development of Hebrew. civilization under the Moors must no doubt be attributed to the intercourse of the Jews with the latter, who made them acquainted. with the writings of Aristotle. The precepts of the Rabbi Judah... ben Tibbon give a lively idea of the education of a Jewish scholar.

of the period. Jewish culture in Spain culminated in Mainsonides (1150—1200); its subsequent decay seems to indicate that, apart from foreign influences, the Semitic is not a progressive

Karl Hirsche's contribution to the problem of the authorship of the Imitatio Christi || is one of first-rate importance. A manuscript, it appears, exists in the Royal Library at Brussels, which is con sidered, and, as Herr Hirsche believes, with justice, to be in the handwriting of Thomas à-Kempis himself. That it is the autograph of the author, whoever he was, is in Herr Hirscho's opinion a demonstrated by the employment of a peculiar system of punctuation, which the editors have neglected to preserve, but which, needs but to be restored to bring out at once the rhythmical character. of the original, to the great enhancement both of its beauty and its significance. This punctuation is further shown to be pseuliar to à-Kempis by its occurrence in the Mest, of his undoubted works, and nowhere else. We must leave Herr Hirsche's critical arguments to the appreciation of those who have made a study of the: subject, but there can be no doubt whatever of the vast: superiority of his method of printing the Imitatio as irregular verse, so far at ... least as the specimens given by him extend. The cadences resembles those of the English Bible; the gain in force and euphony may be easily conceived. On this account alone the new edition he promises will be exceedingly valuable.

Bobanus Hessus I is one of the most pleasing of the minor figures of the age of the Reformation—an accomplished scholar, and clagant poet, a warm-hearted and high-minded man, who, like Melanchthon, united in his own person the characters of humanists. and religious reformer. His career, less distinguished by exciting: occurrences than by his cordial intimacy with Luther and other leading characters of the age, is very pleasantly narrated in a littles volume by Dr. Schwertzell.

offenor Lehm . in his every towards a colentific investigation so scholie upon Pindat, divides these into two classes, the of the scholia upon Pindat, divides these into two classes, the certier and the later, and draws attention to the extreme confusion and corruption of both. Mendelsechn's letters to Fardinand Hiller † would hemosphismed a mach faller notice at our hands but for the appearance of an English translation. They are distinguished by all the writer's habitaal buoyancy of spirit, vivacity of style, and cordiality of feeling. Their only drawback is that, being addressed to a brother componer, they are frequently too technical for non-required readers. musical readers.

Resident Contactables Postic 1 is entitled to much praise as a clear, judicious, and concise treatise on a theme where obscurity, paradox, and prolixity are in fashion. After a brief account of the literature of the subject, and an essay on the nature of imaginative composition in general, the author descends to the technicalities of art, such as the suitable employment of similes and the choice of metrical forms. The recent volume treats of the various classes of inaginative composition, from its simplest exercise in the song up to its most extensive scale in the spic, whether prose or verse, and its most complicated manifestation in the dramatic art. Herr Gettschalle observations are always distinguished by sound judg-

mant, and a perfect mastery of the principles of certhetic criticiau.

"Reinhart Lionchild," 5 a metrical take of old-world German chivalry and popular mythology, is interesting in itself, and agree—ably teld in fluent hexameter verse—of the kind, however, which ms as if it could flow on indefinitely when the trick of inditing

it has once been caught.

It is hardly probable that the dramatic works of Princess Amelia of Saxony | would have been collected in three volumes, and in part revised by a dramatist of reputation, had not the late King of Saxony interested himself in the matter. They are, however, elegant and refined, if not very powerful pieces, and in every way creditable to the princely smateur. Some tew have esta-blished themselves on the German stage. Most varieties of the drams are represented among them, but the domestic are the most numerous and successful.

"Sibyla" is a pretty and interesting tale, agreeably written and with a decided moral tendency. "Siberia," an historical romance of modern Russia, is chiefly remarkable for its copious particulars respecting Russian manners and customs.

The last number of the Archiv fur Anthropologic ††, in addition to

its usual store of scientific matter, contains a full report of the proceedings of the German Anthropological Congress assembled at Wiesbeden in September last. Among the contributions to the review is an essay on a subject of archaeological rather than ethnological interest, the overland commerce of the Etruscans with Northern Europe, which appears to have been very active for several conturies. The object of their quest was amber, as is established by the much more frequent occurrence of objects of Etruscan manufacture in the extreme north of Prussia than in any intermediate district.

THE BUDGET DEBATE.

T was more convenient for the CHANCELLOR of the Exorrows than conducive to the public advantage that be knew himself beforehand to be secure against the censure of his most formidable cratic. The advantages of an Oppoof his most formulable cratic. The advantages of an Opposition are never more conspicuous than when for casual reasons its functions are temporarily suspended. Mr. Gladstore's approval of a Budget practically borrowed from his own was cordial and almost unqualited. In one of his election speeches at Greenwich Mr. Gladstone ridiculed Mr. Disnaell for suggesting that the rate of Income-tax should be diminished, on the ground that it was inexpedient to maintain the annoyance of the collection except for the returns of raising a considerable revenue. In the House purpose of raising a considerable revenue. In the House of Commons Mr. Gladstone defended the reduction by the only tenable argument in its favour. The Chancellos only tenable argument in its favour. of the Excusives has not hitherto pledged himself either to the permanence du to the future abolition of the the permanence on to the future abolton of the tas; but in removing one-third of the burden, he may, as Mr. GLADSTONE observed, be supposed to contemplate the possibility of modition. The author of a more sweeping measure naturally welcomed an instalment of his own comprehensive offer of relief. If Mr. GLADSTONE'S judgment had been wholly unbiassed, he might perhaps have warned the House of the possibility that in a future wear it may become necessary to occur by that in a future year it may become necessary to cover by an increase of the rate a deficiency which is not unlikely to be caused by the reduction. Mr. Laing was perfectly justified in protesting against the conventional doctrine that the Chancellor of the Exchequer and the House of Commons should be absolutely bound to adopt the Estimates as they are framed by the permanent heads of departments. The prosperity of the country sometimes advances or recodes, in Mr. GLADSTONE'S phrase, by leaps and boards, while the Commissioners of Revenue and properly and necessarily bound by various fixed rules. It may be admitted that in his speech on Thursday Sir S. NORTHCOTS furnished some additional reasons for expecting a moderate increase of receipts; and, as he justly remarked, a conjectural stagnation of the Sugar duties would only prove that the sacrifice of revenue has been overestimated.

Mr. Gladstone and Sir S. Northcote concurred in the undersible proposition that the Budget and the Estimates equally expresent, the collective responsibility of the Cabinet; and while Mr. Gladstone ironically expressed his confidence that no large addition to the naval expenditure was projected, the Chancelloe of the Excheques limited his apprehensions to the possible necessity of a small Supplementary Estimate. Nevertheless Mr. Ward Huer's statements with respect to the condition and wants of the navy furnish a strong reason against undue remissions of taxation, although they may perhaps not greatly affect the narrow margin of surplus allowed for the present year. The postponement of a large expenditure to another financial year would not justify the reduction of the Income-tax, which must be regarded as permanent. It may even be suspected that Sir S. Northcote's profused agreements of his unledge than by Mr. Goschen's infilted which was, indeed hypothetically sound. The suggestion that the Chancellow of the Exchequen was infilted that the Chancellow of the Exchequen was infilted that the Chancellow of the Exchequen was infilted that the Chancellow of the Exchequen was absolute that the Chancellow would the require was absolute that the Chancellow would the proposed of the Exchequen was provided to the continuous of the Exchequen was provided to the continuous of the Exchequen was absolute that the Chancellow would the proposed of the Exchequen was provided to the continuous of the Exchequent was provided to the continuous of the Exchequen

Minister is not to starve but to supply the public service. If the Chancellor of the Exchequer for the time being considers the expenses recommended by the Secretary of State for War or by the First Lord of the Admiralty excessive, it is his business to represent his views to the Cabinet, and, if possible, to obtain the consent of his colloagues to reduction. It is impossible to suppose that Mr. Ward Hunt was expressing only his personal opinion when he intimated that the charges for construction and repair of ships would either in this or in a future year exceed the Estimates framed for the use of his predecessor. His elaborate speech was principally directed against undue the interesting a practical conclusion that the entered tite in apparently unnecessary attack on the policy of the late Government. The Ministers are at present in the anomalous position of recommending to the House of Commons a scheme of finance which will sconer or later be inadequate to meet the cost of their scheme of naval administration. It is possible that, even without any increase of expenditure, the surplus may be reduced to less than nothing by the diminution of the revenue at is almost impossible that the receipts should be sufficiently elastic to cover supplementary naval Estimates; and the reputation of the Government will be seriously affected if, for the first time in several years, they create a deficit. Sir Starford Northcoth has no reason to complain of any want of candid acknowledgment of his merits; but he has yet to earn the confidence of the country by the results of his operations as well as by his financial proposals.

It is not a little strange that Sir Statebud Northcome's subsidy to the rates has been almost universally approach. A contribution of somewhat more than a million involvement the principle for which the advocates of the ratepayers have consistently contended. It is true that, as findowners bear their full share of hational burdons, they are only relieved to the extent by which the area of general taxation exceeds that of rating. The occupiers will in most instances receive the whole benefit of the allowance for the maintenance of lunatics and for the pelice, because the consequent reduction of rates will be too small to be considered in future adjustments of rent. In some Unions the reduction of the cost of lunatics by nearly one-half will perceptibly affect the amount of poor rates, and the county rate will be sensibly diminished by the relief from another fourth part of the expense of the police. The Changellor of the Exchequer received much praise for the arrangement by which he maintained the interest of the local authorities in economical administration. When the Government subscribes a fixed sum for the maintenance of every lunatic, it is supposed that the flotives for vigilance in the expenditure of the margin will be in no degree impaired. In consideration of Sir Stawoom Northcote's adherence to sound doctrine in the case of lunatic asylums, the House of Commons condoned his adoption of the contrary plan in dealing with the police. It is evident that if the governing body of any county so far abandoned the traditions of rates administration as to indulge in extravagance, the Treasury would be compelled to pay an excessive sum in aid of the rates. The Inspector on whose certificate the Government allowance is paid only reports that the police is efficient in condition and numbers. Excess of numbers would not come within his official cognizance. Fortunately there is not the smallest probability that either the justices or any body which may inherit their present functions will unprecentally augment the po

national contribution to the cost of ad, like the police allowance, been pro-to the outlay. It is a fallacy to suppose that local responsibility has been in any way protected by the Chancellor of the Exchequer's measures. The administration of the asylums belongs to the counties, while the payment in aid of rates will be made to the Unions. The only function of the Guardians is to take care that all lunatic paupers are sent to the asylum, and further to pay for each patient the amount required by the governing body. The truth is that the justices are in no degree anxious to allow undue luxuries to the inmates. The frequent additions to the expense of asylums are almost always incurred in deference to the suggestions of the Commissioners of Lunacy, who represent the central authority. If the CHANCELLOR of the Excheques had made his donation in the form of an assumption of a certain proportion of cost, his beneficence would have been equally exempt from risk of abuse, and it would have been more generally appreciated. The diminution of the poor rates of each Union will be proportionally small, while the same sum would have relatively assumed a respectable magnitude if it had been deducted from the county rate. The question of distribution as the county rate. The question of distributing a sum arising from a certain source among the same persons in different shapes is of secondary importance; but the haste with which the majority of critics applauded Sir Stafford Northcote's measure is not undeserving of notice. The not inconsiderable sum which is to be bestowed on a few parishes by rating Government buildings might have been more advantageously retained in aid of a questionable surplus. In almost all cases Government establishments add largely to the wealth of the districts in which they happen to be situated. Many towns have of late been urging on the Government their special claims to be made district military centres, although, in the present state of the law, the barracks and other works would be exempt from rating. It may perhaps have been difficult to resist the importunity of towns which, like Portsmouth and Chatham, displayed their admirable sentiments so conspicuously at the late election.

If the CHANCELLOR of the EXCHEQUER had committed the error of mixing up political and financial considerations, he might shelter himself by the authority of Mr. GLADSTONE, who introduced into the discussion, almost without attracting notice, a menace or intimation which was perhaps more significant than his examination of the Budget. appears that in Mr. GLADSTONE'S opinion the recent verdict of the constituencies must be distinguished from the voice of the nation. In other words, the late Minister appeals to extended or universal suffrage against the condemnation which has been passed, not so much on his policy, as on the tone and temper of his administration.

THE NAVY.

THE speech made by Mr. WARD HUNT on Monday in moving the Navy Estimates gave rise to much animated discussion, until on Thursday Sir STAFFORD NORTHCOTE gently threw his fervent colleague overboard. Mr. Hunt adopted the Estimates of Mr. Goschen, but he explained that he had not had time to communicate with his colleagues as to their general results, and that he bound himself to nothing except to saying that when he saked for ten millions of money for the navy, he must be understood to mean that he should certainly want ten millions. So far as he could bee he should want a good deal more, but he could not say how much. He had found the state of the ironclad fleet most unsatisfactory, and he was not going to let it remain so. This naturally provoked the retort from Mr. Goschen that, if this was so, the Ministry could not be justified in giving away all the surplus of the estimated revenue. The late Government left the present Ministry a remarkably handsome amount of money to start with, and the present Ministry at once gave away the money, and said that a large portion of it ought to be spent on urgent public purposes. But this is a matter apart from the condition of the navy, and from the real wants of the navy if England is to retain its maritime supremacy. What we want to know is, first, whither our ironelad fleet is in a condition below what the interests of the country demand; and, secondly, if this is justified in giving away all the surplus of the estimated

we have to consider our ironolad fleet as it is in itself, and as it is in comparison with the ironclad fleets of other nations. There can be no doubt after what Mr. Hurr has said, that the efficient force of our fronclad fleet is in reality far less than would be supposed if nothing were known of it but its nominal strength. We have fifty-five impelads, of which forty-one are seagoing ships, and fourteen are available for harbour and coast defence. Out of the forty-one seagoing ships five are in course of construction, as nine are not fit to go to sea or worth making fit. We must take off nine more for vessels that will be available some day, but not in the present year; and this brings us down to eighteen. But then, although we shall have eighteen at some period of the present year, four are undergoing repairs and will not be ready until August next. The real effective strength of English ironclads fit to go to sea this summer is just fourteen. In the same way, of our fourteen coast ironclads only nine can be considered really fit for their work. The other five are on foreign stations, and are not worth bringing home. Fourteen ironclads to conquer the maritime world, and nine to keep us safe at home, seems certainly a small residuum into which to have boiled down the invincible navy of the Mistress of the Ocean. That it is not enough was virtually confessed by Mr. Goschen, and was not questioned by any speaker. Mr. Hunt declared that so phantom a sort of navy should not exist while he was at the Admiralty. He would have an ironed diete much more Admiralty. He would have an ironclad fleet much more worthy of the name and power of England, and when he had found out how much beyond his ten millions would be wanted to carry out his patriotic purposes, he would let Sir STAFFORD NORTHCOTE know. If unfortunately the information should derange the patriotic purposes of his colleague, who desires to conciliate the clamorous world of taxpayers, that seemed to Mr. Hunt on Monday to be the look-out of a Chancellor of the Exchequer, and to have nothing to do with the First Lord of the Admiralty.

That the nation will have to spend more money on its ironclads is certain; but it is not necessary to be in any very great alarm about the state of the navy. It is not only what we have got, but what other nations have got, that is to be considered; and if our effective strength is much smaller than our nominal strength, we may be sure that this is the case with all our possible rivals. Mr. Reed, in writing to the Times, has informed Englishmen who might be tempted to be alarmed that nearly all the French ironclads are wooden built. Such ships are now wholly discarded in the English navy, as they will not last, and cannot be really compared with iron ships. We have, as Mr. Goschen said, nine ironclads that could sweep the Channel. Then Mr. Hunt condemns Mr. Reed's favourite, the Devastation, to the rank of a coast-defence ironaled, as he says that his nautical advisors do not think that it would be safe to send her really to sea. Mr. Rued of course questions this. If a certain cul de sac, which he derides as ridiculous, were taken away, he is confident that the Devastation might be safely sent into the middle of the Atlantic. It would be uncommonly wet work being on board her, but he is confident she would float. This is a question as to which naval men must be left to fight their own battles, but what Mr. Goscmen said seems perfectly true, that if the Devastation is to be ranked as a mere coast vessel, so ought the Peter the Great, that pride of Russia, with a description of which Mr. REED not long ago scared his countrymen. Then, when it is said that out of fourteen of the coast ironclads five are not available, Mr. Resp explains that they were not meant to be available. They were small insignificant ships built as experiments, and if they can be of some little apparent use on a foreign station, that is all that any one who knew their history could ever have expected of them. Many of our ironclads, too, are temporarily disabled from their boilers having worn out sooner than was expected; and if English boilers wear out, it is to be supposed that foreign boilers wear out too. Nor is it at all fair to look only at ironclads if we want to judge of the strength of the whole navy. The late Government did not spend much money. Mr. Gosoners would stability allow, if it was his business to allow such things, that it did not spend enough money in ironclads but it ment to the late of the strength money in ironclads but it ment to the late. not spend enough money on ironclads, but it spent considerreal wants of the navy if England is to retain its ritine supremacy. What we want to know is, first, there our ironclad fleet is in a condition below what the purposes of the country demand; and, secondly, if this is come, now much ought to be spent beyond the present the navy presents on this side a warm satisfactory than appear to have been taken for the name as last, and 60,000 assume to have been taken for the name as the proper normal strangth. The system of

training boys for the navy has been very successful, and makes military men wish that they could get recruite of an equally good quality in some such easy way. Admiral Elizior, as member for Devonport, complained that the dockyards are atrociously managed, that good workmen will not stay in them, and that the supplies of stores are most inadequate. Mr. Hust, happy in his plea of being new to his office, promised to go himself to look at the Dockyards when the recess begins, and with this promise Admiral Elizor had to be contented. Mr. Reep laments that a foolish parsimony has hitherto prevented our admirals having the means granted to them of studying naval tactics under the new conditions of modern warfare, and that the limited stock of coal served out to them does not permit of their trying the requisite experiments. Mr. Reep may probably be right in this. The chances are that under the Gladstone Government an admiral would not get as much coal for his experiments as in his zeal for the service he would like to expend. But on the whole the navy is, apart from the ironclads, in a satisfactory state—well manned, well commanded, and well armed.

Mr. Hunr, adopting Mr. Goschen's Estimates, explained what he intended to do in the way of spending money on ironolads during the present year, or, to speak more strictly, he told the House what Mr. Goschen would have spent, and said that he was himself considering how much more to spend. As Mr. REED justly observed, it was impossible that a Minister who so distinctly repudiated the possible that a Minister who so distinctly repudiated the policy of his predecessors with regard to injusted shipbuilding could rest satisfied with the meagre projects of Mr. Goschen. The simple fact appears to be that, if we have 60,000 sailors, we must have a certain number of ships to put them in; and it now costs 170l. to put a sailor where a few years ago it only cost 100l. But Mr. Goschen, although he represented the reaction in the counsels of the Admiralty against the headlong economics and random changes of Mr. Childers, had to serve under a Premier who prided himself on his reductions of expenditure, and who in this particular on his reductions of expenditure, and who in this particular year intended by a stroke of financial genius to retrieve the fallen fortunes of his party. Coal and iron have been very dear, and Mr. Goschen discovered that the only way of keeping the Navy Estimates down was to cut down the expenditure on ironclads to the lowest possible figure. He could easily justify himself. Who is there for England to go to war with? France is not likely to go to war, and France is the only nation that has a nominal ironclad fleet at all able to rival that of England. Then if one type of ironclad is devised, another is immediately invented to ironcled is devised, another is immediately invented to supersede it, and to be slow in the construction of ironclads is really to avoid expensive mistakes. What is meant by an efficient fleet? Is every boiler to be constantly changed on the suspicion that it may be corroded? When we talk of having a fleet available, are we to suppose that every ship on the list is to be fit to go to sea at a few days notice; for, if so, we are rushing into boundless fields of expense, and are aiming at a standard of perfection far beyond the dreams of any other nation. There is much in these arguments, and Mr. Gosonen was quite right in reminding his hearers that there is no need for a panic, and that by a good condition of the navy we ought to mean that which for practical purposes, and under average circumstances, is a good condition. But it was quite obvious through the thin veil of Mr. GOSCHEN'S reserve that, if he could but have had a little more money to spend on ironclads, he would have rejoiced as First Lord, although as a colleague of Mr. GLADSTONE he would have deplored so lamentable an instance of reckless expenditure. To those who have nothing to do with the squabbles of parties, who only pay taxes, and wish to see England with a navy worthy of its fame, it is comforting to find that the whole money sion at issue is comparatively a small one. For the at fifteen years our average annual expenditure on our chad feet has been under a million sterling. Mr. REED, who is one of the most ardent advocates of a liberal ex-penditure on ironolads, writes to point out that this sum must be increased if the same results are to be produced, comes prices and rages have risen, and that, as too little are arrears to be made up. But he altogether disclaims the notion of incurring any great increase of expanditure. Whereas we have a navy excellent in mapor respects, but falling short in one important particular, for ten millions a year, we might, even according to the move of those who wish on reasonable grounds to

have more spent, possess a navy altogram which no one would specify, but which which no one would specify, but which down at the outside at half a million more is necessary, which is not to be admitted intil shown, although possibly an extra half-million of expenditures may happen to derange some future plans of a Chancellor of the Exchequer. For the present Sir Stafford North-Cote seems to have checked Mr. Hunt's ardour. The Ministry is not going to repair too fast the snistakes of its predecessors. It will spend more than Mr. Goschen would have spent on ironelads, but it will not spend much more. Something like a hundred thousand pounds beyond the Estimates may perhaps be wanted this year, but even as to that Sir Stafford Northcote is doubtful. The general conclusion of the Ministry appears to be that the country can afford to wait for the present, and may make its existing ironelads do fairly well. As Mr. Goschen justly remarked, the comments of Sir Stafford Northcote on Mr. Hunt's speech were the best exculpation of his own management of the navy while he was First Lord that he could possibly have desired.

SPAÎN.

LTHOUGH the decisive struggle in Biscay is still delayed, it becomes more and more evident that a crisis in Spanish affairs is approaching. Marshal SERRANO has been embarrassed, not only by the obstinate resistance of General Ellio's army, but by political intrigues and disputes which are still only suspended. The mission of Admiral Topers to Madrid seems to have been caused by dissension among the members of the Cabinet which represents a temporary coalition. Senor Marros, who is the leader of the Republican section, suspected some of his colleagues, and especially General Zabala, Minister of War, of a design to proclaim Don Alfonso in concert with some of the chiefs of the army. SERRANO has hitherto steadily opposed the restoration of the dynasty of Queen Isabella, perhaps, among other reasons, because he must feel that he has offended the QUEEN whom he dethroned beyond possibility of forgiveness. Only a few months ago Admiral TOPETE made it one of his principal arguments against the Republican party that its extravagances tended to facilitate the return of Don Al-ronso. It is not known whether the generals of the second rank share to any considerable extent in the opinions of Serrano and Topete. There seems reason to believe that a large number of the officers of the army favour Don Alfonso; and it oddly happens that some of those whose antipathy to the Republic has driven them into the army of Don Carlos could gladly witness the conclusion of some arrangement by which he might renounce his claims in favour of his cousin. The attempt to place Don Alponso on the throne could scarcely be worse timed than at the present moment. Until the Carlists are defeated, no patriotic Spaniard would wish to promote a new and doubtful revolution. The Republic has few respectable friends; but fortunately the present Government is only Republican in name. Even if CASTELAR were still at the head of affairs, his whole energies would be concentrated on the civil war, and he would assuredly deprecate any domestic changes, however closely they might correspond with his political opinions. The Carlists would inevitably profit by an open supture in the ranks of their opponents, and it is difficult to understand how the most factions members of the Ministry can have been induced to distract the attention of the Chief of the Executive from his difficult military task. Admiral TOPETE appears to have patched up the quarrel for the moment; and probably all parties will for a short time be content to watch the fortune of The extreme Republicans in Carthagena and other places have again assumed a menacing demeanour; but they will scarcely venture to provoke a Government which, if it attains a decisive victory, will dispose of an irresistible force. The same considerations will operate still more forcibly on the minds of SERRANO'S mutinous colleagues at Madrid. The army which is now assembled in the neighbourhood of Bilbao is the largest which has appeared in Spain for many years; and all the principal military leaders are gathered around their chief. If the lines of Somorrostro were forced, and if Bilbo were relieved, Surrano would be at liberty to devolve the conplation of the task on one of his lieutenants : and he would

probably at once return in triumph to Madrid. In that event, a sufficient force to overawe all insurgents might be spared from the Northern army. There is no other disciplined body of troops in any part of Spain except in the Northern provinces. If SERRANO fails in his present enterprise, his position at the head of the Government will perhaps become antenable. Spain must have changed greatly if there are not rival generals ready to profit by any discredit which may fall on their superior; and the Republicans would be ready on the first occasion to avenge themselves for their own discomfiture. General PAVIA, who continues to maintain order in Madrid, will probably be able to decide the fate of SERRANO if the Carlists obtain a decisive victory. After his judicious expulsion of the rabble called a Cortes, General Pavia declined political office, and he has since contented himself with the military command of Madrid. No officer has of late exhibited greater force of character; and the Republicans especially are penetrated with the wholesome conviction that it is not safe to trifle with General Pavia.

Until the attack of Somorrostro is either resumed or rendered innecessary by some movement against the Carlist position from another direction, it would be rash to anticipate too confidently the success of the relieving army. For some weeks the Carlista have abstained from replying to the languid and occasional fire of Serrano's artillery. Their silence may be conjecturally explained either by want of guns and of ammunition, or by a determination to reserve their efforts for the decisive struggle. On the other side the intermittent fire is perhaps sustained for the exclusive purpose of encouraging the beleaguered garrison of Bilbao, which is shut out from all other external communication. During the interval which has clapsed since the gunsuccessful attack on S. Pedro de Abanto, the force which defends Somorrostro has had ample time to strengthen the defences, and the Carlists are certainly not absolutely destitute of artillery. The mysterious negotiations which have been conducted between the head-quarters of the hostile armies are not likely to have tempted either party to relax preparations for the final struggle. It is still difficult to conjecture what bases of compromise could have been suggested by SERRANO to which Don CARLOS could have consented without the surrender of his claims to the Crown. It would have been idle to expect that General Elio would reproduce the treachery of Maroro by concluding another Bergara Convention. Nevertheless the authenticity of the negotiation is sufficiently proved by the ostentations declarations of the Government of Madrid that no such transaction has been attempted or contemplated. It is mossible that Supplies are sufficiently proved by the ostentations and the first supplies that Supplies are sufficiently proved by the supplies that Supplies are supplied to the supplies are supplies are supplied to the supplies are supplies are supplies are supplied to the supplies are suppli possible that Serrano may profit by his superiority in numbers to avoid the necessity of attacking Somorrostro in front. A considerable army has been assembled near the strong fortress of Santona under the command of General CONCHA. The communications of the Carlists to the eastward are still open; but if SERRANO and his generals thought it possible to operate in their rear, the command of the sea might perhaps enable them to effect a diversion by landing a body of troops on the other side of Bilbao. a body of troops on the other side of Bilbac. In all probability no unnecessary risk will be incurred. Serrano himself is far past middle life, and General Concha, though he is said to possess military ability, is eighty years old. General Elio, who commands on the other side, is old enough to have taken an active part in the civil war of forty years ago., It is impossible to indre among conflicting accounts of the comparative judge among conflicting accounts of the comparative quality of the troops in either army. It may readily be believed that the rank and file of the Carlists would unanimously resent any attempt on the part of their officers to promote the secession of Don Alronso. General Elio's army is probably composed of incongruous materials, and some of his men are perhaps unwilling combatants. The forces of Serrano are on the average better disciplined, and they are more abundantly supplied with weapons and munitions of war. It is not surprising if they feel but faint enthusiasm for a cause which is but indistinctly defined. If they obtain a victory in the name of the Republic, the result may probably be the re-establishment of Monarchy.

Although it is impossible to form any confident judgment of the probable result of existing complications, it may be safely assumed that the era of mere politicians and Parlia-mentary debaters is for the present closed. The war will measurily restore to the army the power, which for some PRIM, who was, with the exception of O'Downell, the most statesmanlike of recent Spanish Ministers, always professed, after he had attained power by the aid of the army, to rule secording to constitutional forms with the assumed sanction of the nation. Soon after the expulsion of Queen Isabella, the Minister, being also the head of the army, issued an order by which officers and soldiers were reminded that they were strictly furbidden to take part in political affairs. After the murder forbidden to take part in political affairs. After the murder of PRIM, King AMADEO made a serious and unsuccessful effort to govern the country on those Parliamentary principles which are utterly distasteful to the great majority of Spaniards. In the meantime the Republicans employed themselves in intrigues with the soldiery which almost resulted in the dissolution of military discipline. The army which is now engaged in the North will be strong enough, even if it fails in defeating the Carlists, to dictate the mode of government to be adopted at Madrid.

INDIAN FAMINE AND FINANCE.

THE figures of the Indian Budget which were telegraphed yesterday bear out what we said last week about the impossibility of coming to any conclusion at present as to the ultimate incidence of the cost of the famine in Bengal. It is calculated that the net famine expenditure in the years 1873-4 and 1874-5 will be six and a half millions. The actual expenditure for the year 1874-5 may not exceed the estimate to anything like the extent to which the actual expenditure for the year 1873-4 has exceeded the estimates formed at the beginning of the scarcity. But the calculations for the coming year must have been made with extraordinary and almost miraculous correctness if they are not very largely exceeded. Even so lately as the opening of Parliament the UNDER-SECRETARY OF STATE for INDIA, though he asked for power to raise ten millions by loan, hoped that three millions would be all that it would be actually necessary to raise. It now appears that eight millions and a half out of the ten millions must certainly be borrowed, to meet present liabilities, while Lord SALISBURY'S first detailed despatch to the Vicerov virtually orders a very large increase of expenditure. Lord Northerook had secured 420,000 tons of rice, and Lord Salisbury estimates that of this 413,000 tons will certainly be required for the six most afflicted districts. But there will be partial distress in nine districts more, and in the distressed districts the demands on the Government store "cannot be confined to those who are in receipt of the "wages or the alms of Government." There will be numbers who will have money enough to support themselves, provided that they can obtain rice at less than famine prices. If the Government were to refuse to soll to this class of persons, the only result would be that it would ultimately have them on its hands altogether. It will be good policy, therefore, to sell to them even at a loss, in order to avoid having to give to them later at a still greater loss. Consequently, says Lord Salisbury, "as Government grain becomes the "only grain of the district, the stores destined for the three "millions who will be on your hands must be every-"where divided in some degree with a less destitute class." Thus, supposing the 420,000 tons to be amply sufficient for the supply of those directly relieved by the Government, a large margin must be allowed for other demands likely to be made upon it. But this 420,000 tons may not be all available. Lord Salisbury instances the possible failure of arrivals, the shrinkage of transport, the chance of accident, the loss that may result from damage done by rain, to which, as a telegram the other day reminded us, he might have added the danger of fires. It is impossible to say what deductions should be made from the 420,000 tons to meet these unforeseen drains on the supply. But that in one form or another they will involve very considerable deductions can hardly be questioned. A third source of discrepancy between the provision and the need is the possible inadequacy of the calculations furnished to the Viceroy. As Lord Salisbury points out, the number of the VICEROY. As Lord SALISBURY points out, the number of persons requiring ralief was fixed in November at two millions and a half. By March the estimate had been raised to three millions, and "it is impossible to assume with certainty "that the tendency to an insidequate appreciation of the "danger has already ceased to operate."

Accordingly on the 10th of March Lord Salisbury directed the Viceror by telegram to secure 200,000 tons more of rice from Burmah, thus increasing the Viceror's provision by nearly one-half; and though, in answer to telegram deprecating any further increase in Bur-

mess orders, he left the Yronnor free to provide the requisite supplies in whatever manner night seem best he still instructs him to seeme "a very ample margin to "meet contingencies." There can be little doubt that these orders will have the result of raising the Government stores by the amount indicated by the Secretary of State. No subordinate ruler will run the risk of failing to meet them, but to meet them in a certain way. Lord Salisbury's policy as regards the supply of rice is an earnest of his policy in other respects. When he took office there was a general expression of satisfaction from all parties that India was now in the hands of a man who could rise to the level of the need, and meet an unpresedented emergency by a display of corresponding vigour. In matters of this kind increased vigour means increased outlay. Lord Salisbury will secure universal support in dealing in this spirit with the Indian famine, but there can be no good in blinking the fact that his policy means increased outlay, and that increased outlay means additional burdens upon somebody. Who this somebody will have to be is a question upon which a significant little statement appended to the fighres of the Indian Budget may throw some light. "There are to be no new taxes imposed in "the financial year 1874-5." When the effect which the famine is likely to have upon the taxpaying powers of the native community is taken into account, there is reason to fear that a similar statement may appear for more years than one, and the same causes which will make it impossible to impose new taxes will tend to reduce the yield of the taxes already in existence.

the taxes already in existence.

The Daily News Correspondent is of opinion that the Government of India has shown itself thoroughly up to its work except in one particular. There was a dolay in getting the transport machinery into working order and in beginning relief operations. This delay he attributes to Lord NORTHBROOK'S desire to conceal the extent to which he was buying grain, and this desire he thinks was prompted by a fear of raising the price. Upon this charge three are two things to be said. In the first place, it is not proved that the delay in getting the transport system into working order was due to the concealment of the Government purchases. Lord Northerook is not a man to throw on subordinates any blame which he is conscious ought to fall upon himself, yet he has more than once expressed his disappointment and displeasure that the local officials were not more prompt in forwarding their estimates of the supplies which would be required for their several districts, and of the machinery which would be necessary for distributing them. It is not wonderful perhaps that these officers should not at once have understood that the efforts of the Government to meet the famine would be on a scale to which Indian history affords no precedent, or that, until they understood this, they should have failed to understand what was required of them in the way of calculation and information. supposing that they did fail to understand this, their negligence is sufficient to account for the delay in organizing the systems both of transport and relief without tracing it to the Vicenor's policy in concealing the extent of his purchases. In the second place, even supposing that this policy had caused delay, it would not follow that it was an anwise policy. Before that can be proved it must be considered whether the evils arising from public purchases on in enormous scale would not have been greater than the glis arising from the delay in getting the transport and dief organization into working order. The VICEROY had to remember that the grain trade is the one great trade of India, and that upon this trade must mainly depend the sapply of food to those who have money to buy it. has the Government can do to feed the minority who have no money, or not enough to feed themselves; and if, in addition to this, it had been saddled with the feeding of he majority who so long as the dealers have grain to sell rill have the means wherewith to buy it, the result must are been an entire breakdown of the whole relief system. It in India the native dealers have so profound a belief in pranipotence of the Government that, if they had once the idea into their heads that it intended to compete th them, they would probably have closed their stores hand to fill them. Lord Northesook had to take acof this among other contingencies, and even if it, that in avoiding this danger he provoked others, will have made a wise choice between the two evils stand to him. THE LAND TRANSFER BILL

THE LORDS have very sensibly decided not to send the Land Transfer Bill to a Select Committee. To refer Bills for legal improvements to a Select Committee is generally to dig their grave; and while in Opposition Lord Carris always dug a grave for every Bill he did not wish passed, and quietly and quietly overed it up, and allowed it to be heard of no more. But when Lord ROMILLY proposed to treat in the same way Lord Carris's own Bills, the CHANGELLOR stated insuppossible chiestions to own Bills, the Chancer Lor stated insuperable objections to such a course. The Law Lords are wanted to hear appeals, and if the appeals are to be heard they cannot attend Select Committees. So that either sunters are punished for the legislative activity of the Covernment, or the Committee adjoint its attimes until the Sassion is but mittee adjourns its sittings until the Session is fost. Lord Selboung too pointed out that the Peers, by shirking all discussions in public, deprive the public of a great benefit, as, if such a Bill as the Land Transfer Bill is debated publicly, those who are practically interested in the questions raised have it brought to their notice what the Bill really means, and what it will or will not do for them. Landowners will malways leave the details of dealings with their estates to their solicitors; but if they are mon of any intelligence, they must wish to understand the general outlines of the system which Lord CAIRNS proposes to establish, and a debate sustained by peers notoriously qualified to take part in it would afford the best of all possible popular explanations of the new measure Meantime those who wish beforehand to com-prehend the leading outlines of Lord Cairns's Bill may derive much light by perusing the Report of the Commissioners who were appointed in 1868 to investigate the working of Lord Westbury's Act. For the most part Lord CAIRNS has adopted the conclusions of the Commissioners, as they in their turn had adopted the principles of Lord Cairns's own Bill of 1859 In some few particulars Lord Cairns has now followed an independent course, and the best mode of approaching what must in any case be a somewhat difficult and technical subject is to examine on the one hand what were the main recommendations of the Commissioners which Lord Carens has adopted, and on' what ground they were made, and on the other hand where and why he has diverged from the conclusions at which they arrived.

The majority of the Commissioners recommended that the machinery of Lord Westbury's Act should be kept up for those who might like to take advantage of it; but the objections to this are so obvious that although, out of compliment to Lord Westbury, who sat, on the Commission, his colleagues might have thought they could scarcely propose less, it is not to be wondered at that Lord CAIRNS, who comes to the subject perfectly unfettered, should get rid altogether of a system which has proved a total failure. It was the object of Lord WESTBURY'S Act to register the evidences of indefeasible titles and to make these titles good, not only against claimants to the land, but also against adjoining owners. Lord Cairns leaves disputes as to boundaries altogether out of sight, and this is in accordance with the views of the Commissioners, who recommend that, as to boundaries, the owner should do no more than give the best description in his power. The registration of indefeasible titles is still permitted, but the great feature of the Bill, as of the changes proposed by the Commissioners, is that titles of a less perfect kind are permitted to be registered. What—as the Commissioners very sensibly asked—is the object of establishing a Registry in England? The thing wanted is not security of the landowners, for they are secure enough now; nor security of purchasers, for they are content, with what they get in this respect, but case of transfor, Purchasors do not want an indefeasible title; they are content with a good title, such a title as makes them. reasonably secure that they can hold or transfer the land. What people want in the way of registration is what the law must give them, or the law will be inoperative. Accordingly, under the Bill of Lord Cairns an owner will be enabled to register merely such a title as it is found that in additional life and the law ordinary life purchasers will practically accept; and the theoretical distance between such a title and an absolute title is abridged by two important provisors—that the Registrar shall not go back more than forty, years, unless some special cause for further inquiry if disclosed to him; and that, if there is a theoretical imperfection which the Registrar may consider of no practical importance, he may state the this theoretical imperfection may be disregarded. Applicants for registration will, under the Bill, have three courses before them. They may ask to be registered as swiners with an absolute title, or as owners with a title limited in time—that is, stated to go back a certain number of years but no more; or as simple owners without any title, and then the commencement of the registered title will date from the day of registration. Before, however, an applicant early so registered as proprietor only, the Registrar must he, or some person whicant is prima facie entitled to the being the proprietor, is in prelaimed by him, and the test profits. This is a provision probably recordance matrily to meet the case of trustees, but it will be desirable that information should be given when the Bill is discussed in the Lords as to what are the interests which this plan of registration of proprietors without title is intended to protect. It may however be mentioned that no trust, express, implied, or constructive, is to be entered or referred to in the land register, and the register will not show that the proprietor is mortgagee or has a security only.

But it is not merely the fee simple in freehold land that may be registered. Leaseholders, when more than twentyone years of the term are, at the time of registration, still anexpired, may be registered also, and, what is more important, charges may come on the register. Thus is contrary to the recommendations of the majority of the Commissioners, although some members of the Commission whose names carry great weight were of opinion that, unless the new scheme gave facilities for the creation of charges, one main object of a good system of registration would be defeated; and Lord Carny has adopted their opinion. A mortgagee may be registered as proprietor, and then, as between himself and third parties, he is to occupy in every respect the position of the proprietor; and a purchaser from the mortgages will be on precisely as good a footing as if the mortgage had not existed, and he had purchased from the proprietor, although, as between the mortgagor and the mortgagee, the latter is to retain all the equitable rights which he now possesses. It is not, however, in regard to mortgages, where the mortgagee steps, so far as third parties are concorned, into the shoes of the mortgagor, that there is any great novelty in the measure of Lord Cairns. It is the new system of creating charges that will practically introduce a considerable change, and perhaps nothing will conduce so effectually to make proprictors, register as the facility they will possess of getting money on their land with trifling trouble and expense. Charges may be created in two ways. The registered proprietor is to receive from the Registrar a certificate stating that he is the registered proprietor of certain lands or leaseholds, and then he is to be at liberty to deposit this certificate with a memorandum endorsed on it stating the date and object of the deposit, and no charge or lien is to be created by any other deposit, and no lien for unpaid purchase money is to exist, unless a charge under the Act has been created in favour of the vendor. The other mode in which charges may be created is by registering an instrumont establishing the charge, and then the land certificate will not be deposited, but it will have to be produced, and the Registrar will note on it a description of the charge oreated. When a charge is created under the Act, it will be registered, and the registered proprietor of the charge will have absolute power to deal with this charge, and to dispose of it or release it; and transferees from him will have nothing to do with any trusts by which the proprietor of the charge may be affected. The proprietor of the charge will have a certificate given to him of his proprietorship, and a charge is to carry with it, unless the instrument creating it negatives the presumption, a covenant to pay the amount charged and the right to take possession; and registered charges are to take priority among them-selves according, not to the date when they are created, but according to the date of their being entered on the register. Thus a purson asked to lend money on land will easily make Thus a person asked to lend money on land will easily make himself sure of safety, and the person anxious to borrow will be able, by going through a very simple form, to create such a accurity as will enable him to get the money with the least possible delay. It is this power of getting money easily on land which those acquainted with colonial and Continental systems of registration have always represented as one of the greatest bauelts derived from the systems they admire; and it is impossible to do justice to

the Charcellor's measure unless the importance of intenducing such a power into the legal sphere of English landowners is adequately recognized.

THE SUEZ CANAL.

MR. DISRAELI, in his answer to a question, but the Suez Canal, judiciously made little of the difficulty which has arisen; but it would have been prudent to contakes a liberty in f. DE LESSEPS'S personal susceptibility. takes a liberty in 11 capressarprise projected and accomplished a man of sense, not likely a that even a Princestal complished a man of sense, not likely a that even a Princestal cape the effect of a casual burst of temper. The assurance was the effect of a casual burst of temper. The assurance that the French Government was engaged in efforts to settle the dispute was more satisfactory than Mr. DISRABLI'S confidence in the final discretion of M. DE LESSERS. On the other hand, the assent of Russia to the demands of the Canal Company requires explanation. The great importance of the undertaking entitles the proprietors to an equitable and liberal consideration of their interests. But for the energy of M. DE LESSEPS and the confidence reposed in his judgment and ability by capitalists, the Canal would not have been made. If the tariff attached to the concession proved to be inadequate, it would be unreasonable and inconvenient to construe the legal rights of the Company too strictly. At the same time it is impossible to allow the dues to be raised at discretion to the derangement and discouragement of trade. The whole matter has been fully considered by the Commission which lately met at Constantinople, and, notwithstanding much difference of opinion among representatives of different nations, a scale of duties was ultimately settled and formally approved by the Porte. It is intelligible that the English representative should have been more anxious than some of his colleagues to secure moderation in the rates. His countrymen pay the greater part of the whole amount levied, and they perhaps best understand the tendency of low duties to increase the number of vessels using the Canal. In this, as in all similar cases, the greatest profit would probably be derived from a rate neither the highest nor the lowest which may have been proposed. The recipients of the toll naturally incline to the assumption that the tennage passing the Canal will vary little with the charge, while shipowners and freighters have no object but to aduce the rate to the lowest possible point. It is impossible for those who have not inquired minutely into the whole question to form an opinion of the justice of M. DE LESSEPS's claims. The Commission must be supposed to have been a commission of the supposed to the supposed to the supposed to have been a commission of the supposed to t The Commission must be supposed to have been a co. petent Court, and the presumption is against the litigant was seeks to reverse the judgment. The Company relies on the decision in its favour of a French Court, which may probably have jurisdiction over the relations of the share-holders with one another; but it can scarcely give power to levy a certain scale of tolls in a foreign country.

The danger of an arbitrary stoppage of the trade of the Canal may be safely disregarded. No Company and an undertaker, however meritorious, can be allowed to hald the key of the passage between the East and the West. The Company cannot perhaps be compelled to provide by the maintenance, the working, and the lighting of the Canal; but if it perversely refuses to perform its duties, the Governments concerned in the matter will be fully justified in interfering. If M. DE LESSERS puts out the lights, and declines to perform any longer the services for which the Company is paid, the functions which the Company repudiate must be discharged on behalf of all traditionations, probably by the Egyptian Government, which has already determined to take provisional possession of Canal if the Company refuses to keep it open. Capitalists who constructed the Canal were in the fininstance at liberty to withhold their contributions; but the nature of the case they have no right to chose communication which has once been opened. Even the question admitted of argument, power fortunately incides with general expediency; and although M. De Lessers have together helpless in a quarrel where he would also helplaced himself in the wrong. Mr. Dissanti had good the thinking, if not for arging, that M. De Lessers have thinking, if not for arging, that M. De Lessers have

commonsiderate, though his agent in England has since formally repeated the obnoxious threat. If there were no other objection to the scheme of suddenly closing the Canal, such a measure would involve intolerable interference with pending arrangements and existing contracts. The orders, the placements, and the charter parties which have been made on the assumption that the Canal would be permanently open would produce intertricable confusion if the Canal successary to revert to the obsolete transit by the Canal. Within half-a-dozen years hundreds of vessels have been built for the express purpose of navigating the Canal, and it would be intolerable that a large part of the outlay should be rendered useless in consequence of a dispute between the Company and the Governments of Europe. M. DE LESSERS and his associates own the Canal to keep it open; and their rights and powers must be suspended when they cause to be employed for their proper purpose.

The enthusiasm for the Canal which formerly prevailed in the States bordering on the Mediterranean and the Black See has been modified, though not destroyed, by experience. It had been confidently expected that Marseilles, Genoa, Trieste, and Odessa would divert trade from Liverpool and London by the geographical advantage of their comparative vicinity to the Canal. The trade of Southern and Eastern Rurope with India and China has in fact increased; but English commerce has profited by the reduction of distance in a far greater proportion. Comparative shortness of sea passage is an advantage in competition; but the course of commercial navigation is determined chiefly by the importance of the markets at other end. The manufacturing industry of England and the wants of a denso and wealthy population create an abundance of exports and imports with which no other community can for the present vie. Italy and Russia, having much less to sell and buy, have proportionally less need to use the Canal If the transit were impeded by excessive dues, English chants and shipowners would suffer the heaviest loss, but perhaps their weaker rivals would be sooner driven from the trade. If no political difficulty were interosed, the most desirable object for the interests of the Canal and of general commerce would be the transfer of the management of the undertaking into the hands of English capitalists. Some national prejudice may perhaps influence the judgment of those who are familiar with the administration and prospects of the Canal; but Englishmen may be trusted better than the people of almost any other country to lay aside patriotic proposessions when they are dealing with serious matters of business. If the greater part of the shares of the Canal are at any time bought up by English investors, there will be no recurrence to threats of discontinuing the transit. The transfer of interest is not urgently required; and probably it may be better that it should be postponed until the jealousies which formerly existed have been partially forgotten. France may fairly claim the credit of having promoted the Canal at a time when, partly in deference to the authority of Lord PALMERSION, the enterprise was regarded in England with little favour.
The political rivalry between England and France which explained Lord Palkerston's apprehensions has now happly abated. There is no present reason to fear that Egypt will become a French dependency; and Continental stateshies must by this time be disabused of their fear that English the same chieft heread defence and scenario his ambition has any object beyond defence and security. It is much more necessary to provide for the wants of commerce than to guard against the remote contingency of Sandish ownership and management of the Canal would to the equal benefit of traders of all nations.

he Egyptian Government has from the first more or this willingly acquiesced in the pretensions of the Porte to control the affairs of the Canal. The interposition of a fresch settlement which might have become practically adequated between Egypt and Syria would probably have been as unwelcome to the Khedure as to the Government of Constantinople. In this, as in other instances, the transient foreign encroachment. It is highly convenient that interitional jurisdiction over the Canal should be exercised that it is the such as Turkey and Egypt. The Company would be such as Turkey and Egypt. The Company would be such as Turkey and Egypt. The Company would be such as Turkey and Egypt. The Company would be such as Turkey and Egypt. The Company would be such as Turkey and Egypt. The Company would be such as the interest of the company the Canal should be superior.

probable that the Russian Government would countenance an unnecessary increase of tolls on the Suez Canal in deference to M. De Lessers, although he is projecting railways to connect the Asiatic possessions of Russia with India. Lord Deeps will not fail to watch with care the progress of any negotiations which may take place. The Foreign Minister is seldom troubled with interference in matters relating merely to politics and diplomacy; but the merchants and shipowners who are interested in the navigation of the Suez Canal are a powerful and active body, and they will take care that any grievances which they may suffer receive due attention. M. De Lessers is in all probability disposed to an amicable settlement of the dispute.

FRENCH PARTIES AND THE SEPTENNATI.

THERE are three possible ways of describing the existing Government of France According to the first, it is a Republic legally and irrevocably established for seven years. Before the 20th of November Marshal MacManov was President of the Republic, just as M. Thiers had been before him. The law of that date unde no change in his powers or in the title under which he exercises them. It simply confirmed him in the possession of them for a fixed period. According to the second view, the Government is either a Republic or a Monarchy according as the Assembly shall hereafter choose to make it, and all that the law of the 20th of November did was to provide that, whichever it be, the executive power shall remain in the hands of Marshal MacManon for the full term of seven years, provided that he wishes to retain it. If the Assembly thinks fit to establish a Republic, he will continue to be called President. If it prefers to restore the Monarchy, some other title must be found for him. But under one name or another he must remain at the head of the Government until the year 1880. Those who hold this theory probably believe that if the Assembly has the good sense to recall the Count of Chambord, Marshal MacManon will not insist on maintaining his technical rights in the presence of his lawful sovereign; but they admit that, if he did so, he would only be sinning against good taste. The third view regards the present form of government as something peculiar and unprecedented. For the next seven years Franco will live neither under a Republic nor under a Monarchy, but under a Septennate. When the seven years are over, Frenchmen will awake from their charmed sleep and take up the quarrel between Monarchy and Republicanism just where they left it. But for the present the rivalry between the two forms of government is suspended, and any one who attempts to revive it before the seven years are over breaks the law of the 20th of November.

The first of these three views is that taken by the Left Centre. They assert that, France being a Republic, and pledged to remain a Republic for seven years, the Assembly is at liberty to consolidate the Republic, though it is not at liberty to set up anything else in its place. They regard the Marshal's term of office as a breathing space in which this may be done with good effect. The second view is the view which finds favour with the Right. When it was found impossible to effect a Restoration last autumn, the first want of the Royalist party was an interval in which to recruit their strength before making another effort in the same direction. By placing Marshal MacMahon at the head of affairs, they hoped to secure this. They allege that the law of the 20th of November is sufficiently complied with if they profess respect for Marshal MacManon's person and readiness to obey him for so much of the seven years as he continues to ask for obedience. The third view is especially the view of the Right Centre. They argue that at present there do not exist the materials for creating either a Republic or a Monarchy, and that the question has been put on the shelf in order to give time for the formation of an independent public opinion. Such an independent public opinion cannot be created until Radicalism has been suppressed, and their hope is that when Radicalism has been suppressed for seven years under the Septennate, the popular form of government will be a decidedly Orleanist type of Monarchy.

The question of most interest in France just now is, which of these three theories the Government will in the end adopt. So far as the official atterances of the Ministers go, there has been nothing but contradiction and equivoustion. The text of the law itself admits of different inter-

pretations. It confides the executive power to Marshal MacManon for seven years, and then provides that this power shall be exercised "with the title of President of the "Republic, and under the existing conditions, until the "modifications which may be introduced by the Consti-tutional laws." If these modifications extend to the title as well as to the conditions under which the Marshal exercises the executive power, there is nothing in the law to prevent the Assembly from christening him Lieutenant-General of the kingdom, and so making France a Monarchy by implication; which is what the Right contend. If the modifications can only be introduced into the conditions, and the title of President of the Republic is to continue unchanged, then it is clear that for the term of the Marshal's power France must remain a Republic; which is what the Left Centre, and, with some difference of meaning, the Right Centre also, contend. The Duke of BROULE's speeches do nothing to remove this uncertainty. On the one hand, he has said that the Assembly has shown its confidence in the PRESIDENT of the Republic by entrusting him with the executive power for several years, and that the President has returned this confidence by leaving it to the Assembly to decide what shall be the attributes of his power. This clearly limits the sphere of the Constitutional laws to the determination of what amount of power the PRESIDENT of the Republic shall possess; it does not imply any right in the Assembly to change the character or name of the person possessing it. In the same speech, however, the Duke of Broglie said that when the Constitutional inCommittee had made its report, the Assembly would judge establa wisdom whether the state of parties permitted the to prolishment of a definitive Government, or made it desirable sible decing the existing truce. This certainly points to a pos-and a Republic, perhaps amply of the issue between Monarchy It was by putting out these conference of the present Session. another, as the Journal des Protect of Naments one after BROGLIE secured a majority on the 19th of Noments one after Republicans were secured by the assertion that nothing was changed; the Monarchists were secured by the assertion that everything might be changed. Since then the Duke had been repeatedly challenged to declare which of the two interpretations he intends to stand by, but as yet he has contrived to evade giving a positive answer.

It seems impossible, however, that he should keep silent much longer. The recent Circular of the Minister of Justice is not less equivocal than the earlier declarations of the Government, but a very precise interpretation has been the Government, but a very precise interpretation has been the Union. In this letter the Legitimist deputy states that the Union. In this letter the Legitimist deputy states that when the Circular threatens with prosecution any newswhen the Circular threatens with prosecution any newswhen the country has been irrevocably confided to that the executive power has been irrevocably confided to that the executive power has been irrevocably confided to him for seven years. But no member of the Right, says M. Brun, would dream of contesting this. Under one name or another, Marshal MacMahon will, if he chooses, remain the ruler of France for seven years. This does not hinder, and the Minister of Justice never meant it to hinder, the Assembly from pronouncing whether should be cleared up with the least possible delay. It is not important archy or a Republic. On the contrary, it is most important for the tranquillity of France that all doubt upon this point should be cleared up with the least possible delay. It is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it is even hinted that M. Deperre does not object to his it

DEPETRE'S meaning, and that the theory of Marshal Mac-Maron's position, which is accepted by the Right, is the theory accepted, or at all events tolerated, by the Cabinet. However resolute therefore the Duke of Broglie may show himself in keeping silent, it seems impossible that even his silence should not be quite sufficiently expressive. He will not thank M. Brun for thus forcing him the speak out, or to let his meaning be equally obvious without his speaking out; but, upleasant as the compulsion may be, even the practised ingenuity of an Orleanist Minister can hardly succeed in evading it.

THE ARCHBISHOP'S BILL

WE have often had occasion to show how Prince BISMARCK, with all his genius, has committed a capital fault in his controversy with the German ecclesiastics from his disregard of the spiritual element of human nature while dealing with a religious body. He has committed the grave mistake of elevating antagonists, whom he ought to have made as uninteresting as possible, upon the pedestal of martyrdom. We should be very sorry to think that the English Bishops had made a similar false step in their way of treating the existing difficulties in the Church. We cannot, however, help fearing that the Archbishop of Canterbury's policy of introducing a Bill for facilitating law suits on disputed matters of ceremonial, instead of attempting to define what the due limits of ceremonial should be, is one which may inflame instead of allaying present heats. The persons whose peculiarities have confessedly called down the Episcopal intervention are a class whose faults are all those of being so fond of church that they never can be stopped from overworking it. Fanatics they may be, wrongheaded, or contumacious, but at the bottom of all their aberrations zeal from tems. The persons whose peculiarities and the present policy is their conscience goes wrong, it is and the present policy is their conscience goes wrong, it is and the present policy is their conscience goes wrong, it is and the present policy is their conscience goes wrong, it is and the present policy is their conscience goes wrong, it is and the present policy is their conscience goes wrong, it is and the present policy is the blunted. They are emphatically to take them on their temblunted. They are emphatically to take them on their temblunted. They are emphatically to take them unmanageable, it would over disagreeable make them unmanageable, it would over disagreeable make them unmanageable, it would over disagreeable make them unmanageable, it would over disagreeable of the cerical and popular pulses—in order, subject, and feel the clerical and popular pulses—in

Nor is it only Ritualists who will argue in this way. Ritualism may be a crime worthy of hanging, drawing and quartering; but before you can convict the crimina you ought at least to define the crime. This is just what those who are most forward in pushing the new measure home have never cared to do. The oddities of the late Mr. Purchas, whom Lord Nelson bluntly described a being somewhat touched in the head, were no doubt whole inconsistent with any settled order. But will the Arcinesistent with any settled order. But will the Arcinesistent jurisdiction in order to check the production of future Purchases? His reference to the Bishop of future Purchases? His reference to the Bishop of future Purchases? His reference to the Bishop Durham, immediately after his recapitulation of poor I Purchas's extravagances, was peculiarly unfortunate. Af quoting a violent and offensive tirade of a Mr. Stam against the Establishment, he went on to say, "The Bish against the Establishment, he went on to say," The Bish "clergymen who indulged in these practices," adding the "laity" of all Durham and Northumberland "ros we believe, that there was one meeting held means, we believe, that there was one meeting held means, we believe, that there was one meeting held more measures "were, as we had occasion at the to point out, the imposition of arbitrary and extraces to point out, the imposition of arbitrary and extraces to point out, the imposition of arbitrary and extraces to point out, the imposition of arbitrary and extraces to point out, the imposition of arbitrary and extraces to point out, the imposition of arbitrary and extraces to point out, the imposition of arbitrary and extraces to point out, the imposition of arbitrary and extraces of them. The point which the Ascinesion of Mr. Purchas are brought hama to proceed the production of the Bishop, Habitra which was ever brought

Drugs was that of standing before the table at the Communion. We cannot suppose that the Archushor knew this when he made the sweeping assertion, but such looseness of statement may well make the most moderate Churchmen fear an engine of persecution in the novel jurisdiction. It is more certain that if it is intended to do for diction. It is very certain that, if it is intended to do for incomments what the Bishop of Durinam has been doing for carates, and on equally slight provocation, the end of the Bishblishment is very much nearer than the Liberation Society in its wildest jubilation has ever anticipated, for it would be nothing less than the arbitrary articipated. Society in its wildest judication has ever anticipated, for it would be nothing less than the arbitrary enforcement of the narrowest Puritanism. The Bishop of DURHAM has unhappily made himself a public character, and it is not unseemly to say that, armed with the powers which this Bill contains, he might bring the Church to a deadlock within his populous diocese. The Archeisthop indeed began with a declaration of impartiality which was, we doubt not, sincerely uttered; and he gave a sketch, more picturesque than flattering, of the village church of a former generation. But he soon got into the anti-Ritnal groove, and kept there all through his speech. It is only too much to be feared that, under the provocation of believing themselves picked out for oppression, and in direct response to the Archbishor's asseveration that the tribunal is intended to have a double action—to screw up as well as to throw down—High Churchmen may have wide recourse to that from which they have hitherto absolutely abstained, and make themselves delators of clergymen who in their opinion have fallen short of the Prayer Book standard. The Bishops may turn a deaf car to these allegations, as well as many others from the opposite side. But the spectacle of the Church of England converted into a hive of waspish nformers will neither be edifying, nor safe, nor comfortable or the Bishops who will have fostered the swarm.

The provoking part of the whole proceeding is that, with a little wider grasp of things as they are, the embroglio night have been converted into an opportunity for at least attempting to replace the Church of England on a footing of new and strong stability. It is certain that on the one hand all the principal parties in the Church command an amount of congregational sympathy which entitles them to something more than indulgence, and on the other that it s impossible to bind down nineteenth-century aspirations by Tudor and Stuarr restrictions. We should be exremely sorry to see the Prayer Book tampered with; t has in the main an antiquity and breathes a spirit very lifferent from Tudor or Stuart politics, and can be well naintained, if only for its unrivalled literary merit, as the formal standard of the worship of a people to whom its conents are very dear. But to accept the Prayer Book and to be enslaved to the Prayer Book are not altogether the same hing. That loose mass of revivals and novelties which it smuses some people to lump together as Ritualism has its strong as well as its weak points, and the Episcopal Bench night be as profitably employed in discovering which of these points really hit wants of the day, and are healthy for the souls of living men, as in planning Acts of Parliament or the indiscriminate worrying of whole classes of laborious dergymen. The religious difficulty in large towns is purely inreal when every section of Churchmanship ought to be ble within an easy distance to find that type of worship which is most congenial to it. In country parishes the case is different, and there we freely grant that the clergyman ought to remember that, in forcing on his own theories against the feelings of the flock of whom he is minister, he affends alike against Christian charity and worldly common sense. But even in the country the day has twenty-four hours, and much may be done within that time. So long the superstition holds good that Church means eleven and three o'clock, and that eleven and three o'clock must witness the same performances from January to December, the shoe will be sure to pinch somewhere. Even in the shoe will be sure to pinch somewhere. Even in the senutry, where different phases of Churchmanship are represented in the same parish, the Church might well witness different types of worship at various times of the day. These remarks may appear trite, but we believe that such simple and obvious reforms might smooth down difficulties which would resist the impact of more elaborate menutues which would resist the impact of more elaborate and pretentions machinery. At all events the experiment worth trying, and if the attempt should be the cause of the little delay in legislation, the time would not be lost would not be lost would not be lost tonly we avoided the hasty production of a cumbrons for the promotion of general ill-will.

positiones to a provision which is embodied in the 18th

Clause of the Bill, and which we must reckon amongst the least defensible provisions of the measure—namely, the reversal of the well-understood and universal rule of our Courts, that an appeal suspended pro tempore the execution of the judgment of the lower Court. If such a thing as a partisan Bishop were an impossibility, if while what University preachers term "the inferior clergy" ostentationaly mount the differing cockades of "High" and "Low" and "Broad," the Lord Bishop sat seronely aloft above the temptations of frail humanity, then the propriety of such a provision might be considered without prejudice to the prima facie objection which exists against isolating any particular jurisdiction by novel provisions antagonistic to the general juridical system of the country. But we know that strong personal feeling may even penetrate the lordly halls of Auckland, and we must therefore strongly protest against a provision which might so easily be converted, in the hands of a prelate of unscrupulous conscientiousness, into an engine for worrying out practices which he knows are not illegal, but which he feels may be made impossible by a sufficient number of suspensions. The time has hardly come for treating English clergymen like French journalists.

In another feature the Bill must be fundamentally The three assessors whom the Bishop must name are in each case chosen for the particular suit. This is copied from an Act more than thirty years old, This is copied from an Act more than thirty years old, and we believe seldom put in force, for the punishment of criminal elergymen. But to make it the first duty of the judge, in whose hands a new and illimitable system of criminal jurisdiction has been placed, to pack for every case the knot of men who will be half assessors and half jurymen, is to impose upon the Bishop a responsibility from which the most scrupulous will shrink, and which the bitterest partisan must feel to be a temptation which ought not to have been thrown in his way. On the other hand, Bishops may arous that to fix way. On the other hand, Bishops may argue that to fix the membership of their Court will be to put their own office into commission. On the whole, we should not be surprised to find that when they have got out of the echo of mutual congratulations over the neatness of their own handiwork, they will discover that the grievance is less tangible and the proposed remedy less workable than they had persuaded each other into believing. They may at least reflect that it is playing for very high stakes to call Parliament to subvert the legal status of all the clergy in the land, and to take care that those clergy shall not have the opportunity of being heard on, hardly even of considering, the revolutionary measure. If the Bill breaks down under such circumstances, something else will break down with it.

CURIOSITIES OF CRITICISM.

IT is a favourite consolation of unpopular authors to remark upon the fallibility of critics. The most popular illustration of that undeniable fact has been taken from the reception of of that undemable fact has been taken from the reception of Wordsworth and Keats by those who then sat in the seat of authority. Jeffrey's dogmatic "This will never do," and the recommendation to Keats to go back to his gallipots, have been cust in the teeth of all self-appointed judges. The comfort thus given to bud authors of a later generation may perhaps counterbalance the pain inflicted upon the original sufferors. The error was indeed great in both cases, though it would be only fair to remember that in each case it was an error rather of omission than commission. The faults attacked were real faults, though the merits were over-looked. Nobody will now deny that Wordsworth is constantly tedious, or that *Endymion* is in many respects a very crudo performance. Criticism involving errors of a still grosser kind may have a real value of its own. We set aside the question as to the expediency of inflicting pain, even on a bad poet. Pope justifies his practice of making public

That secret to each fool that he's an ass

by the plausible argument that

No creature smarts so little as a fool.

Providence, it may be, has given thick skins along with dull brains. But this excuse assumes that the critic is always right in brains. But this excuse assumes that the critic is always right in his judgment, and is not treating with contempt a better man than himself. To the public, however, whatever may be the case of the sufferer, the assertion of an independent judgment, even when it is grossly erroneous, is valuable in its way. Criticism is good for nothing in so far as it is insincers, or in so far as it is merely the mechanical repetition of the judgment of other men. A great many writers are afraid of nothing so much as trusting to their own judgment; and a mere echo of the accepted verdict of the day is of course valualess. But a distinct record of first-hand impressions, however absurd they may be, is generally worth studying. If people could only be induced to say frankly what they really feel, we should much scoper come to an interstanding

upon critical questions. The misfortune is that most critics think themselves to be not only right but infallible. They try to make a universal law of their own private taste. If, instead of saying Wordsworth is dull, Jeffrey had said Wordsworth bores me, he would have been a useful witness instead of a bad judge. The fact that a great writer makes a certain impression upon his constitutions of the control of the c temporaries is one to be taken into account, however little we may

temporaries is one to be taken into account, however little we may be disposed to accept their verdict as final.

Thus, for example, in the mass of Shakspearean criticism, it is as important to notice Voltaire's "drunken savage" and the inappreciative remarks of the old English critics as the wildest speculations of his German idolaters. The worst piece of criticism that was ever deliberately published by any human being we take to have been a remark of Gifford's. After saying that Shakspeare was equalled or excelled in almost every quality by some of the contemporary dramatists, he asks what is that quality in which he was really pre-emigent, and by which he deserves his immorhe was really pre-eminent and by which he deserves his immortality? The answer is that it was his wit. Worth would certainly fail to give any adequate conception of the absolute want of even a rudimentary approxiation of Shakspeare implied in such a statement; and yet we think it more valuable than the hundredth repetition by some commonplace critic of the cant phrases about the knowledge of human nature of the myriad-minded poet. If it shows nothing else, it at least shows what was the state of mind of a critical magnate whose teaching Byron accepted with reverence, though luckily he did not always accept its conclusions. Gifford, for example, recommended him to omit from the Siege of Corinth the most picturesque lines in the poem, where the wild dogs strip the scalp from a skull :-

As ye pool the fig when the fruit is fresh.

Byron's critical judgments are far above Gifford's level; and occasionally, as in the letters on Pope, imply genuine insight, though generally one-sided and perverted enough. His respect for Gifford is intelligible when one finds him calling Regers the "Tithonus of poetry, immortal already," and condemning himself and all the revolutionary school in comparison with that very faded Tithonus and the much stronger, but scarcely immortal, Crabbe. There is still much to be said by Byronic critics as to the postical tendencies indicated by these opinions. The school from which they were more or less inherited, and to which Gifford, as a good Conservative, naturally adhered, has been sufficiently ridicaled for the absurdities, as they seem to us, of its judgments. Macaulay points out with his usual vigour how very erroneous were the criticisms passed by such men as Johnson and Walpole upon their contemporaries as well as upon their aucestors. Nobody indeed is more vigorous than Macaulay in assaulting a sophistry which was already thoroughly exploded. He is admirable at attacking the errors of the generation which preceded his own; and could mount the breach with an abundant display of courage after its defenders had given up the game. It is amusing to remark, for example, how audaciously he disputes the old-fashioned theory of "correctness" which had gone out with the school of Pope, assails the dramatic unities of time and place, and ridicules the old canons that the hero of an epic poem ought to be victorious and its first book unadorned with similes. He has no trouble in showing that Johnson was grossly unjust, not only to Shakspeare and Milton, but to *Tom Jones, Gullver's Travets*, and *Tristram Shandy*, and that Walpole allowed his projudices as a fine gentleman to bias his opinions as to the literary magnates of his time. Some of those opinions, indeed, are abourd enough. Johnson's criticism upon Lycidas has been quoted too often to be repeated. His remarks upon Shakspeare are sometimes equally absurd. statement, for example, that, in discussing the particular excellences which mark Shakspeares plays, we should "allow to the tragedy of Hamlet the praise of variety," is perhaps almost as silly as the phrase we have quoted from Gifford. Walpole may be condemned with equal facility. To say nothing of his characteristic dislike for the roughness of Johnson and Warburton, he attacked some of the greatest names in literature. He compares Pante, for example, to "a Methodist parson in Bedlam"—a statement in which, as we may remark in passing, he was countenanced by Voltaire, who speaks of the Divina Commedia as "stupidly extravagant and barbarens." If Walpole did not share Voltaire's prejudice against the "drunken If Walpole did not share Voltaire's prejudice against the "drinken savago" Shakspeare, it was because, in spite of his affected Gallicism, he shared a good many British prejudices. Walpole, however, was no fool, and most of his prejudices are an impression of a very sincere dislike to being bored. We are less angry with him for fluding Thomson's Sensons wearisome, or being vexed by the French admiration for Richardson, than grateful to him for saying sincerely what so many other people have folt. Macaulay himself would have to invoke our morey on the same grounds when, in his Essay on Bunvan, he people have felt. Macaulay himself would have to invoke our morey on the same grounds when, in his Essay on Bunyan, he pronounces the Fnery Queens to be hopelessly tedious, and doubts whether anybody but a commentator could have reached the end of the poem if the six last books had been preserved. We may doubt whether Macaulay himself accomplished the task of reaching the end of the existing performance. "Vory sew and very weary," he says, "are those who are in at the death of the Blatant Reast." The Blatant Beast does not die at all, though lamed for the time by Calidore. The last stanzas tell us that by Calidore. The last stanzas tell us that

Now he roungeth through the world againe, And rageth sare in each degree and state, Ne any is that may him now restraine, He growen is so great and strong of late.

into of this kind should, in fact, he considered purely from

the historical point of view. The insensibility of the soutest critics in the last century to Gothic architecture and to romande poetry is a fact to be explained rather than an error to be denounced. When Hume, in some remarks upon Home's Desigles, shows a strong preference of Racine to Shakspeare, it would be ridiculous to censure what is an interesting illustration of contemporary habits of mind. Nothing would be easier than takill any number of pages with equally erroneous verdicts of men of the finest taste. A couple of specimens may be enough. Macanian number of pages with equally erroneous verdicts of man of the finest taste. A couple of specimens may be enough. Macanlay ridicules Johnson for praising the Creation of that "pretentous bore Elackmore." Johnson is merely following the least of Macanlay's idol, Addison, who calls the same poem "one of the most useful and noble productions in our English verse"; and says that the reader will find in it "the depths of philosophy enlivened with all the charms of poetry," and be pleased "to see so great a strength of reason amidst so beautiful a redundancy of the imagination." Addison, however, was not the only writer whose approval of the moral purpose of a poem has prejudiced his judgment of its literary merits. Generally speaking, his critical instincts are as fine as the reasons by which he supports them are strangely puerile. Of the later writers who more or less scknowledged his authority no one showed a more exquisite taste than (foldsmith; and we find Goldsmith saying that the work which he would select as the most perfect example of English ganius would be the Rape of the Lock; and remarking on Milton's Allegro and Penseroso, that though they show a "correct and strong" imagination, the irregular measure of the introduction "hurts en English ear." English ear.

The second-hand repetitions of such opinions by superior writers have, of course, no interest; but where we find them put forward in undoubted sincerity by men of genuine power they are valuable, whether as illustrating some odd personal prejudice, or as showing how the development of a strong mind is modified by breathing an intellectual atmosphere different from our own. The writers who revolted against the old errors fell into errors which strike us as equally abourd. Charles Lamb's preference, for example, of Maxlowen version of Faust to Goethe's is an amusing proof of the humourist's addiction to a particular vein of thought; and his judgment may be compared with De Quincey's ingenious theory that Goethe's reputation was ephemeral, and principally due to the splendour of his official position at the Court of Weimar. We laugh at such whims, but we must admit that there is a certain value in a good sturdy prejudice. Criticism has net as yet passed into the scientific stage. There are but a few verdicts which are not liable to be considerably modified, if not entirely upset. The first condition for obtaining trust worthy results would be to know accurately how individual minds are really effected by a given author. As in abanical constitution of the scient and the scient and the scient and the scient are really effected by a given author. are really affected by a given author. As in chemical experiments we try how a substance is affected when exposed to various agents, so in criticism we should try the effect of a course of Shakspeare so in criticism we should try the effect of a course of Shakspeare upon as many different minds at as many different periods as possible. The conclusions so obtained would not be an expression of our own individual taste, but the statement of a certain law determining the influence of a certain law. determining the influence of a given author under varying circumstances. The great difficulty of applying the method is that, even where sufficient materials exist, it is hard to distinguish between the genuine sentiment and the mere echo of other measurements; and therefore the great value of a thoroughly mistaken and wrong-headed estimate is that there is rather more above of its singuist. Aftertion indeed takes impressible chance of its sincerity. Affectation, indeed, takes innumerable shapes, and there are many writers at the present day who admire what revolts or bores other people precisely because it is tiresome or offensive. The notion that originality is secured by contradicting established opinions is indeed the plague of all good reasoning. We have to criticize the critics themselves before we can distinguish that part of their judgment which is really sincers. But, assuming that process to be satisfactorily accomplished, we should value any eccentric opinion as the natural philosopher values some unique specimen which serves to embody a crucial experiment.

SIMONY.

WE shall not at present discuss the proposed amendment of the law of Simony so eloquently introduced last Tuesday to the consideration of the House of Lords by the Bishop of Peterborough. But the history of the sin or sendal or abuse, or whatever it is to be called, which has doomed the name of Simon Magus to an immortality of shame is a carious on a brief notice of its origin and growth may not be without in at this moment. It need hardly be premised that the word at this moment. It need hardly be premised that the word is one sense a misnomer. No two characters can well be more unlessed other than the easy-going comfortable sort of person most a in these days to prefit by a simomiscal contract, and the gramagician and arch-heretic—as he was regarded in the early Chammagician and arch-heretic—as he was regarded in the early Chammagician and arch-heretic—as he was regarded in the early Chammagician and arch-heretic—as he was regarded in the early Chammagician and a limited much more of Mahomet or John of Leyden about his than of the Vicar of Bray. It was not a specious glebs, in a general product of the vicar of Bray. It was not a specious glebs, in a general and alimited supply of "souls"—to say nothing of other concept tant advantages periodically trampated in the adventising column of the Ecclesiation Genetic—that he wished to purchase money from St. Peter. Were have the most greatly and sormalisms of modern persons made any perturns of being able to be preclaimed. These is of course with the mistage of the mistage and the mistage of the mistage and the mistage of the mistage and the mistage of the mi

efficient analogy between the two kinds of transaction to explain, if not to justify, their common nomenclature. But it was not in fact, at all in this light that Simon Magus was originally looked upon either by friend or foe. By his immediate followers, as we know, he was reverenced as "the great power of God," and in his own country of Samaria he appears to have gained over the whole population by the use of magical arts, and he was there universally, believed to be an emanation from the Godhead. He shought to increase his influence by sharing the miraculous powers of the Apostles, and his conversion to Christianity, if not insincere the first, was at least only superficial and tonnovary. That them the first, was at least only superficial and temporary. That he was really a remarkable man there can be no doubt, but it is scarcely possible now to disentangle the elaborate network of the in which his name has been involved by the earlier heretics. What is less certainly fabulous is that he fell in with St. Peter a second time at Rome, and according to the oldest tradition, rved by Hippolytus, after preaching under a plane-tree, he had himself buried alive, giving out that he should rise from the dead, but, as was natural, rose no more. There is nothing absorbed by the state of hately incredible in the story, even putting aside the hypothesis of sollusion, for impostors of that type are always more than half enthusiasts. The later legend of his flying through the air and being east down at the prayer of St. Peter and St. Paul, somes to us through the apocryphal Judgment of Peter and Teachsing of the Apostles, composed in the interest of the Ebionites. Nor is it easier to distinguish with accuracy his actual teaching than his personal history. The document ascribed to him by his disciples, the Great Apophanis, is certainly not his composition, though it may be the work of Menander, whom Milman considers the real founder of the Simonians. He seems however to have taught that advation was to be obtained by grace only—meaning thereby by gnosts—and not by good works, and it is against his doctrine that some of the warnings in St. John's First Epistle are supposed to be directed. In the early Church he was looked upon, much as Luther was by Catholics of the sixteenth century, as the architectury of Grostician. The control of Sixty inner continued to the supposed to the sixty of Churchican of Sixty inner continued to the supposed to the sixty of Grostician. as the author of Gnosticism. The sect of Simonians oscillated between Pagan, Judaic, and Christian professions, and, while at one time preferring a rigid asceticism, at another claimed independence of all moral law. In this they did but follow the example of him to whom they looked up as their founder and, in some sense, their Redeemer, but how far they represented his real saching cannot now be determined. Simon Magus had already become, to use Neander's words, "a mythical personage," and Justin Martyr even speaks in his Second Apology of a pillar erected Justin Martyr even speaks in his Second Apology of a pillar erected in his honour on an island in the Tiber, with the inscription Semoni deo sancto, and the story is repeated by Eusebius. The trus history of this pillar has however subsequently come to light, though Tillemont still adheres to the old explanation. In 1574 a stone was dug up at the spot indicated by Justin, which seems to have been the pedestal of a statue, bearing the inscription Semoni Sango Deo Fidio macrum; it was erected by one Sextus Pompeius to the Sabine deiry Semo Sancus, with whose name Justin was probably unacquainted, and hence his whose name Justin was probably unacquainted, and hence his mistake. But, while it is doubtful whether Simon Magus really founded any sect at all, the opinion of some writers that the Simonians derived their origin from a namesake of his is a purely arbitrary conjecture. It was clearly after his name that they called themselves, however extensively, for anything we can tell, they may have innovated on his actual teaching. From Simon Magus to "the detestable and execuble sin of simony" as known to the canon less in the detestable and execuble sin of simony as known to the canon less in the cano

From Simon Magus to "the detestable and excernble sin of simony" as known to the canon law is a long step. At first sight one might have thought that practices which have long been and still are very prevalent in the Church, and have never been seriously condemned or interfered with, such as paying for masses and sacraments, came nearer to the particular offence of the Samaritan magician than the sale of ecclesiastical benefices. Yet fees for baptiams, burials, marriages, and the like, are still equally common, solitatic materials, in the Church of England and the Church of Rome. There is indeed a canon of the Council of Trent expressly forbidding Bishops to receive any payment for ordination as savouring of simoniscal pravity—possibly from an idea of Simon having which to buy the apostolic office. But if buptism and ordination are both sacraments, it is difficult to see why fees may not as allowably be paid for the one us for the other. The general explanation of these "surplies fees" would of course be that they are simply part of the professional income of the clernyman, like pew rents, and that "the labourer is worthy of his hire," whereas no such excuse can be pleaded for the buying and selling of livings. We are not however concerned have so much with the merits as with the history of the law of the buying and selling of livings. We are not however concerned have so much with the merits as with the history of the law of the buying and selling of livings. We are not however concerned have so much with the merits as with the history of the law of the buying and selling of livings. We are not however concerned have so much with the merits as with the history of the law of the buying and selling of livings. We are not however concerned have so much with the merits as with the history of the law of the buying and selling of livings. We are not however concerned have so much with the merits as with the history of the law of the buying and selling of livings. The eleventh century that the masse of Olement II., b

be content with imposing a penance of forty days on all priests what had been knowingly ordained by a simoniacal bishop. Some years later Leo-IX, renewed the attempt to grapple with what worse regarded by all zealous churchmen as the two crying vices of tha day, simony and clerical marriage, or, as Hildebrand invariably designated it, "fornication." It was again proposed at a Raman Council to degrade all cleries guilty of these crimes, but again for the same obvious reason the scheme had to be abandoned. The stern reformer Poter Damian presented to the Pope a book on the morals of the clergy, the title of which alone there would be some difficulty in quoting. Hildebrand was an abler and more uncompromising, though hardly perhaps in the long run a more successful, assailant of the twin clerical vices of the age. The enormous and growing wealth of the clergy, in a condition of society when the cassock and the sword offered the sole avenues to distinction, was alone fatal to any effective reform. On the contrary, the scandal grow more portentous when the Court of Rome itself became the centre and focus, not of the reforming movement, but of the perpetration of the crime so loudly denounced. After the return from Avignon, Boniface IX., finding the Papal exchequer almost empty, could devise no better means to replanish it than by organizing simony in its most objectionable form. At first he only took money for ecclesinatical appointments through socret and trustworthy agents, but as the severer Cardinals one by one died off, he adopted a bolder policy and established as a permanent tax the annates or first-fruits of every bishopric and wealthy abbey, which had to be paid in advance by candidates for promotion, many of whom nover got possession of the benefice after all, so that it could be sold twice over. The abominable system of Papal usury which grew out of this arrangement is described in Janua. Smaller benefices were sold with shanndess notoriety, and we hear of reen reauming about they incumbents, for which se

For centuries these abuses continued almost unchecked, or rather gained ground. According to an authentic record in the Chiri Palace there were in 1471 nearly 550 valuable offices at Rome, the income of which amounted to about 100,000 scudi. Sixtus IV, established whole colleges the places in which were sold for two or three hundred ducats a-piece. Isnocent VIII, founded another. Alexander VI, created 30 writers of briefs, each of whom paid 750 soudi for his appointment, and Julius II, added 100 writers of archives on the same terms. Leo X, pursued the same policy, and under Paul IV, there were no less than 3,50s of these venal offices. The internal "Counter-reformation" of Catholicism which followed close on the Protestent Reformation of the sixteenth century naturally fell foul of these scandalous abuses. Contarini, one of the reforming Cardinals appointed by Paul III., composed a treatise De Potestate Pontificis in Composed in the sixteenth century naturally fell foul of these scandalous abuses. It was laid before the Pope, who received it favourably. Strong things were said on the same subject by influential speakers at the Council of Trent. But such abuses die hard, and it is no doubt due rather to the diminished revenues of the Church all over Europe than to any other cause, that little is heard of them in our own day. Innocent XII, finally abolished the selling of places in 1693, but, as Dr. Dollinger observes, he could not do away with the consequences of a system that had existed for centuries, and the results of which are still felt. In England, where the ancient ecclesiastical property has not been tampered with since the Reformation, when the monastic endownents were confiscated, though its distribution has been altered, the old evil still survives, but hey petrons only could venture is our day to sell the livings in their gift.

MODERN CLOTHES PHILOSOPHY.

THE dog in the fable who thought it was an excellent arrangement that man should have been invented to take care of
dogs, only expressed in a blunt way a very common view of life.
Most persons are more or less unconsciously in the habit of regarding the world as having been expressly constructed to suit
their private convenience, and the people in it as so much furniture for their use. This tendency comes out very strongly in
the class literature of different trades and professions. From
the wine-merchant and publican's point of view, humanity is only
a variety of cask or bottle, a vessel for holding liquor; while the
grocer's interest in it is limited to its capacity for disposing of
tea, sugar, and molasses. Anybody not a dector who happens
to take up a medical paper can hardly fail to be unpleasantly
impressed by the idea that the main object of the existence of the
human race is to furnish doctors and surgeons with subjects to be
drugged, cut into, or otherwise operated upon; and undortakers'
circulars similarly suggest that man fulfile his destiny in providing
something to be buried. The organs of the various trades which
undertakes to cover the nakedness of mankind are naturally disposed to take a more cheerful view of the mission of their species,
but it may be traced to the same origin in a section constition that

the main furpose of creation was to provide a market for their wares. In their opinion man, and especially woman, was evidently made only in order to be clothed—a theory, however, which obviously cannot be carried back beyond the Fall. There is something refreshing to a mind sated and jaded with ordinary newspaper literature in turning to such a periodical as the Wimehousenian and Drapet's Journal. Since the primitive innocence of Eden was abandoned there has necessarily been a great deal of drapery in life; but life all strapery, or at least life viewed exclusively in its relation to drapery, certainly presents a novel and surprising life; but life all anapery, or at least life viewed exclusively in its relation to drapery, certainly presents a hovel and surprising aspect. Political questions, for example, are studied only with reference to the gowns and bonnets which they are supposed to be likely to bring into fashion. It would appear that the fluctuations of French parties keep the drapers and milliners and their customers in a state of perpetual agitation. At one moment the Count of Chambors is thought to be coming to the front, and fleurs de lis and costumes of the reign of Francis I. and Henry IV. have to be prepared in haste. These have soon after to give way to bees and sagles and Imperial fashions, while at the same time Republicanism prepared in haste. These have soon after to give way to bees and eagles and Imperial fashions, while at the same time Republicanism has to be recognized by a revival of the eccentricities of the merceilleuses and incroyables. It may seem strange to a philosophical mind that English ladies should be obliged to change the cut and colour of their dresses whenever a new turn is given to political intrigue in France. Perhaps when woman's suffrace is established we shall find our own domestic questions elevated into their natural prominence in this respect. The weather is watched by the draper with as intense interest as by the furmer, but the question in which he is interested is its probable effect, not on the crops, but on the style of costume. Again, when the draper goes to the play, his ears are idle. He is there to criticize, not the dialogue and acting, but the dresses of the performers. Little good has been said of M. Sardou's latest piece from a dramatic point of view, but it is something that at least it is a success in the way of costume. One of Madlle. Croizette's most effective toilets in the Sphinx is a blue satin train open over an under-skirt of white satin, trimmed with narrow flounces, with a tunic of white lace, and a scarf of silver gauze. In the third act she wears a white anuslin morning gown, over an under-skirt of white silk. Madlle. Sarah Bernhardt has a dress of two different pinks in one act, and a long light slate-coloured dress in the fourth act. Another actress, who appears only in the first act, wears a flesh-coloured silk, covered with a tunic of black net, embroidered with roses. One can imagine what inspiration a poetical dramatist must find in writing a play for the exhibition of these marvels of millinery. It is obvious that this line of criticism might be largely extended. The Draper's Trade Journal does not appear as yet to have taken the London theatres in hand from this point of view, but this will probably come in time. A notice of the Academy Exhibition in May devoted to the ladies' dresses would only do justice to the most brilliant and conspicuous part of the show. The speckled crudeness of colour in most English art is porhaps due to the terrific competition to which it is subjected on these occasions. Milliners and drapers would perhaps be scandalized by a suggestion that ladies should be toned down to suit the pictures, but an Academy costume in neutral tints, with spare skirts and an unobtrusive bonnet to match, might possibly pay as a fashionable novelty.

A very serious question just now in the world of fine clothes is, it seems, "How long will tunics last?" This question, however, does not rofer to the endurance of the materials of which tunics are

seens, "How long will tunics last?" This question, however, does not refer to the endurance of the materials of which tunics are composed; for, flimsy as they are, if they lasted oven as long as the stuff would wear, that would be much too long to please the providers. It appears that the ladies have taken a fancy for tunics, and that there is some difficulty in directing their tastes in another direction; and we are told that "it does not seem likely that the summer will see the last of the tunic." "Plain skirts" are, however, making a determined invasion. A French authority has, it appears, decided in favour of a tight-fitting dress, moulded to the figure, long in the waist, rather short in the skirt, and without a vestige of crinoline. It is shrewdly remarked that, though this style of dress might suit nature in its finest forms, it is hardly likely for obvious reasons to become very popular. Pretty women may set the fashion, but their designs are adopted by the majority only when they can be applied to the great object of art, which in this case is rather to disguise than to reveal. It may be assumed that, if the tunic holds its ground, at least its cut or trimmings will be changed for the good of trade. In the meantime bonnets are hopefully regarded. "A bowl-shaped thing, entirely covered with leaves and flowers, is," we are told, "s form patronized by some milliners," but the "Trade Journal" is independent enough to say that it is not becoming. At present there is a struggle between the milliners and the hairdressers, which will probably end in a compromise. For some time past the hairdressers have had it all their own way, and have gradually built up their tower of fulse hair so that the bonnets are only perched on the top, and must be constructed to suit this position. But now "there is a decided lowering in the height of chapmans, or rather they are not perched on the top of the head as they used to be; the hair is dressed lower down." There are milliners who are sanguine enough to believe that "we are

back, however, to the crownless bonnet. It has been remarked in Paris that since it came into use almost every other woman wears cotton in her ears. The same peculiarity may be observed in the stuffed animals in the British Museum. False hair and cotton in the sears would tertainly create an uncomfortable suspicion of straw inside.

The minds of the drapers are at present greatly exercised as to the best means of protecting themselves against had tests, and especially against the repudiation by husbands of debts contracted by their wives. Much indignation appears to have been caused in drapery circles by certain decisions adverse to tradesum which en given by a County Court Judge in Lancashire, and various suggestions have been made for getting over the difficulty, which are at least amusing as an illustration of the way in which a particular class of traders would like to see the world regulated a particular class of traders would like to see the world regulated, in order to serve their own ends. A correspondent at Manchester writes, "Make it compulsory by law to have the husband's signature of responsibility before making any debt—i.e. any wife's debt—legal." "If any husband doubts the discretion of his wife, let him give notice to what amount he will be held responsible, receiving such certificate back, or a copy, with signature of tradesman." It is obvious that in order to carry out this project the husband would have to determine how far his wife might go with each should have to determine how far his wife might go with each shopkeeper. A second proposal is that a tradesman who gives credit should, as a matter of course, draw a bill for the amount to be accepted by the customer, and made payable in a month. This bill should be paid into a banker's, and presented in the usual manner. Another plan is to put society under surveillance for the security of shopkeepers. It is suggested that there manner. Another plan is to put society under surveillance for the security of shopkeepers. It is suggested that there should be an extensive system of inquiries, embracing the whole country, and that all the information collected about defaulters should be registered, classified, indexed, and placed at the disposal of the trade. "We photograph our gaol birds," says this correspondent, and he sees no reason why customers who omit to pay should not be placarded in a similar manner. The editor of the formal country country to his length and rejusts out to his correspondent. Trude Journal cannot quite go this length, and points out to his cor-respondent that "the establishment of such a system as he suggests might lead to a perfectly unbearable espionage, which the public would resent, and under which great private injustice might be perpetrated." He is willing, however, to concede that the responsibility of warning shopkeepers not to give credit should be thrown on the husband. It is strange that it does not seem to have occurred to the editor or to any of his correspondents that the simplest and most effectual way to avoid bad debts would be to insist upon cash payments and not to allow debts to be contracted. The credit system is nothing more than the robbery of honest people for the benefit of rogues. In order to provide a margin for his losses the shopkeeper has to add to his prices, and the consequences of his demoralizing recklessness are thus thrown upon the regular customers by whom he is supported. As Paris in many things sets the fashion to London, we may perhaps see the practice of offering refreshment to purchasers introduced into Regent Street.
One of the features of Mr. Worth's famous establishment is the tribute of afternoon tea to his clients. The proprietor of a rival house has gone beyond this and offers sirops and cakes. to imagine the lengths to which this sort of competition may be carried by enterprising tradesmen. The cakes may soon pass into écrecieses, and the sirops into old Chablis, or iced champagne. The only question is whether the table should not be laid for husbands and fathers instead of for the ladies.

THE QUARTERLIES QN ROME AND PRUSSIA.

THE Edinburgh and the Quarterly Reviews have each an article on the contest between Prince Bismarck and the Ultramontanes. The former may be described as very proper reading for the average Englishman. In this country we are accustomed to form conclusions with much promptitude, and to express them with very little qualification. We are loth to confess that a subject is too large and complicated to be conveniently handled in this way, or that the conditions of the same problem may be so different in different countries as to necessitate different methods of treatment, or that want of full acquaintance with the facts is a reason for not pronouncing a positive opinion upon them. Persons who adopt this rough and ready system must be satisfied with somewhat superficial views of the difficulties presented to them, and where this is the case it is of more importance that their views should be sound morally than that they should be sound intellectually. Knowing what they do of the Prussian ecclesiastical legislation, it is better that Englishmen should dialike it ignorantly than that they should like it ignorantly. Be the real merits of Prince Bismarck's policy what they may, it is not calculated to be popular with Englishmen except from a complete misapprehension of its purport and aims, and the favour which it receives from those who labour under this misapprehension is not creditable to English tolerance or common sense. If it were necessary, as some persons seem to suppose, to convert Prussia either into an example or a warning, it is in the latter character that she would be most useful. It would be better still if Englishmen can learn that the matter is one in which very decided opinions on their part are out of place, that the war hetween. Prussia and Rome is one which has not said cannot have any counterpart in this country, and that before the said them.

German affairs are to be judged by a purely English standard, we prefer the measure applied to them in the Edinburgh Review to the measure applied to them in the Quarterly Review. When the Edinburgh Reviewer, declares that he is "indignant at the exaggregated pretensions of the Ultramontane party," but "that he is much more "indignant at the attempt to crash the faith and independence of any form of religious belief by State persecution and intelegrance," we may not feel that we have not hold of a and intolerance," we may not feel that we have got hold of a contiment which helps us far forward towards the appreciation of Prince Bismarck's difficulties or of the expedients by which he proposes to overcome them; but, at all events, the sentiment itself is irreproachable. When the Quarterly Reviewer, on the other hand, appeals to the experience of "our Protestant forefathers," and praises the "unerring instinct" of the English people because it "sympathizes as warmly in the nineteenth century as it did in the sixteenth and sevents onth with the appeals of the angle of the sixteenth and sevents onth with the appeals of the sixteenth and sevents onth with the appeals of the sixteenth and sevents onth with the appeals of the sixteenth and sevents on the sixteenth and sevents of the sixteenth and sixteenth and sevents of the sixteenth and six sixteenth and seventsenth with the cause of true religious liberty in Germany," we know that we are in the region of claptrap, and that a writer far too intelligent to be the dupe of his own commons is merely speculating on the extent of our complacent ality. "When we ourselves are drawn into the conflict," says credulity. the Reviewer, "we may learn the true meaning that it bears in Germany." He has wisely omitted to add that before we can ourselves be drawn into the conflict the enemy must be placed in a position analogous to that which he occupies in Germany. What that position is the Reviewer himself shall state. "The undisputed condition on which the Catholic Church, like every other recognized community, exists in Germany, is its connexion with the State. The Catholic priests are, like the Protestant ministers, the servants of the State Government, which secures them their salaries, protects them in their duties, and gives validity to their functions in all that affects the social status of their own followers. They have never proposed to give up the advantages of this position; but they claim to use them, whenever they please or whonever they are bidden by their foreign master, against the power which protects and supports them." Perhaps in a future number the Quarterly Review will define the advantages of Archbishop Manning's position in England, and in what way the power against which he claims to use them can be said to protect and support him. When the undisputed condition on which the Catholic Church exists in England is its connexion with the State, the conflict with Rome may become "one of the most anxious questions looming on our political horizon." Till then we must continue to regard it as subordinate to the reform of local taxation, or to the provision of a continuous supply of water in

The Quarterly Reviewer is so evidently well acquainted with a views of the Prussian Government, that it is not surprising to find his otherwise exhaustive article gliding lightly over a point upon which that Government has always been resolutely silent. which that Government has always been resolutely silent. What was it that put an end to the favour which the Prussian Government had always shown to the Roman Catholic Church? The Reviewer admits that down to 1872 the old attitude was preserved, but the grounds of quarrel which arose in that year seem altogether insufficient to account for a change of such magnitude. The complicity of the Archbishop of Posen in Polish intrigues, and the dispute between the Catholic Chaplain-General and the Minister-at-War about the use of the garrison church at Cologra by the Old Catholics may have irritated Prince Bunnerely Cologne by the Old Catholics, may have irritated Prince Businarck into sudden action, but the intention of acting at some time must have been already in his mind. Trifles may determine the date of tying out a policy, but they will hardly call, it into existence. Whether Prince Bismarck was anxious to involve Prussia in a new war in which his own reputation would not, as in the case of the war with France, be overshadowed by that of the military chiefs, war with France, be overshadowed by that of the military chiefs, ar whether he wished to identify himself at the close of the Emperor's life with a policy likely to be favoured by the Crown Prince, or whether he thought that a course of anti-ecclesiastical legislation would give him that influence with the Liberal party which his supposed leaning towards the Catholic Church had hitherto prevented him from obtaining, are questions which will long remain matters of speculation. But that Prince Bismarck's motive, whatever it was had no immediate councilon with any motive, whatever it was, had no immediate connexion with any overt act of the Ultramontanes is shown, we think, by the fact that, often as he has been challenged to state the precise offence which his enemies have committed, he has never thought fit to do so. As the Edinburgh Reviewer justly asks, Why, if the Jesuits had conspired against the Empire, were not the guilty members of the Order tried and punished, instead of the whole Order, innocent as well as guilty, being expelled from the country? The ecclesiastical laws would have been passed with even greater case, and would have received a still more general approval, if they had followed upon the conviction of a few ecclesiastics for treasonable conspiracy. That there was abundance of discontent and irritation among the Catholic clery at the rapid advance of Protestant Power to the uncontrolled headship of Germany is more m probable; but if the suppression of this feeling was Prince Bismarck's only object, it is strange that he should have proposed to attain it by proving that the feeling itself had ample foundation. The local and particularist hostility to the new Empire might by this time have died out if the policy of the Government had not given it a band of new and ardent allies in the persons of the Ukinamontanes.

Prince Biamarch's motive for embarking in his anti-occlesiastical slicy is a distinct question from the marits and character of that glinstion. And in forming an opinion upon this latter point it is appearant to bear in mind that the new laws have a scientific

character which ought to be taken into second in any judement presourced on them. They may be wrong in their aim and in the means by which they propose to attain that aim, but their error is at all evenus the error of nier specially incorred, in the subject dealt with. The new laws are the work not so much of politicians as of canonistic of men who have theroughly studied the canon law and the reintions between the Church and the civil Gasprament, and who would probably be able to quate ecclasiastical authority or permission for every one of the claims which the State now puts forward as regards the Church. Experts may be wrong as well as other men, but they have at least a right to have their acts more closely looked into than those of other men before they are pronounced wrong. The Quarterly Reviewer apparently feels that where religious ligitalation is concerned, the English public think austinent of more importance than knowledge. At all events, he makes no mention of the part which the Prussian canonists have had in the praparation of the laws he so much loves. Nor does he tell us anything of the feeling of instructed Catholics towards the new state of things. Yet in the long run this feeling will more than of the feeling of instructed Catholies towards the new state of things. Yet in the long run this feeling will more than anything else determine the success or failure of Prince Blamarck's policy. Popular disapprobation may be got over or passed by, but if the great body of educated Catholic opinion should eventually pronounce against the new laws, it will be exceedingly difficult to enforce them without committing the dovernment to the immense mistake of driving its friends into the course of its form. As got them, he must have time this the camp of its fees. As yet there has not been time for this opinion to manifest itself, and the dislike of the German (latholic laity to the aggressions of the Ultramontane clergy haturally makes them slow to condemn the action of the Covernment until experience has proved that the conditions to which the Church has been lately subjected are injurious to her spiritual independence as well as to that secular supremacy which it is the Ultramontane fushion to confound with it.

DANGEROUS BUILDINGS,

IT is to be hoped that the Bill which has just been brought forward by the Matagonitan Barrier Barrier forward by the Metropolitan Board for the amendment and consolidation of the various Building Acts will be very carofully considered before it is passed into law. There are at present as many as seven Building Acts which are wholly or partially in force in the metropolis, but the principal one is the Act of 1855. This Act has long been condomined as inadequate and even mischievous. At the recent inquest on the body of the amateur fireman who was killed at the Pantechnicon, Mr. J. Marsh Nelson, man who was killed at the Pantochnicon, Mr. J. Marsh Nelson, the architect who examined the rains at the request of the Coroner, stated in his Report that the Pantechnicon was "a most imperfect structure, although it was built under the provisions of the Metro-polis Building Act." Mr. Nelson also quoted the following passage from a Report which he made to the Coroner of Middleses in 1858: from a Report which he made to the Coloner of Middless in 1858;

"The Government incur a great responsibility in continuing in force this Act of Parliament in the face of the frequently expressed opinion of all parties, from the humblest builder to the judges of the land. It is an Act which legalizes bad buildings; it has made London as inferior to many Continental cities as it was formerly superior; and by its conflicting and in many cases absurd and contradictory regulations, it defeats the only object that a proper Building Act should have in view—namely, the substantial construction of all houses and buildings, without any exceptions whatever, the prevention of the spread of fire, and the protection of the inhabitants of the metropolis from such accidents as the fearful case now under investigation." This is only one example of many condemnations of the Act by competent professional men which might be cited. It is impossible to exaggerate the importance of the matters which have to be dealt with under such a law. They affect not merely the convenience of the public, but security for life and property. The fall of a house is a danger not security for life and property. The fall of a house is a danger not merely to the inhabitants, but to everybody within a certain range, and a fire may involve the devastation of a whole neighbourhood. It was probably only an accident that the fire at the Pantechnicon did not cover a considerable region with wreck and ruin. If it had broken out in the middle of the night instead of in the early part of the evening, if the wind had been stronger or blowing another way, the catastrophe might have involved fearful loss of life as well as the destruction of a vast amount of valuable property. It went as the destruction of a vast amount of valuable property. It is also obvious that, if it is worth while to impose regulations with regard to the safety of buildings in point of strength and capacity of resisting fire, it is essential that these regulations should be of such a kind as really to secure the safety which is aimed at. Otherwise they must necessarily be misleading and There is a natural tendency on the part of builders mischievous. to regard the conditions of the Act as a maximum, and to build down to them. Compliance with the requirements of the law operates as a certificate of indemnity for the builder. He is tempted therefore not to trouble himself to consider how far the building is sound. It is enough for him that he has done all that he is required to do by the Act, and having done that he washes his hands of all responsibility. It would be better to have no Act at all, and to hold the builder responsible for the consequences of his work, than to have an Act which gives countenance and encouragement to filmsy and dangerous structures.

The questions which are raised by the Metropolitan Buildings and Management Bill are mostly of a technical character, and must necessarily be left to the decision of experts. We have no intention of

discussing them here, and can only hope that they will receive full attention in the proper quarter. A change of some importance is made by the Bill. Under the present system the offices of Superintending Architect of Metropolitan Buildings and of District Surveyor are constituted by statute, and these officers have powers and duties which are to a considerable extent independent of the control of the Board. There can be no doubt that this is an anomalous state of things, and it is therefore proposed that these half-independent officers should be brought directly under the authority of the Board. In discharging its duties under the Act, the Board itself will, however, be on its trial; and it will be well-that it should be closely watched. It will be extremely unfortunate if the authority of the Board should be used, as has sometimes happened with other Boards, and as is notoriously the case discussing them here, and can only hope that they will receive full times happened with other Boards, and as is notoriously the case with the Vestries, to cover negligence or undue favour to the practices against which the law is directed. Many of the provisions of the Bill are a reproduction of existing clauses, but amendments and additions have also been introduced. One of the lessons of the disaster at the Pantechnicon was that there is very little use in in-sisting upon large buildings being divided inside by vertical walls if these walls are to be pierced by doors which may be always kept open. It is now proposed that all buildings of cubical contents exceeding 300,000 cubic feet shall be vertically separated into divisions by walls, each division being limited to 300,000 cubic feet as a maximum; and that no opening shall be allowed in a party wall dividing buildings of this class unless it is fitted with a fire-resisting door, composed of wrought iron and concrete, and this door must be so hung as to be self-closing. In other cases the communication is to be from an external opening in one division to another external opening in another division—in fact, by iron balconies outside. In one of the schedules is given a list of what are conoutside. In one of the schedules is given a list of what are considered fire-resisting materials, and brickwork very properly comes first—"brickwork constructed of good bricks, well burnt, hard, and sound, properly bonded and solidly put together with good mortar, compounded of good lime and sharp, clear sand or broken flint grit, or with good cement, or with cement mixed with sharp sand." It would be interesting to know how much of the brickwork of dwelling-houses and other buildings the leading that folds! erected in London during the last ten years can be said to fulfil these conditions. When iron is used in combination with oak these conditions. When iron is used in combination with one and teak, it is required to be protected by plastering in cement or other incombustible or non-conducting external coating; but iron by itself figures as a fire-resisting material. "The use of iron," said Mr. Alexander Peebles, architect and district surveyor, in any structure intended to resist the effects of fire; it is a surre and a delivation and not only dostroys itself when exposed to the flames. delusion, and not only destroys itself when exposed to the flames, but the other materials also." This is confirmed by the experience of recent fires in this country and elsewhere, and most kinds of stone are even more untrustworthy than iron in the presence of fire. Indeed, scarcely anything except good brickwork or concrete is really fireproof. An architect who visited Paris after it was barned by the Communists has stated that brickwork of all kinds as a rule resisted an enormous heat. Stone floors and staffcrases were quickly destroyed, "while the thin brick and tile arched and concrete floors remained perfect, and, where not broken by the civing way of the intermediate iron girlers. broken by the giving way of the intermediate iron girders, afforded protection to the goods stored in them." The writer adds that, as far as he observed, wherever stone or iron was protected with plaster, comparatively little damage was done. Extocted with plaster, comparatively little damage was done. posed iron, both cast and wrought, only assisted the general destruction. In the schedule of the Board of Works Bill "granite and other stone suitable for building purposes by reason of its solidity and durability "find a place among fire-resisting materials, but the definition is rather vague. Still it is better than the phrase of the present Act, "stone or other incombustible substance." It is to be enacted that walls of staircases shall be of brick, and not less than thirteen inches thick; the steps and land ings to be on brick arches, or a frame of wrought iron; and a stone or slate staircese is not to have its steps tailed into the wall or, be dependent for support on anything other than the brick arches or iron frame. Steps of brick, terra-cotta, or other material, however, may be tailed into the wall if shown by experiment to be

capable of being made fire-resisting.

There is a special division of the Bill with reference to various arrangements which are likely to lead to or feed a fire, as, for instance, the dengerous position of flues in hotels, eating-houses, and other places of trade or business, the proximity of wood to chimneys, the formation of floors under and around eating of floors in domestic buildings under and around stoves, and the fixing of pipes for conveying heated air, steam, smoke, or other products of combustion. The rules as to the thickness of walls in proportion to their height are pretty much the same as those in the existing Act in the case of buildings of moderate height, but the thickness is increased in the case of forty buildings. It is provided that "every building, and every structure, and every work (being a work to which this Act applies) done to, in, or on a building or a structure, shall be subject to the supervision of the Board"; and extensive powers are also given to the Board in regard to the laying out and naming of attests. It would seem that the powers asked for by the Metropolitan Board are sufficiently large, but everything will of course distant as that the powers asked for by the Metropolitan Board are sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficiently large, but everything will of course distant as a sufficient as a sufficient as a sufficient as a

it is to be an offence to stencil, draw, mark in crayon, chalk, or other material, to paint, or otherwise to write, stamp, print, usake, draw, or in any manner mark any name, word, advertisement, character, symbol, drawing, painting, or representation, on any pevement or footway. This would of course strike equally at the trade advertisements which are occasionally published in this manner, at Mr. Whalley's young friends who chalk offensive remarks about the Pope, and at those melancholy artists who draw such wonderful saints heads and mackerel on the pavement with coloured crayons. This offence is to be punished by a penalty not exceeding five pounds, and by a further penalty not exceeding two pounds for every day during which the offence is continued. It is necessary of course that the Board should have authority to deal with all serious distigurements or obstructions in the streets, but it may be doubted whether writing on the pavement is not one of the little things about which the law need not trouble itself. Moreover maticious use might be made of the principle that "where any placard, poster, handbill, or advertisement relates to the trade, business, or affairs of any person, it shall be presumed that (until the contrary is shown) he has caused or procured the placing thereof." Any one who owed a shopkeeper a grudge would only have to chalk his name and address on the pavement.

THE GIPSIES.

THE Gipsies are a people whom we know next to nothing about; probably they know very little about themselves, but if there is anybody alive who knows anything about them, it is Mr. George Borrow. At least he understands and appreciates the picturesque aspects of their Bohemian existence, and he has made his way as far into their contidence as it is given to any Gorgio to do. He has lived in their tents, and trusted hinself to their hospitality and friendship, when the temptation to abuse his confidence appeared irresistible. He has travelled and talked with the wandering bands in all the countries they most frequent, from the yellow sands of the Tagus to the Iron Gates on the Lower Danube. He has studied their unwritten speech until he talks it with far greater fluency and parity than many of themselves. He has given us more than one of those admirable books to which we are chiefly indebted for the interest we take in the Gipsy life and character; but, as it is the way with human nature to grow grasping with what it gets, we have always been longing to have something more comprehensive from him. And now, by way of sppendix to a "Word-book of the Romany" which he has just published, we have a series of papers on his favourite subject, and, as we need hardly say, they are very agreeable reading. Although some of them were apparently written several years ago, they contain some very curious facts, with much information which is comparatively recent; still we hope we need only accept them as a foretaste of the more finished work that ought to follow in due course. A man of Mr. Borrow's special powers and information has no right to bring his literary life to a close without doing more for us and for the Gipsies than he has done.

We know no writer who in his own special way showed from the first more literary power than Mr. Borrow in more unpretending fashion. His style was simple almost to ungainliness; he paid but slight attention to the graces of modern composition; he told his story in the plainest words, and never hesitated to repeat himself in order to ensure precision of expression. Sometimes he would ride a pet idea to death; and he was in the habit of parading his prejudices and uncompromising opinions in season and out of season. It puzzled one to tell why his writings impressed and interested the reader so strongly; but no doubt their charm lay in the powerful sense of realism which they conveyed, with their vivid reproduction of the author's individuality. At the same time he seized as if by intuition on the most novel and picturesque aspect of everything; he had an original intellect that surprised you as much by its peculiar grasp as by its penetrating power; he had a decided athnity for much that was altogether uncongenial to ordinary people; and underneath the quaint, simple manner which he wore like a loese-fitting suit of homespun, there was no mistaking the evidences of mental cultivation and recondite research. In some of his earlier writings, which, unlike The Bible in Spain, did not profess to be altogether veracious histories, you were never altogether sure how much was pure romance and how much genuine autobiography. When he related that tremendous single combat in which the fancous flaming Tinman was thrashed by the ailing lad in the dingle, kis readers were as much mystified as his tramping and Gipsy Riendsmust have been when he astounded them with long-winded Armenian words and marvellous displays of out-of-the-way erudition. We take it for granted that he really did make Jasper l'etulengro's acquaintance when a boy; that he kept up in later life his boyish friendship with that here-couping nomad; that he was hand in glove with Tawno Chilmi, "the beauty of the world," and their longing and the did was a person

of an English priest, choose so singular a companion through a disturbed country as Mr. Borrow did when he trusted himself with "the wild Gipsy Antonio" in the long ride from Portuguese Extensedure to the Clastiles? It must be remembered that he played his part so theroughly—if we may talk of playing when the acting came so naturally—that his speech and dress and bouring altogether disarrand the district of this savage outlaw who was at open war with the Christians and their authorities. Picture the bold Englishman making his way through forests and depoblades at midnight—his guide being one of those birds of night who dare not show themselves abroad in the sunshine—mounted on the stiff-jointed old grey that afterwards bolted with him as if the damon of the woods had possessed it. Imagine him listening by a lonely fire in the forest to the mysterious conversation that informed him how his guide's whole family had been caught by the officers of justice in a single sweep of the official net, or crouching with the old hag over the smouldering subers in her dank hovel in the city, while his guide had gone abroad to scout for intelligence. Seenes like these, when you know them to be true, must inevitably impress themselves on the memory, although you may have read them but once and that long ago. Yet scenes like these, in Lavengro and in the Romany Rye, only come in more or less incidentally. As for The Gipnes in Spain, it was a history rather than a record of incident and everyday life; besides, it was written many years ago, and it only deals with a single section of the wandering race. There is ample room still for a comprehensive work that shall embody the varied experiences and information which Mr.

Shall embody the varied experiences and information which Mr. Borrow must have spont so much of his life in accumulating.

One thing we learn from the papers which have suggested these remarks. If Mr. Borrow does not avail himself of these unrivalled experiences of his, no one else is likely to have similar oppor-tunities. In England, at least, the Gipsies are fast dying out; the purity of the old blood is being deteriorated; as they blend them-selves by mixed marriages among the mass of roughs, tramps, and ruffians, they are getting out of their old customs and even forgetting their old speech. Like bustards or snipe, wolves or marten cuts, they love waste places with plenty of elbow-room, and disappear before the progress of cultivation and reclamation. High farming and the rise in the value of land has interfered with them sorely, and Mr. Borrow tells us that the institution of the rural police is likely to sweep them out of the country. For, with all our improving and enclosing, there is still many a sheltered nook on a bit of breezy commonland where the Gipsy may set up his tent in poace, boil his kettle, and turn out his animals to graze. But Gipsy families are by no means desirable neighbours, although the men may do jobs in tinkering cheap, while the women deal in golden promises on easy terms. Household trifles are missing from the neighbouring homesteads; there are demandations from the neighbouring homesteads; there are depredations in orchards and poultry yards; hedges are broken through by the lean horses; while the squire's keepers look suspiciously on by the lean horses; while the squire's keepers look suspiciously on the simmering kettle, whose contents were probably their master's property, although now they are placed beyond identification. Most people would much rather have the Gipsies' room than their company, but in old times they could laugh at the parish coustables, and it was neither the business nor pleasure of any one else have atvict orders to keep the yearshould moving. Wherever a have strict orders to keep the vagabonds moving. brown tilt is to be distinguished, or a tell-tale wreath of spiral smoke betrays the presence of some lurking group, forthwith an active officer makes his appearance. The women who go about fortune-telling in farms and cottages push their trade at their peril, although they are tolerated when they attend race meetings in gorgeous raiment—probably as being among the licensed humours of the course. Hence an anxious inquirer into their habits, such as Mr. Horrow was in his younger days, would find no easy oppor-tunities of gratifying his curiosity now. How can a people show hospitality or include in quiet talk round their tent-pole when they hospitality or include in quiet talk round their tent-pole when they are perpetually being hounded about? Strange to say, it appears that the places to study Gipsy life such as it is nowadays are to be found in the West End of London, and close to the fashionable quarters of Belgravia and Tyburnia. One of these is on a wacant space of ground on the borders of Wandsworth and Batterses; the other, called the Potteries, lies on the alopes of Notting Hill. Comparatively deserted in the summer, these places are crowded in the winter time with caravans and with the familiar tents of brown cloth stretched over the bent sticks. Many of the inhabitants are still full-blooded Gipsies; but it may readily be supposed that their promiscuous huddling tegether in close quarters is fatal to their remaining the peculiar people which they used to be. The days are gone by when it was a shame and scandal for a Gipsy girl to internarry with a Gorgio, and, now that the traditional barriers have been breached, it will not be long before they are levelled. On the it was a shame and scandal for a Gipsy garl to internarry with a Gorgio, and, now that the traditional barriers have been breached, it will not be long before they are levelled. On the one hand, some rich roving Gorgio is attracted by the looks of a brown daughter of Egypt, and presents himself to her parents as a highly eligible match. Mr. Borrow tells of one case where the Gorgio husband, who had made a fortune by horse-dealing, lived in the middle of the Gipsies whom he terrorized by his courage and brute strength, and, while he looked down on the wife whom he terrorized as a squaw, never lost an opportunity of insulting her nd brute strength, and, while he looked down on the wife whom a treated as a squaw, never lost an opportunity of insuling her appla. On the other hand, there are a number of English manner whom the Gipsies affect to despise as a race altogether started to themselves, and yet they eften necessarily increases with these close neighbours of theirs. Even in the most remote districts they are equally losing their distinctive because. They have been diminishing fast in Scotland close

Firstehes of Saltons wrote in the beginning of the sighteenth century that the hormal numbers of wandering Egyptians and such like amounted to about one hundred thousand. But they have had one thriving colony in the Border country for many generations, and its headquarters still remain in the little village of Kirk Yetholm. Heave the days of the rural police, these Yetholm Gipaies used to lock up their dwellings in the summar season and betake themselves to the roads; in the winter they came home to settle in their winter quarters. Mr. Barrow wond thither to pay his respects to the reigning queen, a lady who derived her blood from the ancient and royal line of Fas. Her majesty received him somewhat ungracionally at first, distrustful, not unnaturally, of this Saxon atranger who came mumping Romany to her with no visible reason. But the mysterious extent of his philological attainments first embarrassed and finally impressed her; she fairly confessed that he talked Romany in a way to which she could make no pretensions; and yet she prided herself on speaking her language far better than any of her subjects. Air. Borrow introduces us to some other distinguished and highly dramatic charactors; among them, Jack Cooper, a noted pugilist, who married a wife whose fighting powers were relatively as formidable as those of the muscular Brunhilde in the Niebelungenlied, and Ryley Hoevil, who was buried in magnificent Oriental fashion—his ponies, tent furniture, ornaments, and personal riches generally, being all interred with him in the same grave. In short, this strange people are full of singular inconsistencies which savour strongly of their Oriental origin. Lavishness, estentation, and avarice are jumbled up together in their character. They have a scrupulous sense of honour of a certain kind, without the most shameless language, while priding themselves justly on their great personal purity; and other contradictions might be multiplied almost indefinitely. But it is a sort of presumption for any one to write upon a

TRIBUNALS OF COMMERCE.

A DEBATE in the House of Commons upon Tribunals of Commerce would not be likely to elicit any novelty. The subject has been discussed for years with the general result that it is better for litigants to hear those ills they have than fly to others that they know not of. Litigation in the existing Courts is costly and uncertain, but the judges do at any rate make an attempt to follow established principles; whereas, if nerchants were substituted for lawyers on the Bonch, everything would be at sea. The provailing opinion among lawyers is that matters should be left as they are, except that the judges should be assisted by skilled assessors in cases involving special knowledge. It may be boped that under the Judicature Act more time will be allowed for the trial of commercial cases, and that suitors will not be forced to refer their cases to arbitrators from the impossibility of getting them tried in Court. One element of uncertainty will remain under any legislation. If counsel accept briefs in several Courts which are sitting at one time, they cannot always be ready when a particular case comes on. In the Court of Queen's Bonch this week an application was made to re-hear a case which was decided against the defendant in the absence of his counsel. There were two counsel instructed for the defendant, and it is stated that one of them was engaged on an election petition, and the other at an election, and there was an application for a postponement, and an understanding-or, as the Court said, a mis-understanding-that the application was accorded to. The case came on; the counsel for the plaintiff were fully heard, and in the absence of the defendant's counsel the Court decided against him on a question involving character as well as a large sum of money. The defendant will doubtless believe to the end of his life that the result would have been different if his counsel had been present, and it must be owned that this result of a protracted litigation is eminently unsatisfactory. From various causes briefs accumulate in few hands. Neither attorney nor client likes the risk of employ-ing a counsel who is not thoroughly well known, and thus the risk is incurred that among many engagements some will be fulfilled imperfectly, or not at all. But so long as clients prefer to take the chance of having a big man rather than the certainty of having a small man for their council, so long will this element of chance be added to others which go to constitute the proverbial uncertainty of the law.

It may be admitted that the existing system is not viewed with favour by commercial men. Many disputed questions of large amount are settled by private arbitration of the most informal kind, and in utter disregard of legal principles. Whether the decisions thus obtained give greater or lass satisfaction to the losing party than the verdict of a jury cannot easily be discovered. But at any rate these decisions are obtained quickly and inexpensively, and in this manner many of the supposed advantages of tribunals of commerce are placed within the reach of commercial men. It seems that if any new Courts were established by law, they must have a system of procedure and permanent officers, and they would gradually assimilate themselves to older Courts so as to exhibit the same merits and defects. As regards the cost of legal proceedings, it must be remembered that highly skilled labour, whether of attorneys or barrieters, must be

adequately paid; and the complicated transactions of modern life tend inevitably to increase the mass of materials which must be submitted to advocates and judges. The length of legal documents, such as conveyances and wills, is still a discredit to English law; but it is easy to manufacture a "heavy brief" in a case in which no such documents appear. The Tichborne case affords an example of papers of portentous length for which conveyancers were responsible only in a slight degree; and in many other cases there is correspondence of great length which must be copied for counsel and perused by them, and thus inevitable expense occurs. The really unsatisfactory part of the system hitherto existing has been that a number of witnesses are brought down at heavy cost to an assize town to try a London case, say in July, and then it is discovered that judge and counsel want a heliday, and so the case must be referred to a barrister who will proceed with it at such time in November or December as may suit the convenience of himself and two other barristers who will be employed for the respective parties. If the lawyers acted under an enlightened perception of self-interest, they would offer to the commercial world the utmost facility for litigation. It need not be cheap, but it should be tolerably prompt, and so managed as to ensure a good stand-up flight in open Court. Every man likes to have "a run for his money," whether on the Turf or in a Court of law; and litigation, even when unsuccessful, is, if well conducted, a luxury for which wealthy litigants will pay more cheerfully than might be expected. There is a story of a Yorkshire farmer who accepted without grumbling an adverse verdict because, as he said, "his counsellor was atop of tother counsellor all the time." Lawyers who are in Parliament owe it to themselves and to their brethren, if not to their country, to provide increased facilities for litigation.

for litigation. The Judicature Commission have presented a Report upon this subject, and they promise an Appendix, which may contain some curiosities in the shape of evidence, although it is unlikely that they can throw any new light upon a question which has been repeatedly considered with the uniform result of showing that lawyers and laymen do not appear to place the same value upon law. Sir Sydney Waterlow, who may be taken to represent the average commercial mind, dissents from his colleagues of the Commission, and puts in a separate exposition of his own view. He feels very strongly that in a great commercial country like England tribunals can and ought to be established where suitors might obtain a decision on their differences more promptly and much less expensively than in the Superior Courts as at present constituted. As regards promptitude, that depends on the number of judges that the country thinks proper to employ. The procedure in the existing Courts up to trial is quite sufficiently expeditious, and it may be doubted whether some delay, which may allow passion to cool and risk to be considered before incurring great expense, may not be salutary. When the cause is set down for trial, the delay in hearing it must depend noon the number of judges, and on the arrangements for occupying mission, and puts in a separate exposition of his own view. cause is set down for trial, the delay in hearing it must depend upon the number of judges, and on the arrangements for occupying their time; and it may be admitted that the present arrangements are very wasteful, as too much time is allowed at some places, and too little time at other places, on the circuits. Then as regards expense it entirely depends what model of Court you adopt. If you employ professional advocates you must pay them, but it may be that Sir Sydney Waterlow would dispense with them. Sir Charles Napier notices in a diary which he kept in Scinde that courts-martial are generally under the necessity of proceeding without help from law or lawyers, and he interjects "Thank God for all his mercies." Sir Sydney Waterlow complains that those who support the present system of trying commercial disputes seem to regard them all as hostile litigation, and he complains that the lawyers inflict worry and engender bitterness. It disputes seem to regard them all as hostile litigation, and he complains that the lawyers inflict worry and engender bitterness. It might perhaps be convenient to settle what we want before we try to get it. A difference between friends can usually be composed by friendly means, and it would be a great injustice to the body of solicitors to suggest that it is their habit to aggravate differences or foster litigation. But the defect of Sir Sydney Waterlow's plan is that it fails to provide for the settlement of those differences whether majority or minority which are unfailedly. The plan is that it fails to provide for the settlement of those differences, whether majority or minority, which are unfriendly. The complaint that solicitors plead in their client's interest "every technical point" is difficult to answer, but we do not think that the ordinary procedure before justices of the peace is so admirable that it ought to be set up as a model for mercantile courts. The clerk to justices is usually a lawyer, and, if he be an able man, he is sure to influence their decisions; and it is better that the virtual should be the actual judge. Without adopting the demand which has been strongly urged for stipendiary magistrates throughout the country, we may at least say that it does not indicate such a general satisfaction with the system of unrained judges as would encourage its extension. It is well known to lawyers that magistrates are more open than trained judges to judges as would encourage its extension. It is well known to lawyers that magistrates are more open than trained judges to be influenced by advocacy, and the public are apt to think the power of talk even greater than it is. Large fees are paid to counsel on applications to magistrates for licences for houses of entertainment, and the money is by no means thrown away. Another and stronger example of the same kind is furnished by Parliamentary Committees. It is impossible to doubt that if mercantile men were made judges in cases involving large amounts, cosmasl would be brought before them at heavy fees, unless indeed Sir Sydney Waterlow is prepared to exclude advocacy from his Courts.

Mr. Ayrton differs from the majority of his colleagues in thinking that the openmardal and legal members of these Courts

should be placed on an equal footing, and he combats the suggestion that "the uniform administration of the law would be impaired" by allowing commercial men to decide cases. The mischief which erroneous decisions of County Court judges and magistrates might do to the law is largely mitigated in practice by the fact that those decisions are not usually reported. Lord Campbell has explained that when he was a reporter at Niai Prius he took notes of all the rulings of Lord Ellenborough, and only reported those which were good law. But we cannot always find reporters who are capable of supervising a Chief Justice, and therefore it is inevitable that the series of reports in the Superior Courts should contain some cases likely to embarrass the future administration of the law. As regards County Court judges, magistrates, and other judicial functionaries of inferior rank, there are not wanting industrious persons who would be willing to report their decisions if there were not happily a dearth of other persons sufficiently industrious to read the reports when published. Thus some limit is practically placed to the accumulation of books containing matter capable of being quoted as "authority" by one counsel against another. If commercial judges should ever be appointed, we would urgently advise them for the sake of themselves and the public not to gives reasons which would probably be wrong, for conclusions which would probably be right. Mr. Ayrton puts rather oddly his own view of the propriety of establishing these commercial Courts, and thereby relieving commercial men from the necessity of resorting to the Courts at Westminster. He argues that it is unreasonable to insist that parties shall, as a condition of having their dispute determined, "be required to create a precedent for the benefit of society." We doubt, however, whether the suitor who causes an addition to the law reports does confer a benefit on society. "Of making many books there is no end"; but certainly it had not occurred to us that suitors were

THE TWO WATER-COLOUR GALLERIES.

THE present Exhibition of the "Old Society" had well night proved a failure; some of the leading members are absent, and others appear only by minor works. One cause of this falling away no doubt is the ambition which has seized on certain painters in water-colours to shine conspicuously in oils; hence the divided allegiance between the Society in Pall Mall and the Academy in Piccadilly. Hitherto, notwithstanding the signal successes of Sir John Gilbert, A.R.A., Mr. Lewis, R.A., and Mr. Frederick Walker, A.R.A., the art of water-colour painting has suffered by this diversion more than oils have gained; as a general rule, the oil pictures of a painter trained in water-colours are filmsy, weak, and washy, while the drawings of artists addicted to oils are apt to be wanting in delicacy, transparency, and facile touch. Experience would thus seem to teach that an artist is wise to make his election between the two materials. Possibly, like a ready musician, he may anuse himself by passing from instrument to instrument, or as a man of the world he may find the wisdom of having two strings to his bow; but in the end his reputation will necessarily rest in the direction where his greatest strength lies. Yet a survey of London Exhibitions apparently proves that any such selection or surrender implies more self-knowledge and self-sacrifice than can be expected of human nature. And in favour of the course now taken by our painters appeal may be made to the old masters, who passed at will from fresco to oil or from crayon to tempera. A change too has taken place in the use of processes and in the modes of study, which favours this versatility; we are now led to look on the medium or material as an accident, as a means to an end, or as a more or less apt language for the expression of thought. And no doubt it is found that some ideas translate themselves more kindly into water-colours, and others, on the contrary, more powerfully into oils, though in this and other Galleries we too often see that artists err by choosing sub

sports amid the elements.

Unfortunately, some of the artists most constant to this Gallary Could willingly dispense with; unfortunately, too, several of the most conspicuous contributions, such as those of Mr. Richlandson, have received such perfect parody from the sister art of chromo-lithography that the walls show spots as blatant in colour as the print shops in the Strand, the Haymarket, or Regent Street, Unluckily, likewise, an unconscious comedy reigns within this

Gallery; artists who intend to be as grave as judges provoke a smile at their own expense. For this relief to the tedium of exhibitions we ought to be duly thankful, though it would seem a poor sign of the times when professedly comic cartoons are as solemn as sermons, while designs of would-be gravity provoke to merriment. Occasionally we are at a loss to know which way an artist wishes to be read; for instance, we can scarcely tell whether Mr. Smallfield invites the world to smile or to sigh over poor "Mother Hubbard" (173), though lachrymose colour and forms drawn out to ugliness would seem to suggest tears; perhaps a compromise might be hit upon in the tears which follow laurhter, or in the sorrow which some of our poets tell us should perhaps a compromise might be hit upon in the tears which follow laughter, or in the sorrow which some of our poets tell us should attemper mirth. We are equally perplexed when we are introduced by Mr. Riviere to the "Soldier's Widow," and "All that was Left to Her" (62). We heard some one suppose that the "Soldier's Tear" was the possible legacy; but on closer examination the gift. Riviere has surpassed even himself when he depicts a buxom lass, seeming in the act of inscribing her sentiments on a noble tree. Riviere has surpassed even himself when he depicts a buxom lass, semi-nude, in the act of inscribing her sentiments on a noble tree, grown and placed on the spot for the purpose. We leave the artist to speak for himself, in terms as eloquent as simple, when we add the modest title of this meretricious drawing:—"Hero, the Young, the Beautiful, the Brave, the Lovely Hope of Sesto's Daughter" (165). A newly-elected Associate, Mr. Walter Duncan, makes his first entry into the Gallery with like promise; but we refrain from designating his productions according to their deserts, because he has yet many years before him for improvement. Some because he has yet many years before him for improvement. Some people will be glad to learn from the preceding signal examples that this sedate Society finds that anusement may be mingled with instruction, and that an occasional descent into the ridiculous is not incompatible with the sublime.

But so great are the resources of this long-tried Society that

deficiencies are sure to find compensation somewhere. Mr. Alma Tadema proves himself a valuable acquisition by four compositions conspicuous by the eccentricity of genius; he may be compared to one of the many excavators of ancient tombs and temples—Belzoni and others—with this difference, however, that the old art he makes new, that dead mummies he galvanizes into life. And yet, when Pharach and Cleopatra revisit the glimpses of the moon, and are invoked as substantial creatures elethed in these and advanced with the invoked as substantial creatures clothed in flesh and adorned with the richest draperies, they do not seem to forget wholly that they have just been ghosts or mummies; they look with strange surprise on the new life restored and its surroundings, they stand rather uncomfortably as strangers or intruders, and before they enter on their daily avocations appear to wish to unburden themselves of the secrets of the grave. These anomalies are almost inseparable from archæological revivals even at their best. "Autumn" (249), is a drawing which carries the imagination far afield; on a classic seat within a beech wood are figures which like the dwing year are growing old; dued leaves lie thick upon the like the dying year are growing old; dead leaves lie thick upon the ground, and shadows gather as of the coming night. Compositions of this class leave much to the fancy of the spectator; they are of this class leave much to the fancy of the spectator; they are capable of more diversity of interpretation than subjects taken from contemporary life. Mr. Houghton is yet another artist who seeks originality by walking along eccentric byways in out-of-the-way places. He seems to deem it a privilege to be denied all sense of beauty; "A Mendicant" (259), and "The Jew" who examines a light-giving diamond smid dirt and darkness (220), are compositions strong in the talismanic spell of ugliness, in the witchery of the "black art." Such works, which never seem likely to be too numerous, give spice to an exhibition; they are what curry is to cookery.

Among the figure-painters the greatest advance is made by Mr. Johnson. "Summer Time" (44) is levely for sunshine, colour, and joyous growth of flowers. Tastefully dressed ladies on a lawn are collecting rose leaves for a pot-pourri. Great are the difficulties overcome; light is at a maximum, while shadow is all but annihilated. One of the problems which our artists are now intent on working out is the dazzling effect of sunshine upon colour, and we think it must be admitted that all that perturns a transpheric effects and spiral preparative can be better atto atmospheric effects and aërial perspective can be better attained in water-colours than in oils; witness "Sea Anemones" (231) by Mr. Alfred Fripp, "Coast of the Isle of Sark" (69) by Mr. George Fripp, "The Lledr Valley" (246) by Mr. Alfred Hunt, "Florence from the Ponte della Caraja" (235) by Mr. Glennie, and "The Alpine Summer" (108) by Mr. Albert Goodwin. This last brilliant drawing, dazzling in sunshine and in colour, pleasantly revives the recollection of travel among Swiss hills and valleys. Scarcely has the snow melted under the sun when the Scarcely has the snow melted under the sun when the

almost faultless in treatment. Neither must we forget to mention a grand study of rolling waves within sight of "The Isles of the Sea" (180) by Mr. Francia Powell. Ferhaps the light is over white and the colour rather too grey; but all things are possible to the ocean in its infinite variety. Since the days of Copley Flelding we do not remember a finer sea-piece in this Gallery.

The "Institute" is worthy of a visit, if only for the sake of Mr. Linton's "Lotos-caters" (58). The scene is laid outside a picture-eque Italian city of the olden time, wherein poetic associations linger. The materials are made up of a campanile, a colonnade, a fountain, a bronze statue, and a dark grove of cyprus trees. An itinerant vendor of objets dart presents himself to a graceful company of youths and maidens who are doing the doice for meents on and around a garden seat pleasantly situated among graceful company of youths and maidens who are doing the solve far nients on and around a garden seat pleasantly situated among trees. The picture might be an episode in the Decameron; it is likewise suggestive of M. Cabanel's lovely conception, "The Florentine Poet." The title also naturally carries the fancy away to Mr. Tennyson's highly-wrought word-painting of "mild-syed melancholy Lotos-eaters" dwelling in a land wherein "the languid air did swoon, broathing like one that hath a weary dream." Mr. Linton, always thoughtful, here again proves himself studious of type and form; his accessories too are chosen with care to carry out the governing intention. Perhaps, nothwithstanding shortcomings, there is no drawing of higher aim now on exhibition. In dire contrast to such true and sarnest art are meretricious products by Mr. Guido Bach, Mr. Bouvier, and Mr. Jopling. The last artist, under the enticing title "Strawberries and Cream" (93), perpetrates a figure worthy of a Casino. The hope of the "Institute" is not in the line in which Mr. Corbould has long led the way, but rather with truthful men Mr. Corbould has long led the way, but rather with truthful men such as Messrs. Gow, Small, Kilburne, and Carter among figure-painters, and with simple students like Messrs. Hine and Collier on the side of landscape. Not even within this Gallery does nature forsake the man who loves her truly. Curiosity and expectation have naturally gathered about certain new Associates who are represented to being peaded talout and represented to be a superscape of the second talout and represented to be a superscape of the second talout and represented to be a superscape of the second talout and represented to be a superscape of the second talout and represented to be a superscape of the second talout and represented to be a superscape of the second talout and represented to be a superscape of the second talout and represented to be a superscape of the second talout and represented to the second talout and talout who are presumed to bring needed talent and reputation to the exhibition. Mr. William Simpson, from "Round the World" with "Pictures from the Four Quarters of the Globe," spares with "Pictures from the Four Quarters of the Globe," spares but one sample from his exhaustless and most interesting store. Such impromptu work is, in relation to art proper, what clever newspaper correspondence is to mature literary composition. Mr. John Tenniel, whose weekly cartoons all the world hugh over, for once eachews comedy. Yet "Alnaschar and the Basket of Glass" from the Arabian Nights (213) does not lack story, character, or even painstaking finish. But such small ware is not quite what we may yet expect from the painter of the noble fresco in the Palace of Westminster.

THE THEATRES.

WIIAT is a "contract for publicity"? We are obliged to WHAT is a "contract for publicity"? We are obliged to ask the question because we have been lately requested to assist in carrying such a contract into execution. A gentleman in Paris writes to inform us that he has on hand "an important contract for publicity from a dramatic artist" who is about to appear on the English stage, and he appears to be going methodically to work to get his client puffed by the English press. It is true that his way of proceeding is rather opposed to English ideas, and he reminds us of a foreign baker who, desiring to obtain a lease of premises in Regent Street which were the property of the Crown, manufactured every morning rolls. who, desiring to obtain a lease of preinises in Regent Street which were the property of the Crown, manufactured every morning rolls of superior quality and sent them round to the houses of all Cabinet Ministers and other persons whom he supposed to have any influence in granting leases. It appears, however, that puffery, like other branches of business, has become international, and that an office exists in Paris where arrangements can be made, or at least can be undertaken to be made, for puffs in the journals of all European countries. The plan is to furnish from Paris to an English journal, if there be any that will accept it, a biographical article upon the forthcoming dramatic artist. This article will commence, "We are advised from Paris," and will be sent ready for insertion. So far all is clear; but the next paragraph of our correspondent's letter caused us a momentary doubt whether he intended that we should pay him or he should pay us for the puff which he desired us to insert. But, in order probably to keep up the idea that this is a genuine article of dramatic intelligence and criticism, and not a puff, we find on second perusal that he intends that we should pay him, and even requests us to name a price. Nay, more, he even proposes, with admirable audacity, that we should profix to his article ten lines of what he calls "réclame," that is, "favourable appreciation," and he suggests that by varying this "réclame" in form, the article may pass three or four times successively as new matter. It must be owned that the editor and readers of an English intends and the properties of an English intends and the properties of the proper were the property of the Orown, manufactured every morning rolls valleys. Scarcely has the snow melted under the sun when the earth is clothed in a tapestry of flowers, and gold, blue, purple, and red, attempered by grey greens, outshine the brightest colours in the painter's box. We had acarcely supposed this joyous sport of folisted and floral life, this smile of sunshine and laughter of colour, to have been within the possibilities of painting. But we have the pleasure of seeing from time to time the limits of art extended, and it is gratifying to find an English painter attain a triumph where hitherto native artists have failed. The Swiss love their country, but they cannot paint it. Mr. Hale seizes with advantage on opposite effects; he waits till the sun has dipped below the horizon; he paints the witching hour when the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; have the songhird has given place to the bat and the owl; has a substitute of the songhird has given place to the bat and the owl is a guntant and the number of substitute of the substitute of price to the substitute of the form, the article may pass three or four times successively as new matter. It must be owned that the editor and readers of an English journal, as they are imagined by this ingenious Frenchman, would not have much advantage over one another in intelligence. Supposing that an editor might be prepared to sell his paper for a sufficient price, he could have no possible inducement to give it away. Our correspondent, however, thinks that it might be agreeable to enter into comexion with his establishment for all further above the same referent that the might paper for the same referent that might paper for the same referent that the might paper for the same reference.

ciation," and publish it as intelligence received from Paris. The plan is simple, but we think that the plunder as well as the disgrace should be international.

It seems difficult to believe that such a proposal could be seriously unde. Yet it is only an extension of the existing French system of contracting fast supplement and it may not be very long to form of contracting for similarse, and it may not be very long before that system establishes itself in England. A few years more of international intercourse will doubtless smooth away any semaining roughnesses of English character, and we shall all perceive that the most convenient nuthod for a dramatic author or artist who is coming upon the London stage would be to onter into a "contract for publicity" with some established firm. Suppose, which this comedy received was accounted to the produce and the sound the produced as the produced as the produced. Although a first night at a London then the produced. Although a first night at a London then treat accounted to a newspaper, and the editor would prefix too lines of "réclame," and there would be his theatrical article ready-monde. Although a first night at a London thentre has acquired something of an "international" character, the upplease which this comedy received was accounted and it seems libely to which this comedy received was genuine, and it seems likely to become popular.

It is wanderful to observe how almost every actor of reputation

It is wenderful to outerve now assume every actor of representations on being placed at the head of a separate theatre. Mrs. John Wood, who is, and acts, an American latly, forms with Mr. Byron the principal strength of the company which acts a new play by Mr. Byron at one house. Mr. J. S. Charles, an American beaute on his shoulders the entire weight of another new play by Mr. Hyron at another house. It is idle to suppose that such a system can be satisfactory. These plays are necessarily constructed, system can be satisfactory. These pures are necessary constructed, like a monthly magazine, with a good deal of padding; and those parts of the Yaumbareuria which Mr. Clarke does not appear happen to be exceptionally worthless. In the character of a poor and not over scrapphous attorney, Mr. Clarke is, as he seldom fails to be, amusing; but when he is not on the stage it is a mere blank. The play is in live acts and the first is "introductory." This act is as mapty as the most insue farce that occupies the first half-hour at other thestees. Persons in the country may obtain a tolerably conrect idea of sow a new play is constructed for the London stage by examining the pages of a new novel. If we mention Lauriss Decremen, it is not because Miss Braddon is the worst offender in this way, but because she is the most conspicuous and popular. In that nevel she started with a fresh idea. By trueting her characters to a log-but in the North-West of America, she at least freed herself from the magnificent upholsteries among which in imagination she for the most part dwells. But this is marely introductory. She soon returns to England and her athletic pet is established at a West-End hotel, where he dines samptaously in a chapter which must have given the author as much trouble as Mr. Byron had in writing the mother and children into the play which he constructed for Mr. J. S. Clarke. The only difference between a play and a novel thus produced is that the practised reader can skip the pudding of a novel, whereas he must sit out the whole play in order not to miss the anusing parts of it. We have heard of the keeper of a lighthouse who could rely on waking if the machinery of the intermittent light failed to make the regular signals that it was working accurately. Perhaps by practice signals that it was working accurately. Perhaps by practice theatrical critic might acquire the faculty of waking whenever the principal actor cames much the states. A good deal of healths. principal actor comes upon the stage. A good deal of healthy sleep might be obtained while the young lovers were transacting the business proper to their age and sex, and when the play was over the critic would be refreshed for doing his own work during the small hours which precede the publication of a daily

The play which Mr. Albert has written for the Vandeville Theatre has been more carefully composed and produced than These has been more carefully composed and produced than either of Mr. Hyron's plays. The manager evidently contemplates that Pride will fill his house for some time, and the play has been so constructed as to efford several popular favourites opportunity to display their talent. There is probably no single scene which is better than the less parts of one of Mr. Byron's plays, but then it is more uniformly good. Resides the pair of lovers, to whom it would be dilicult in this advanced age of the world to impart novelty, there is a mechanic, who is so absorbed in his pursuit that, having impulsively accused himself of felony to screen body clse, he forgots the trifling circumstance, and is with diffi-culty recalled to a sense of his disagreeable and perilous position. Then there is a baronet who has been reduced to live upon the charity and suffer the insults of a merchant brother-in-law. He has still a taste for gambling, and helps himself to some gold from a drawer in the merchant's study. This is the theft which the mechanic takes upon himself. The mystery of the piece is the relationship of father and son between the merchant, who has rised by base arts from nothing and the mechanic. The remaining the mechanic of the property is by base arts from nothing, and the mechanic. The romance is supplied by the merchant's daughter, destined to marry a lord, and his handsome and manuating counters. supplied by the more hant's daughter, destined to marry a lord, and his handsone and insinuating secretary, with whom the daughter of course falls, most undustifully, in love. We hardly know whether the prejudice against party governesses extends to handsone secretaries, but it is obvious that this merchant who has been so successful out of doors is utterly incapable of managing his own homehold. A formidable middle-aged lady who causes to take his domestic matters under control arrives meta day tao aon, and the is reasonably amand at the anarchy which are fluid prevailing. The secretary at a deak is estendibly analysis of the anarchy his menter's letters. The daughter has some and the library for a body which takes a long time to fluid, and is attiment to fluid on a top shelf, only accessible by a laider, which she mounts with proper attention to the disposition of her skirts. There is another sixl, the teacher in the village school, who is a turnite friend and companion to the heaven, and plays propriety at this interview, and certainly does not overact the pert. A man may have his eyes so intently fixed on distant and important objects as not to see that which passes immediately under his mass: but certainly among the fathers of modern consedy this merchant stands conspicuous for fathers of modern consedy this merchant stands conspicuous for fathers of modern consedy this merchant stands conspicuous for fathers of modern consedy this merchant wount people were brought together, they could not fall in leve. Mr. Albery makes his characters say many witty things without much regard to their anitableness to the speakers. Mr. Byron's wit is more apoutaneous and antural, and he makes hir. J. S. Clarko as the poor attorney say some droll things, which are Clarke as the poor attorney say some droll things, which are exactly on the level of his audiones. A good example is his protest against drinking tea at 1s. 9d. per lis., "memoraing a distinct and unmistakable flavour of mothing at all"; and another is the speech which he makes for opactice in supposed defence of the servant-girl on a charge of stealing sugar. People will go to hear this sort of thing, but still it is a pity that a clawer writer should put so much slovenly work upon the stage.

REVIEWS.

DIXON'S TWO DEFENS!

WE are always anxious to keep faith with all men, and among them with Mr. Hepworth Dixon. We are bound to Mr. Dixon by a solome promise. When we reviewed the pair of volumes which he put forth last year 1, we promised that, if his next volume answered certain conditions, we would review it seriously as an historical work. Those conditions were that it should be written in prose, and that the references should be as little unsatisfactory as Mr. Froude's. And we defined prose, for the purposes of the matter in hand, to be "where we cannot find more than two ten-syllable lines, and those not consecutive, in each page." Now, in studying the deeds of King Harry, we suspect that we have caught a little of his spirit. Mr. Froade, who suspect that we have caught a little of his spirit. Mr. Fronde, who holds that all the acts of the ideal King were written for example of life and instruction of namers, must therefore approve our state of mind; Mr. Dixon doubtless will not. Anyhow, like King Harry, we have scruples of conscience, and, like King Harry, we must reveal them to the world. Unluckily we have not, like King Harry, the means of taking the opinions of Universities and appoints for the adjustic of the state canonists for the relieving of our doubts; we must even sottle our great concern and privy matter as we best may for ourselves. Our case is this; we do not think that Mr. Dixon's present volumes quite answer the conditions laid down, but we do think that they come nearer to answering them than the other two volumes did. What then are we bound to do? We hardly think that the casuist would hold that, as things stand, we are bound to sit down and examine Mr. Dixon's book as gravely as if it were a book, we will not say by Mr. Brewer, but oven by Mr. Fronde. Yet we are so ready to welcome the slightest signs of amendment, we are so auxious not to discourage Mr. Hixon or anybody else in even the faintest effort after a reformation of manners, that we have a certain feeling as if we ought in some way to mark two facts. One is that Mr. Dixon's language, if not strictly prose according to our definition, is yet one step nearer to prose than it was a year ago. The other is that his references, though still not satisfactory, though still more unsatisfactory than Mr. Froude's, are still not quite so un-

satisfactory as they were hast year.

Let us first take our readers into our confidence as to our first scruple, the question of press or not press. It is quite certain that Mr. Dixon's metrical powers have not treaken him. There are plenty of passages in these two volumes which fall as naturally into metres of various kinds as anything in the first two volumes. On the whole, Mr. Dixon seems not so fond of the received opic and tragic tensyllable metre as he was before. And this is part of our difficulty; if there is a page in which we cannot find two consecutive ten-syllable lines, but in which we can find a passage something after the manner of Keha or of Gray's Bard without the rivnes, is such a page to entitle Mr. Dixon to the benuit of our promise? Or again, if we find not two whole pages of prose, not one whole page, but two half-pages, made by the ending of an old and beginning of a new chapter, are those half-pages to be allowed to qualify? Mr. Dixon, as author of the Switzers, will understand us if we liken this difficulty of the half-pages to the difficulty which sometimes arises from the presence of half-Cantons in the Confederation. Auxious to be just and accurate on the smallest point, we determined to test ten consecutive pages taken at random, and we began with Vol. III. In that page we found far more than the needfed Here was a battle piece in very respectable blank page 107. allowance. VOTED.

Our next two pages supplied their quots; we recognize the true ring when we read how

Henry knew that peace with France Had been the potentar of his feither's reign; His marriage had disturbed the line of march, Hy maging England on the side of lips in.

Indeed, If Mr. Dixon, instead of "march," had used some word like "advance," which would rhyme with "France," he would really have turned out something coming very near to a querrain with alternate rhymes like Gray's Elegy. But after this we broke down; then came the two half-pages, and in the second of these even the battle of Ravenna, even the description of Archduchess "Marguerite"—the French form is Mr. Dixon's—as "a Queen of Song " could not stir Mr. Dixon up to any high metrical effort. To be sure the lack is quite made up in other places. Here (iv. 123) is a flerce trochaic gibe against Wolsey almost equal to any handeensyllabic of Catallus:—

Hen whem he had tolled and polled, Blen whom he had plucked and serowed, Men whom he had gnawed and scourged, Assailed him in the public streets.

Or again, more in the Kehama vein :-

Love laughed, as Russell said, In Anna Boleyn's eyes; But love in Anna Boleyn's eyes Was innocent of everything but mirth.

So much for the question of prose and not prose. As to the question of references we have much less of "my note book" than we had before. We doubt if we have it at all in the fourth volume, and though a good many of Mr. Dixon's references are still of that kind which are a mockery rather than a help, there are others which it is not hard to make use of; and there are here and there short discussions of particular points which show that he is quite able when he chooses to put plain sense into plain English. Of course this really aggravates his habitual offences both as to style and matter, as they show that the offence is willful Still, as we before said, we welcome any signs of amondment, and seeing that we have got two half-pages which a charitable construction will bring within our definition of prose, and seeing that we have several notes at the end written in a really rational way, though Mr. Dixon can hardly bind us to the letter of our bond, we think that he is fairly entitled to at least so much favour as to make his two volumes an occasion for a few remarks on his subject, and on his way of treating it.

One thing at least Mr. Dixon has done; he has given Mr. Froude a lift. While we are on the subject of our own doubts, difficulties, and scruples, some of our readers may perhaps remember another great concern of ours which we had some years back. This was to find out whether Mr. Froude was in earnest, whether he really believed his own paradoxes, whether he was not simply playing as a trick, and trying to see what astounding things some people might be led to believe. It did seem so very odd, so wholly beyond the reage of all earlier experience, that any man could seriously bolieve that a man cut off his wife's head one morning, and married her maid the next, out of nothing but pure patrictism. It was so odd that a man should think that, to prove not only facts, but the motives of their doers, it was enough to say that, reading Mr. Froude again by the light of Mr. Dixon, we believe that Mr. Froude again by the light of Mr. Dixon, we believe that Mr. Froude again by the light of Mr. Froude the \$\tilde{a}\t

was no leagur in Heavy's the your, and only acced his head by Minney dwing before it could be ent off, then Nariolk was nothing as squaffert. We still indeed hear of his envires, but they are no leagur the same proof positive of his virtues. Sundy no man would have contradicted himself in this way unless he had really meant what he said each time. Mr. Dixon of course, as the champion of Auso, painted each time. Mr. Dixon of course, as the champion of Auso, painted each time as a secondrel at the earlier century. But have he was nothing worse than a time-server who was affaild to do his duty—nothing worse, that is, than everybody was at the time, butings for martyrs on opposite sides. But at the moment Mr. Dixon's picture is a truer one than Mr. Fronde's. Still Mr. Fronde's picture is a grotesque that a man could hardly have drawn it unless he had at the time really taken it for a Miseness. Mr. Rixon's, with all its glare and gaudiness, is one that any one could have drawn, whether he believed it to be a likeness or not.

But what is of more importance is that both Mr. Fronds and Mr. Itixon have got into a characteristic confusion shout the tribunal before which both the Queen and her brother Lord Rochford were tried. Mr. Fronds is, as usual on legal points, slowardly. We are reminded that we see dealing with the man who shad never heard of paint forte at dans, and who—throusin agreeing with Mr. Bixon—had such vague notions as so the nature of attainder. Mr. Fronds tells us, "Bise heard, with her trother, would be tried by the House of Lords"; and he says ofberwards:

—"As a certain number only of the peers were summaned, it may be imagined that some fixed was precised in the selection, and that those only were admitted whose subserviously could be relied upon." Mr. Bixon says more holdty:—

In such a situation, two extraordinary measures had to be adapted by the council. Strong as the pretenders were at court, they faired not bring the Queen to Westminster, and try her in the spen day, tween the English pers. Chapura was shull of failure. Heavy gave enters that his consent should be tried in the Tower, instead of its Westminster distl: and by a picked committee of pers., Instead of by the house. Thus, her proper that she might have a lawful trial, and that har accusers might not be her judges, was refused.

We believe that Mr. Dixon is quite right, as against Mr. Frombs, in pointing out how carefully the Court was picked for the sequence. But neither Mr. Fronde nor Mr. Dixon seams to have the least notion of the constitution of the Court of the Lord High Steward, as it then stood. Yet they might have found a good deal about the seconds of the debates on the subject recorded in Lord Macaulay's fourth volume. Anne was tried "by a picked Committee of Pours instead of by the House." But that she should so be tried was according to the ordinary law of the time. And Parliament been sitting, she and her beother would have had a right to be tried by the whole House. As Parliament was not sitting, the Lord High Steward appointed for the purpose did, as usual, select, in the words of the document quoted by Mr. Fronde, "such and so many Lords" as he thought fit. That is doubtless such and so many as were safe to find the Queen guilty. As usual under Henry, the injustice was monstrous, but the legal process was perfectly regular. And neither of our writers notices that, though Purliament was not sitting, set a Parliament had been anumoned on the very day on which the first arrests were made, and that it not in the month after the executions. Had Henry wished for justice, he would surely have waited till Parliament mot, and till Anne and Rochford could have laid a chance of a fairer trial. But he took care to get rid of his victims before Parliament met. When they did meet, it was no use in those days to ory over spilled blood, there was nothing to be done but to approve of what was already a thing of the past.

We think then that we have quite carried out our promise. We have seriously examined one part of Mr. Dixon's book; and, in order not to deal unfairly by him, we have chosen a part where, so far as any one who has any regard for pood taste and good English can go along with Mr. Dixon, we do go along with him. We used hardly go much more into dotail, but we have noted a few things here and there. We could wish that Mr. Binon had given us the original of the letter in which Henry the Eighth (iii. 57) is made to call Venice "a rock against the tide of Islam." We should be greatly supprised if King Harry, with all his learning, was so far in advance of his age as to know the real name of the creed which people a good deal later spoke of as "Turkism." We are enrious to know about Sir Thomas Parre, who is described (iii. 64) as "a man of succent limage with the blood of Saxon monarchs in his voins," and who is further described as "a connexion of the reigning knows," and one who, "like Henry, could trace his line to John of Gaunt." John of Gaunt can hardly be galled a Saxon monarch, and so we are left to gaves whother the blood of Saxon monarch which flowed in the veius of Sir Thomas Parre had got there from the same sources as those by which it had got into the veius of Henry, or from some other sources which Sir Thomas Parse had all to himself. But perhaps "Saxon monarchs" are spoken of as wagnedy by Mr. Dixon as "Saxon saints." It seems that Anne Boleyn professed to be, through the house of Butler, descended from a sister of St. Thomas of Canterbury—Mr. Dixon, we may note provides his Bucket with a small a with a grave accent—and on the strength of this we have a great deal (iii. 132, 133) about the "kinsman of Caen being Saxon in the ethnology of Mr. Dixon. Indeed he goes so far as to use this Saxon pedigree as a source of metaphor, but of metaphor which is alto-ether showed our understanding. He is describing Anne Boleyn when she was

A little lady in her fourteenth year.

He then goes on to tell us how she was "a bright and elfin creature; one in whom the Saxon depths were lighted up by Celtic fire." Getting up out of these depths, Saxon or other, we desire to know something more of a person described (iii. 121) as "Bruce, King of Scots." Are we to understand the famous Robert or his much less famous son? And we are still more puzzled (iii. 182) with another person described as the "Dauphin François d'Angoulême." It is hardly possible that Mr. Dixon can have thought that Francis the First was the son of Louis the Twelfth, but from one who thought that Mary of Burgund was the daughter of Margaret of York we are not surprised at anything in the way of genealogy. It may be as well to point out when Mr. Dixon (iv. 97) calls Cardinal Campeggio "a worldly priest with children to support," which sounds like the revival of an old scandal, that Campeggio had been ordained as a widower, and that the son whom he brought with him into England had been born in lawful marriage. And, as Mr. Dixon seems rather in the dark about legal processes, it may be kind to remind him, when he says (iv. 260) that "the punishment of high treason was the axe," that, unless when a remission was made, the punishment was the axe and a good deal besides. It is perhaps from Mr. Dixon's new-born zeal to turn out something which may without impropriety be read aloud in a family that he has left out a good deal which, if his subject is to be treated at all, cannot honestly be left out; but at any rate it is going too far altogether to leave out the perfectly well-authenticated history of Henry and Mary Boleyn—Anne's younger sister, according to Mr. Dixon—on which the validity of Anne's marriage so largely turns.

perhaps from Mr. Dixon's new-born zeal to turn out something which may without impropriety be read aloud in a family that he has left out a good deal which, if his subject is to be treated at all, cannot honestly be left out; but at any rate it is going too far altogether to leave out the perfectly well-authenticated history of Henry and Mary Boleyn—Anne's younger sister, according to Mr. Dixon—on which the validity of Anne's marriage so largely turns. We have now done with Mr. Dixon; we should be well pleased to think that we had done with him for ever. We have tried to do justice to the least glimmerings of improvement even in such a writer as he is. But improvement must go very much further than it has gone yet to counterbalance, in any sensible degree, the inherent vice of writing like Mr. Dixon's. It is all the worse because here, as elsewhere, he shows ever and anon that he could have done something better if he had chosen. This of course only aggravates his offence. He has deliberately chosen the wrong path. He has made up his mind, with his eyes open, to address himself to a low taste, when we-believe that he could have done something to please a higher. That Mr. Dixon has admirers is plain; that he should have admirers is a fact worthy of notice, as proving the existence of a very remarkable form of human nature. What kind of people they can be who are not disgusted with his ceaseless false glare and glitter, with his constant sacrifice of truth and sense to mere sound, is beyond our power of guessing; perhaps some scientific body, the Anthropological Institute for instance, may be able to define and to ticket a form of our common nature which to us at least is altogether baffling.

VAMBÉRY'S CENTRAL ASIA.

M. Vambéry, in 1804, published his Tranels in Central Asia, he was careful to let us know that the objects of his venturous exploits were principally philological, and that statistics and geography had the second claim on his attention. Political speculation was at the same time declared absolutely incompatible with the character of a Dervish. But when, in 1808, this accomplished Orientalist published a second volume, full of interesting details about fanatics and the wild tribes of Turkestan, he made a jump from philology to politics, and in his last chapter devoted sixty pages to a consideration of the rivalry between Russia and England. Now a discussion of this sort is apt to become a ruling passion, and in the volume before us M. Vambéry examines the great Central Asian question by every possible test and under every conceivable aspect. The work is a reprint of ten essays contributed, at various times between 1867 and 1873, to the pages of Unsers Zeit, and we discover that the first paper is simply the last chapter of the author's second work, Sketches of Central Asia, with a few verbal alterations. It would seem that the learned Hungarian wrote it first in English, and then turned it into German for the periodical mentioned. Any slight alterations in the language, then, are simply due to the process of filtration which the author's thoughts have undergone when composing in two languages, neither of which is his native tongue. To the translation which the papers have passed through in order to present them in an English garb must be owing some petty mistakes in the spelling of words regarding which Orientalists, who differ in many things, are entirely agreed. M. Vambéry does not require to be told that there is not in the well-known title Maharaja or in the Persian word 19 jihad." In like manner "Munshi" is spelt with an s, and not "Dijihad." In like manner "Munshi" is spelt with an s, and not "Dijihad." In like manner "Munshi" is spelt with an s, and not "Dijihad." In like manner "Munshi" is spelt with an

whose motives he is invariably suspicious, and whose policy he emphasically condemns. We take it, however, that while this author does not lay claim to the character of a scientific geographer, his general accuracy and faithfulness cannot be impugned with any success. He may not be an adept in the use of chain and theodolite. Some of his distances may have been miscalculated, as, for instance, that between Djizzag and Peshawur, which he puts down as only 120 geographical miles; but we apprehend that it is hopeless to call in question his descriptions of the desert, his notes of the various tracks followed by caravans and Kirghizes, and the positions which he assigns to petty forts and occasional wells of bitter water.

But, if politics have been kept out of sight in the first work and only touched on in the second, the present volume inverts the position of such topics altogether. Indeed M. Vambery has only one other part left to take up. His denunciations of the Ozar remind us of nothing so much as those uttered by the Athenian remind us of nothing so much as those uttered by the Athenian orator against Philip. A parallel might easily be found, in some one or other of these ten essays, to the Philippics, the Olynthiacs, the Peace, and the False Embassy. We might even go further and compare the last paper, on the campaign against Khiva, to the Domosthenic orations on Halonesus and the state of affairs in the Characters. Men like M. Vambéry however do not fulminate Demosthenic orations on Halonesus and the state of affairs in the Chersonesus. Men like M. Vambéry, however, do not fulminate speeches. They only overflow in pamphlets, or they fill the columns of a widely circulated paper. Yet, if intelligent observation, unrivalled familiarity with that recondite Oriental life which wraps itself in religion and caste, and sterling honesty of purpose, justify any writer in discussing what must become one of the most formidable problems of the day, M. Vambéry has indisputable claims to be heard. We observe, however, that his knowledge of Indian politics is by no means on a par writers pertaining exclusively to the valley of his information on matters pertaining exclusively to the valley of the Oxus or the Zerefshan. We shall first specify a few of the the Oxus or the Zereishan. We shall first specify a 1ew of the points on which he has either been misled by newspaper paragraphs or has failed to have recourse to authentic sources. When a traveller leaves the gossip of the tent, the caravan, and the crowded bazaar, for the solemn discussions of the Council and the Cabinet, he must not disdain to pore over blue-books. A moderate amount of drudgery would have avoided the following mistakes. It has never been a primary object of Indian Viceroys to establish an English representative or commissioner permanently at Cabul or Kandahar. On the contrary this idea has been discussed only to be abandoned. A knowledge of Afghan events is attained with greater facility and much less risk, through a native Vakil. An Englishman at Boymaroo or the Bala Hissar cannot be spit at by an excited Mahommedan in a festival, not to say cut or shot down, without a tremendous explosion. A native agent can live in a foreign capital and mix with Heratees or Bokhariots live in a foreign capital and mix with Heraters or Hokhariots without attracting attention or inviting insult. He is not likely to have "views" or "policies" of his own. He can be changed or withdrawn without a Special Correspondent becoming aware of the fact. He requires no escort; he oversladows no local dignity; and he offends none of the sturdy conservative instincts which hedge an Oriental despot against the invokes of reform. M. Vambery next sees in the departure of Lord Lawrence, at the standard electric layer of his five wears toward of five the indications of a vampery next sees in the departure of Lord Lawrence, at the natural close of his five years tenure of office, the indications of a decided change in the treatment of the Central Asian matter; and, with a gravity which a French savant might envy, he declares that the climate, "after the first few years of trial, agrees well with every Briton for the end of his life." Anglo-Indians will smile at the dictum that the healthiness of the climate increases with learnth of weidang while set to the alaman for the climate increases smile at the dictum that the healthness of the climate increases with length of residence, while as to the change of policy which followed Lord Lawrence's departure, the simple fact is that Lord Mayo carried out to the very letter all that his predecessor had designed. What the Irish nobleman further did was to fix, limit, and define, as far as possible, the relations of the Indian Government with the Amir of Cabul on the original lines indicated by Lord Lawrence.

In the same strain of erroneous assumption our author conceives the "island kingdom" to have borne the cost of the Afghan campaign of 1842, and Englishmen to be apprehensive of incurring more debts for similar unlucky expeditions. England, we need hardly say, in the ill-conceived and ill-fated Afghan affair, gave nothing to India except an incompetent commander and the worst of advice. Then we light upon a passage which at first sight reads rather oddly. Shir Ali, it is well known, has two sons, Yakub Khan, grown up, now the Governor of Herat, and Abdulla Jan, the lad whom his father's partiality designates as his Wali-Ahd, or successor. In regard to this latter the author says that the mother of Yakub was gradually removed "from the circle of his royal favour, and her place was occupied by an Afghan princess, whom the King subsequently married, but who was then already the mother of a boy eleven years of age, named Abdulla-Jan." This might be construed as if M. Vambéry was under the impression that Abdulla was step-son to the Amir. What he really means, and what is clear from other passages, is that the ceremony of formal marriage was not performed until his son by the second wife was eleven years old. The language of the translator is not very happy in this sentence, and the author himself, we think, has overstated the age of this lad, who was only about seven or eight years of age as the time of the Umballa Durbar. Neither is he accurately informed regarding the offensive and defensive alliance between the English Government and the Amir, and the stipulation for a yearly subsidy. No formal treaty or alliance was ever combined; and the substantial assistance in arms, ammunition, and money has been given

Control Asia and the Anglo-Russian Frontier Question. By Arminius Vambery. Translated by F. E. Bunnett. London: Smith, Elder, & Co.

to the Amir at irregular intervals, and can be withheld or granted as the Viceroy pleases or as events dictate. Again, it is impossible on military and strategical grounds to condemn too strongly the suggestion that England, by way of fortifying her frontier, should occupy the fort known as Quetta, or the "Little Fort," on the northern side of the Bolan Pass. This plan, which is a favourite one with certain irresponsible declaimers, has almost every possible demerit and defect. The situation is unhealthy. The expense would be enormous. A garrison isolated and at a distance from its supports and reinforcements would be a source of apprehension and alarm. The project, moreover, has been seriously analysed and condemned by some of the most experienced soldiers and most competent statesmen in India, who, at issue on other points, have been unanimous in refusing to spend millions of money in keeping thousands of English bayonets in a place which is either a desert or a swamp.

M. Vambery must excuse us for making another remark. While the progress of Russia has in some points vindicated his prescience, the course of events has in others deprived his chapters of half their value. For instance, one essay is devoted to a narrative of the rise, progress, and final ascendency of Mahommed Yakub, known as the Khushbegi, or the Atalik Ghazi, in Yarkand and Kashgar. The whole information, as far as we can make out, is second-hand, derived from a certain Hadji Bilal, whose home was somewhere in the "Six Cities," and who cordially hated the leader of the Khojas, by whose means the Atalik rose to Empire. M. Vambery sneers at the inexpensive character of the first embassy to Yarkand under the guidance of Mr. T. D. Forsyth. But he is obliged to admit that the enterprise has resulted in a second deputation on a larger scale, and with better prospect of success. In fact, the simple and unostentatious character of the first mission probably disarmed the suspicions of the Yarkand ruler, and by the help of Mr. Shaw and Mr. Forsyth we shall probably know much more of the commerce, climate, productions, and politics of this part of Central Asia than we could ever have gathered from M. Vambéry's informants.

It is, however, impossible to deny the force and earnestness of the author's criticisms on Russian encroachment, or the justice of many of the sarcasms which he levels at the apathy and ussociance of the Foreign Office. And no one can fail to be impressed with M. Vambéry's ability in baffling the penetration of purists in apeech and bigots in religion, with his contempt for privations, dirt, and discomfort, in the interests of philology and science, and with the close attention he has given to a political panorama which is always shifting, and in which the goal reached to-day becomes the starting-place of to-morrow. His arguments cannot be put aside summarily, though Russian generals might be only too glad to send him to Siberia, or though an Indian Political might declare him wanting in knowledge of what passes in the Gouncil Chamber of Calcutta or Simla. His final suggestions are certainly not deficient in pertinence and propriety. Putting aside the wish to see an English Resident at Cabul, on which we have already commented, he is right to urge on us a more skilful, active, and earnest diplomacy at Teheran. He is also correct in insisting on the demarcation of the boundary of Afghanistan and Persia, and on the necessity for increased vigilance on the part of Lord Derby and Mr. Bourke. When Russia moves another pawn in advance, or prepares to give check with her castles or knights, M. Vambéry's prophecies and denunciations ought to be read side by side with the explanations of Prince Gortchakoff and the placid commentaries of Lord Granville.

Moanwhile we may close this paper by drawing attention to one or two of those anecdotes of Oriental customs which could only be surpassed or rivalled by such Orientalists as Mr. Palgrave or Captain Burton. The author found Anglo-Indian Sepoys at Herat and elsewhere, who, having doubtless done deeds in the mutiny which put them beyond the pale of the Queen's amnesty, had crossed the border and entered the Afghan service. And Afghans, with gleams of fanatic hatred in their eyes, boasted as to a fellow-believer that their swords had struck down English Kafirs. At another time he listened imperturbably to a description given by a pious Mussulman of the arrival at Aksu, one of the six cities of Eastern Turkestan, of what is termed the "Mui-Mubarak," or "blessed hair" from the beard of the Prophet. The criterion of genuineness, we are told, is that such hairs cast no shadow if held in the light, and that they bow of their own accord when true believers repeat the well-known formula "Allah Akbar." But the author hints that an admiring and fasting knot of believers may have been the victims of a wicked hoax, and that the precious relic was merely that of a grey sss. We conclude with an incident which beled the author during his residence in Bokhara some ten years ago. The Sunis, it appears, wash their arms five times a day from the elbow downwards to the hands, owing to which process the points of the hairs incline to the palm. The Persians, who are Shias, on the contrary wash from the hands to the elbow, whereby the hairs slant upwards. The Bokhariots, accustomed to these two marked varieties of Mahommedans, were amazed to find that the hair on M. Varibery grew neither upwards nor downwards, but in a circular form. They were driven to regard him as a "remarkable Museulman," an "abortion," or a specimen of "an unknown race" of the creed of Islam! We commend this new fact of development to the notice of Mr. Darwin; and we take leave of the mather with a lone that from his Hungarian professorship he asy still

continue to wake us up from our insular complacency, to reind us of our national duties, and to prepare our statesmen for grave controversies which can neither be evaded nor ignored.

FORSYTH'S ESSAYS.

MR. FORSYTII has published a miscellaneous collection of R. FURSYTH has published a miscellaneous collection of articles and lectures written during the last sixteen years, and asks for the judgment of the public, "from which," as he says, "there is no appeal." The judgment of the public is not the same thing as the judgment of critics; and we express our own opinion with the sense that it may possibly not coincide with that of the world at large. Many books have obtained for a time a wide popularity for which we should not find it very easy to account. Essays which to us appear to be the embodiments of commonplace thought seem to commend themselves for that very mason to a class of readers who absolutely dislike originality. reason to a class of readers who absolutely dislike originality. And yet we presume that, though we may not have been able to discover it, there must have been in such cases some other elements of success. Mere absence of intellectual vigour cannot be a sufficient recommendation, or the number of popular books would at once be multiplied indefinitely; but of a thousand insipid productions one may hit off the precise flavour of insipidity which suits the ordinary palate; whilst the nine hundred and ninety-nine pass into oblivion as quickly as they deserve. Though the dulness of a book does not amount to a demonstration that it will be a of a book does not amount to a demonstration that it will be a failure, it certainly raises a strong presumption against its success. And therefore we cannot affect to have much hesitation in predicting the fate of Mr. Forsyth's Essays. Their characteristic quality, if we may be permitted to use the expression, is the absence of any characteristic whatever. They are exquisitely hundrum, respectable, and commonplace. There is not a word to which the most sensitive father of a family, or the most orthodox clergyman of the high and dry school, could possibly raise a moment's objection. Mr. Kinglake tolla a story in the first volume of the Grimean War as to the means by which the Times made itself the acknowledged representative of public opinion. An acute observer was sent out to loiter in places of common report. He was to listen neither to to loiter in places of common resort. He was to listen neither to the very foolish nor to the clever; he was to wait till he had heard some common and obvious thought repeated by a number of independent people. That was the prize which he sought for, and the possession of it enabled his employers to trim their sails to popular sentiment. How far this story may be founded on fact we know not; but if such a system existed at the present day, the acute observer might save himself half his trouble. He would only have to discover Mr. Forsyth's opinion to know what was the obvious view taken by the respectable classes. Several of the articles obvious view taken by the respectable classes. Several of the articles now published appeared originally in the Edinburgh Review, and they represent that good sound Whiggism which is scarcely distinguishable from equally solid Torvism. Nobody could hit off more accurately the proper justa milieu between opposing tendencies. In the first page we are told that the name of Brougham is "imperishably associated with those of Clarkson and Wilberforce"; in the last we have the essence of Paley's Ecidences preforce"; in the last we have the essence of Paley's Ecidences presented in a series of ten propositions. The intervening matter is ruch as might naturally come between two such exemplary state-The contents, indeed, are miscellaneous in a high degree. ments. The contents, indeed, are inscollaneous in a high degree. Mr. Forsyth writes upon criminal procedure and upon literary style; upon the lives of the Judges and the tunnel through the Alps; he criticizes Eugénie de Cuérin and M. du Chailln; he describes visits to Russin, to Sark, and to the Portland prison; gives an account of Cobbett, and discusses the principles of his gives an account of Cobbett, and discusses the principles of historical evidence. But the identity of the author is perceptible in every line. Everywhere he makes the proper bows to all the orthodox objects of worship; accepts the ordinary verdicts, whether in politics, history, or literature; and, in fact, is a model specimen of the English gentleman who has enjoyed all the advantages of a legal and classical training. There is not a single statement throughout the volume which could be called eccentric by his wildest antagonist, and which could be called eccentric by his wildest antagonist, and he only once condescends to make a joke. He apologizes, indeed, for this weakness; less for the badness of the article, it would seem, than for the loss of dignity. Our readers may judge whether an apology was needful upon either score. Certain caves in Sark, it seems, are called less boutiques. In describing one of them Mr. Forsyth says, "This was the cavern—the veritable shop which gives less boutiques their name, and, if the pun may be excused, we never intend to go 'shopping' there again." There is a well-known pun commemorated by Charles Lamb which excited inextinguishable laughter on account of its supremue badness and utter irrelevancy. Perhaps an equally ingenious writer might utter irrelevancy. Perhaps an equally ingenious writer might discover merits of a similar kind in Mr. Forsyth's essay in the art. We can only say that it appears to us to be, on the whole, the very feeblest specimen of facetiousness that ever presumed to pass itself off under the name.

How is such a book to be criticized? Any of our readers can guess for himself what kind of remarks such a writer is likely to make about Eugénie de Guérin. He discovers, of course, that it is a relief to find so pure a stream of thought amidst "the impurity which has so long flooded French literature," and that there is not a trace of cant or affectation in her pages." He discovers

^{*} Essaya, Critical and Narrative. By William Forsyth, Q.C., LL.D., M.F. Lendon: Longmans. 1874.

also that the eulogics of M. Sainte-Bouve, "one of the first of French critics," are exaggerated; but he does not venture to the a single fault in hur writings, for to do so would be to be more of less original. In short, he says in good grammar and with sufficient flow of language what overybody has been saying; and treads with tolerable security in the steps of M. Sainte-Beuve and Mr. Matthew Arnold. We are not likely to gain any new views from criticism of this order. Let us turn to an article upon literary style, which is one of the most elaborate in the volume, and from which at least we may hope to discover what are Mr. Forsyth's views of bis own art. He begins by pointing out that style is a moster of much importance, and comparing it to cookery and architecture. Hume, he tells us, is still "at the bend of English historians" in virtue of his style, and is not likely to be displaced. Paley waste in good style; so did Cobbett, except that he was too fond of italies; the letters of Cowper and the works of Living and Southey are also models of style. In the next place, German style is cumbrons, whereas French is neat and dexterous. English, on the other hand, is apt to be careless—a fact which is attributed to our being a "practical people." The sum quality explains why English architecture has been had for the last two centuries, though a better teste has now begun. should ask in vain whether the style of English architecture was worse during those two centuries than the style which prevailed classifier; whether we were a "practical people" for that period slone; and what is the real opposition between a good style and practical tendencies. Mr. Forsyth is far too well satisfied with his antiquated and slipshed little platitude to care to ask whether it walls antiquate his widdle. "Flore cours consists on the unlocks his riddle. Then, after some remarks on the carelessness of our nineteenth-century writers, he observes that a good style can only be the result of labour, and wishes, with all the air of the author of an original remark, that it were the custom to teach English composition at schools. Such a system, be observes, would not obliterate individuality, which he proves by the observation that the style of Isaiah differs from that of Jeremich, and the style of Herodotus from that of Thueydides. were not aware that any of those writers were systematically taught the art of translation from classical authors, which he is specially commending; but we agree that the danger is imaginary. Then we "proceed at once to Gibbon, whose style is in many respects remarkable." He was, we are hardly surprised to learn, "a timid infidel," and his skill in accoring is "the keynote In the next paragraph, however, it couses to of his style." be the keynote, for the "general character" of the style "is that of lofty magnificance." We are not to industrand, however, that he never relaxes, for sometimes he indulges in an indecent note. He is, however, generally too still and too little given to the picturesque. He would not have ventured upon some given to the picture que. of Macaulay's details. Mr. Foreyth appears to be under the impression that all this has not been said many hundred times before, or he would scarcely have republished it seventeen years after its first appearance. Then we have a series of equally original criticisms on the Duke of Wellington, Alison, Macaulay, who has a bad habit of repeating nouns instead of using pronouns; Napier, who is good at describing battles; Dickens, who is inclined to caricature and to fasten upon little addities of manner; Carlyle, who wrote a good style in the "Life of Schiller," but has since which wrote a good style in the "Line of Schiller," but has since written a language of which the whole structure is "often in a state of contortion"; De Quincey, whose style is discursive; Mr. Ruskin, who is occasionally bombastic, and Dr. Newman, who is agreat master of English. Then we are told that many modern writers are apt to be flippent and facetious at any price—a fault from which we can conscious timely say that Mr. Forsich is outlinde force. which we can conscientiously say that Mr. Forsyth is outirely free; and finally we are treated to that poor old formula, which ought to have been dead and buried lifty years ago, that we cought to write as much as possible in "Anglo-Saxon," though it would be pedantry to insist that all words of Greek and Latin origin" should be excluded. Here we have, of course, Mackintosh's translation of the "penetrability of matter" into the "thorough-farosomeness of stuff"; and so we are left between two opposite platitudes in the ordinary attitude of the thoroughly respectable person. The true moral of the paper appears to be that any man is objectionable who has a marked idiosymensy of his own. The dectrine that Mr. Carlyle's writings ought all to have been pitched in the key of the "Life of Schiller" is precisely that which commends itself to the good safe lover of commends. place. Mr. Forsyth of course quotes, and of course admires, the very questionable advice to a young writer to strike out whatever he thinks particularly fine. If that precept could have been generally enforced, Mr. Carlyle and such offenders might have been compelled to form themselves on the model of the Speciator. All that gives them their characteristic flavour would have been refined away; and English literature would have been nave been refined away; and raignes interactive would have seen reduced to a good stondy jog-trot without a spark of originality or genius. We do not feel convinced that it would have been the better for the process; but doubtless it would have been much more to Mr. Forsyth's taste. Respectability is obviously his pattern wirtue, and he is as much vexed by a man who writes a style of his own as by a statement who ever forgets to keep Vattel below. his own as by a state-minn who ever forgets to keep vatici below-his eyes. Of course there is a good deal to be said for his views on most matters, for opinious which have satisfied several militims of ordinary people must have something in them. But it is hardly worth while to publish such Juoubrations, and it is certainly not worth while for anybody to read a formal statement of views which he can so easily construct for himself. Take that view which have not a judicious to the ordinary British Philistine,

dilute it in that kind of writing which forms the pudding for the Edinburgh Review, mix in as many of the current platitudes on the subject as occur to you, and you have one of Mr. Forsyth's Essays.

HOFFMAN'S PORMS.

THIS is a collection of various piaces by a writer who had a growing reputation in America about thirty years ago, and who is still well known for some of the senge reprinted here; but who has long been obliged by ill-health to give up work. The kindly purpose of the editor might perhaps have been attained letter, on the whole, by a smaller selection; but the book is really noteworthy for a certain special power. The American posts best known in this country are, with one-exception, the posts of culture. The primary inspiration both of Longfollow and of Lowell, in their different ways, is essentially literary. Mr. Haffman is described by his editor as "a lover of nature and the natural," and Goethe's longing is quoted as the clue to his life:—

Where can I justury to thy secret springs, Eturnal Nature? Onward still I press, Follow thy windings still, yet sigh for more.

To judge from the book itself, we should say that this account needs a little more definition. The posts of wild nature any he roughly classed as philosophical, descriptive, or romantic. One of the first hind finds in nature either, as Wordsworth did, divino and all-sufficing lessons, or, as floothe did, spiritual refreshment in the pauses of passionate social experience. A teno faculty of the second kind, such as that of Shakspeare or Keats or Maurice de Guéria, reveals itself in those touches which give us, we do not know how, a now and intimate sense of outward things. To the third type of imagination—of which Schiller, Scott, and Byron represent phases—Wild Nature is the theatre of Wild Life, human or superhuman. Now the genine shown forth in this book is of the third sort. The writer is hardly a poet when he has to express merely the converse between Nature and his own soul. The thoughts in the piece called "Primoval Woods," for instance, if calculy analysed, will be found to come to this:—"Was any one with an equal knowledge of Elementary theology over here before? Probably not." Nor are his descriptions, though bright and spirited, mainet with that indefinable sensious magic which is quite a different thing from vividness; thus the "Forest Cametery," which has some fine passages, somehow fails of being a beautiful picture. But when he has to tell a story of human passion as terrible as the cliffs or woods that saw it, then he is really strong—then he shows that, in this direction, he has a genuine gift. We shall come back to them presently; but first we must get through a less grateful part of our task.

witness to this gift. We shall come back to their presently; but first we must get through a lose grateful part of our task.

The pieces in the volume are arranged under four catagories—"Forest Musings," "Lays of the Hudson," "Love Poems," "Songs and Occasional Poems." The first two divisions, besides containing the two real poems, are altogether much the best; and we cannot help wishing that the third division had been either omitted or weeded. It begins with a piece called "Love Calendar," in thirty stanzas, describing the successive phases of a lover's misery. If a stanza represents a day, it might have been entitled "A Calendar Month of Love"; and when the lady, who may be supposed to have read Stanzas I. to XXIV., requests that her letters may be sent back on what in prose would be called the 25th instant, we confess that our surprise is tempered with other feelines. "Coming Out—A Dream" is perhaps the best of the "Love Poems." Three of the songs are said in the Preface to be popular still—"Monterey." "Rosalie Clare," "Sparkling and Bright." "Monterey" is a variation of "On Lindon when the sun was low," and ends with what strikes us as rather an odd sentiment for a military bard, though the fault may be in our own civilian mind:—

We are not many—we who press'd Boside the brave who foll that day; But who of as has not confess'd He'd rather share their warrior rest Than not have been at Monterey?

"Sparkling and Bright" is a good specimen of the kind of song which is still conventionally supposed to crown festal joy; and, if it has not already been put down by fair belligerents, we have no doubt that it will live.

The two real pouns of the book are "Knohesco" and "The Ambuscade"—both stories of Indian revenue. In his early days Mr. Hoffman was foud of making excursions into the country about the Upper Hudson, and among the lakes at its sources in the Adirondac Mountains, then a trackless solitude save for buntres or Indians. His spirit of adventure, his sense of mostical enjoyment in wild travel, and, above all, his feeling for the pathetic side of Indian life and history, remind us sometimes of Cooper, and sometimes of Captain Butler, especially of the Great Lone Land. A man must have both manliness and the insight of tenderness if he is to penetrate, as these have done, the secrets of the Indian nature, and appreciate the power of loving and suffering, of devotion and self-devotion, which is often disquised under stolid pride or disfigured by savagre ferocity. The scane of "Kaphebo" is laid among the Adirondae Mountains, on the share of a lake valled Inco-pah-co—which, the notes my, may be l'indiand as "Lindenmere"—ane of a long chain of lakes which displacent themselves

"The Poems of Charles Franco Singliness. Collected and Billiad by his Nephaw, E. E. Huffman, Philadelphias Faster & College, 4673. into the St. Lawrence, but which are clearly interlessed with the head-lakes of the Eludson. Euchesses is so old Indian with whom the traveller makes friends on a fishing ramble, and who tells him his story one night as they are smoking their pipes over the line him the lake. Euchesses in his youth had loved the daughter of a trapper whose lodge was on one of the lake-islands, and it is told law, when her lever was away hunting, the maiden

would venture forth,

Venture upon the darkest night,
Assess the broad and gasty water,
To climb that cliff upon the main,
I've some since call'd the Maiden's Rest,
That foot save hers both never press'd,
And watch the camp-fire's distant light,
Which told that she should see again
Her hunter when the dawn was bright.

At last just before Karhesco went away on a longer hunting excursion than usual—they were formally betrothed. Kachesco sent messages to her by one of his tribe, his chosen friend, who sought to win her love for himself, but whose lies never shock the girl's faith. The eve of the marriage morning cause, and the bridegroom's triends were gathered before the island lodge,

Waiting until that mean should rise. The brids moon, whose aspect crown'd, For good or ill, our destines; The signal, tee, the hear had come When I could ohim my bride and home.

At that moment the false friend sprang forth, rushed into the hut, and stabbed the girl to the heart. When Kachesco woke to consciousness from the fever which followed his frenzy, he saw the murderer watching over him,

Trembling, with jealous fear afraid,
When near the grave I seem'd to hever,
Lest that bright hand which claim'd the maid
Was opening too upon her lover.

He hoped, he blindly trusted, he, He hoped, he Dinniy trustee, ne,
That on the instant that I woke
Rovenge would be so there in me,
I'd madly deal some deathful stroke,
Would sond his soul where here was gone.

But a form from the Spirit-land was ever moving about the sick man's bud-

With palm reversed it seemed to say,
"If yet thou wilt not with me go,
Keep him—oh, keep but him away!"

How this charge was kept, the rest of the poem sets forth. Thenceforth it was the one task of Kachesco's life not to let the mon die. He takes his right of avenger by cutting off the brave's war-look, and so making him for ever an outcast; but he will neither kill him nor leave him. The tale of how the wretch, praying in agony for the death which was always withheld, was worn down into a broken-spirited thrall, is told with an intensity which is wonderful and terrible—an intensity which depends too much on continuity to be represented even faintly by extracts. But we wish that we had room to quote the stanzas with which the poem ends —the Indian's creed of unother life, and his vision of those Islands of the West on whose strand he looks to see his bride

As we have said, there is one other poem in the book which shows, in its degree, the same distinctive power—"The Ambuscade." The picture of the Adirondach Indians, mute and motionless from sunrise to summet in their lair, of their unsuspecting formen coming on through the wild mountain gorge, and then of the onehught, could have been drawn only by a true poet. We take leave of his book with the hope that, if only for "Kachesco," it will find readers in England, and that in his own country it will bring to the memory of these poems that which one of them describes—"An Indian Summer."

THE RIVISED EDITION OF THE STATUTES.

TEME expectation that a Conservative Government will do some-These expectation that a Conservative Government will do something to clear the law of its observity is not unreasonable. These is nothing revolutionary in a Code; which may indeed result from the most dissimilar causes. It may be the expression of the abolition of old privileges and customs, and then it is a natural accompaniment of political change; or it may be merely the distalment in an orderly form of a disorderly body of law already in existence. Thus the codification of Napolecon was already in existence. formularization of the principles of the Revolution, while that of Justinian was in the main a mere-generation of well-understood rules in a more convenient shape. The latter process is one which haven of widely differing views are beginning to unite in wishing to see attempted; and it is essentially suited to a Government which, while it shrinks from unnecessary innovation, is auxious for insprovement. It would be quite possible to bestow on the country the inestimable boom of an intelligible system of law, without modifying in the least the rights and duties of a single citizen. We are of course a long way as yet from a Code, but some approximation to it is within easy nach, if people could

only be made to understand that a reform in the sources of the law is at least as important as a reform in the machinery of Parliamentary elections.

A correspondence which enrang up in the Rieses during the Easter recess may possibly have attracted some public attention to questions which are as a rule delated only in probasional circles. "A Barrister" wreste to hint that the time had some for some more vigorous effort for the consolidation of the statutes, and parlaque also for a renewal of the attornst made four or five years ago to form a Digest of the Experted Cases. To him replied "the Editor of the Revised Statutes," bidding the impatient Harrister wait quietly and see what is in store for the legal world when the assessed edition shall be complete. Then followed other letters more or less coherent, and hastly the "Barrister" wound up the contraversy by declaring that no one had chaken his original ballof that comething memoring mas no one had chaken his original belief that comething ought to be done. We entirely concur in this opinion, and wish the "Barrister" all success in the disheartening task of pursuading judges who have thriven, and Queen's Counsel who are now thereing in mitter of the distance of the state of criving, in spite of the disorder and prelimity of the law, to see

the boarsty and utility of brevity and saethed.

I'p to the present time two arrious attempts have been unde to render the sources of the law more accessible. The expregation of render the sources of the law more accessible. The accompation of the Statute-book was systematically undertaken in 1850, and a Commission with a view to the construction of a Dignat of the law was appointed in 1866. The labours of the Commission resulted in ladicrons failure. It was of unwioldy size. The lagar notables of whom it was composed had abviously but the vaguest conception of the mature of their task. One might be tempted to suppose that the learned Commissioners entertained a belief, which we have heard gravely asserted, that the turn "Dignat" implies a digrestion or assimilation of the nutritions matter of the resumbed digestion or assimilation of the nutritious matter of the reported cases into a new substance. It is at least cartain that in their riew a Digest consists of an orderly collection of logal rules, such of which should be the essence or extract of all the cases upon the subject, and should be supported by references to them. It ought to be nunceessary to state that, in its etymologically and historically accumate some, the toru is suggestive surely of selection and arrangement. A Digrest is a classified selection of extracts. There may be a Digwet of Statutes when the extracts are taken from Acts of Parliament, or a Digwet of Cases when the extracts are taken from the Reports, or a Digwet of both combined; but in any case the extract should be taken we hally as it stands, and no attempt should be made to express its securing in other language. When the reforming dramamen expresses to be the his own language, whether he is giving what he supposes to be the effect of a series of cases or is consciously inventage a new rule, the following a new rule, and the series of the following to a bigest but to a Code. The following Comissioners tried to produce a hybrid—a Cade the chauses of which are supported by some of the apparatus of a biggest—and which are supported by some of the apparatus of a bigrest—and their failure was inevitable. They employed three distingent to prepare specimen portions of a so-called Digest upon this plan; but when the work was done, the question at once suggested itself whether the rules drawn up by the draftsmen really represented the cases upon which they professed to be founded. It was impossible for the Commissioners to assume this to be so without examination. It was equally impossible for them to neglect their own various dignified and responsible for them to neglect their over again the very work which had occupied their subordinates during several years. They preferred to discharge these gentlemen, by two of whom they were forthwith sued for breach of contract, and to recommend the discontinuance of these gentlemen, by two of whom they were forthwith sued for breach of contract, and to recommend the discontinuance of

the Commission, which thus terminated an inclusions existence.

The less pretentions scheme of reform has, on the other hand, produced solid results. The condition of the Statute-book, a complete edition of which exceeds a hundred volume, in which cannot useful emetaments are meatrically intersporsed amongst clause which have been accorded for continuous fad languages. chances which have been repealed for conturios, had long been a soundal, and many preparations for its improvement had been made helbre Lord Westbury, who was Attorney-General at the time, amounted that the work had been at length undertaken in somest. The whole series was to be correctly examined, registers were to be compiled of all Acts that had been repeded, and anrepealed, but sport or otherwise obsolets, hav were to be enhedded for express repeal. The residue was to be published in a mederate compass. Ideally a year has passed since that announcement was made without some evidence of the activity of those to whom the work was entrusted. Experiention Acts were prepared and carried through Parliament, by which a wholesale charmen was made of character law, and in 1870 the value of what had been done was revealed by the publication of the first volume of the Revised revealed by the publication of the first volume of the Revised Statetes. We have on previous occasions given some account of that volume, which contains every syllable sow remaining in fures of the legislation of the four and a half contains which proceded the Lievalution, and of the second volume, which covers the eightytwo years which intervane between 1088 and 1770. If the subsequent volumes, the third accounts for the thirty years ending in 1800, but the fourth and fifth deal with only about ten years apiece, and envy us down only to 1823. This is by no means surprising. Not only is decislation more copious as we appreced our own times, but the amount of unseprated matter is proportionately greater. Considerable, however, as the built of the operative law presented in those volumes, a gluone at the registers with which each is furnished will show that it furnes but an insignificant fraction, perhaps one township part, of the emetments of the same period which are repealed. One is thus ambled to appreciate the bessit consequent. two years which intervene between 1688 and 1770. If the sales

[&]quot; The Sectator. Revised Edition. Vol. III. 17 G. III. to 42 D. III.
1770-1800; Val. IV. 45 G. III. to 32 G. III. the 32 G. IV. 1820-1803. By Authority. Landon: Printed by Gainge Released Eyro. and William Apolithmyonic, Edution to the Catenda Most Excellent Egiaty, 2870-1874.

ferred upon the lawyer who can now for the first time obtain in so manageable a compass the net surviving result of fifty years of prolific Parliamentary activity. This result is, as compared with the legislative results of earlier or later poriods of equal length, of no great importance. One's first impression of the surviving statutes of the period is that they are mainly concerned with the militia, with the building of new churches, and with the relief of the poor. Looking at them somewhat more closely, we may remark, among those of constitutional importance, the Royal Marriage Act, the exclusion of clergymen and contractors from the House of Commons, and the appointment of a Vice-Chancellor of England. A good many Acts are devoted to Queen Anne's Bounty and other Church matters. The Land-tax is made perpetual, and the Consolidated Fund is established. In criminal law we get the Act which forbids meetings of more than fifty persons within one mile of Westminster Hall during the sitting of Parliament, and suppresses the clubs of "Spencean philanthropists." There is a good deal of legislation against the embezzlement of public stores, and against frauds in trade, such as the sale of spurious tea or of trusses of hay below a certain weight; and there are severe enactments against the comparatively minor offences of stealing turnips and giving false characters to servants. Especially in the later portion of the review of the previous the proveness of humann facility is marked. ferred upon the lawyer who can now for the first time obtain in so severe enactments against the comparatively minor offences of stealing turnips and giving false characters to servants. Especially in the later portion of the period, the progress of humane feeling is marked by the abolition of the pillory, of the more barbarous parts of the punishment for treason, of the whipping of women, of the burial of suicides at crossroads, and of the necessity of passing sentence of death for any felony except murder. Of historical events other than the Treaty of Paris in 1763, of the organization of India, and of the Union with Ireland there is little remaining trace.

If our public law derives few principles of first-rate importance from the fifty years covered by the three volumes, still fewer are the rules regulating the relations of private persons to one another which can be traced to the same period. That the insurer of a life must be interested in its continuance, that the occupier of premises is not liable for accidental fire arising in them, that Good

premises is not liable for accidental fire arising in them, that Good Friday is a Bank holiday, that promissory notes for sums less than twenty shillings are void, that there may be copyright in sculpture, that acceptance at a banker's is a general acceptance, and that acceptance at a banker's is a general acceptance, and that a complete list of such rules; but to the Acts containing them must be added the Act which still regulates all ecclesiastical marriages (4 G. IV. c. 76). We might learn even from the statutes of the period that it was an age of stage-conches, the furious driving of which is made a misdemeanour, but there are no provisions as to become the statutes which were to locomotive steam-engines. Such were the matters which were dealt with by Parliament during the later Georgian period. As to the manner of dealing with them which was then in vogue, it is worth while to remark that it was an age of attempts to embrace large topics of law in single chapters. It produced "General" Acts, such as the "General Turnpike Acts" of George IV., clauses of which are still painted up at every tell-gate, and the long codes which govern the militia of the three kingdoms at the present

Knowing the difficulties which have had to be overcome, we are not disposed to join in complaints of the tardy progress of the new edition of the Statutes, although it is now fifteen years rather than five, as might be inferred from the recent letter of the editor to the *Times*, since the work was commenced. Ten were spent in registering, expurgating, and other processes preliminary to the publication of the first volume in 1870, and of the subsequent volumes which have followed thus far at the of the subsequent volumes which have followed this far at the rate of one a year. It is consoling to learn that although, owing to the causes to which we have already referred, the editor expects that the legislation of the half-century which has elapsed since 1823 may fill ten more volumes, he thinks that these may be all published in the course of the next three years. When this has been accomplished, to use the editor's apt expression, the jungle will have been cleared. We shall possess in about fifteen volumes every syllable of operative law enacted during more than six centuries, and it will be the duty of Government to take care, by means of annually published tables of the effect of new legislation, and by periodical re-editing of the volumes themselves, that it shall henceforth be the simplest thing in the world, instead of one of the most periodical re-editing of the volumes themselves, that it shall henceforth be the simplest thing in the world, instead of one of the most difficult, to tell whother or not any given section of an Act of Parliament is still in force. The work, as far as it goes, is one of the most solid improvements ever effected in the law of this country, although it is dissingured by two faults, to which we have called attention on previous occasions, and the ill results of which are very apparent in the volumes recently published. In the first place, it is quite right that certain Acts should be omitted which, though technically a part of the "public" series, are really of a "local" or "personal" character; but this is done with so little method that Acts are inserted at full length the sole effect of which is to remove doubts as to the legality of certain marriages. A more important mistake is the inclusion in this series of Acts operative only in Scotland, Ireland, or the colonies. A glance at the new volumes will show how large a proportion of their bulk, though passed by the same Parliament which legislates for England, has no operation in this country. This is of course increasingly the case since the date of the union with Ireland. The mistake seems to arise from the double nature of the Statute-book, which is both a collection of historical monuments and a collection of emendations on several district bedies of law. For historical purposes, it is important that all the doings of the Imperial Legislature should be viewed as the law of the purpose, the accident that settutes affecting the purpose of the setting the purpose. is no good reason why the lex scripts of England should be obtainable only in combination with fragments of the lex scripts of the very different systems which prevail in India or in Scotland. It would be scarcely more absurd to insist that no copies of the Jubbelli et pacis of Grotius should be sold unless bound up with the theological writings of the same author.

We are still not without hope that, on the first occasion when the Revised Statutes are re-edited, the work may be broken up into four bodies of law, the first of which should consist of all Acts operabodies of law, the first of which should consist of all Acts operative in England, and the others of Acts operating in Scotland, Ireland, or the colonies exclusively. As we have often suggested, the same division should be made of the annual issue of new statutes. But even if the Revised Statute-book were terrect in arrangement and complete to the present day, it would still fall short of what we have a right to expect, because its order would still he merely chronological. To discover the law upon any given subject, such as conveyance of land, or bills of exchange, one would still have to hunt for and piece together for oneself rules enacted in different reigns and probably printed in different volumes. The remedy for this is obvious. Logical method must be substituted for chronothis is obvious. Logical method must be substituted for chronological sequence. When every enactment has been transferred just as it stands, be it French or English, well or ill expressed, with all as it stands, be it French or English, wen or in expressed, what as other enactments on the same subject, to its proper place in a general scheme of legal topics, the Statute-book will have become a Digest, and this, by consolidation and re-expression in a uniform dialect, may be readily converted into a Statute Code.

THE VON MOLTKE NARRATIVE OF MARS-LA-TOUR. (Second Notice.)

NEVER in all the history of battles has the advantage of audacity been so plainly illustrated as in this instance of Mars-la-Tour. It has been already shown that the German cavalry had been allowed, owing to the shameful negligence of Forton's French horse, to approach unobserved the very road along which lay the main line of retreat to be followed that day. Their shells falling suddenly in the midst of Murat's dragoons spread a panic which seems to have been hardly less serious than that following the similar surprise by the Bayarians of De Failly's infantry at the similar surprise by the Bavarians of De Failly's infantry at Beaumont a fortnight later. Though startled at first, the French soon recovered, and went down in force towards the section of road thus boldly taken possession of by the advanced

guard of General Voigts-Rhetz.

As has been said, the country about Rezonville and Mars-la-Tour is of a remarkably open character. It slopes on the whole to the southward, and has undulations running through it which fall away presently into ravines as they trend towards the more broken district through which the German army was coming by way of Gorze; but they seem unimportant to the eye of the spectator standing anywhere in the vicinity of the road and villages, though forming features in reality sufficient here and there to cover troops from fire. The only notable tactical point of the ground which was to be contanded for, besides the villages themselves, is a large isolated at the formed which was to be contended for, besides the villages themselves, is a large isolated. patch of wood, which runs northward of the road a mile or so, well clear to the west of Mars-la-Tour, but with its southern end close to Vionville. This wood is known as the Bois de Tronville, from a hamlet near its southern point, and its possession, or rather the having it in the rear as a point d'appui, formed the key to the greater part of all that followed. If the Germans, coming up from the Moselle in a north-west direction, seized and held Vionville and the border of the wood near it, they would effectually bar the most direct road from Metz towards Verdun; and in doing this they would not only throw the whole of Bazaine's army on that more northerly chausee which divergus to Étain, but would compel all the corps yet left on the Metz side of Mars-la-Tour to make a wide détour round the very head of their advancing columns in order to carry out the plan of a retreat on the Meuse, which must thenceforward be either abandoned or carried out under pressure and at the most serious risk. This Tronville wood, with the ground about it, formed, in fact, a point of unspeakable importance to the Germans in the "bold dash" ordered the day before by Von Moltke to be made at "bold dash" ordered the day before by Von Moltke to be made at their enemy's line of retreat; and for the same reason it was essential on the French side that it should not be yielded except to superior force and after every possible effort had been made to hold it. Yet if one wishes to tell the history of this hardly-fought day in a single sentence, it may be done thus—the 6th Division of Alvensleben's corps at once dashed on Vionville and the ground outside the wood before the French had recovered their first surprise, and all efforts to dislodge them proved vain. In fact, from the time that the division accomplished this prime object, and the 5th, already come into action to the right, prolonged the line it took up south-eastward across the road, and so on to the south of Rezonville, the real front of the battle never altered seriously. Desperate efforts were made here and there have in the division of the latter and the line in the line of the latter and the latter in the latter are the contents. never altered seriously. Desperate efforts were made nere and there later in the day to crush or pierce or outflank the bold assailants. But, as a whole, the French acted chiefly on the defensive, strange as this seems under the conditions. This is the blot which the official writer very justly hits in their whole conduct of the fight. In fact, the sudden appearance of the German infantry on the ground before their advance grand of cavalry and house artillery gould be cleared from it; this wide outspreading of the two districts favoured by the contrary column

Mary Street, Sales V. Bester, Millian

imation into which their battalions instinctively broke; the dring attempts which they made not merely to hold their own, by to carry the open ground before them, and drive the French lib back towards the Etain road—all these seem to have impressed up the French generals, especially on Canrobert and Frossard, to thom they were first opposed, a completely unreal notion of the fart upon the ground, and so prevented them from making effectivenes of their superior numbers, which must, had they been free used at the first, have been sufficient to turn and overwhelm their daring foes. Besaine himself shared largely in, and even added to this error, as we shall presently see. And the result sufficiently proves that the enormous advantage gained for Germany on the day was due above all to the apparently reckless boldness with which Generals Buddenbrock and Stulpnagel threw their divisions ito action, and the courage with which they maintained a contest, which, had Bazaine but known that they must be for hours unupported, they could have had no chance of holding the

ground tey had seized.

Not the General Alvensleben or his staff were at all aware of the situation of the enemy as they came to know it afterwards. To them t seemed that the large force of French before them, which the so soon brought to a defensive, could be but the rearguard the of Bazaine's army. It must be remembered that the III. Corporad had for days very little opportunity of knowing how far the Freth might have carried out their retreat. In seizing the wood of Troville, and pushing beyond it with the audacity already mentioned, teir efforts—beyond the general desire to carry out Von Moltke orders—were made with the view of bringing this supposed reargard to bay, or driving it back on a retreating mass beyond. It we not until late in the day, when reinforcement on reinforcement as discovered coming into the French line from the direction of the that they began to understand the fact that it was the heady the enemy's army and not the tail which they had engaged, all that their exertions were about to earn the realization of the greatest strategic design of modern war, the cutting off an arry of 200,000 men from its base. The course of events that ensue was briefly as follows. The 5th Division had got well upon the ground before the 6th, and just in time to meet the advance under by Frossard's Corps from both sides of Rezonville, when he panic raised by Murat's dragoons was stayed. Checked by he bold counter-attack of General Stulpnagel, the French edged any to their left, and extended that flank as though to turn hin and in doing this gradually faced west. Meanwhile General luddenbrock, more to the German left, had wheeled round the 6t from its first direction on Mars-la-Tour, so as to keep near thuth, and made an attack on Vionville, then held only by part of huget's brigade, which proved completely successful. He was son across the road, and at once confronted Canrobert, who was baging in his two divisions to Freesard's right, and apparently intending to turn Stulpnagel from that side also. It was now near non, and it seems to have been at this time also. It was now near non, and it seems to have been at this time that the French fell into be great error of the day. Frossard and Canrobert, without ordertyet from Bazaine, formed their troops carefully as for defence; at the corps of Lebeuf, moving up to support them from the are northern road, passed round Canrobert's right flank as thigh to turn the German left, but so slowly and feebly, considering the thinness of the line before him, as to cause the purpose of be movement presently to fail. For Buddenbrock made a show deovering his left with his last small infantry reserve sided by the energies and withdraw some of the infantry reserve aided by the cavalry, and withdrew some of the light artillery at his disposal to dexterously from the other flank as to restrain the French on tat side, and even to give time to advance his right and carry the hamlet of Flavigny, an important point, south-east of Vionvill, which connected his division effectually henceforth with the aft of Stulpnarel. This advantage gained, the Prussian efforts ceded for a while. The III-4 Corps had in fact exhausted its officient power, and done nobly in winning ground from two of the enemy's. But besides Lebeuf, who was moving in on the Frenq right, Marshal Bazaine, now in person on the ground, had the nn of the Guard Corps arriving near Rezonville in sufficient forceto have completely turned the German flank on that side by reiforcing the French left. And here we may well let the Berlin wher tell what became of these troops: infantry reserve aided by thecavalry, and withdrew some of the

As it would seem, it was the Marshal'adesire before all not to allow himself to be out off from Metz. He thought hat he discerned such an intention on the Prussian side in their advance. Apering to this notion throughout the day, the Marshal directed his chief at hit on to the woods lying south of Gravelotts and Rezonville, from which sid he especially feared to be outflanked. For this reason the division of Lasson-Sorval was already halted east of Rezonville, and fronted southward: The Marshal similarly caused the Zouaves of the Guard, with a brigade of Guard cavalry and some guns, to halt and face to the couth nearer Gravelop. And still further to the east, opposite the Bois des Ognous, he placed threflegiments of the Grenadiers of the Guard, with the Voltigeur division of Digny in reserve behind them. Thus the whole of the Guard and part of Chrobert's corps were kept at a part of the field where no serious attack was be made. And the reserve taken up by Frussard and Canrobert.

When this was the view taken by thir Commander in Chief.

When this was the view taken by thir Commander-in-Chief, what wonder is it that the movement of he French on their right produced so little effect on their bolds adversaries? Lebosuf indeed hypught his corps into action belond Alvenaleben's, and Ladmireuit supported and extended its movement; but not until the Germans had received some of the exmetty looked-for reinforcements of the K. Corps, whose infantry, haried on to the front by detachments, and already preceded by the lignes, which had been preceded on at special speed, gradually nowled the left. The hattle

meanwhile waged increasably along the centre, the infantry fire can either aide being hot and deadly, and frequent partial advances being made and repulsed on either side. But on each flash the German horse took a noble share in covering the weakness of their infantry line. On Alvensleben's right General Bredow led a deeperate charge of his brigade into the French batteries, only to be received and severely cut up by the very dragoons of Forton who had been surprised in the morning, and to leave half his men and horses behind him in his retreat. On the left, now partly protected by the head of the Xth Corps, the 1st Guard Dragoons rode down a mass of French skirmishers in the most desperate cavalry charge of the war, and by a most terrible self-sacrifice freed for the moment the flank of the Gorman infantry from the pressure thrown on it by a turning movement of Ladmirsult's corps, which had now deployed beyond Lebeut's. Still later, Barby's dragoon brigade on the same flank overthrew in fair fight the cavalry division of Legrand, who found a soldier's death in the encounter. At one time it seemed as if the single brigade of the Xth Corps, which had reached the Tronville wood, must yield it to Ladmirault; but the splendid achievements of the cavalry on their flanks, the powerful and well-served artillery which supported General Voigts-Rihetz, and finally the reinforcements of infantry coming in, enabled that general to hold his own. On the right Prince Frederick Charles had taken command, and had even ordered an attack on Rezonville, which failed before the deadly fire of the Chassepot. This was the last important event of that hard-fought day. Night closed slowly on the exhausted armies. The Germans had failed to carry the position taken up by their enemies. The French had not recovered the ground lost before the contest began. A clear-space, hardly a pistol-shot across in places, and marked out by two lines of the dying or the dead, showed where the centre of each had vainly striven for more ground. Each

THE MYSTERY OF ASHLEIGH MANOR.

"MISS CALLENDER'S taste," says the author of The Mystery of Ashleigh Monor in a foot-note, "was quite in keeping with that of her contemporarists; and should the reader feel tempted to laugh at her for it, let him ask himself how his taste may be judged fifty years hence, when some witty reviewer shall discourse on the character of the plays and novels which delight the present generation." It is no slight satisfaction to find that one at least of our modern novelists has some suspicion that her works may be laughed at fifty years hence. So, too, some port miss or some young fop may, when waking up with an aching hoad after a party kept up too late, be troubled with a suspicion that fifty years hence they may themselves be found as ridiculous as any of the battered beaux or faded coquettes whom they had found so absurd the night before. It is scarcely probable, however, that The Mystery of Ashleigh Manor will be laughed at fifty years hence, or even five years hence. Like many another piece of folly, it will find safety in the world's forcetfulness. The reviewer of the present age, whether witty or not, unfortunately finds little to make him laugh in most of the novels that come before him. The first "sensational" novel, as it is called, that we read might perhaps have moved our laughter, had the sensational novel, like Minerva, sprung into existence in all its completeness. It grew, however, by slow degrees, just as some Cockney villa by a succession of owners, by the addition of this monstrosity and that monstrosity, this ugly wing and that ugly piece of rock-work, attains in long years the full measure of its absurdity. Of all the modern novels the most wearisome is that which, like The Mystery of Ashleigh Manor, belongs to what we may call the Governess School. Ever since Jane Eyre was written it has become the fashion for ladies to write novels in the shape of autobiographies, in which the heroine who tells the story is a governess and an orphan. There would be at all events a certain degree of variety if,

last out of the way.

The heroine of the story before us, Kate Malcoimson, was left an orphan at the age of eight—was not Jane Eyre eight when she was left an orphan?—to the care of her stern old aunt Mrs.

^{*} The Mystery of Asiloish Monor. A Romance, By Eliza Rhyl Daviss. 3 vols. London: Richard Bentley & Son. 1874.

Wellwood. This aunt had some excuse for her sternne late husband "Mr. Wellwood, who died six years after their late husband "Mr. Wellwood, who died six years after their nuptials, had been a man of a very coarse nature, though sprung from a respectable Dorsetshire family." "His temper," we read, "had been aggravated by drink, a vice which in those days was esteemed a decoration." It is difficult to understand how drink can be either a vice or a decoration. It is comfortable to learn, however, in the next line that "that fashion has been reversed in this ago." So now perhaps we must look upon drink as a decoration which in these days is esteemed a vice. Mr. Wellwood had left behind him an only son, who "not only drank drink as a decoration which in these days is esteemed a vice. Mr. Wellwood had left behind him an only son, who "not only drank like his father before him, but was abnormally passionate, deceitful, and sinister in his nature." He bullies the heroine when she is a child, and falls in love with her when she is grown up. She escapes from him by getting a place as governess at Ashleigh Manor. We hear nothing more of the cruel aunt and the wicked son till at a convenient point in the story, when the heroine stands—or thinks she stands—in need of some ready money, he jumps out of an upper window in a fit of drunkenness, and his mother dies of grief and remorse, leaving her niece 5,000l. How much the world would be improved if at every pinch in our fortunes we could conjure up relations who have enough wickedness to deserve to die, and enough penitence 5,000l. How much the world would be improved if at every pinch in our fortunes we could conjure up relations who have enough wickedness to deserve to die, and enough penitence to make us their sole heirs! With the aunt and nephew, then, we have nothing to do, and the real interest of the story begins when the young governess enters Ashleigh Manor, "having passed through the ordeal of certain interrogatories from the black-browed janitor who guarded the entrance to the estate." One whole wing of this old country house was entirely shut up and empty, and, by its vacuum so abhorned by nature, called for that supply of crimes and horrors which was so soon to come in. The heroine as she was led by the housekeeper through one of the courts "was struck by the damp mortary smell, as though we were in a crypt or an old church." We were not surprised to find that some sixty years before the story opened—sixty years is the usual time that has elapsed since a murder was committed which only indirectly bears on a story—a very beautiful young lady had in this very court been "barbarously stabbed in the throat." The floor was "still black with her blood." For, as the housekeeper remarked, in language which was most creditable to her as a housekeeper, and would not indeed have disgraced Mr. Mortimer Collins, "Blood is a wonderful dye. It takes Eternity to obliterate its terrible sign."

There was something gained by thus plunging into the horrors of the old past of the mansion, for "the swart and suller rooms" through which the new governess passed served, when she at last reached the drawing-room, to "heighten the feetal beauty of this brilliant apartment." The heroine does her best to describe this "gilded saloon," but at last she has to confess that "the list of the furniture would fail to convey to you the forcible suggestions of splendour, wealth, and refinement with which the large room was full fraught." Not unworthy of the room was the footman.

the furniture would fail to convey to you the forcible suggestions of splendour, wealth, and refinement with which the large room was full fraught." Not unworthy of the room was the footman, "this fine and handsome gentleman in silver trappings and well shaped stockings"; but sadly unworthy both of the gilded saloon and of the footman in his silver trappings was the lady "who reclined on a sofa, very richly dressed in green silk, with white lace flowers." Her husband, when, two years after he had murdered her, just before killing himself, he wrote a confession of his crime, had only too wheth reason for saving. "Downs adultorers that she had only too much reason for saying, "Domon, adultoress that she was—the world owes me its debt of gratitude for wiping so fell and foul a thing out of its sight." Whether a virtuous husband who sheds his wife's blood can properly claim the gratitude of mankind we do not care to consider. We are, however, forgetting our heroine, whom we had left, no longer supported by the footman, in the presence of this magnificence and this lady. She had but a cold reception, but at length she escaped by the footman, in the presence of this magnificence and this lady. She had but a cold reception, but at length she escaped to her own room, where, "while the clock was striking nine, Mrs. Saunders came in. She brought a small tray containing wine, biscuits, and sandwiches." It was not yet time for these refreshments to be enjoyed, for first Miss Laura, her pupil, had to be put to bed. "This being so, I took a bedroom candle, which the footman had left upon a side-table, and lighted it. When we entered the passage, I found that it was illuminated by two large laura, one at each end." Laura—who, as she was good, and was to die early of typhoid fever, of course had gold-coloured hair—was at length put to bed, and the time had come to enjoy the refreshments that had been provided. "Mrs. Saunders eaked me to take a glass for her." So friendly do they become together, that after a page or two the heroims says, "Will you not take another glass of wins, Mrs. Saunders? I am much obliged to you for your attention in bringing me this refreshment." The next day is marked by much the same attentions, and again "at nine the footman brought up a tray bearing some refreshments." Everything, in fact, except the damp mortary smell, and the stain of blood, seemed to promise a most peaceful existence. Within was the footman in silver trappings, and without were fields "swelling with the yellowing green of crops—verdant sees deep-breathing to the transparent kinace of the soft west wind." But the mistress of the house, Mrs. Merton, was a lady whose taxener "was a weed of no recent growth," and whose "face had desp-breathing to the transparent kieses of the soft west wind."
But the mistress of the house, Mrs. Merton, was a lady whose temper "was a weed of no recent growth," and whose "noe had worn Passion's signal for many a long year." She had, a few ween serlies, stabbed her husband in the arm, when he had responsed her with too great familiarity with a Daptain Fowler. The large soot finds out all the secrets of the family, by pumping the large stable with the large stable and the servants.

conduct scarcely consistent, we should have thought, with to excellence that is meant to belong to her. She detects he Merton and Captain Fowler in a place which leaves no doubt of their guilt, and, after long hesitation, informs the inject husband. She was justified in saying that she "had entered the theatre in time to witness the most exciting scene in the most theatre in time to witness the most exciting scene in the merimonial drama that had been twelve years playing." For the ame
evening "the wind plained (sic) sullenly at the window," begre
were "swart and gathering phalanxes in the west," "directant
that burned palely out of the gloomy element," and "th/burid
radiance of lightning." The heroine eavs:—

I heard warning voices in the air long before the lightning seamed. They were but thin-air echoes, sobs and mutterings as if a legion of pectres were sailing swiftly beyond the reach of the tempest; but never d sounds seem more portentous. Since that night I have found a kind of error in listening to the wind.

The next morning there was that "subtle sense of see which is always among those who sleep in a house who sleep has been shed," and before long it was found out that Ms. Merton had been murdered. Her maid was missing, and on Ar all the suspicion fell. The girl had come into the room just as r. Merton was yielding to his passion and to the atmospheric indeposes—on our barometers, by the way, at the point where the moury stands when it is at its lowest should be automathed. when it is at its lowest should be entered "expect his winds and murders"—and had seen him commit the murder, the at once murders "—and had seen him commit the murder. She at once fainted off, and he, carrying her into the old wing, cked her up in a vault, taking care to manufacture traces which eften together with her disappearance, would naturally lead any or to believe in her guilt. Among other things he went out and broke down a part of the park hedge, in order "to produce to se eye such an effect as would be caused by a person who had crambled over it." As at the time "the ground was heap with mud," it is curious that his footsteps were not discrered when this "effect" was noticed the next morning. The maid is kept a close prisoner for two years, and meanwhile he price the horoine, who had not the least suspicion of his guilt When the right time arrived, the story having been dragged out the close of the third volume, there came a night when "therewas something very spectral and cheerless in the light cast by the an moon. I felt," spectral and cheerless in the light cast by the an moon. I felt,

spectral and cheerless in the light cost by the an moon. I felt," says the heroine, "more sad that night than Ind ever been before. It was the sadness born of presentiment." For husband of course killed himself that night, having first writtes a confession.

There are certain tribes of American Indus who, when suffering from hunger, try to cheat their stomach by loading them with a kind of earth. They have this excuse, tat they have nothing better at hand to put in. If a man fond freading found, after starting on a long voyage, that there werne books on board but such stories as this of The Mystery of Adeity Manor, we could conceive that he might try to use themse the Indians use the earth, to stop the cravings for wholes of food. It must be a very morbid tasto, however, that can diberately enjoy this sort of trush when there is at hand such a endless variety of good of trush when there is at hand such a endless variety of good reading as our language affords.

THE UTRECHT PALTER.*

WE have never yet seen a literar production which reminded us more forcibly of Horace too familiar line. The fine ws more forcibly of Horace too familiar line. The fine appearance of this folio volume, win the array of names in the title-page, is wonderfully imposing but unfortunately even the title-page manifests the intention vth which it has been got up. Doan Stanley is well known to has taken a more prominent part than perhaps any other ecclesiastic the day in the recent agitation against the Athanasian Creed; an of course it is of the tast importance, in the view of disparsing the Creed, if the supposed antiquity of the earliest MS. cop of it in existence can be disproved. We can imagine no other reason why the Dean should have mixed up his name in this lies of of relaxographical research. proved. We can imagine no over reason why the Dean should have mixed up his name in this siece of palæographical research, except the desire he has consistently expressed to displace the Athanasian Creed from its resent position in the offices of the Church of England. With naracteristic zeal he has anlarged on the great stress laid upon as Deputy Keeper's Report at the meeting in St. James's Hall, seld in January last year. Those who will take the trouble to rid through the authorized Report of that meeting will judge of he Dean's accuracy when they find that not a syllable was said sout that Report in St. James's Hall, though it was cursorily refered to by two of the speakers at the second meeting which wassimultaneously held at the Hancour Square Rooms.

Square Rooms.

But, though Dr. Stanleyhas prefaced the eight Reports with two folio pages, the first of which mainly consists of a description of the circumstances whiched to Sir Thomas Hardy's Report, all of the circumstances whichled to Sir Thomas Hardy's Report, and of which may be read it that document, and the second of a summary of the opinions be which eight gentlemes have committed thouselves as to the date of the manuscript, he has not ventured on any expression of opinion on his own part. He seems to have depended much on the priciple

Defends names, junctaque umbone phalanges,

and has probably wisely betained from meddling further with th

The Unrealet Publice: Sports addressed to the President of the British British Mustum on the Age of all Munuscript. By S. A. Bund, E. M. Thompson, Rev. H. O. Cotte, Rev. S. A. Lowie, Sir M. Dighy Wysis, Professor Wate. P. H. Dishimson, and Professor Swainson, With a Professor by A. Puntigen Stanley, E.D., and of Westmisster. With a fundamental London.

ambject of paleography, which, implying as it does accurate habits of thought and investigation, has few attractions for him. And why any preface or any summary should have been thought accessary by the Dean of Westminster, or by anybody else, we can hardly enjecture, unless the object was to add the éclat of another muse distinguished in the annals of literature to the somewhatfeeble catalogue of those which are mentioned just before it on the title-page.

We may observe that, apart from the name of the Dean, who show not profess to be an authority on the subject of unless such as an authority on the subject of unless such as an authority on the subject of unless such as a subject of unless subject of unless such as a subject of unless subject

see not prese to be an authority on the subject of palæography, so others may be divided into two classes—those who are entitled to live an opinion on such a subject, and those who are not. Wi do not intend to particularize further. The reader will easily pt the respective writers in their proper places; but we may at the proceeding to analyse their Reports, observe first that, occupying as they do exactly thirteen pages, they really seem brief endigh to have enabled any reader to dispense with an epitome; secodly, we may dismiss Mr. Dickinson with the remark which we will copy from Dr. Stanley, who compresses into one line what Mr. Dickinson had extended to nearly into one line what Mr. Dickinson had extended to nearly half a page—that "he does not express any opinion on the age of the MS." The nodest conclusion of the Librarian of C. C. C. Cambridge is that hedoes not himself feel warranted in assigning an earlier date than he ninth century. His conclusion appears to be based principallyon a comparison of the Utrecht MS. with one other manuscript. The accomplished Librarian of the Bodleian gives no reasons at all for the opinion he has formed, but says that he has never seen any MS. written throughout in the same character and in the tri-columnar form. This at least, as far as it goes, is in favour of the greater antiquity of the MS., as the Ambresian palimpest from which Cardinal Mai produced his fragments of Cicero's Orations is indoubtedly as early as the sixth century, and palimpsest from Wach Cardinal Mat produced his magnetic of Cicero's Orations is indoubtedly as early as the sixth century, and precisely resembles the Utrecht MS. both in the formation of the letters and in the facthat the page is divided into three columns. letters and in the factthat the page is divided into three columns. Moreover the tri-columnar arrangement is otherwise known as a common mode of writing in that century. Sir M. Digby Wyatt is of opinion, judging from the drawings, that the MS, is certainly not of earlier date than he seventh century. As it is admitted that the drawings were certaily executed later than the handwriting, it will be admitted that the argument does not go for much against the firm persuasion of the Deputy Keeper of the Records that the Utrecht MS, belongs to the sixth century.

Canon Swainson's Report is somewhat fuller, but need not detain us long, because he weely professers to avoid all arguments of a paleographical character and employs himself chiefly in dealing with the argument for the arly date of the MS, which Sir Thomas Hardy founded on its containing the Psalter according to the Gallican and not the Roma version. But he very unwisely departs from his purpose of keeping clear of paleography by asserting

parts from his purpose of keeping clear of palaeography by asserting that it is a mistake to suppose the writing of the style of the Utrecht MS, had become observe in the ninth century. It was as much obsolete as the Old English character is in the pres as much obsolete as the Und english character is in the present century. That is to say, it waloccasionally used, much as the Old English character is still frequently adopted in parts of the titles of English books that are printed in ordinary Roman character; but there is not a single known its, of that period written as the Utrecht Psalteris throughout in Amen rusticated capitals. Further, Canon Swainson asserts that the drawings in the Harleian MS. 603 are of the tenth or eleventh century, and are much earlier than those of the Utrecht Psalter; and certainly if the premisers are granted, the conclusion follows, not that the MS. cannot be much earlier than the middle of the minth century, but that the drawings are certainly later than the tenth or eleventh. Whichever date may be fixed on for the Harleian 18.603, we may be content to class this argument under the ancien head of logical fallacy called Petitio Principii, and the only remaining argument may go under the head of Ignoratio Elementi. Caum Swainson himself seems to have an inkling of its being somewat irrelevant to the matter in hand to prove that the headings of he paqlue, which may have been added conturies later than the restof the MS., could not have

been earlier than the ninth or tenth centry.

We have done with the Reports which use no argument and with the one which uses bad arguments. Then remain the three letters of the Oxford Professor and the Keeper and Assistant-Keeper of the MSS, in the British Museum. No on will attempt to deny the MSS, in the British Museum. No on will attempt to deny the value of an opinion on such a subject given either by these gentlemen or by the Hodleian Librarian. But we have to deal with arguments and not with names; and Professor Westwood admits that there is no difficulty in assigningthe text to the fifth or aixth century, and that he is guided by cosiderations independent of the character of the handwriting, and that the initial letter of the first peals brings the date down to the seventh or eighth century at the earliest, in which case the drawings may have been added in the ninth or tenth centuries. That the initial B is of later date than the rest of the MS, is plainly proved by its showing through on the obverse, and even faintly on the reverse of the second leaf; and every one admits that the B must have been added after the volume was folded into sheets. As regards the lawred semicolon as a musical stop, Professor Vestwood believes that it cannot be traced back carrier than the seventh century. And here we may be allowed to express some surprise at the efficiency way in which the fact of the addition of these stops has been known by Mr. Hond. He simply remark that they have event appearance of having been inserted, as the common

case, it is next to certain that the punctuation would have b carried on throughout the MS., which it is not. And the only important argument—which, considering the paucity of MSS, of the sixth century, does not seem to us worth much—is that early MSS. have not, as the Utrecht Pealter has, the first line of each pealed written in Uncial characters.

To Mr. Bond and Mr. Thompson we are indebted for an interesting and very discriminating account of the MS. Mr. Thompson adds to the arguments we have already noticed the remark that the ink is of the reddish-brown tint which was in common use in the ninth century; but neither he nor Mr. Bond deals with the preliminary argument that there is no known Mil.of the ninth century wholly written in the same character as the Utrecht Psalter, both of them dwelling, and not without some force, on the fact that the Aratus of the Harleian Collection, which is certainly not earlier than the ninth century, has the consmentary, written within the outlines of the Constellations, in Rustic capitals, whilst the text is written below in characters of the beginning of the tenth century. Mr. Bond adds:--" The the beginning of the tenth century. Mr. Bond adds:—"The reason is obvious. The MS, was copied from a much older one; and in order to keep up the likeness of the figures, it was found convenient to preserve the forms of the letters in the writing within thom." Weadmit that there soon is obvious, and if an equally obvious reason can be assigned why the Utrecht Paalter was from beginning to end written in this character, we shall be willing to give up our opinion that it really was written in the sixth century. We should not, however, be doing justice to Mr. Bond if we did not add that his remarks are of great weight, and indeed might be thought almost conclusive if it were not for the paucity of copies of MSS. of the sixth century from which the induction has to be made. We could not do justice to his argument without transcribing large parts of it, which those who are interested in the matter can read for themselves in the original document. Moreover, his Report is specially directed against Sir Thomas Hardy's, and, as it is well known that Sir Thomas has his reply in the press nearly ready for publication, we shall not trespass any further on matters which will be much more ably handled by him then by anything likely

to be alleged by a mere amateur.

We do not profess to be without our prejudices, and, feeling certain, as we think any theologian must do, that this Oreed is at the very least of an earlier date than A.D. 451, the date of the condemnation of the Eutychian heresy, we should be glad to have a conclusive argument for the antiquity of the handwriting which would be intelligible to ordinary readers, who cannot be expected We therefore to understand the subtleties of theological language. think it worth while to conclude with quoting a few lines from

Mr. Bond's Report. He says :-

In respect to the Creed, it might be argued that, granting that the Psulter is a manuscript of the ninth century, it has every indication of having been copied from one of far higher antiquity, and that this would also have contained the Canticles, Creeds, and Apocryphal Psulm.

Nevertheless Mr. Bond is not of opinion that this argument will hold, for he adds:-

I am of opinion, however, that if it were so, the Apacryphal Paalm would not have been found where it is in the Utreatt Paalm-at the end of the manuscript after the Canticles and Creeds—but rather after the last Paalm. It seems to me more probable that all the additions to the actual Paalter ought to be assigned to the period of its transcription.

DEEP AND SHALLOW COAL-MINING.*

THERE can be no doubt that the events of the last two years have done much to excite an interest in the public mind about coal at home and abroad. Many a well-to-do householder will have wondered over the circumstances under which it has been possible for a limited number of dealers and workers to run up the price of an article to double or even treble its normal value; and the larger body of people constantly struggling against the res angusta domi will have grievously resented the undue profits notorionely accruing to the few from the pressure and tribulation of the many. Not an inconsiderable number soom to have concluded that the high prices have been the result of a conspiracy, and that a compact has been made between the coal-owners and the pitmen that, though they reserve full right to carry on their own intestine wars, they shall both unite when opportunity offers to pillage and wars, they shall both units when opportunity offers to pillage and maltreat the public. Under such conditions it is no wonder that, besides Reports of Royal Commissions, other publications should have been put forward to throw light on so black a subject. Readers who have not the requisits fortitude for wading through the more solid constituents of blue-books may be content to skim the newspaper or magazine articles, or dip into the more systematic-looking pages of a work professing to be explanatory of the mystery.

A creat amount of useful general information has been becaused.

A great amount of useful general information has been brought together by Mr. Leischild in a little book made up out of articles together by Mr. Leitchild in a little book made up out of arthcles in the Edinburgh Review. The first division, on the consumption, and cost of coal, is valuable as giving some of the conclusions, quantum valuate, of Commissions and Committees, interrepresed with a good deal of lighter matter taken from various sources, but much of it utilized in former works by the same author. We could wish that the figures had been more carefully looked to; for

^{*} On Coal, at Home and Abread. By J. R. Leifchild, M.A. London: ongunus. 1873. The Cost Fields of Chriscotershire and Romerostshire. By Julia Abelia.

it is somewhat startling to find, apropos of the consumption of coal for smelting, that the amount of lead ore raised in this kingdom is given at a figure just ten times as large as that in the Government statistics, whilst the total of coal raised throughout the world is estimated "for 1866 at 170,430,544 millions of tons," where the word "millions" is obviously redundant. It is an old observation that pullers of the long bow ought to be provided with an exceptionally good memory, and though we must disclaim any notion of reducing the authors of popular books to the level of unveracious narrators, it must be admitted that in the re-cooking of articles very troublesome contradictions are apt uncomfortably to arise. These are often due apparently to want of recollection that what passed muster in the magazine fifteen years ago is not in accordance with the statements of a treatise concocted within the last few months. Or the author of a rechauffée may take up different standing-ground, and hold that his former lucubrations should remain just as they were; "he has not thought it desirable to alter them," and they are to be taken for what they are worth. One consequence is that we have by way of introduction to the facts of the coal-bearing strata a bevy of misstatements and confusions such as ought on no pretext to have been left unamended. In the next page again comes the legitimate areas for a passage of fine writing; the restroing, in imagination, of "the hancient and luxuriant flora." And who would expect, in a book bearing the date 1873 on its title-page, to find the worthy old Dean Buckland's famous dome-shaped plant still doing duty like a true Briton, in spite of having years ago been knocked over and turned into quite other shapes by a host of botanical critics? In spite of them all we still read of "a strange plant resembling an immense coach-wheel within its rim, so that the boughs shoot out horizontally on all sides like spokes from the nave, the central portion of a Stigmaria flowles, once floating n

The second article is, in fact, a review of Professor Rogers's very interesting and fully illustrated work on the coal-fields of North America, but the author has travelled much beyond his sphere to give us particulars of a very inaccurate sort respecting our own British coal strata and coal-pits, the corrections for which have long since been easily attainable. The author's third article on "Fatal Accidents in Coal Mines" is more up to the mark, having been written at a recent period, and being based upon official Reports which provide abundance of excellent data. A fair popular account is here given of the principal sources of risk in the working of collieries, and of the means by which a powerful system of ventilation is brought into play in order to combat the special enemy, fire-damp, the origin of one-fifth, on the average, of the fatal accidents which occur. Less explanatory or useful is the attempted description of the falls of roof and coal, estimated to cause two-fifths of the violent deaths which appear at first eight to be an opprobrium to the management, but which too surely form one of the most knotty practical problems to deal with. We can quite agree with most of what is said by the author on the system of Government inspection which has been adopted, the advantages which have accrued from the introduction of this once-dreaded novelty, and the desirableness of a systematic and personal examination of the mines being more frequent. This, however, has now in a great measure been provided for by the recent appointment of sub-inspectors under the Home Office. And, although the provisions of the new Act may have added an item to the advanced price of coal, it will hardly be objected to by the public that suitable steps should have been adopted by the Government for rendering as secure as possible an occupation which, from its inherent difficulties, must always remain one of exceptional roughness and danger.

A very different kind of work, although handling some of the same subjects, is Mr. Austie's description of the coal-fields of Gloucestershire and Somersetshire. It is a carefully elaborated, and, in most points, well reasoned out, investigation of one of the most important and curious tracts in the West of England. We see in every page the result of close personal inquiry; and, observing in the preface that the author was employed in making surveys and estimates for the Royal Commission on Coal, we cannot but conclude that he was excellently fitted for the task, and has carried it out with remarkable zeal and success.

clude that he was excellently fitted for the taak, and has carried it out with remarkable zeal and success.

Oertain parts of the district in question are pretty well known, as regards their surface features, to the public at large. We need hardly speak of the bold rocks of Clifton, which form the foundation of the Bristol coal-field, various pits in which may be seen from that point of vantage, dotted about on the lower ground, and contributing their quota to the pall of smoke which begrimes a neighbourhood in other respects exceptionally beautiful. Hence, through the varied lowlands extending northward up to Tortworth Park, a more or less vigorous activity at intervals marks the Gloucestershire field; whilst a ride over the picturesque country of hill and dale, from Bath to the Mendip Hills, carries us across the principal portion of the Somersetahire basin. It is scarcely possible without having experienced it to appreciate the difficulty of reconciling and adapting to one general view the disjointed fragments of knowledge obtained in such a district by the isolated workers of the coal seams. At each colliery or group of workings the natural phenomena are sure to differ in some degree, and a series of names will be successive strata which will commonly be altogether to the successive strata which will commonly be altogether to the coardinate of the somenclature of their neighbours. Hence arises a part of the coardinate of the coardinate of the somenclature of their neighbours.

person having a local interest; but then really of the highest value. Whether the "great seam" of one place is the "great seam" of another, or whether the "rock" seam appears to correspond with the "nill grit" of Golden Valley, or the "chick" may represent the "Rag seam in a deteriorated condition," may appear to a cursory glance, when continued for page after page, anything but lively reading; yet we doubt whether a difficult work of this kind has ever been more conscientiously performed, and it may be taken as an example of that careful weighing of isolated details without which it would have been impossible to make any reasonable approximation to an estimate of our national wealth in coal.

There is one character hardly paralleled elsewhere which, in the district reaching from Bath by Radstock to the Mendip, contributes greatly to its natural beauty and its scientific interest. A large proportion of the coal-bearing strata make noappearance at the surface, but are covered by the varied components of the newer formations—namely, the dolomitic conglomerate, new red sandstone, lias, and colite. In some instances, and it comparatively early days, shafts have been sunk through a whole series of these secondary strata down into the coal-measures. The beds are of course much thinner than in the districts where we are wont to hear of their development to hundreds of feet, e even yards, in thickness, but offer a curious epitome of an exensive geological series which is here but the vertical doorway prough which we gain access to the valuable seams below.

In his chapter on the probable further extension of the coalfield Mr. Anstie puts before us a sketch of sore of the questions
which are probably destined at a future day to arouse much more
general interest than at present, when they appertain as speculations to the domain of the geological thinker. We believe it was
Mr. Godwin Austen who first pointed out the probable existence
of an axis of ancient rocks extending beneath the newer formations
which from the Mendip to the Pas de Calair conceal the structure
of the deeper-lying strata with which the coals are associated.
And no one observing the parallel lines of the folded structure of
the southern portion of the Somersetship field can take up his
position at Wells, and look a trifle south a east, without reflecting
that straight away there he would read successively the North
French and then the Belgian coal-field, where he would meet with
the very same structure, and with sevent points of curious similarity in the seams. Continuous they as not likely to be, and the
hasty conclusion that estates in certain parts of Sussex may be
rogarded as coal properties is totally unvarranted by the statements
of philosophical writers. But it still locs appear a fact that we
are not well acquainted with the casten limits of this field, and it
is a reasonable hypothesis that other troughs of coal only to be
detected by deep borings should follow at intervals along the prolongation of the line of disturbance. When the author strays
from his own region into that of theory we can no longer agree
with him. He makes Broadfield Fown, near Bristel, a mass of
carboniferous limestone which has been upheaned through the coalmeasures; and though we might he be doubtful what is meant by
the expression, we road again of a ract near the Speedwell pit, "a
disturbed area having a roughly circular form, which seems to have
been forced up amid the rest of the measures." Nor do we see
that he has thrown any light on the old puzzle of the masses of
limestone at Vobeter, "fragment of

It is to be regretted that a bok so full of good matter should be so little readable. We shouldlike to see the faces of a group of Mudie's customers to whom ithad been offered. But, as a contribution to our knowledge of as physical structure of a very important section of the kingdos, the work will be indispensable to a class now increasing in numbers, whose interest lies in the further treatment of the details thu honestly and industriously collected.

AMERCAN LITERATURE.

THE place held by Jeerson in the history of the United States is quite sufficient b render a popular biography of so distinguished a stateaman recessary and acceptable; and as, with a tits faults, Mr. Parton's/olume has the one indispensable merit of being tolerably readabl, we do not doubt that it may achieve a large circulation in Arerica. We cannot but suspect the author of having kept this and in view at times when justice to his subject and to histori truth required that he should have forgotten it. Mr. Jefferson we the leader of the party called in his time Republican; that if the party whose views and principles were directly antagonist! to those of the Republicans of to-day—the party opposed to the Federalist, or, as they might be more accurately described, the Centralist objects and policy of Hamilton and Adams, the party of State Rights and democratic Liberalism. His mans are muthority were constantly invoked by the Democrates so the as the old issues remained open, and his manifestoes furnished their watchwords in political strift, their standard of opplition to the encroschments and maurostices to which the Federal Legislature was continually usuad by the Anti-slavery against and political intriguence of New England Jefferson's named and the Section; and has proportionably

310, 100

lost weight and credit since Secession failed, and the sovereignty of the States was eliminated from the Constitution at the point of the hayonat. Mr. Parton is anxious to get rid as far as possible of this supposed slur on the memory of his hero, and this intention colours not only his comments on Jefferson's opinions, but his whole account of the first years of the Union and of the political contest which was terminated by Jefferson's election to the Presidency. Hamilton and the elder Adams, on the other hand, represented the doctrines, mutatis mutaniis, now ascendant in the North; and, more than that, the high-handed measures imputed to them were—naturally, since the object of both measures imputed to them were—naturally, since the object of both was to exalt the Federal power at the expense of the States, though Hamilton and Adams never dreamt of using the Federal power to sxtirpate personal liberty—not unlike in character to those of Lincoln and Seward, though infinitely less extreme in violence. An author writing a history of the times, with no bias in favour of particular men, would naturally be led to exalt the Federalists and their croed, as being closely accordant with the policy of to-day, at the expense of their opponents. But Mr. l'arton's business is to eulogise Jefferson, and to remove the so-called stains which his Democratic principles have left on his memory in the estimation of Pemocratic principles have left on his memory in the estimation of Northern readers; and in order to do this, it is necessary to misrepresent the policy and principles of his antagonists, so as to bring his own into accordance with those of men who have overturned the political system of which he was the first founder.

Mr: Parton is always a violent partisan, and never a trustworthy guide in regard to political history; but few of his works are more wholly unfair, more utterly out of accord with the facts, than this Life of Jefferson. The English Government and George III, fare no better at his hands than Hamilton and Adums; except that he is more careful in this case to tell as little as possible of the actual story, and to rely as far as he can on mere comment and innuendo. For to tell the true story of the American Revolution, to exhibit the extravagance of the pretensions of Massachusetts, and yet to vindicate the Revolution, it is necessary to recur to the old Jeffersonian principle that a people have a right to choose and cashier their governors at pleasure; and to admit this has become impossible since the writers of the North have been compelled to treat secession not merely as technical rebellion, but as a moral enormity. We must therefore warn our readers against accepting any part of Mr. Parton's political chapters as a correct account any part of Mr. Parton's political chapters as a correct account of the objects of parties or the relations of politicians. For the rest, his description of the family and home of Jefferson, a Virginian yeoman of the better class till education, practice at the Bar, and marriage lifted him into a higher social rank; his picture of the life of the wealthier Virginian planters, though greatly overcharged and tinged by a very manifest animus; and his sketches of some of the early incidents of the Revolution—indeed, all his narratives of salient incidents or descriptions of remarkable scenes are as lively and graphic as his comments are absurd and his partisanship extravagant. A writer who can gravely applaud the burning of a Royal ship by smugglers, simply because her captain had done his duty in repressing their malpractices, and denounce as "theft" the seizure by a Royal governor of a store of powder which was about to be seized for their own purposes by the rebels, can hardly expect his readers to listen seriously to anything he has to say on questions of political ethics.

The Smithsonian Institution renders good service to science by publishing books which, however valuable, are too dry and too bulky to tempt the trade in the character of commercial ventures; and Mr. Lewis H. Morgan's Systems of Consumputative and Affinity is just such a book as no publisher could hope to sell, yet contains a great deal that ought not to be lost to the world. It is true that if he had not found a gratuitous publisher, to whom expense was a secondary consideration, Mr. Morgan would probably have cut his book down to a fourth of its actual size, thereby rendering it not one whit less valuable. Nevertheless, despite the waste of type and paper, the facts which are expanded into this enormous m of words are worth preserving even at the monstrous cost which the author has chosen to put on them. They contain an elaborate examination of the systems of kinship existing among different sections of the human family in past and present times; and the extent of ground covered by the author's inquiries is very large, and the results are very important. No doubt, Mr. Morgan wholly misconceives their bearing. He tells the philologists that in the investigation of the descent and connexion of races they must be content gation of the descent and connexion of races they must be content to occupy a secondary position; the primary being assigned to the investigators of the systems of kinship. These he divides into two great classes—the descriptive and the classificatory. The proof of his blundering over-estimate of his subject may be given in one word, by translating his phraseology into that of history. His "descriptive" system of kinship is the system of races among whom paternity has been a certainty long enough at least to give rise to a nomenclature founded on it. His "classificatory" system is that of races which have not long escaped from promiscuity or polyandry. With the former a father's brother is an uncle, because the father is identified. With the latter all the father's brothers are "fathers," because till recently (say within one thousand years or more) the only thing accertainable about paternity was that some one member of a family was the father. In a word, this "classificatory" practice is a relic of the Thibeton forms of polyandry. And it is plain that, as different more may have emerged from this

rains Contributions in Chapterine, 218. Systems of Consemputally of the Human France. Surface London: Tribune & Co., 2872.

state at different times, the nomenclature of kinship is no proof of affinity. Some Aryan tribe may have taken to infanticide and polyandry, and thus fallen into the classificatory group; some Turanian horde may have become purified of these aboundants. Turanian horde may have become purmed of statute. The value early enough to have now a descriptive nomenclature. The value of Mr. Morgan's contributions to the science of ethnology is not in collecting the nomenclatures of kinchip what he supposes; but, in collecting the nomenclatures of kinship from some scores of languages, he has furnished useful materials to the philologists whem he assuredly will not supersede. We may mention here another Smithsonian publication of great utility—a first series of the Constants of Nature, by Mr. F. W. Clarke, comprising the chemical formulæ, boiling and malting points, and specific gravities of a list, which may not be complete but is certainly elaborated with no common care, of all "the artificial compounds of definite constitution" known to the laboratory. It is a most useful and convenient work of reference, rendered perfectly available by a carefully prepared alphabetical index.

as a most useful and convenient work of reference, rendered perfectly available by a carefully prepared alphabetical index.

To ornithologists—unhappily not to the general reador—the publication of the great work of Messrs. Baird, Brewer, and Ridgway on North American Birds (or rather, of the first part of that work, in three medium-sized quarto volumes, which treat only of North American Land Birds) †, will be, we presume, an event of no ordinary interest. The work is strictly and minutely technical and expert to these who have a they such knowledge. technical, and, except to those who have a thorough knowledge of scientific ornithology, its very language will be unintelligible; but perhaps from the stores of inaccessible information which it contains some one may select for the British public that which they can understand, and put it in a form that will attract their attention and command their interest. The present treatise apears to aim at completeness of workmanship and of research, and to be intended for "a possession for ever," so far as in the present age such an ambition is possible in any branch of science; to the world at large it can be made known only through a competent

interpretor.

The Report of Progress for 1872-3 rendered by the Director of the Geological Survey of Canada 1 contains some not uninteresting descriptions of explorations made to the north and west of Lake Superior, and in other quarters, accounts of the discovery of tracts of fertile soil, and of analyses of ores and visits to mines, all of which promise well for the variety and amplitude of the resources waiting development in the interior of the new Dominion. the survey does not seem to make progress at anything like the same rate as the United States Geological Survey of the Far West. same rate as the United States Goological Survey of the Far Wost. Perhaps it is not so amply provided with active and efficient subordinates in every branch, able as are the papers sent in by those actually employed; certainly it has a far more difficult task, having to deal with a territory in which neither railways nor settlers have preceded it, and being often dependent upon Indian guides for direction, not only in the woods, but through the labyrinthine channels of the lakes and rivers, which wind in and out among innumerable islands all so densely wooded that no more distant landmarks are visible. Not roads or railways, but river carriage and portages (hereafter perhaps to be superseded by locks), form the lines of traffic through Western Canada, and seem likely to determine the direction and distribution of her and seem likely to determine the direction and distribution of her settlements.

A Report of the Autopey of the Siamese Twins 5 contains much less than we should have expected to minister to an unwholesome curiosity. The anatomical structure of the mysterious band is explained; it appears that the peritoneum of each brother extended into the band in a couple of pouches, which did not communicate; but that the livers were actually connected in the upper portion of the band. It follows that their medical attendant was wrong in believing in the possibility of separation without danger; and that the instinct which told Eng, when wakened from his sleep and informed of his brother's death, that his own was at hand, was sounder than the doctor's diagnosis. A few remarks on the origin and general character of similar monstrosities are of purely medical interest. We may mention two other works of equally limited attraction; a careful monograph on that curious apparatus for obtaining an automatic record of the pulse, called by its author the *Sphygmograph* ||; and a Trestise on Therapeutics, Materia Medica, and Toxicology ¶, by Ir. Wood,

which deals chiefly with that mystery of which so little is known, yet on which all healing hange, the operation of drugs upon the human frame.

A treatise on heat and heat engines, by Professor Trowbridge *, deals with the mechanical effects and relations of heat in a plain and practical manner, with especial regard to the requirements of those who may have to deal with steam and other engines depending on caloric for their motive power.

A Report on the United States Marine Hospital Service † is curious, first, as revealing cases of waste and mismanagement—or parhaps of downright political achieve—again in their way to any

perhaps of downright political jobbery—equal in their way to any that have been charged against the effete and corrupt monarchies of Europe; and secondly as containing a valuable and interesting paper on the distribution of yellow fever in the States, the effect of careful and well-executed quarantine laws, and the influence of situation, and especially of height above the sea-lovel, upon its

of careful and well-executed quarantine laws, and the influence of situation, and especially of height above the sea-level, upon its prevalence. A map accompanying the paper in question throws light on several of the subjects treated, and especially on the last.

It is not our practice to notice reprints; but the republication of a series of essays by Agassix on the Structure of the Animal Kingdon; and particularly on the theory of development, can hardly be passed over without mention, especially as the book has been long out of print. In regard both to the interpretation of the geological record, and of those interruptions, followed by a complete change of species, in the series of strata, which are some of the crucial points of the Darwinian controversy, M. Agassix was the ablest and most lucid of the naturalists who adhered to the so-called "Convulsionist" doctrine; as in dealing with the development of the different sub-kingdoms and the order of specific succession he was one of the most resolute and authoritative opponents of the school of Wallace and Darwin; and as the outline of his views is clearly and succinctly set forth in these lectures, they well deserve to be studied even at this distance of time.

We have actually a well-printed, elaborately got-up treatise on the Quadrature of the Circles, and several other exploded extravagances, which, despite the pretensions of the author and his show of mathematical formulae, displays that fundamental ignorance of the conditions of the problem which has led so many country curates and uneducated students to wasto a lifetime in the same wild-goose chase.

A namely led of the distribution of the hardent of the author of the same wild-goose chase.
